What's missing from this picture?

(Three of **39,000 different B. F. Goodrich products** on the job around the world!)

Take away the B.F.Goodrich products and not much would move on this dockside. But things do move—here and almost everywhere—thanks to more than 39,000 different products from BFG. Have some examples: tires for everything from airplanes to wheelbarrows—about 250 different types in all. Hose for every job, every climate, every specification. All types of conveyor belts. Quality, service and satisfaction are built into every B.F.Goodrich product.

B.F.Goodrich

FIRST IN RUBBER

Don't these products belong in your picture?

DOCK LOADING HOSE is reinforced with nylon cord for extra strength, surprising lightness. Other advantages—highly resistant to surge and shock pressures, longer life, lower operating costs!

TIRES for power trucks and tractors soak up shocks and vibration in irregular floors; give fragile loads extra-gentle protection. Results? Better control, lower maintenance on equipment, less damage to loads.

32% EXTRA MILEAGE! This Extra Miler truck tire beat all other tires tested for mileage economy! Made with extra strong SUPER-SYN and a new 3-rib tread design for better traction, more even wear.

For complete information about any B.F.Goodrich product, write: International B.F.Goodrich, 500 South Main Street, Akron, Ohio, U.S.A.

TIME LISTINGS

TELEVISION

Wednesday, May 6

CBS REPORTS (CBS, 7:30-8:30 p.m.).* The second of two parts on De Gaulle.

Friday, May 8

BURKE'S LAW (ABC, 8:30-9:30 p.m.). Gisele Mackenzie, Buster Keaton, Betty Hutton, Nina Foch, Joan Blondell and Anne Helm are all suspects in "Who Killed One-Half of Glory Lee?"

THE JACK PAAR PROGRAM (NBC, 10-11 p.m.). Richard Burton will read either from Shakespeare or Churchill, also chat.

Saturday, May 9

SATURDAY NIGHT AT THE MOVIES (NBC, 9-11 p.m.). M-G-M's 1954 all-star *Executive Suite* with William Holden, Nina Foch, Barbara Stanwyck, June Allyson, Fredric March, Shelley Winters, Walter Pidgeon, Dean Jagger, Paul Douglas and Louis Calhern.

Sunday, May 10

DISCOVERY (ABC, 1-1:30 p.m.). The first of two programs on the history of folk singing in America.

DIRECTIONS '64 (ABC, 2-2:20 p.m.). A film made in Israel on archaeology.

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). "The Fighting E," a tribute to both aircraft carriers named *Enterprise*, World War II's heroic conventional version and the new nuclear-powered successor.

WALT DISNEY'S WONDERFUL WORLD OF COLOR (NBC, 7:30-8:30 p.m.). Another sample of Disney's wonderful way with animals—this time elephants, shown both live on location at Angkor Wat and in animation drawn by the Disney Studios.

Monday, May 11

HOLLYWOOD AND THE STARS (NBC, 9:30-10 p.m.). A repeat of the documentary on movie vamps, flappers, sirens and glamour girls.

Tuesday, May 12

COMBAT (ABC, 7:30-8:30 p.m.). Guest stars are Eddie Albert and Alida Valli.

THE CAMPAIGN AND THE CANDIDATES (NBC, 10-11 p.m.). A preview of the May 15 Oregon primary.

THEATER

On Broadway

HAMLET. Witty, virile, supremely intelligent, Richard Burton's Hamlet is a masterful prince of language, though never quite the fallen prince of tragedy.

HIGH SPIRITS. A house was never haunted by so blithe a spirit as Tammy Grimes, and Bea Lillie is the comic conjurer who brings her back to earth to tempt her husband and torture his second wife.

FUNNY GIRL. Singing, loving, wheedling, Barbra Streisand is a shower of bright lights as she re-creates Comedienne Fanny Brice's star-crossed career.

ANY WEDNESDAY. As sunny and as teary as a fickle April day, Sandy Dennis makes the mistressing game just slightly more complicated than doll-housekeeping.

DYLAN. Alec Guinness plays Dylan Thomas on his last U.S. reading tour, his humor biting but not bitter, his heart in neither his life nor his poetry.

HELLO, DOLLY! Cast as a matchmaker, Carol Channing dangles her gay, carrot-topped self in front of a stuffy moneybags (David Burns) who is slow off the mark. Gower Champion's dancers set a brisk pace for the chase.

NOBODY LOVES AN ALBATROSS. As a fast-talking TV producer-director, Robert Preston gives a sly, light touch to a play full of caustic mass-media mockery and plotting.

BAREFOOT IN THE PARK. Elizabeth Ashley and Robert Redford bring to an early married life, dollops of humor and bright good looks.

Off Broadway

THE BLOOD KNOT. Two half brothers—joined in kinship, disjunctively opposite in color—prey on each other's weaknesses, but stay together in a communion of spirit that is full of laughter, envy, good intent and deep fears.

AFTER THE FALL. Angry and autobiographical, Arthur Miller's play questions the limits of responsibility, and details tormenting relationships with friends, family and wives.

RECORDS

Folk Music

HEATHER AND GLEN (Tradition). Folk singers in Aberdeenshire and the Hebrides tell their tales, most often laments—for James MacPherson, dangling from the gallows when his pardon arrives; for William Chisholm, the young husband who died for Prince Charlie in 1746. There are also work songs. *Gentle Lady* is sung to the rhythmic accompaniment of milk squirting into a pail. It would be hard for any cow to resist Kate Nicholson crooning: "Ruddy-faced and smooth-cheeked, gentle lady, you are my dear one. The calves have sucked, O gentle lady." The real thing by real folk, collected and selected by Alan Lomax and two Scottish experts.

ADVENTURES FOR 12-STRING, 6-STRING AND BANJO (Elektra). Leadbelly used to be about the only fellow to play the 12-string guitar, but now even the boy next door is learning the strums. One of the dozen new records featuring the instrument is this extravaganza of plucking by Richard Rosmini, who plays everything in sight. The 12-string alone sounds like a guitar accompanying itself, but here Rosmini uses three other guitarists, plus Jazz Bassist Red Mitchell picking away stylishly at the likes of *John Hardy, Jelly Roll, St. James Drag*. No singing.

JUDY COLLINS #3 (Elektra). Joan Baez is still queen, but many of her subjects owe allegiance to Collins as well. Her voice is less pure, but it has body and conviction, and she has a good repertory of songs that are more indigenous to Greenwich Village than her native Colorado. In her third and best album, she sings Dylan and Seeger, but her stopper is a haunting new ballad about an ancient injustice done to a girl named Anathea, in bed, of all places.

EVENING BELLS AND OTHER RUSSIAN FOLK SONGS (Capitol). Dark nostalgia dished out by Metropolitan Opera tenor, Nicolai Gedda, with the help of the Cappella Russian Male Chorus and some balalaikas. Gedda was born in Sweden of a Russian father, and he sings of the snow-swept steppes, the willows and the fields of rye like one of the dispossessed.

THE VOICE OF AFRICA (RCA Victor) is Miriam Makeba, late of South Africa and also dispossessed. The music here is not only African: there is a taste of gospel, a pop tune and even opera (the *Willow Song* from *Otello*). Makeba can manage them all, but her heart is in the songs of her own people, like *Ohude* and *Uyadela*. "When all the beasts of the earth had gone to fetch their tails," she sings in Zulu, "the rock rabbit had long given up all hope, hence the absence of his tail."

CINEMA

THE ORGANIZER. Playing a sad, scraggly revolutionary who leads an unsuccessful strike of textile workers, Marcello Mastroianni sews up his status as the international cinema's most versatile leading man.

FROM RUSSIA WITH LOVE. The incredible adventures and immoderate amours of Agent 007, alias James Bond, alias Actor Sean Connery, lead to Istanbul in this uproarious parody of Ian Fleming's fiction.

THE NIGHT WATCH. Five men seek an underground escape route from a Paris prison—a commonplace theme developed with uncommon skill in this taut *French* thriller.

BECKET. A superior film spectacle based on Jean Anouilh's superior drama has a prodigally talented cast headed by Richard Burton as England's 12th century religious martyr and Peter O'Toole as Henry II.

THE WORLD OF HENRY ORIENT introduces Tippy Walker and Merrie Spaeth as a pair of antic New York juveniles scotching the adult delinquency of a lecherous concert pianist (Peter Sellers).

THE SERVANT. Hell-fire gleams through the tea-party façade of Dirk Bogarde, the conniving "gentleman's gentleman" who serves up Director Joseph Losey's message about class distinction in Britain with a dash of bitters.

YESTERDAY, TODAY AND TOMORROW. The knowing eye of Director Vittorio De Sica scans Italy's greatest natural wonder, Sophia Loren, whose Vesuvian warmth bubbles through this three-part comedy co-starring the ubiquitous Mastroianni.

THE SILENCE is celestial, the passion [illegible] in Ingmar Bergman's bold, beautifully acted drama of life among the damned. Pleading humanity's case are a lesbian, a nymphomaniac and a child.

DR. STRANGELOVE, OR: HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB. Sterling Hayden, George C. Scott and Peter Sellers detonate the bitter laughs in Stanley Kubrick's comedy of terrors.

THE GUEST. In this film version of Harold Pinter's drama *The Caretaker*, Donald Pleasence stunningly re-creates his stage role as a grubby, bigoted old derelict.

BOOKS

Best Reading

SELECTED POEMS OF HERMAN MELVILLE, edited by Hennig Cohen. The finest U.S. novelists was not an outstanding poet, but there are enough good poems in this chronological sampling, such as the final lines of *Billy Budd*, to make it more than just a literary curiosity.

IN HIS OWN WRITE, by John Lennon. The oldest Beatle ("He's the arty one") explains his startling collection of pure Joycean jabberwocky: "As far as I'm

Be precise!

You can't afford mistakes when you're specifying a grade of fuel for a customer, or a lubricant for his heavy machinery. You've got to be precise. That's why so many managers of the world's industries look to Esso. They know that Esso has a wealth of international experience in petroleum production and research. They know that Esso maintains a world-wide network of modern service facilities, staffed by highly trained technical personnel. And they know that Esso takes pride in its exacting standards. Perhaps these are major reasons why Esso is the **World's First Choice.** Refer your petroleum product needs to our local organization.

ceived this correction of short writty is most wonderfoul larf I've ever ready." readers shrdlu too.

THE SPIRE, by William Golding. O riding church, chapter and parish, a s dean drives his architect to build a prayer-envisioned stone spire on the s foundations of his cathedral, and realizes on his deathbed that his spir inspiration was probably only wor ambition. A metaphysical summation his four previous novels (*Lord of Flies, Free Fall*, etc.), William Goldi medieval fable is a provocative and o brilliant statement of the helpless and iquitous nature of man.

DREAMTIGERS, by Jorge Luis Borges. G ing blind, Argentina's greatest writer turned inward to the mirrors of his m and in this slight volume of poems parables has dreamed himself into tiplicity of recollections and roles.

STRANGERS ON A BRIDGE, by Jame Donovan. As onetime defense counsel Soviet Spy Rudolf Abel, Lawyer Dono reviews the trials and recounts his in the subsequent spy-thriller negotiati that led to a dramatic moment of cold war—the exchange of Colonel A for U-2 Pilot Francis Powers.

FLOOD, by Robert Penn Warren. Wi his considerable talent for narrative sense of place, the author of *All the K Men* observes Fiddlersburg, Tenn., i strange, revealing twilight that pre the town's disappearance beneath th flooding waters of a federal dam project.

THE WAPSHOT SCANDAL, by John Cheev This second novel about the Wapsh family is related to but very different fr the earlier *Wapshot Chronicle:* the *Chro icle's* traditional way of life is not lo but becomes a vision in the *Scandal* th makes more bearable the absurdities the improvised present.

KEEPERS OF THE HOUSE, by Shirley A Grau. Miscegenation, political vengea and racial hatred unto the third gene tion are the Faulknerian themes, but A thor Grau writes with such quiet dire ness that the violence serves to define contrast, a deeper sense of order and

LETTERS

Yips & Yelps

Sir: President Johnson succeeded in providing the Republicans with two of the greatest campaign issues of our time: driving too fast and pulling dog's ears.

He needs only four more crises and he too will be able to write a book.

ORVILLE O. COLIANNI

Chicago

Sir: The support of full body weight by the ears is not recommended for the care and handling of dogs, children, or any mammal, even if you want to "let them bark." I am shocked and dismayed.

GILBERT O. SEWALL, D.D.S.
Secretary
German Wirehaired Pointer Club
of California
Los Angeles

Sir: I've been a straight-ticket Democrat for 50 years but if Lyndon Johnson picks them beagles up by the ears one more time, he's a dead duck in my book.

J. S. WHITE

West Palm Beach, Fla.

Sir: Why all the fuss about L.B.J. yanking the ears of his pet beagles? He's been doing the same thing to those poor dogs up on Capitol Hill ever since he took office.

T. ANTHONY QUINN

Washington, D.C.

Plaudits & Prunes

Sir: Such an admirable and unbiased account of our whirlwind President and a really delightful cover picture of him [May 1]!

Sometimes I wonder just how lucky we American people can be to have such a splendid man as Mr. Johnson holding the reins of government in steady hands at this awesome time. I'm of the rank-and-file but feel we should all be united in one thing—prayer for his continued health.

(MRS.) CAROLINE C. JOHNSON

San Jose, Calif.

Sir: What puzzles me is the fact that Johnson is making a joke of being President. His driving escapade in Texas, his reception of tourists at the White House, and his crude conversations are not characteristic of a good President.

RICHARD RADFORD

Perry Point, Md.

Sir: Whenever we turn on TV, President Johnson is on the screen. He drones on with Pollyanna prunes and prisms and a string of soppy platitudes. He is the talkingest President we've ever had. It would be better for the country if he did less talking and more thinking.

MARGARET A. MANN

Charlottesville, Va.

Sir: The disrespect shown the President of the U.S. at the World's Fair was shocking. Anyone who is so self-centered as to show this disrespect to the President deserves no rights.

MRS. NEAL COMPTON

St. Louis

Sir: At last the Southerner feels a ray of hope, since President Johnson conceded that demonstrators should be arrested. It is noteworthy that he made this assertion only after he was inconvenienced by their unruliness.

CARL M. FOSTER

Columbia, S.C.

The Big Split

Sir: Your comprehensive report on the Communist split and the history of Leninism [April 24] was greatly appreciated. I am a student who is at present studying the Communist "isms and schisms," and I found your article an invaluable aid in my research.

BONNIE-JEAN HEASLIP

Hampton, N.H.

Sir: When you explained the procedure that the Russians go through to preserve the body of Lenin, I was reminded of those wonderful lines from Robert Service in his *The Ballad of Lenin's Tomb:*

And there was Lenin, stiff and still, a symbol and a sign,
And rancid races come to thrill and wonder at his Shrine;
And hold the thought: if Lenin rot the Soviets will decay.

Perhaps this explains why Khrushchev & Co. go to the expense that they do to keep the old goat on display.

CHARLES A. PETERSEN

Powell, Wyo.

Sir: Your cover on the occasion of Lenin's anniversary is an unpardonable sacrilege. Your utilization of such a flagrant artistic mediocrity to defame the memory of the George Washington of millions of people throughout the world is a sad comment on your own lack of fairness, objectivity and cultural comprehension.

GASTON BROSSOLET

Paris

Sir: Ben Shahn's cover picture of Lenin speaks of Communism with an eloquence as powerful as Dostoevsky's *The Possessed*. Here is Lenin's face, not the likeness that God gave him at birth, but the likeness of the twisted, humorless, mad, rationalized world he built for his followers. That cramped, despotic teaching hand with the three bent fingers is the perfect portrait of a Communist textbook or a Party meeting.

GERHART NIEMEYER

Notre Dame, Ind.

Sir: May I compliment you on your report on the Communist split.

There are no such persons as Communists because nowhere, not even in Russia, has Communism been achieved. Nor indeed will it ever be. For Russian socialism will never pass beyond state capitalism, and all the talk of the disappearance of the state is pure mythology.

M. F. CLEWS

Coventry, England

Sir: I was born in Russia very shortly after Lenin's brother was hanged as a *Narodovolets*, and in high school I was wooed unsuccessfully by both Mensheviks and Bolsheviks.

"*Narodnaia Volia*" was still recent history, and the agitators used this slogan in the meaning of "People's Freedom" as well as "People's Will."

Obviously they didn't mean it either way; it was always "The Party's Will," but it was better for brainwashing.

S. GINZBURG

Berkeley, Calif.

Word from the Palace

Sir: In the article you devote to my person [April 3], one sentence strikes me as being particularly to the point: "Then why not leave Sihanouk to his theatrics and ignore him?"

Since it is clear you consider me "unbalanced," "eccentric" and a "playboy," and believe my country to be a repair of cobras, vipers and cockroaches—to say nothing of the Viet Cong—where those who do not contract dysentery are liable to die from the heat, I am at a loss to understand why you should give such generous coverage to a topic which hardly seems to merit this treatment.

I gave up expecting anything from the Americans long ago, having had previous occasions to note the tenacious hatred with which they regard me, due to my refusal to be one of their Asian "puppets."

You imply that I am mad. I consider myself justified in returning the compliment. For the policy you are pursuing in Asia may be truly said to be an insane one, and is disquieting even your most trusted allies. Wherever you go, you spread war, revolution and misery.

What do you reproach me with exactly? Not to have abased myself before the dollar? To have succeeded, where so many others in this troubled region have failed? With providing my enslaved Asian brethren with a "bad example" by my pride, patriotism and independence? With placing the interests of Washington after those of my country?

I am, Sir, Yours

NORODOM SIHANOUK
Chief of State

Pnompenh, Cambodia

Wallace in Indiana

Sir: Before Governor Wallace's visit to Indiana University [April 24], reports came that one of his favorite devices was to stand before the audience, wave a copy of the civil rights bill and shout, "Do you see this bill? Have you read it? Do you know what it says?" With hardly any listeners having read the bill, he could then

QUEEN OF YOUR TIME, WITH MOVADO!

You will reign over the fleeting hours . . .

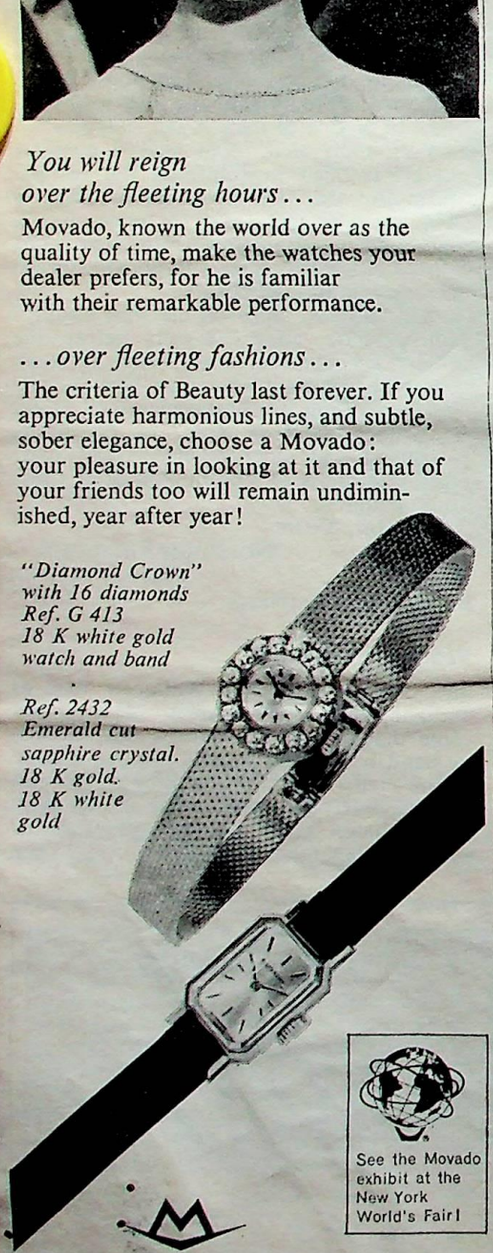
Movado, known the world over as the quality of time, make the watches your dealer prefers, for he is familiar with their remarkable performance.

. . . over fleeting fashions . . .

The criteria of Beauty last forever. If you appreciate harmonious lines, and subtle, sober elegance, choose a Movado: your pleasure in looking at it and that of your friends too will remain undiminished, year after year!

"Diamond Crown" with 16 diamonds Ref. G 413 18 K white gold watch and band

Ref. 2432 Emerald cut sapphire crystal. 18 K gold. 18 K white gold



See the Movado exhibit at the New York World's Fair!

MOVADO

Sold and serviced all over the world.

exclaim, "Well, I'll tell you what it says!" and proceed to distort the truth.

But when he came to Indiana University, held up the bill and shouted, "Have you read it?", several hundred informed students replied with a resounding "Yes!", as they held up their own copies. It was one of the few cases in which he lost his composure.

CHARLES A. WALLS III

Bloomington, Ind.

Sir: Thank you for printing Hoosier Governor Welsh's denunciation of Alabama's Wallace. It appears that Wallace's "armor-plated skin" has met its match in another Governor's valor.

It is not the first time Matt Welsh has stood up for principles that are perhaps politically unpopular.

ROBERT R. BROWN

Seymour, Ind.

Sir: You quoted Wallace as saying, "I think the Negro race ought to stay pure and the white race stay pure."

As a Negro, I find it necessary to say that it is unlikely that there are any pure Negroes in the entire U.S.—that is why the Negro race here has such a variety of skin tones.

PHYLLIS L. COX

Richmond, Ky.

Remarried Widower

Sir: In your story on Chuck Percy, the G.O.P. candidate for Governor of Illinois [April 24], you identified three of the members of his family as "children of a previous Percy marriage."

By failing to add that Chuck Percy's first wife died long before he even knew his present spouse, you left the highly erroneous impression that he may have been divorced.

HENRY J. COUCH

Chicago

None but the Brave Deserves the Fair

Sir: Undoubtedly Robert Moses, more than any other man, is responsible for the New York World's Fair [May 1]. It is his genius that has molded the predominant theme of the fair—mediocrity.

Moses has botched a unique opportunity for positive good creatively accomplished. The 1964 World's Carnival and its drab, sterile skyline will be timeless reminders of Robert Moses' total ignorance of things artistic. May he retire and give humanity another chance!

WILLIAM FUNK

Harvard College
Cambridge, Mass.

Sir: Thank you for the priceless portrait of the *Pietà* at the World's Fair. This marvelous work, and all other great works of art, belong to mankind. Now thousands of Americans who otherwise could not have known this deep experience can view it. It is fitting that it should be on display for all who pass by at the fair.

ELEANOR SANDS

Bloomsburg, Pa.

Sir: How can the Protestant Council possibly justify spending $3,000,000 on a pavilion in the face of incredible world need? With people overseas starving and dying of diseases that we can help cure! I pray that God will not let us bury ourselves in such crass materialism before it is too late to hear his call!

(THE REV.) RICHARD G. VINEY
Pastor

First Methodist Church
Casey, Iowa

Sir: TIME was erroneously informed that some of the proceeds from "It's a Small World—A Salute to UNICEF" ride at the World's Fair go to the United Nations Children's Fund.

UNICEF benefits from Pepsi-Cola generosity in the form of free land, an exhibit, and a sales counter staffed by volunteers. These are an outright donation—but not the proceeds of Walt Disney's delightful ride.

C. LLOYD BAILEY
Executive Director
U.S. Committee for UNICEF
New York City

Sur la Pointe

Sir: I agree with Mr. Balanchine [May 1] that dancing to music with no theme or story can be entertaining, but it should never comprise the entire repertoire of a ballet company. The tremendous emotional and popular appeal of the great story ballets are the very lifeblood of the art.

(MRS.) LEE CASTER

San Francisco

Sir: Your statement that George Balanchine has "undisputed stature as the world's leading choreographer" sure needs qualifying. He may be the world's leading ballet choreographer, but there are those of us who believe that in musical sensitivity, theatrical sense, urgency of communication, and pure choreographic inventiveness, Martha Graham leaves him far behind.

JAY KLEES

Englewood Cliffs, N.J.

High Endorsement

Sir: In your account of the leading law reviews of the country [April 24], you failed to mention the *Virginia Law Review*.

The *Virginia Law Review* is one of our outstanding reviews. It has, indeed, the largest circulation of any, with the exception of Harvard and Columbia.

It has no superior when it comes to quality.

WILLIAM O. DOUGLAS
Associate Justice
Supreme Court of the U.S.
Washington, D.C.

Drug Plug

Sir: Reporting on Dr. Nathan S. Kline's view of the humane, economic and social benefits of tranquilizing drugs [April 24], TIME reached millions of people with a most significant message.

The prescription-drug industry has tried to obtain public understanding of value received when prescription drugs are purchased. We feel that a story like yours definitely contributes to more objective discussion of the role of this industry.

AUSTIN SMITH, M.D.
Pharmaceutical Manufacturers Assoc.
Washington, D.C.

From the Butter of Their Harps

Sir: We were so hobby to see your rebue on Beatle John Lennon's wr [May 1]. We all considerate quite a gr larf, you know, and think John w cleaver.

Bu'really you should not hab ought said that Beatle fiends could not ima stamp this bit of writty, becorpse we frum the butter of our harps. We not began to talk like good owld Re and Anne yet, buck we do lick to m writty as that.

A letter from the PUBLISHER

Bernhard M. Auer

THE news is often given a sharper edge by the things people are saying—lines that tell a lot in daily conversation but may get lost in routine day-to-day reporting. A few examples from this week's TIME:

"Parting the waters"—newsmen's description of President Johnson's favorite oratorical exercise, a spreading breast-stroke-like gesture.

"The Westmoreland Stretch"—the term that military men have applied to the ability of Army Lieut. General William Westmoreland, the new U.S. military-assistance commander in South Viet Nam, to get more than a day's work out of his men every day.

"The Mail-Order Bride"—what some Oregonians are calling Henry Cabot Lodge, following a tart cue from the Portland Journal.

"This downward career from home to House"—Nancy Astor's description of her course when she became the first woman to sit in Britain's House of Commons.

Fräuleinwunder—a truly delightful transformation in West Germany.

"Sanctified common sense"—the phrase with which Methodist Bishop Gerald Kennedy, this week's cover subject, sums up his church's pragmatic but perfection-aimed faith.

In other cases it is the almost passing comment that bears pondering in terms of what may happen in the future. Also in this week's issue:

"Now things are going to be settled one way or the other in Viet Nam"—the surprising statement of onetime Army Deputy Chief of Staff James Gavin.

"We don't need publicity. We will show them by doing"—Paraguayan Dictator Alfredo Stroessner's response to the suggestion that his image needs improving.

"The frequency and intensity of the local battles warn us clearly to get at the root of the trouble before we have a full-scale war"—not a warning from a military man but from the president of the National School Boards Association about the conflict between school officials over roles and responsibilities.

"I can't ever tell what he is going to do. He can't either"—the disarming comment of Luci Baines Johnson about her daddy.

READERS are writing to TIME in pleasingly growing numbers—the letters we received in the first three months of this year topped the same period of last year by 48%. Most of the readers write to us about stories we have printed—at times to make caustic comment and at other times to praise and approve. When a public question arouses a large number of readers, however, they sit down to write to us immediately, even though our issue carrying the story they want to comment on has not yet gone to press.

This was the case last week as letters began to pour into TIME almost as soon as they reached the White House after President Johnson lifted his beagles by the ears and, as one reader put it, "landed in the dog house." And so while The Nation reports on the dog howl, the Letters section gives some readers their own say on the subject. Like most people, we like to get mail; we also like to be thought of as people who should hear what you think. Thanks for writing.

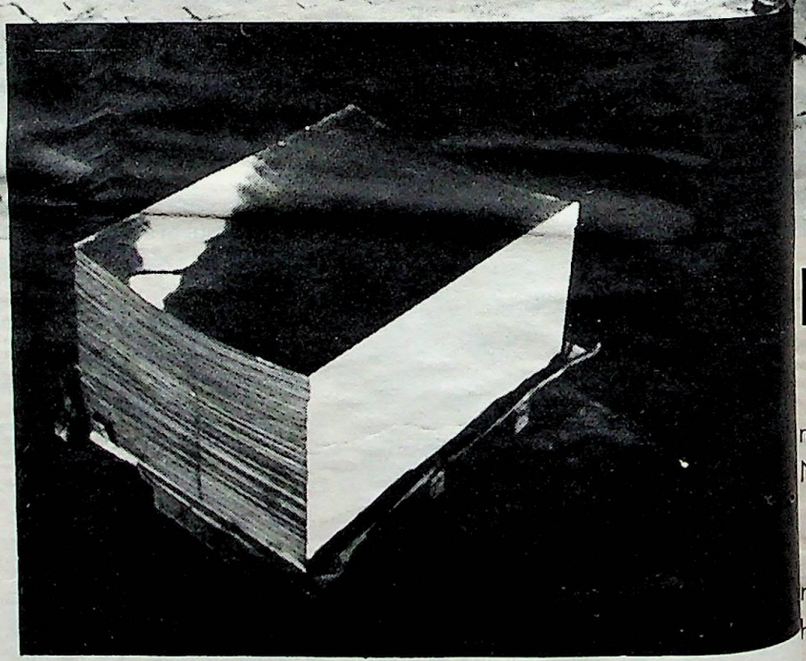
Designed and executed by world-famous Wean Engineering, ELISCO's electrolytic line, above, taken at the entry end has a full rated capacity of 40,000 tons annually, with tin coatings varying from one-fourth pound per base box to one and a half pounds per base box. Variable tin coatings as well as special tin coating weights can be manufactured per your specifications.



ELISCO electrolytic tinplates vary in thickness ranging from .214 mm. to .357 mm. with minimum width of 24" and a maximum of 36"; minimum length of 18" and a maximum of 43".

Keeping Work on Schedule

When WEAN ENGINEERING of Warren, Ohio, supplier of 80% of the world's electrolytic equipment, was consulting with us to conceive and execute our electrolytic line, we were WORKING PARTNERS in establishing the first tinning plant in the Philippines.

If you market products which need tin containers, your tinplate supplier is a working partner.

We of Elizalde Iron & Steel Corporation, the Philippines' first tinplate manufacturer, have assumed this role and as such, we coordinate with our clients in tin packaging designs and construction, in material handling systems, in inventory outlays that provide flexibility to expand production, in cost-saving estimates and in other packaging problems that can make the difference between KEEPING WORK ON SCHEDULE and within the budget or not. We are equipped to supply the total tinplate demand of the Philippines at the lowest price possible.

PICTURE OF A RIVER CHANGING ITS COURSE

for the biggest blast on the 200 ft. canal – some 5,000 plastic tubes d with 56 tons of dynamite stretch h water-logged overburden into drock.

This is no ordinary blast. It was the début of a new method that cut a 4-mile seaway overland to double the shipping tonnage of Sweden's port of Norrköping. Four miles of problems to short-circuit the long, winding estuary to the Baltic that no large modern vessels could clear.

Some thirty feet of clay covered the rock bed to be blasted. Too costly for conventional excavation. A new method was evolved—Overburden Drilling. The bedrock was drilled and charged *without removing the overlying clay.* Rock and overburden were blasted as one and removed by dredging.

Sounds simple. It wasn't. It took advanced compressed air technology, new Atlas Copco air-powered equipment, plus special Coromant Extension steels. Most of all it took experience. Experience in putting air to work. The same method has been used for deepening Genoa's new harbour, for prospecting in Africa, and for strengthening dam foundations in Canada.

This is the kind of experience Atl Copco brings you from co struction sites, mines and i dustry the world over, and wh is reflected in the smallest tool and the largest compress

THE U.S.

REPUBLICANS

The Man to Beat

Suddenly, like a brush fire racing out of control, the word crackled among informed Republicans: Goldwater's almost got it.

It seemed hardly possible. Here was Arizona's Barry Goldwater, who only a few weeks ago appeared to be flat on his back in his quest for the G.O.P. presidential nomination. He had been counted out because of the supposed political effects of John Kennedy's assassination and Lyndon Johnson's accession to the White House. He had been counted out as he campaigned about the country seeming to hate every minute of it and, entirely too often, shooting from the lip. He had been counted out as the polls showed his popularity dipping drastically. And he had been counted out after his loss in the New Hampshire primary.

Yet as of last week, Goldwater was clearly the man to beat in San Francisco come July.

This was what top Republicans finally realized, having taken out their pencils and started totting up the only thing that really counts at a convention. It took them quite a while to get around to the tallying process, but there were several reasons for the delay:

AP

GOLDWATER & PHOENIX AUTOGRAPH SEEKERS
Pointing toward the first ballot.

▶ There was the national preoccupation with primaries, which usually make more headlines than delegates. All Goldwater actually lost in New Hampshire was 14 delegates, a mere handful. When he won in Illinois, there were ohs and ahs about the size of the vote for Maine's Senator Margaret Chase Smith, about the write-ins for Henry Cabot Lodge and Richard Nixon. Yet it was Goldwater who gathered up at least 47 delegates. Last week in Massachusetts, Native Son Lodge amassed a 69,000-vote write-in, against only 9,000 for Runner-Up Goldwater. In Pennsylvania, Governor William Scranton piled up some 225,000 write-ins to break the record of 183,000 set by Jack Kennedy in 1960. Lodge got an impressive 80,000 in Scranton's home territory, Nixon received 37,000 and Goldwater was a poor fourth with 33,000. All but unnoticed was the fact that Goldwater snatched a few delegates from beneath the noses of the native sons—two or three in Pennsylvania, four or five in Massachusetts.

▶ There was the obsession with polls. For months, surveys have shown Goldwater's stock down with "rank and file" Republicans and with that elusive voter classified as "independent." This week the Gallup poll reported Lodge favored by 37% of Republicans, Nixon by 28%, Goldwater by 14%, Rockefeller by 9% and Scranton by 4%. Such figures have fooled a lot of people into thinking that Goldwater was through. But no pollster has ever nominated a presidential candidate, and Goldwater has been and remains the favorite of G.O.P. professionals—the people who go to conventions.

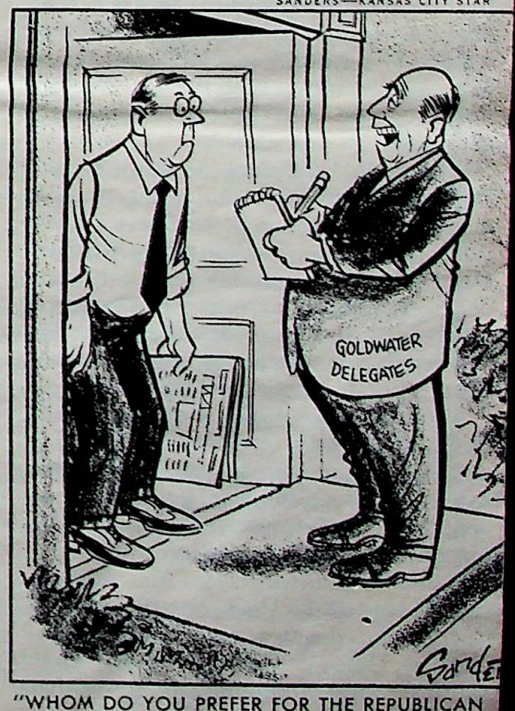
▶ There was the generally muddled Republican situation. With the party's highest prize up for grabs, the G.O.P. presidential contest should have been a rousing, issue-sharpening affair. Instead, it has turned out to be a thumping bore. Then President Johnson's rising popularity seemed to make the whole show academic. Ironically, Goldwater gained strength from his party's defeatist attitude. Since no Republican had a chance against Johnson anyhow, the argument went, why not let the party's conservative wing have the nomination it has been demanding for so long?

Thus, slowly but steadily, Goldwater kept collecting delegates while the unavoweds and the disavoweds collected press clippings. The success of his efforts was dramatically disclosed in a secret survey just completed by a group of the G.O.P.'s most experienced professionals. The canvass, based on conversations with state and county Republican leaders over a national telephone network, was deliberately cautious: wherever a delegate's loyalty was in doubt, his vote was not counted in Goldwater's column. The poll's projections, state by state:

Alabama, all 20 delegates for Goldwater; Arizona, all 16; Arkansas, 11 of 12; Florida, 32 of 34; Georgia, all 24; Idaho, 12 of 14; Illinois, 47 of 58; Indiana, all 32; Iowa, 10 of 24; Kansas, 15 of 20; Louisiana, all 20; Maryland, 15 of 20; Minnesota, 11 of 26; Mississippi, all 13; Missouri, 20 of 24; Montana, all 14; Nebraska, all 16; Nevada, all 6; New Mexico, 10 of 14; North Carolina, 20 of 26; North Dakota, 6 of 14; Oklahoma, all 22; South Carolina, all 16; South Dakota, all 14; Tennessee, 20 of 28; Texas, all 56; Utah, all 14; Virginia, 26 of 30; Wyoming, all 12.

Feeling Chipper. These alone would give Goldwater 550 first-ballot votes of the 655 he needs for nomination. But

SANDERS—KANSAS CITY STAR



"WHOM DO YOU PREFER FOR THE REPUBLICAN NOMINATION . . . NOT THAT IT MAKES A GREAT DEAL OF DIFFERENCE."

ROCKEFELLER & OREGON'S CAVEMEN
The woodpecker vote isn't much either.

Goldwater also has impressive reserve strength in some of the states presently planning to support favorite sons on the first ballot. Among these are Ohio with 58 delegates, Michigan with 48, Wisconsin with 30, Kentucky with 24, Colorado with 18 and Maine with 14. Colorado, for example, has Senator Gordon Allott as its favorite son. But there is strong Goldwater sentiment in Colorado and Allott can probably swing most of the delegation to Barry whenever he wishes.

These facts and figures have left the Goldwater forces feeling understandably chipper. Realizing that Barry could still blurt out some remark that would hurt his cause, they plan from now on to keep him pretty much off the stump, concentrate instead on a series of filmed, edited, nationwide television appearances. And already they are talking about a possible running mate for Goldwater. The most logical choice: Scranton, whose state, with its 29 electoral votes, would be vital to a successful campaign.

But such confident Goldwater talk fails to take into account what could be a real stumbling block to Barry's ambitions: the June 2 California primary. Goldwater has already virtually conceded the May 15 Oregon primary, and a loss there figures to do little more than further flaw his image as a popular vote getter. But California is different.

Time to Combine. For one thing, Goldwater badly wants the state's 86 delegate votes, which might put him over the top at the San Francisco convention. For another, Goldwater has placed his political prestige squarely on the line in California, to the point of saying that if he does not win in California, he doesn't deserve the nomination. Thus, a California loss might cause second thoughts in the minds of some delegates who presently favor Goldwater.

California's is a winner-take-all primary between Goldwater and Rockefeller, with no other candidates entered and no write-in votes counted. With the stakes involved, it would seem good political sense for all anti-Goldwater forces to combine behind Rocky in an effort to head Barry off. But so far only the Lodge camp has made a tentative offer of cooperation, and little has come even of that.

It goes without saying that a lot can happen in the two months before the Republican convention. But as far as a stop-Goldwater movement is concerned, the best place for something to happen would certainly be in California. If it doesn't, then the Republican presidential race may be all over except for the convention shouting of "The Man Who. . . ."

Oregon Roundup

Here it was, just two weeks before the Oregon presidential primary, and the only Republican candidate still in there personally swinging was Nelson Rockefeller.

Rocky delivered a speech in Portland and drew an enthusiastic crowd of 2,000. When he got to Grants Pass (pop. 10,000), a bunch of characters wearing animal skins descended and made him a member of the Oregon Cavemen, a local society that quadrennially pops up to embarrass presidential candidates by making them look like idiots in photographs. In Albany (pop. 13,000), several colorfully clad "Princesses" belonging to the Timber Carnival and some red-suited gents ceremoniously made Rocky an honorary Woodpecker.

Alas, neither woodpeckers nor cavemen swing much weight, votewise, in Oregon. And the latest Portland Oregonian poll, even while showing Rocky up by three points, still gave him only 21%. Barry Goldwater looked worse than before (from 14% to 12%), and had all but kissed Oregon off. Even so, Field Director Steve Shadegg brought Goldwater Sons Barry Jr. and Mike to let for a campaign swing, and insisted the garden "right now, Goldwater has 25% of the ganized vote in Oregon, and maybe more. Winvestm need about 20,000 votes more to win nor the I wouldn't be surprised if we'd pick the inc them up. Anybody who writes off Goldwater is nuts." As for Dick Nixon, But Oregon friends professed an uncongry tel mon amount of cheer over a telegram In New that was, if nothing else, cautiously can So worded. "I shall look forward to working with you in the final campaign," Nixon wired, "in whatever role our colears, y vention decides I can best serve the chairm cause."

That left the fellow whom the Portland Journal sniffed at and called "the Mail-Order Bride." According to the Oregonian's poll, Ambassador Henry Cabot Lodge still led the field with 40% of the vote. Lodge's Oregon campaign chief, David Goldberg, sent out a broadside promotion mailer to 353,000 Republicans, and within a week got back 22,000 pledge cards. "That's already better percentage than we had in New Hampshire," he said happily. Thus, bring a last-minute surge on someone's part, it still looked as if Oregon were about to hand its primary to Lodge.

THE PRESIDENCY

Another One of Those Weeks

What with wooing and wowing businessmen, preaching to preachers, ringing in Oscar Wilde as a press critic stamping on poverty, playing proud papa to a queen, and pulling his dogs' ears, Lyndon Johnson had another wingding week.

The only sore spot came in the Rose Garden. The President gave the White House beagles, Him and Her, some candy-coated vitamin pills, then lifted the dogs up onto their haunches to pulling their ears and noted their yapping with apparent pleasure. "It's good for them," he said. "It does them good

THE PRESIDENT & THE BEAGLES
Their ears were the only sore spot.

Digitized by Arya Samaj Foundation Chennai and eGangotri

to let them bark." Assembled in the garden was a 13-man task force organized to promote increased foreign investment in the U.S. Neither they nor the President thought much about the incident.

But dog lovers howled in disagreement, flooded the White House with angry telegrams, letters and phone calls. In New York, an official of the American Society for the Prevention of Cruelty to Animals said knowledgeably, "If somebody picked you up by the ears, you'd yelp too." In London, the chairman of the League Against Cruel Sports snapped, "This is a most extraordinary way to treat a dog." In Charleston, W. Va., a dog catcher said to a reporter, "The President did that? You're kidding. If he were in Charleston, I'd run him in." But beagle experts came to Johnson's rescue, said that it was indeed common practice in hunt country to tug the dogs' ears to be sure they are in good voice.

Wish for the Whatnots. The President was at his crowd-pleasing best when he spoke to the U.S. Chamber of Commerce in Washington's Constitution Hall. He loosed a flock of his favorite yarns (*see box*), and got a warm reception even while needling the businessmen: "All of you feel sorry for yourselves now—all of you have a martyr complex, and all of you think you are mistreated." Ticking off his Administration's economic accomplishments, he cried: "I came here this morning because I want you to be a part of this Administration, of this Government, whether you are Democrats, Republicans or whatnots."

Once warmed up, the President put on a display of oratorical gestures that would have made William Jennings Bryan look like a cigar-store Indian. His arms worked like pistons; he pointed up, down and into the audience; he

LYNDON'S FABLES

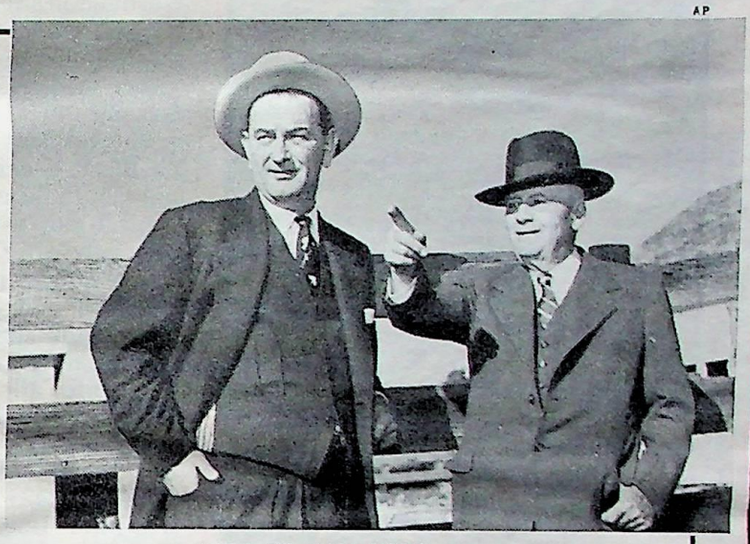
Lyndon Johnson is the hardest-working presidential tale spinner since Abraham Lincoln. Some of his yarns are long and tangled and full of Johnson's long-winded Texas syntax. Some are funny, some are pithy, and as often as not they are used to draw an Aesopian moral or to make a contemporary point. Some examples:

The Game is the Same. "Twenty-seven years ago this month, I came here as a newly elected Congressman. Washington has changed very little since then. Not long ago I called in one of the very bright and very busy young men I have working with me, and I said to him, rather brusquely, because I was in a hurry, 'The people want to know what we are going to do about the farm bill. Let's get our recommendations up right away.' He came right back and said, 'Mr. President, I don't think we have to consider that. I don't have a file on it. I will look it up, but I think you ought to go tell them if we owe it, we will pay it.' "

The Drunk and the Courthouse. When Johnson gets excuses about why something cannot be done, he often tells of "a fellow down in Blanco County who wanted to find the courthouse. He asked the town drunk, who lurched up to the car and began to give directions. 'You go down to the creek, take the first right past the bridge, then go left—no, you can't get to the courthouse that way.' He tried again. 'Let's see, you go on up to the top of the hill, turn left at the cedar grove and cross the bridge—no, you can't get to the courthouse that way either.' After a couple of more stabs at it, the drunk gave up, looked at the other fellow and said, 'You just can't get to the courthouse from here.' "

The Case of the Sleepy Parishioner. "The goal of my Administration is to work for a greater society. I have come here today to ask your help in that work. I don't want you to answer me like the man who slept through the preacher's sermon down in my hill country. Every Sunday he would come and get in the front row and sleep all during the sermon. Finally the preacher got a little irritated, and one Sunday he said, 'All you people'—the fellow was snoring in the front row—he said in a low voice, 'All you people who want to go to heaven, please rise.' Everyone stood up except the man that was asleep. When they sat down, the preacher said in a very loud voice that was calculated to arouse him, 'All of you men that want to go to hell, please stand up.' The man jumped up. He looked around in back of him, he looked at his wife, and she was sitting down. He looked at his grandmother and she was sitting down, at his children and they were sitting down. He looked at the preacher somewhat frustrated and he said, 'Preacher, I don't know what it is we are voting on, but you and I seem to be the only two for it.' "

AP



WITH MR. SAM (1954)

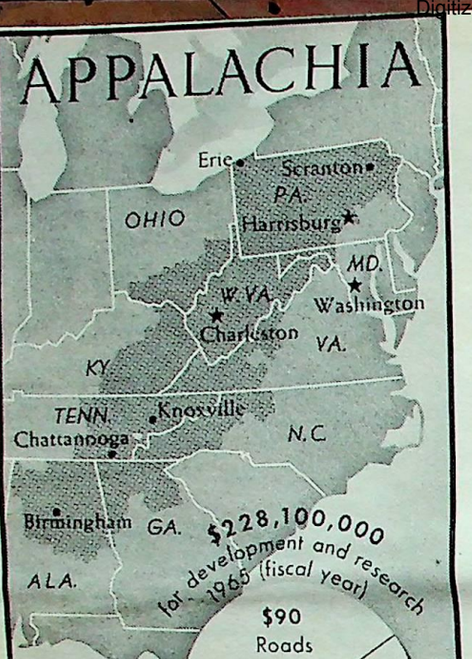
Mr. Sam, The Answer Man. "I was confident that the railroad men [negotiating the settlement] know more about the railroad business than I do. Back in the war, I remember when some people came to Mr. Sam Rayburn and asked if he didn't want to go down to Oak Ridge and inspect the place where they were making the atomic bomb. And he said to General George Marshall, 'I am not a physicist. That is not my business, and I would not know any more about how to win a war after I went to Oak Ridge than I did before I came.' And he said, 'If you don't know how to win a war any more than I do, we sure as hell have wasted a lot of money on West Point all these years.' "

The Uneaten Meal. "I was an NRA director back in the early days of the Roosevelt Administration in 1935 when we were taking kids out of boxcars who were riding the rails. We saw them getting their breakfast by culling grapefruit rinds that had been thrown in the garbage can. I knew a lot of social workers during those days, and I still do. One of the finest women that I ever knew, a social worker, told me that she had called on a family at mealtime not long ago. She told me the surroundings were meager. During the mealtime, she noticed one of the many small children was not eating. When she asked the child why, the answer was, 'It is not my day to eat.' "

The Heckler's Rebuke. "Al Smith was addressing a crowd when a heckler yelled, 'Tell 'em what's on your mind, Al. It won't take long.' Smith grinned, pointed at the man and shouted, 'Stand up, pardner, and I'll tell 'em what's on both our minds. It won't take any longer.' "

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



rocked his body back and forth—once leaning so far forward between the microphones that the public-address system lost his voice. He spoke of patriotism, looked around for Old Glory, couldn't locate it, and went on in pantomime, holding high and waving an imaginary flag standard. Repeatedly, he used a sort of breast-stroke-like gesture that has come to be known to newsmen as "parting the waters."

The Poverty Pitch. Applying profit-and-loss logic along with his hand- and flag-waving, Johnson implored the businessmen to join his war on poverty: "The poverty of other people is already a mounting burden. How much? You are now paying $4 billion a year for public assistance. You are now paying $8 billion a year for police and health and fire departments. The costs are high, and they are going higher and higher. Unless you attack the causes of poverty itself, you are going to be shoveling it out to the tax eaters instead of producing and training taxpayers."

Turning talk into deed, the President sent to Congress a proposal—marked urgent—to spend $228 million to help the troubled Appalachia area, which covers sections of ten states, includes 165,000 sq. mi. and 15 million people (*see map*). The biggest portion of the money would go for highway construction, the rest for flood control and water projects, plus development of new coal-mining techniques, better timber production, and conversion of poor farm land to more profitable pasture land. Pennsylvania's Republican Governor William Scranton had called earlier at the White House with some new recommendations about reclaiming mining areas, gave what Johnson called "a persuasive argument," and sold the President on adding a last-minute $10 million to the program.

Forever & Ever. Next day Johnson greeted religious leaders who had come to Washington to lobby and pray for the civil rights bill. Said the President to the preachers: "It is your job as prophets in our time to direct the immense power of religion in shaping the conduct and thoughts of men toward their brothers in a manner consistent with compassion and love. So help us in this hour." Some of the clergymen responded with reverent amens.

A group of U.S. historians, in town for the 175th anniversary of George Washington's inauguration, listened and laughed as Johnson took the opportunity to slice up the reporters on hand. "Since the press is temporarily with us," said the President, "I might explain in the words of Oscar Wilde: 'In America the President reigns for four years and journalism governs forever and ever.' I can assure you that at times, especially after I read the newspapers, I have strong urges to be a writer. In fact, if I may turn the tables, I sometimes think some of my friends in the press need some new writers."

Despite all the action, the White House seemed relatively calm until week's end. Giving just ten minutes' notice, the President charged off to Winchester, Va., 79 miles away, to see Daughter Luci, 16, crowned Shenandoah Apple Blossom Queen XXXVII. Followed by three cars full of Secret Service men and a Greyhound bus carrying 30 reporters, the President's car moved through the countryside at a relatively sedate 55 m.p.h., arrived in time for the coronation.

Luci was pleased when her daddy turned up, since she had held out no great hopes that he would come. Earlier, reporters had asked if her father would attend and Luci neatly summed up the President's whirlwind way of life when she replied: "I don't know. I can't ever tell what he is going to do. He can't either."

PENNSYLVANIA

Cleaning It Up

Pennsylvania Supreme Court Justice Michael Musmanno ungallantly declared that his lady opponent was ignorant. The lady, State Secretary of Internal Affairs Genevieve Blatt, charged that Musmanno was violating professional ethics by running for political office while still on the bench. A third contender, 300-lb. Pittsburgh Politician David Roberts, indignantly complained that everybody else was "mudslinging." In short, it was good old not-so-clean political fun.

Fun, that is, for everybody except Pennsylvania's Democratic Party. All of the name callers were Democratic candidates in last week's voting for the U.S. Senate nomination, and their bitter struggle may keep the party in populous Pennsylvania split for a long while.

three), spoke scornfully if confusedly of "high-kaflutin' " politicians.

"Sleazy Politics." During the campaign, Senator Clark worked hard against Musmanno. A former mayor of Philadelphia, he has little love for the city organization that was controlled for years by Representative Bill Green, who died in December. "Pennsylvania has had enough sleazy politics," cried Clark. "Let's clean it up."

Despite Clark's effort, Musmanno went into last week's election a solid favorite. But he was in for some surprises. Musmanno counted on taking Philadelphia by 100,000 votes and winning a big plurality in Allegheny County. Instead, he left Philly with a relatively thin cushion of 59,000 votes, and in Allegheny, Roberts' 30,000 votes cut deeply into Musmanno's margin, left him with a disappointing 35,000-vote plurality. Beyond the influence of the big-city machines—in the suburbs, among independents and liberals—it was all Gen Blatt. Statewide, Musmanno won only nine of 67 counties. With 6,000 absentee ballots and a handful of districts still to be counted, Gen Blatt led Musmanno by 455,100 votes to 452,000 (Roberts had some 91,000 votes), appeared a certain winner.

MICHIGAN

ightning Strikes Thrice

Some say that Michigan's Republican overnor George Romney is still biding is time while waiting for presidential ightning to strike. Recently, lightning truck three times—but in each case, omney was the political victim, not the enefactor.

First, in a blistering attack on Romey, veteran G.O.P. State Senator Clyde eerlings publicly resigned from the epublican Party. Geerlings, chairman f the senate tax committee, accused omney of supporting the biggest budgt in state history ($633 million), and getting it by twisting the arms of Reublican legislators." Romney, he raged, ad "kicked farmers in the teeth," thrown small business into a tailspin," nd had taken credit for measures assed by the legislature. "I am tired of he front office taking credit for going rom payless paydays to a $60 million urplus. The payless payday, as everyody knows, was a hoax. And the surlus is due to legislation passed in 1962 y a previous Republican legislature and y an expanding Michigan economy." aid Romney when he heard of the iatribe: "This is not the sort of thing expect from someone loyal to the epublican Party."

Second, former State Senator George iggins, another Old Guard Republican, nnounced that he will run against Romey in this year's G.O.P. gubernatorial rimary because "the man who sits in he executive office at Lansing and now alls himself a Republican is an imostor. He used the Republican Party to et himself elected and has abused the epublican Party ever since." Legislators, he said, "know that when I say something, they can depend on it. And that's one of the problems up there in Lansing—they can't depend on anything Romney says."

Third, while Romney was preparing to submit a new U.S. congressional district reapportionment plan that would keep intact the present split of eleven Republicans and eight Democrats, his Democratic Lieut. Governor T. John Lesinski sandbagged him. Lesinski came up with a plan of his own—which would probably give Democrats at least one additional seat in Congress—and slipped the scheme through the state senate with the cooperation of ten conservative Republicans who had fallen out with Romney. This, complained Senate Majority Leader Stanley Thayer, a Romney loyalist, was a "secret diabolical move." Fuming with anger, Romney accused the dissident Republicans of a sellout, but ironically, he may have to sign the bill into law if it passes the lower house. If he does not sign it, Michigan in all likelihood will have to elect its congressional representatives at large. And if that should happen, there is the possibility that Democrats would take even more seats than in a district-by-district vote.

CALIFORNIA

No Kidding

Before he entered Doctors Hospital in Washington two weeks ago for his second major brain operation in eight months, California's Democratic Senator Clair Engle prepared two statements for the press. The first said that he was still a candidate for renomination to the Senate in his state's June 2 primary. The second announced that he was quitting the campaign because of his health.

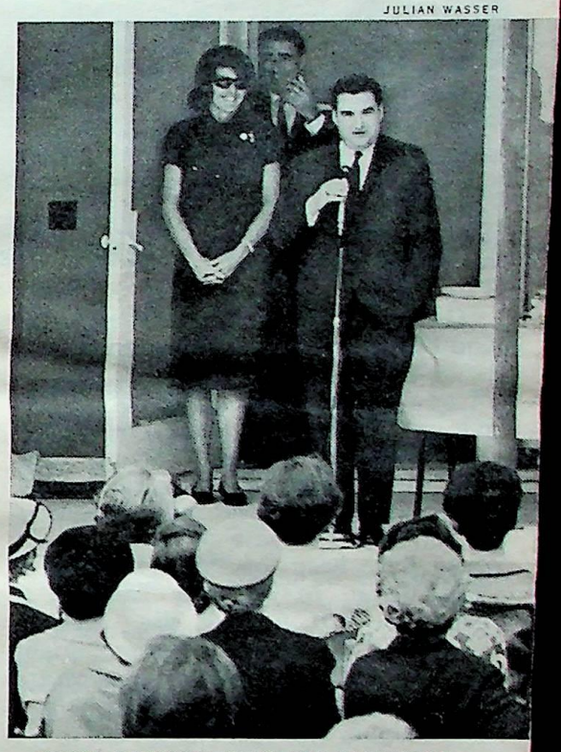
There was never much doubt about which statement would be released. Since August, Engle, 52, had not made a single speech in the Senate. Last month, when he rose at his desk to introduce a bill, he was able to utter only the monosyllable, "A. . .," before he lapsed into agonizing silence. Through it all, he clung to the hope that he could still run. But last week, after the results of his second craniotomy were in, Engle sent a telegram to his California headquarters advising, "It is with deep grief that I now ask my state campaign chairman, Tom Carrell, to release the second statement."

Slow Down. Engle's withdrawal left no fewer than eleven Democrats in the race for the Senate nomination, but only two of them matter. One is State Controller Alan Cranston, 49, a tense, balding liberal who spews out words so swiftly that his aides write marginal notes in his speeches advising him, "Take it easy. Slow it down." The other is portly Pierre Salinger, 38, who quit as White House press secretary in March and filed as a candidate just two hours before the deadline.

Having started last, Salinger is running hardest of all. At first, people had trouble taking him seriously. He had, after all, once taken a fully clad dip in Bobby Kennedy's Hickory Hill pool, and he was always doing things like holding press conferences in Bermuda shorts or showing up for tennis at the Newport Casino clothed in gorgeous hues of canary yellow and powder blue instead of the traditional white. Even when he quit gagging, his audience sometimes kept on laughing. Once, after his usual quota of jokes, he told his listeners that he wanted to discuss education in a serious, nonpolitical vein. The audience roared, and Pierre later wondered exasperatedly, "What was so funny about that?"

"Doll Baby, Let's Go." But Salinger has since made it clear that he is not just kidding around, now impresses audiences with his grasp of California

JULIAN WASSER



PIERRE SALINGER WITH THE LAWFORDS
"What's so funny?"

problems. He works 18-hour days, often gets by on five hours of sleep, has dropped 13 lbs. to 190 in five weeks.

Hastily assembled, Salinger's campaign crew committed such initial mistakes as printing leaflets and posters with his name misspelled SALLINGER, but it is now functioning with considerable precision. Some 10,000 people are working for him across the state, including a galaxy of Hollywood stars and starlets. A squad of six shapely coeds called "Sweethearts for Salinger," clad in white sailor shifts and red, white and blue berets, has been formed to pass out pink champagne and campaign propaganda at Salinger rallies.

Last week the first of a series of "Parties for Pierre" was held at the orange-roofed ocean-front home of Salinger's campaign co-chairman, Pat Kennedy Lawford. The "Sweethearts" wandered around distributing bumper stickers reading I'M FOR PIERRE, and heart-shaped red balloons inscribed P.S. I LOVE YOU, in addition to the finger

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sandwiches. When the speechmaking was over, ladies clustered excitedly around Pierre, and he only broke away when a female aide whispered, "Doll baby, it's getting late on the campaign trail. Let's go."

The Late Show. Pierre is going strong, but Alan Cranston may prove a tough man to beat. Cranston has Governor Pat Brown, the 70,000-member California Democratic Council and organized labor behind him. He is expected to pick up more votes among Engle supporters than is Salinger. And he is a strong vote getter who won his job in 1962 by a 1,300,000-vote majority.

But Salinger has the covert support of State Assembly Speaker Jesse ("Big Daddy") Unruh, perhaps the ablest politician in the state. Salinger's past association with Jack Kennedy is doing him no harm. He is slowly overcoming his image as a "carpetbagger" who was born in San Francisco but had not lived in California for seven years (he was a Virginia resident when he jumped into the Senate race). Occasionally, however, when the brass bands strike up *California Here I Come* or *P.S. I Love You,* a comic in the crowd suggests a rendition of *Carry Me Back to Old Virginny*.

On the Republican side, retired Song-and-Dance Man George Murphy, 61, is considered the front runner, but as of now is given little chance of defeating either Salinger or Cranston in November. Still, Murphy goes over big with middle-aged matrons, gets good laughs when he tells audiences, "They say I'm just an actor. Well, there have been lots of bad actors in Washington. Maybe they can use a good one." If nothing else, Murphy is getting plenty of exposure: right now some 20 old Murphy movies are making the rounds on television's late-show circuit.

TEXAS

Trying for the Truth of It

Jack Ruby's main chance of escaping the electric chair lies in being found insane. Last week he was certainly trying to act like a madman.

During a predawn card game with a guard in his Dallas County jail cell, Ruby asked for a glass of water and, when left alone, charged headfirst into a plaster cell wall. He suffered only a two-inch cut and a knot on his skull; moments later, guards found him trying to rip his white jail uniform into strips —presumably to fashion a noose.

Later that day, Dr. Louis J. West, a University of Oklahoma psychiatrist, interviewed Ruby for an hour, found him full of obsessions. Ruby had crashed into the wall, said West, in an effort to "end it all." His reason: "Last night the patient became convinced that all the Jews in America were being slaughtered. This was in retaliation against him, the Jew responsible for 'all the trouble.' " The psychiatrist said that Ruby also believed he had recently watched while his own brother was tortured and incinerated in the street outside the jail and that the screams still echoed in his ears. "Once or twice," said West, "the patient seemed about to attack me."

Later in the week, Dallas Judge Joe B. Brown, who presided at Ruby's trial, flatly rejected defense attorneys' request for a new trial based on their claim of 203 errors in Brown's handling of the proceedings. The defense, now led by Texas University Law Professor Hubert W. Smith, who replaced bellowing Melvin Belli, said it would submit a motion for a new trial to the Texas Court of Criminal Appeals within six months.

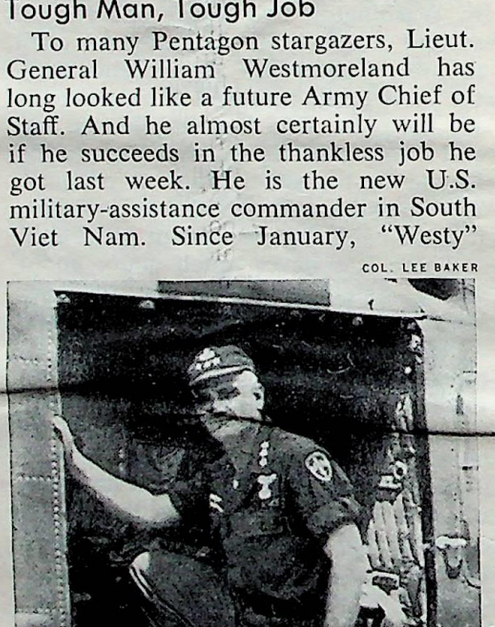
But there was still the question of a defense request for a sanity hearing for Ruby, and Judge Brown seemed more sympathetic toward that. After he had heard Dr. West's report, Brown said: "I would like some real disinterested doctors to examine Ruby for my own benefit. I want to get the truth of it. If the man is insane he should not be executed. If he is sane, he should be amenable to the law." Later Brown assigned Dallas Psychiatrist Robert L. Stubblefield, who had found Major General Edwin Walker mentally competent after the Oxford, Miss. riots, to test Ruby's sanity.

ARMED FORCES

Tough Man, Tough Job

To many Pentagon stargazers, Lieut. General William Westmoreland has long looked like a future Army Chief of Staff. And he almost certainly will be if he succeeds in the thankless job he got last week. He is the new U.S. military-assistance commander in South Viet Nam. Since January, "Westy"

COL. LEE BAKER



GENERAL WESTMORELAND
An end to the drifting.

Westmoreland, 50, had been deputy General Paul Harkins, who, after experiences, must look forward to tirement Aug. 1.

Where most of Harkins' army ca was spent in administrative jobs, W moreland is an elite combat officer South Carolina native, he attended Citadel for a year, switched to W Point and graduated in 1936. W moreland was first captain during senior year, Sunday-school teacher the faculty children, and appare something of a ladies' man. His cheek bore a scar from a boyhood a mobile accident, but Westmoreland not discourage the idea among local girls that he acquired the wo in a duel.

Westmoreland commanded an a lery battalion in the 1942 invasion North Africa, fought in Tunisia Sicily. On D-day he landed on t beach as executive officer of the Infantry Division. After the war served as chief of staff of the 82nd Airborne Division, led airb troops in the Korean war, at 4 came the youngest major gener the Army, commanded the 101st borne Division, served as superinte ent of West Point.

In South Viet Nam as Harkins' d uty, Westmoreland works seven day week, gets out into the field at le twice a week. Two weeks ago, he w fired on by snipers. His ability to huge amounts of work out of his s has come to be known as "the W moreland Stretch." There are those think that the job of U.S. comman in South Viet Nam is an impossi one. It may be, under the present r But there are also those who think Westmoreland is one man who achieve the impossible. Says one Army Deputy Chief of Staff Ja Gavin: "Now things are going to settled one way or the other in Nam; Westy won't let things drift ab He won't mope around about it."

In the Ready Room

In another key military shift, ident Johnson last week named Ge John P. McConnell, 56, to be Air F vice chief of staff on July 31, repla retiring General William F. M A West Pointer ('32) who got his at Randolph Field in 1933, McCo served in the Far East in World W was vice chief of staff at SAC, is rently deputy commander of the pean Command.

McConnell's new assignment put in line for the top Air Force job Chief of Staff Curtis LeMay retir February. That prospect disposes mors that LeMay's successor w General Bernard Schriever (TIME er, April 1, 1957), boss of the Air Systems Command and pioneer in ballistic missiles development possibility for Schriever: comma SAC, now in the hands of Ge Thomas Power, who plans to ret November.

COMMUNISTS

Fathers & Sons

There was a sense of *déjà vu* about the whole affair—an uncanny, paramnesic feeling that all of this had happened before. And of course it had. Half a million Muscovites filled Red Square with song and holiday color, as usual. Through the balmy spring weather rumbled the same long lines of tanks and rocket launchers, as usual. Defense Minister Rodion Malinovsky delivered his usual threats of rocket-borne retaliation against any imperialist aggressor. From high on the façade of the Moscow Hotel, the usual giant portrait of Nikita Khrushchev eyeballed the crowd, and—as usual—the man himself, surrounded by the same Presidium, waved his Homburg in the middle of the line-up atop Lenin's tomb.

The Presidium was, of course, older: it now averages 62, a fairly advanced age for a group that claims to represent the world's future. (Communist China's Politburo is even more decrepit: its average age is 65.) Former Member of the Secretariat Frol Kozlov, 55, was not on hand; the severe stroke he suffered last spring had dropped him from the front rank. Theoretician Mikhail Suslov, 61, the victim of a kidney or liver ailment late last year, was back at the stand, invigorated, no doubt, by the heady air he had whipped up with his ideological attack on Peking last month. Khrushchev himself, at 70, appeared in fine settle, although his own health problems have lately forced him to ease up on meat in favor of cabbage. He sounded only mildly carnivorous later in the day, warning that U.S. reconnaissance flights over Cuba might have "disastrous consequences."

For the first time since World War I, there were no Red Chinese officially on hand to witness the May Day parade. At the last minute, Russia had withdrawn its invitation to the delegation of Chinese workers who had come to Moscow especially for the occasion.

Rumanian Revolt. But if the Chinese were *non grata* in Moscow, there was at least one Eastern European Communist capital where Peking was still welcome. In Bucharest, Rumanian Party Boss Gheorghe Gheorghiu-Dej, 62, went out of his way to include Mao Tse-tung in his May Day message of greeting. In the Red world, it was a significant gesture, and every Communist from Auckland to Zanzibar took note of it. For Dej is playing a double game in the Sino-Soviet conflict, one that could lead to plenty of trouble—or perhaps to a certain amount of freedom.

Before the Chinese attack on Moscow last month, Dej had sent a delegation headed by Premier Ion Maurer to Peking to plead for an end to the polemics. Dej was afraid that any worsening of the split would force Khrushchev to tighten his grip on the Eastern European satellites, and Rumania was doing well without any more help from Nikita. Rumania boasts the highest industrial growth rate in Europe, a phenomenal 15%, and has achieved that growth by defying Moscow. The original role Khrushchev had charted for Rumania under its Comecon plan—the Red version of the Common Market—was that of an agricultural exporter and supplier of oil and petrochemicals. Dej refused to accept this "dumb-peasant" role, struck out on his own three years ago to do as much business with the West as possible.

Since then, Rumanians have imported or contracted for some $400 million in industrial installations from the West. In 1960, when the Rumanian Galati (pronounced Galatz) steel combine was formed, Russia grandly offered its help. But Rumania turned elsewhere, and the $42 million contract for the combine's rolling mill went to a British-French group. The Ploesti oilfields, today producing more than in the best prewar years, are studded with Western-built plants, which produce everything from automobile tires to women's stockings, and Rumania's petrochemical industry is booming.

A Heartfelt Call. But if greying, brush-browed Boss Dej is willing to trade with the West, he is loath to accept any of its political ideals. Few Communist countries have a tougher, more hawk-eyed police force than Rumania. Unlike Budapest, Warsaw, Prague, and even East Berlin, Bucharest is a city without political cabarets or satirical magazines. There is no discernible ferment among the literati, and even the young people are afraid to wear the zoot-suit *stilyagi* clothes popular elsewhere in Eastern Europe.† Party Boss Dej, a strong-handed ex-railroad worker, keeps as tight a grip on the throttle as any old-time Stalinist could have a decade ago.

Last week Dej continued his struggle to stay clear of Moscow's grasp in the fight with China. The Rumanian Workers' Party newspaper, Scînteia (Spark), published a 10,000-word statement summarizing Rumania's efforts to mediate in the dispute between Moscow and Peking. It also addressed "a heartfelt call" for a cessation of the fight—indicating that Rumania would not take sides in the dispute, but preferred the "polycentrist" approach of independent Communist parties, most strongly proposed by the Italian Reds. Said the statement: "There does not and cannot exist a parent party and a son party, parties that are superior and parties that are subordinate." And as for Comecon, the Rumanians were still playing the maverick. The statement proclaimed that any Communist state should have the right to develop economic links "with all states, regardless of their social system."

AP

GRANDFATHER & FAMILY STROLLING ON MAY DAY*

Paramnesic and only mildly carnivorous.

* Ivan Adzhubei, child of Khrushchev's daughter, Rada, and Izvestia Editor Aleksei Adzhubei; Big Nikita; Little Nikita, child of Khrushchev's son, Sergei, and Daughter-in-Law Galina (right).

† By contrast, in Prague's Kinsky Park 3,000 students who had gathered for a poetry reading turned May Day into a melee, chanting antigovernment slogans and "Down with the Gestapo" when Czech Boss Antonin Novotny's cops charged in with clubs and dogs.

THE NETHERLANDS

The Troubled Orange Family

Queen Juliana of The Netherlands and her consort, Prince Bernhard, last week watched their daughter, Princess Irene, get married. But they watched from a distance of 800 miles and over television in a room at Warmelo palace, near Amsterdam.

The TV power failed at 12:15 p.m., but there had been time to see Princess Irene become the bride of Prince Hugo Carlos de Borbón y Parma, and fortunately, the Dutch royal family was spared the spectacle outside Rome's Santa Maria Maggiore that looked more like a political rally than wedding festivities. The crowd rang with Carlist* battle cries of *"Vivan los reyes!"*, and students from Spain's Loyola College, in the heart of Carlist country, serenaded the pair with guitars, tambourines and castanets. Irene's father-in-law, Prince Xavier de Borbón y Parma, as gaunt and straight-backed as an El Greco grandee, arranged a brief interview with Pope Paul VI, who gave the newlyweds his personal blessing and their first wedding present—a crucifix. No reigning monarchs attended the wedding, but the guests included such ghost royalty as Austria's ex-Empress Zita and Portugal's Duke of Braganza. Emotionally the Roman weekly L'Espresso addressed an open letter to Irene telling her "you are like a lamb caught in a den of tigers."

Petty Game. Dutch opinion, though in less perfervid language, essentially agreed that the princess was letting herself be used by the Carlists for their own purpose, however absurd, of gaining the Spanish throne. To a lot of people outside Holland, this petty political game—and the government's anxious insistence that the Dutch monarchy must stay out of it—did not seem reason enough for Irene's own parents to boycott the wedding. But under the Dutch constitution the government is held responsible for the monarch's actions. Besides, Holland maintains a sometimes precarious balance between its Protestant and Catholic citizens, was thus bound to take the issue seriously.

The Dutch were upset by the entire tragicomedy of errors, from their belated discovery that Irene had been converted to Roman Catholicism and become engaged, through the Queen's radio announcement that the engagement had been broken, which then had to be retracted, down to the arrival in The Netherlands of the flamboyant Bourbon-Parmas with their preposterous suggestion that the Roman Catholic wedding take place in a Dutch Protestant church. All this made the Dutch, who have a cozy, middle-class relationship with their monarchy, feel a sense of family embarrassment at the dissension in the House of Orange.

Muddled Queen. Most Dutch people now feel that Irene was too headstrong, but that the Queen could have prevented a lot of the trouble if she had been tough a little earlier in the day. Juliana was brought up under the domineering thumb of her mother, the great Wilhelmina, and was determined that her own daughters should have a happier childhood. Crown Princess Beatrix received a good education with a stress on her coming constitutional role, but the three other girls were scarcely trained as princesses and had wide freedom. A friend of the royal family recalls, "Sometimes weeks would go by when the Queen had no idea what Irene was doing."

ITALY'S NEWS

IRENE & PRINCE AT WEDDING
A lamb in the tigers' den?

Juliana herself is a somewhat uncertain and muddled Queen, always late for appointments because she gets too involved in whatever she is doing. In the 1950s, she fell under the influence of a faith healer named Greet Hofmans. Juliana had long felt a personal guilt for the near blindness of her youngest daughter, Christina, an affliction probably caused by an attack of measles during the Queen's pregnancy. Hofmans claimed she could cure Christina, and Juliana soon depended on her for spiritual and political advice as well. It was Prince Bernhard who got rid of the faith healer. While Dutch papers remained loyally silent, Bernhard leaked the story to the foreign press, and the resulting uproar brought the Queen and government into direct conflict. As a result, Greet Hofmans moved out of the palace and now lives in an old-fashioned wooden trailer on the estate of a Dutch banker.

Active Member. The Queen calls Prince "Bernilo," and he calls "Julie." He is as slim and debonair she is shy and plump. At 52, he has since overcome the handicap of b German by birth, is one of the bu men in the kingdom, sits as an ac member of the boards of Royal Fok Aircraft, Royal Netherlands steelwo and KLM (in the interest of fairn he serves only on the board of com nies that have no Dutch competito Not only is he his nation's most effec representative abroad, but he also p vides the authority and humor Queen lacks. In the case of Irene, backed the view of the Queen the government that, given the C ist political complications, the wedd must take place without official fan sanction.

With the embattled wedding fin over and Irene formally ruled out the line of succession by Parliame attention turned to Beatrix, who a is already surer of herself than Ju ever was. Particularly close to he ther, "Trix" shares his spontaneou joyment of life. Once, when christe a new ship, she drenched the assem dignitaries with champagne, and laughter at the sight was heard throu out the country on TV. Her only parent major problem is getting ma ried. The government would dearly l to break the habit of finding royal co sorts among the Protestant Germ aristocracy. But suitable Protest princes, German or otherwise, are h to find nowadays. The remaining dau ter, pretty, 21-year-old Princess M griet, shares her mother's stoutness, her hairdos have a lamentable tende to come down about her ears.

Rinse & Set. While Irene and her husband were honeymooning in I Juliana received the good wishes of people on her 55th birthday. Wea glasses and with a new hair rinse set, she drove along the road in fron the palace in a Chevrolet convert so that the crowds could get a b look. Later, on TV, she told the na a little unconvincingly that her rol Queen and mother had never cla in the matter of Irene's wedding thanked her subjects for "the love have shown our daughter Irene, w we love so much. Difficulties often us realize how much we love some and we know that you hope with us our daughter will find true happi

WEST GERMANY

BERNARD FALL

PRESIDENT HO

as his major-generalcy, was awarded "several medals" and allowed to accumulate $100,000 in "back pay" in Moscow, in addition to cash handouts of $750-$1,000 per month.

VIET NAM

Remember the *Card*!

Although Saigon had been ready for trouble and had taken special precautions against terrorism by the Communist Viet Cong, May Day had come and gone quietly. But at 5 the next morning, the South Vietnamese capital was jolted by a roar from the harbor. There, the 9,800-ton U.S. aircraft-transport ship *Card* was sinking fast—it touched bottom in just 24 minutes—into the silt of the Saigon River, a 28-ft. by 3-ft. hole ripped in her starboard side. Apparently Viet Cong agents had placed plastic charges on the hull 10 ft. below the water line.

Of 73 crewmen, none was seriously hurt. A World War II baby flattop with seven Nazi U-boats to its credit, the New Orleans-based *Card* had arrived in Saigon with a load of new helicopters, had been scheduled to sail in five hours with a return cargo of bullet-riddled, scrapped "banana" transport choppers. Because of the *Card's* deep draft, her superstructure remained above water, and within hours she was being raised for repairs. While the incident was hardly grave, it gave further evidence of growing Viet Cong boldness and the frequent inefficiency of South Vietnamese security measures. Only weeks earlier, American advisers had requested that the dock be better guarded, but received no response. On the evening after the *Card* explosion, eight U.S. servicemen in Saigon were wounded when a terrorist on a bicycle threw a bomb.

In the guerrilla war, the Viet Cong distinguished themselves with one of their grisliest blows. Ambushing a truck convoy transporting twoscore women and children in the central mountains, 150 Communist terrorists shot or stabbed to death six women and five children, wounded 21 other women. Then the Reds mutilated several of the bodies, carving out the victims' hearts and spleens. The government retaliated with less savage successes of its own. Three hundred miles north of Saigon, Rangers overran a Viet Cong ordnance depot, capturing 166 weapons, TNT, and 1,000 detonators. Twenty miles north of the capital, a self-defense corps post even tried a bit of Viet Cong-type cunning. Getting word that the Reds planned to cut the post's barbed-wire fence by night and stage a raid, the corpsmen lay in ambush outside the post. They allowed the Viet Cong to snip through the first layer of wire, then pelted them with hand grenades. The defenders lost one man; but the Viet Cong's 37 attackers were wiped out.

In addition to their U.S. advisers, the government troops stand to receive some additional expert counsel. Last week, in line with U.S. President Johnson's recent call for "more flags" in South Viet Nam, the Philippines were negotiating to dispatch 75 Filipino special-forces troops to Saigon. Many will be veterans of Manila's successful anti-guerrilla campaign against the Communist Huks.

And Meanwhile What's Happening up North?

North Viet Nam has long served with impunity as a base for war and subversion against the rest of Southeast Asia. It is under Hanoi's direction that the Communist Viet Cong wage their guerrilla war in South Viet Nam, aided by men and matériel smuggled from the North down the famed Ho Chi Minh Trail, which is named for North Viet Nam's longtime Red ruler. But despite its aggressive stance, the Red North is beset by serious internal troubles. Last week, amid streamers and red lanterns, wispy-chinned President Ho Chi Minh himself strode into polling station No. 24 in his dismal capital of Hanoi. Officially described as "solid, nimble and in high spirits" despite his 74 years, Ho delivered a speech praising his "free and democratic" regime, then elaborately marked his ballot.

The election was to renew the rubber-stamp National Assembly—which, according to Hanoi, also represents South Viet Nam—and the vote was of course neither free nor democratic. The slate of candidates had been carefully chosen beforehand. But the West, which gets precious little news out of the tightly closed country north of the 17th Parallel, watched the election carefully. The real outcome might not be clear for months, but which candidates were picked, and the margins by which they were allowed to win, might provide clues to the power struggle obviously going on inside North Viet Nam.

Forced Choice. Sorely in need of Russian aid but living next door to Red China, Ho Chi Minh had long managed an agile course between Moscow and Peking. But last year, faced with lining up behind Moscow and signing the nuclear test-ban or following Peking in rejecting it, Ho reluctantly fell in with the Chinese—whereupon the Russians chopped off most of his aid. The decision made Ho's own pro-Chinese faction more aggressive.

The clash between Hanoi's Sinophiles and old-guard pro-Muscovites reached a showdown at a stormy session of the Lao Dong Central Committee last December. The Peking partisans evidently were in control of the meeting—Ho did not even speak. They put out a communiqué denouncing the "rightist ideologies that exist among a number of our cadres," meaning such pro-Moscow Ho Chi Minh followers as Premier Pham Van Dong. During Ho's 23 years at the head of Vietnamese Communism, he has weathered many storms and is such a father figure that he may never be toppled by anything short of death. But "Uncle Ho" is believed to have lost much control over his party and looks increasingly like a figurehead.

Eggshell Candidate. In last week's vote, Ho, standing for re-election to the Assembly, rolled up a Marxist-style 99.92% majority. Finishing close behind him were two top functionaries of North Viet Nam's Communist movement, known as Lao Dong, or Workers'

Party: First Secretary Le Duan, who won 99.83% and Politburo Member Truong Chinh with 99.81%. Duan, 57, and Chinh, 55, are leaders of the party's pro-Peking wing, and their margins are a measure of the growing challenge by the Peking men to Uncle Ho.

But the Peking patron faces a potential pro-Moscow challenger in Ho's old comrade-in-arms, tough little General Vo Nguyên Giap, 51, victor of Dienbienphu, author of a celebrated book on guerrilla warfare that is studied from Havana to Algiers, and military overseer of the war in the South. Recruited largely from the peasantry, Giap's 400,000-man, Russian-equipped army is closer to the people than the party. His 27 divisions, decked out in eggshell-white uniforms with green badges, help build public works, even bake bricks and construct their own barracks. Naturally, the army also has the guns.

Last week came another indication that perhaps the pro-Soviets still had some say: Hanoi mysteriously announced that a "protocol on an exchange of experts" had been signed with Russia, indicating that Moscow might be preparing to resume some aid.

To Cao Bang. North Viet Nam could use it. Thanks to inefficiency and "natural calamities," the rice crop fell to below 5,000,000 tons last year (down from 9,700,000 in 1962), cutting the minimum ration to less than 26 lbs. per person per month. To expand arable land, the regime has ordered the crash-digging of irrigation canals and the migration of 300,000 peasants from the overcrowded Red River Delta, where two-thirds of the 17 million North Vietnamese live.

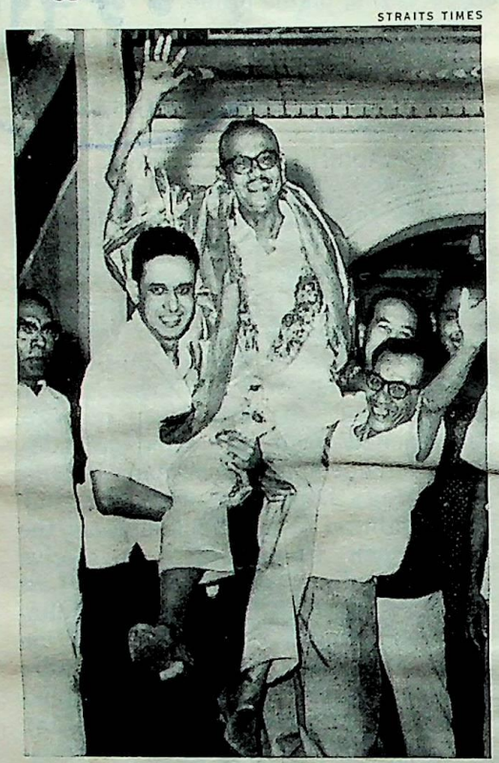
Last week in the Delta, among fields of tender spring-rice shoots, cadres of women peasants—many of whom had never performed farm labor before the Communists took over—hacked at ditches with picks and hoes, hauling off the heavy clay in baskets. To dramatize the pathos of the forced migration, Red River peasants had made up a song:

Carrying a sack of rice, a wife says goodbye to her husband,
And sadly cries: "I love you very much,
You who have to go far to the mountain region
Of Cao Bang."

As for North Viet Nam's rickety industry, even its traditional anthracite production is down. Describing the deadening bureaucracy, a French correspondent reported: "No one in a factory moves as much as a stool without asking the advice of an entire ministry." On Hanoi's broad avenues, which under the French were abustle with Renaults and Citroëns, traffic consists mostly of bicycles and pedicabs, and shop windows are bare. The principal diversions are 5:30 a.m. exercises, reading propaganda posters, and endless indoctrination sessions.

The U.S. last week announced plans to build a 50-kw. Voice of America radio transmitter in South Viet Nam near the 17th Parallel to beam some propaganda of its own into the miserable North. Harassing raids into North Viet Nam by South Vietnamese Rangers, which have been quietly going on for more than a year, are being slightly stepped up; Hanoi itself has announced 14 trials of "spy commandos" since last June, denouncing the "plot of the U.S. imperialists to intensify sabotage against our North." The sabotage, such as it is, is of course not seriously harming the Northern regime or coming even close to blocking the Ho Chi Minh Trail. But it is undeniably making Hanoi nervous and demonstrating just how vulnerable an aggressor North Viet Nam really is.

STRAITS TIMES



TUNKU SHOULDERED BY SUPPORTERS
"To hell with Sukarno."

MALAYSIA

Confrontation at the Polls

"The momentous victory gives us very much courage," said Malaysian Prime Minister Tunku Abdul Rahman. "I pray that God will give us help and shelter from adversity and that Malaysia will continue to flourish and prosper in peace. To hell with Sukarno."

It was quite a post-election statement, but justified in the sense that the big issue at the polls had indeed been Sukarno and his vicious guerrilla and propaganda offensives against the new Federation of Malaysia. In a lively five-week campaign, heated slogans in Malay, English, Tamil and four dialects of Chinese filled the air as candidates ran for most of Malaysia's national Parliament and state assembly seats. Charges flew that politicians were luring women voters with love potions. More serious were charges that some of the parties were playing into the hands of the Indonesians by opposing the Prime Minister's stand against Sukarno.

The Tunku aimed his sharpest shots at the Socialists, alleged that they were cooperating with the Indonesian Communist Party; leftist workers have become increasingly militant since the stoppage of trade by Indonesia caused layoffs. But the Tunku also condemned the right-wing, fanatical Moslem groups, who might be receptive to Indonesian arguments because of their distaste for the multiracial, multireligious character of the federation. Preferring hard for a decisive endorsement, the Tunku exploited every appeal. He offered tidy development funds to strategic regions. Two days before elections, the government published a 64-page white paper charging an Indonesian plot to assassinate the Prime Minister and annex most of Southeast Asia.

Casting their ballots at 3,400 polling stations, voters gave Abdul Rahman's policies landslide approval. His three-party, multiracial Alliance won 89 of 104 seats at stake in the federal Parliament, 241 out of 282 seats in the state assemblies. In Indonesia, Sukarno responded with irritation, blustered that he had "ordered all 21 million volunteers to hold simultaneous roll calls throughout Indonesia to receive a command of action."

GREAT BRITAIN

Jack the Stripper

In the sleazy lower reaches of Soho and Notting Hill, scores of rouged recruits have joined London's army of prostitutes. In hip-tight skirts and needle heels, the tyros wiggle from drinking club to strip joint brazenly soliciting customers. But whenever a man shows interest, the girls identify themselves as policewomen and, flashing photographs of a pinched-looking brunette, inquire with sudden crispness: "Have you seen this woman recently?"

The policewomen are members of a 140-strong task force of bobbies and detectives who are engaged in one of the biggest murder hunts in London history. It started last week when the nude strangled body of brunette Hélène Barthelemy, a stripper turned tart, was found in an alley close to the Thames in Brentford, miles from her Bayswater beat. She was the fourth prostitute to be killed since last November.

Although London's West End streets have been more or less cleared of prostitutes, they still solicit outdoors in many areas, and indoors practically anywhere. Many ply their trade in cars, thus do not remove their clothes. Scotland Yard's Commander George Hatherill appealed to the traditionally hostile demimonde, urged "any prostitute who has been made to strip and has been assaulted" to call Shepherds Bush police station (telephone number: WOO 1113), where, he promised, specially picked officers would arrange to meet any informant "when and where she wishes," without fear of arrest.

"The impact of the appeal has been staggering," said one top cop. "Wom-

What makes it ring?

In 115 countries the answer is ITT.

ITT telephone equipment is manufactured in 25 countries. Over 60 nations use ITT telephone systems and ITT operates telephone companies for 5 others. 115 lands rely on ITT equipment.

You're never very far from an ITT phone.

ITT provides private telephone exchanges. Malaysia's new Parliament Building has one.

Vietnam and Laos also have ITT automatic telephone exchanges, and ITT is installing a complete telephone network in the Philippines. The trunk telephone network between Kuala Lumpur and Singapore was installed by ITT.

Telephone service needs many kinds of skills. ITT has those skills in 173,000 employees, most of whom are citizens of the countries they work in. And ITT educates and trains the people who will operate its equipment, giving them useful skills and their nations a reservoir of technical talent.

The ITT System companies that produce telephone equipment and systems have some of the most famous initials in world telephony, companies such as BTM, Belgium; SEL, Germany; CGCT, France; STC, Great Britain; FACE, Italy.

It takes a lot to make a telephone ring.

ITT has what it takes.

ITT, the world's largest international supplier of electronic and telecommunication equipment.

For information or service, contact your ITT distributor or write: ITT Far East and Pacific, Inc., 24 Des Voeux Road, Central, Hong Kong. World Headquarters: 320 Park Ave., N. Y., N. Y. 10022.

ITT SYSTEM REPRESENTATIVES AND ASSOCIATES:

who would never have dreamed of talking to a policeman are coming all the time." In the first 24 hours alone, more than 120 whores had volunteered information about the murder victims or about male customers of their acquaintance who seemed, in Scotland Yard's words, "odd or eccentric in their association with prostitutes." Said Commander Hatherill: "What has astonished me is the number of women in this profession who have been picked up, stripped in a car, then knocked about—and made no complaint."

The investigation netted one suspect, a 54-year-old janitor who surrendered to police and was charged with killing another prostitute, red-haired Irene Lockwood, whose nude body was found in the Thames last month. The murder scare had another unexpected payoff for police. Fearful that a Jack the Stripper was still at large, whores stayed home by the thousands, cleaning London's sidewalks more effectively than all the vice squads in Britain.

The Ginger Woman

"My vigor, vitality and cheek repel me," she said in one of her rare fits of humility. "I am the kind of woman I would run from." In 84 years of almost constant exercise, Nancy Astor's acerbic tongue and quixotic heart led many to agree with her self-estimate. As Britain's leading feminist, best-known hostess, and fulltime gadfly, she herself was criticized, denounced and derided during much of her life, but all her foes in chorus could not have insulted so many people of high and low station so joyously as Lady Astor.

Among the favorite targets of her Astorisms were fellow politicians, her fellow rich ("The only thing I like about them is their money"), Communists, Socialists, Nazis, Yankees, liquor manufacturers, newspapers (her husband's family owned two), anti-feminists, the cult of the Common Man. It was idealism, not malice, that propelled her bricks and bons mots. She scolded Stalin for "shooting your enemies, and that sort of thing," scorned the late Joe McCarthy to his face, belittled the Vanderbilts as parvenus: "The Astors skinned skunks a century before the Vanderbilts worked ferries."

Down with Duds. In 1919, Virginia-born Nancy Astor became the first woman ever to sit in Britain's House of Commons. She shocked that hallowed chamber by describing her entrance into politics as "this downward career from home to House." Like many another politician, Winston Churchill refused to speak to the female fellow M.P. for several years, explained later that her presence in the traditionally male sanctum made him feel "as if a woman had come into my bathroom and I had only the sponge to defend myself." Retorted Lady Astor: "You are not handsome enough to have worries of that kind." Churchill was the only sparring partner she seldom bested. Once she exclaimed: "If I were your wife, I'd put poison in your coffee." Growled Churchill: "And if I were your husband, I'd drink it."

Returned seven times to Parliament, she described her mission as "gingering up the government." That she did. Of the Labor Party she remarked: "During my 25 years in the House of Commons, the Socialists did nothing but promise the Kingdom of God without praying and the good of this world without working." Voting to oust her old friend, Prime Minister Neville Chamberlain, after Hitler invaded Norway, she explained: "Duds must be got rid of, even if they are one's dearest friends."

Cliveden Chatelaine. One of the five "handsome Miss Langhornes" of Virginia society, Nancy, barely 18, plunged into an unhappy six-year marriage to a drunkard that made her a lifelong crusader for Prohibition. She was 27 and at the height of her beauty when she married Waldorf Astor, whose father, the 1st Viscount and fabulously wealthy great-grandson of John Jacob, had settled in England. For a wedding present, her father-in-law—Nancy called him "Old Moneybags"—presented the couple with several million pounds and Cliveden, a 300-year-old Thames-side estate. Now the home of her eldest son, William, Cliveden hit the headlines in 1963 as the place where Christine Keeler disported with Jack Profumo.

In the '30s Cliveden was in the news for very different reasons. A born hostess, Nancy loved to bring together weekend guests of all nationalities, religions and political convictions. Nonetheless, because the Astors' most frequent visitors included top Tories and the editors of the two Astor newspapers, the London Times and the Observer, the Cliveden set became a sinister synonym for the forces in Britain that believed in making a deal with Hitler. Though actually Prime Minister Chamberlain fervently believed in appeasement with no persuasion from his hostess, Nancy Astor's failure to accept the final futility of his policy caused her to be attacked as godmother of Munich and a Nazi sympathizer.

Resounding Belle. She took the abuse with gallantry and grace. In fact, as she said, "I abhor Hitler and Hitlerism." On one occasion when Hitler's Ambassador, Joachim von Ribbentrop, greeted her with the Nazi salute, she snapped: "Stop that nonsense with me!" During World War II, she ran Cliveden as a 1,600-bed hospital for wounded Canadian soldiers, also assisted her husband in his duties as Lord Mayor of Plymouth, which was savagely bombed. "You can kill us," she challenged the Nazis, "but you can't scare us."

After her retirement from politics in 1945, she described herself as an "extinct volcano"—but it was not quiet for long. Until very recently, Nancy Astor remained her animated, voluble, rapier-tongued but warmhearted self.

When the resounding Virginia belle died last week of the complaints of old age, her lifelong battle for women's rights had long since helped to win her English sisters a valued and creative role in male-dominated Britain; in Parliament alone, 53 women now take their seats as a matter of unquestioned right. Her prowess in that and every other cause she espoused may be gauged by the reaction of another Tory backbencher when she walked into the House of Commons one day with a black eye suffered in a golfing accident. "My word, Nancy!" he marveled. "What must the other bloke be like!"

PARAGUAY

"We Will Show Them"

Ten years ago this week, Army General Alfredo Stroessner seized control of Paraguay in a classic South American palace coup. He is still the landlocked little nation's undisputed *Número Uno*. But no swelling bands or fancy parades will mark the anniversary. Stroessner may hoist a cup of fiery *caña*, the local rum, with a few army cronies—nothing more. At 51, he looks and acts more like a mild-mannered businessman than the most durable of Latin military dictators. Today the important thing for Stroessner is not the tormented past, and his own part in it, but the progress he has begun to make in bringing to 1,800,000 Paraguayans a measure of peace and stability.

GAVIN SCOTT

PRESIDENT STROESSNER
Change is a practical matter.

Blood & Iron. A savage history of foreign wars and civil strife left the country little strength for nation building. In 1864 Paraguay blustered into the suicidal, six-year War of the Triple Alliance against Argentina, Brazil and Uruguay; out of a population of 525,000, only 220,000 survived, and only 28,000 of these were men. Again in the Chaco War of the 1930s, Paraguay took on Bolivia and won 20,000 sq. mi. of wilderness borderland—at a cost of one Paraguayan life for each square mile. Thus the prize won in 1954 by Stroessner, a veteran of the Chaco War, was a sleepy backwater, 600 miles by river from the sea, cobblestone-quaint but short on manpower and desperately poor. Only a few miles of roads were paved, and a wood-burning railroad served as the main land link to Argentina and the outside world.

Stroessner got off to a dictator's ironfisted start, organizing a tough secret police, suppressing all opposition, packing the prisons. Close to 300,000 Paraguayans now live in exile. At Stroessner's Colorado party headquarters in the Asunción capital, functionaries keep IBM listings on everyone who applies for party membership; there are 400,000 names on file. Stroessner is staunchly anti-Communist, but beyond that he does not concern himself with ideology. When a visitor once suggested that Paraguay needed a first-class public relations man to improve its image abroad, the general replied: "We don't need publicity. We will show them by doing."

Roads & Molasses. In his own heavy-handed way, Stroessner is actually trying to make good the boast. By imposing order on his violent little land, he has been able to push new roads through the hinterland to the Bolivian, Brazilian and Argentine borders. Following behind the bulldozers are settlers, clearing and cultivating the 40,000 plots of unused government land that have been distributed to peasant families. Lumber, beef and leather are growing businesses. Last year exports climbed to $40 million, highest since World War II, while imports fell enough to give the country its first trade surplus in five years. The cost of living rose only 1.1% last year *v.* 26% in neighboring Argentina and 80% in Brazil.

Foreign capital has helped finance a plastic-hose factory, a molasses plant, new sawmills and a cottonseed-oil processing plant. In the first two years of the Alliance for Progress, the country received commitments for $45 million from international bankers, the U.S. Government and private investors.

The dictatorship is changing too. As a practical matter, not out of any sudden conversion to democracy, Stroessner now tolerates an opposition, relatively tame though it may be. In the 1963 presidential elections, a nominal opposition got on the ballot for the first time, and by law wound up with an automatic 20 of the 60 seats in Congress. (In Mexico's one-party "guided democracy," the ruling P.R.I. also guarantees some seats to its opposition—but up to 11%, not 33%.) "We allow freedom for all non-Communist political parties," says Edgar Ynsfrán, 45, Stroessner's ambitious and influential Interior Minister. "It is subversion that we cannot tolerate."

A U.S. businessman puts it another way. "This place is in no sense an old-style jack-booted dictatorship. I worked in Venezuela during the time of Pérez Jiménez, in the Dominican Republic under Trujillo, in Argentina under Perón. There is no atmosphere of tension and fear. The idea is order to build something." That is how Stroessner sees himself—as Paraguay's builder. His term expires in 1968, and constitutionally he is barred from running again. But in Stroessner's Paraguay, the builder can always reconstruct a constitution.

COLOMBIA

Death of Black Blood

Slowly but surely, Colombians are writing an end to *la violencia*, which began in 1948 as a political war between the Conservative and Liberal parties, continued as degenerate terrorism long after the leaders made peace, and now has claimed 200,000 lives in the country's backlands. In March, troops trapped and killed *"Desquite"* ("Revenge"), one of the most notorious of the bandit leaders; in the past few months they have erased three other bandits responsible for 1,100 murders among them. Last week the most vicious killer still at large met his death. He was Jacinto Cruz Usma, 31, alias *"Sangre Negra,"* or "Black Blood," and regarded by the government as Public Enemy No. 1.

223 Lives. No one knows why Cruz became a bandit; he came from a peaceful peasant family in the department of Tolima, started out as a hard-working laborer, then suddenly turned up three years ago as *Sangre Negra*. On March 20, 1961, he burned a hacienda and chopped three men to ribbons with a machete. Seven months later, he and his gang ambushed two police trucks, killing eight policemen. Three months after that, *Sangre Negra* halted a bus, lined up 17 passengers, slaughtered them all. He kidnaped children, carried off women to be raped and murdered, boldly shot it out with the army. In September, while President Guillermo

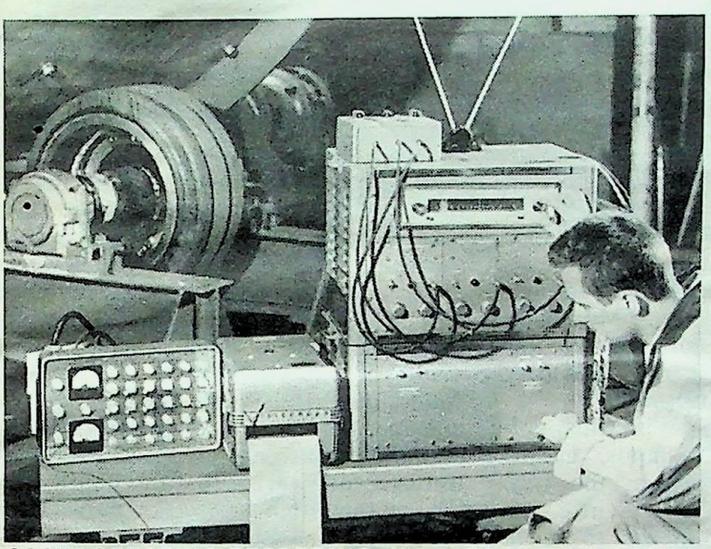
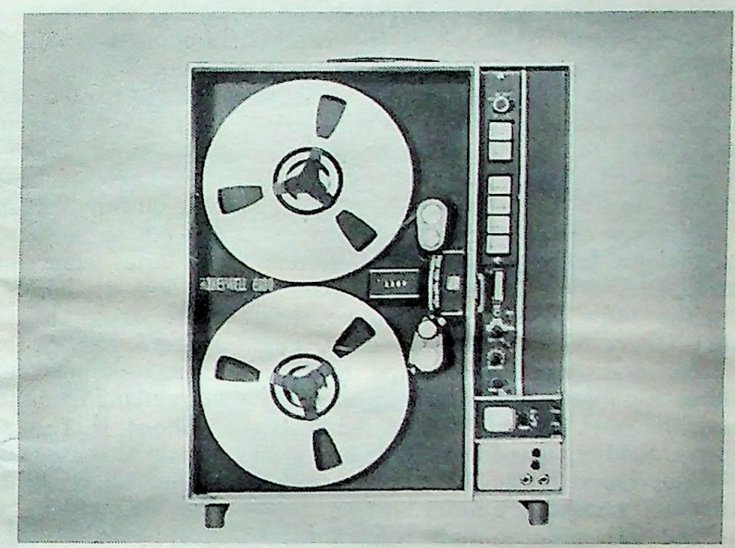
SCIENTIFIC INSTRUMENTATION REPORT FROM HONEYWELL

High performance instrumentation speeds research

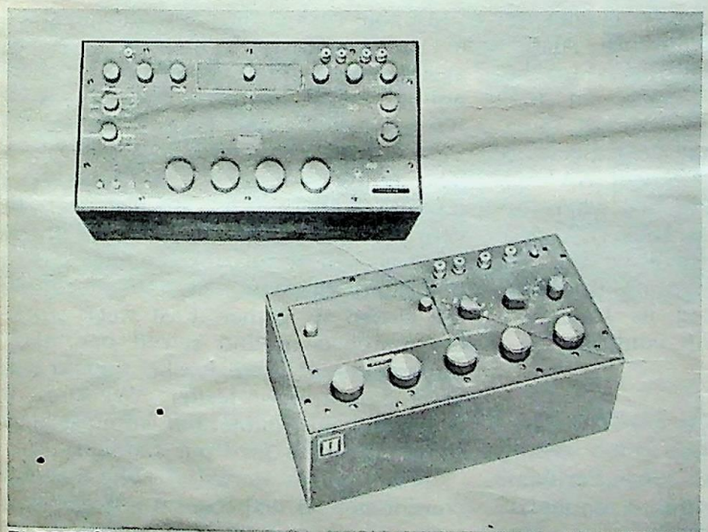
New equipment for data acquisition and measurement is bringing faster, more accurate results in scientific, medical and industrial research and development. Honeywell can supply the exact instrumentation you need for making precision electrical measurements, testing circuit designs, recording physical strain and vibration data or conducting physiological research.



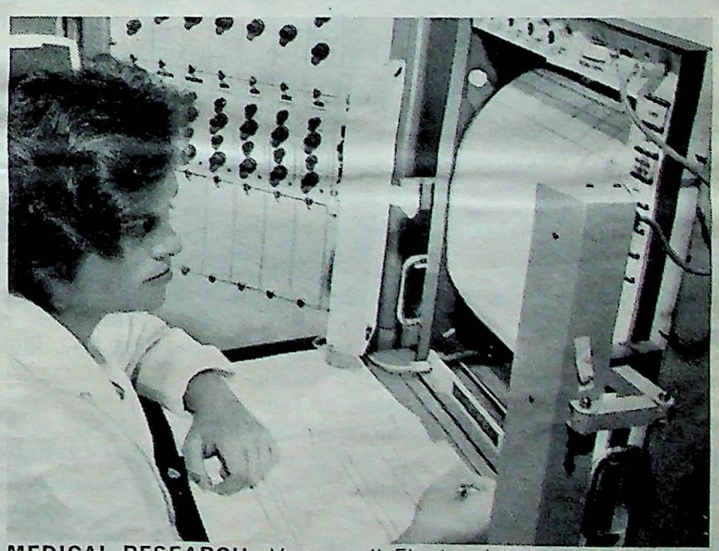
OSCILLOGRAPHIC RECORDING. Up to 36 channels of high frequency data (DC to 5,000 cps) can be recorded by the Honeywell Visicorder oscillograph for immediate readout. Photo shows strain and vibration tests on a rotating scrubber mill.



TAPE RECORDING. Honeywell 8100 portable FM recorder/reproducer records up to 8 channels of DC-10,000 cps data. Built-in calibration panel, automatic switching of center frequencies and simplified pushbutton operation are other features.



ELECTRICAL MEASUREMENT. Model 2802 Laboratory Potentiometer (top) has a calibrated accuracy of ±0.0010% of reading +.1 microvolt and a single range from 0 to 2.0999999 volts. Model 1700 Conductance Bridge measures 10^3 to 10^{15} ohms with ±0.05% to ±10.0% error limit.



MEDICAL RESEARCH. Honeywell Electronic Medical Systems include sensors, signal conditioning equipment and recording equipment for measuring a variety of inputs such as electrical signals, sounds, pressures, temperatures, displacements, rates, volumes, gas content and blood phenomena.

Honeywell

For complete catalog information, see your nearest Honeywell representative or write A. T. Ponds, Dept. 15, Honeywell International, Denver, Colo. 80217, U.S.A.

WORLD LEADER IN CONTROLS AND SYSTEMS FOR HOME, INDUSTRY AND SCIENCE

León Valencia was decorating army officers at Armero in Tolima, *Sangre Negra* contemptuously sacked a nearby town, Totarito, adding 28 more deaths to the list. Though there is no accurate record, authorities place the blood of 223 on his hands.

In the end it was *Sangre Negra's* own brother, Felipe, 32, who did him in. Hearing that his outlaw kin was coming to kill him, or so he said, Felipe went to the police in the small town of El Cairo, then joined the posse sent to track his brother down. They found *Sangre Negra* and three of his men terrorizing a farm family a short way out of town. In a blazing 25-minute gunfight, one of the bandits was killed. But when the posse rushed the farmhouse, *Sangre Negra* and the others were gone. Two days later reinforcements killed his two henchmen a few miles away. But still no *Sangre Negra*. Back they went with dogs to search around the farmhouse. There he was, dead, in the jungle a thousand yards away, face down in a mudhole with bullet holes in his mouth and torso. Mortally wounded in the first fight, he had crawled into the brush to die.

Cortege of Survivors. A helicopter carried the body to army headquarters at Ibagué, where 25,000 people passed by the litter to stare and make sure that *Sangre Negra* was really dead. The corpse was then helicoptered to four other mountain towns for display. At last, he was buried in an unmarked grave. Soldiers acted as pallbearers, and the survivors of the Totarito massacre marched behind in a bitter cortege.

The last major outlaw remaining at large is Pedro Antonio Marín, 32, who goes under the aliases of "Marulanda" and *"Tiro Fijo"* ("Sure Shot"). A bragging Communist, he leads a band of 300 and rules a fief in the hills of southwestern Colombia by both persuasion and force. The army is cutting away his peasant support with a program of roads, medical aid and agricultural advice. Patrols are pressing the hunt.

CUBA

SAM's Song

In exchange for the $1,000,000 a day he gets from the Red bloc, Fidel Castro barters away Cuba's lifeblood —its sugar crop. That blood is beginning to get thin. Partly because of Hurricane Flora and partly because of pitiful mismanagement, Cuban sugar production this year is estimated at 3,300,000 tons, about half what it was in pre-Castro years. Yet Castro has committed more sugar (at bargain prices he can ill afford) to his Communist partners, until he now owes them more than he produces. Faced with this kind of debacle, Cuba last week did an astonishing thing for the world's biggest sugar-cane producer. It went into the world market to buy sugar to meet its Iron Curtain commitments.

Worse than Last Year. Cuba bought 10,000 tons on the French market for shipment to Red China, and another 10,000 tons from Britain to send to Bulgaria. In the rest of 1964, Cuba says it will sell no sugar on the world market, where prices are 8¢ a lb. *v.* the 6¢ Castro gets from his Red friends. This puts Castro in a worse position than last year, when the Russians allowed him to sell 1,000,000 tons on the world market, thus earning a windfall of vital dollars to buy Western buses, trucks, tractors and spare parts.

Washington harbored some suspicions that the Cuban maneuvers were tricks to drive sugar prices higher on the world market and set the stage for a later killing. But most dealers on the New York and London sugar markets thought the moves were genuine evidence of Castro's economic disaster. Heavy spring rains in Cuba have hurt the already skimpy 1964 harvest; the much-touted Russian cane-cutting machines have so far proved a failure; "volunteer" labor battalions sent into the fields to do the job by hand hardly know a machete from a mongoose. Moreover, Eastern Europe has suffered two low sugar-beet harvests in a row, and may be pressing Cuba for its payments.

Shoot If You Must. With this not-so-sweet mess on his hands, Castro spent the week growling at the U.S. and doing his best to convince the world that he really means to shoot down a U-2 reconnaissance plane. Sipping a brandy-and-soda at a Japanese reception in Havana, he insistently told newsmen that he was willing to go to war to stop the U.S. from keeping an aerial eye on his Communist island. "We will prevent these flights to the limits of what our weapons can do," Castro said. And then, for the first time, he confirmed that he expects to get control of the 25 Soviet SAM-II rocket emplacements in Cuba when the Russians depart. "The rockets," said Castro emphatically, "will be handed over to Cuba." In the same emphatic tone, the U.S. repeated its statement that the U-2 flights will continue.

PERU

Industry Overboard

Businessmen call it "the Peruvian miracle," and by all odds it is one of Latin America's brightest success stories. In 1950, imaginative Peruvian entrepreneurs started netting the immense schools of anchovy in coastal waters and processing the small silvery fish into fish meal, a high-protein poultry and livestock food. So rich was the harvest and so great the demand that plants went up all along the coast. Today, fish meal is the country's biggest industry, and Peru has risen from nowhere to No. 2 rank (behind Japan) among fishing nations.

CASTRO & FRIENDS*
Sugar is the telltale deal.

The problem now is to keep the industry from going overboard trying to make too much of a good thing. Last year, Peru processed 1,159,000 tons of fish meal from a record 6,650,000-ton catch and earned an impressive $11 million from exports. But this year there are fears of a smaller haul, with a sharp fall-off in dollars.

Peruvians insist that smaller catches are due merely to a temporary shift in ocean currents, not overfished waters. But everyone agrees that too many people are out fishing. "Two or three years ago," says one Lima skipper, "you seldom saw more than 100 seiners fishing at the same time. Nowadays you see as many as 300 go to work on a school."

The grumbles are even louder ashore. With gold-rush enthusiasm, businessmen overborrowed—took short-term loans at interest as high as 28%—to overbuild. "They are operating in a sea of IOUs," says Víctor Riveros, editor of Peru's fishing-industry journal *Pesca*. The industry now has a capacity of 2,000,000 tons of fish meal a year, nearly double what it expects to sell. As a result, most of the country's fish plants are operating at half speed; others are closed altogether. Last week workers marched in and seized one plant on account of three weeks' unpaid salaries. Said a union leader: "We know it is in financial trouble, but we must have some money to feed our families."

This week a Peruvian congressional commission is expected to propose a series of emergency relief measures, including a moratorium on federal taxes. Even if the government exempted fish-meal processors from all taxes, their average $9-a-ton profit (*v.* an average $20 in 1963) would still not cover interest on the industry's $74 million debt.

* From left: Industry Minister Che Guevara, Raúl Castro, Fidel, President Osvaldo Dorticós, Mrs. Dorticós and Old Communist Blas Roca.

How to lose weight and gain strength

Mercedes-Benz fashion and form tempered steel to make a chassis that's both tough and reasonably light. Because the aim is strength and economy. And the less of its own weight a truck has to carry the more power is available for payload.

Mercedes-Benz use a special steel for the chassis. Heavy duty leaf springs. Hydraulic shock-absorbers. Plus an additional system that reacts progressively (the heavier the load, the greater the resistance). All these features are designed to keep down the truck's own weight. And to keep up its payload.

Why you cannot really enjoy Heidelberg in an hour — or Germany in a day.

Heidelberg on a sunny summer's day is quite different from the town you see at dusk. Stroll through the old city, visit some of the inns frequented by students and rightly described as "gemütlich". When you have seen the Castle, get on board a steamer and go up the Neckar — past castles, vineyards, villages. And perhaps you will find the time to have a look at the old village church of Creglingen, famous for its Gothic altar carved by Tilman Riemenschneider.

Do take a little time: a few hours more in Heidelberg — a few days more for Germany. The Rhine, the Goethe House in Frankfurt, Munich — the capital of Bavaria, the fairy-tale castle of Neu-Schwanstein — all these are places of great charm and well worth seeing.

But you don't have to see everything. What is important is to get the feel of this country and to take home with you a little of its atmosphere. That's why it is worth your while to stay a few days longer in Germany.

The abstract, blotchy strokes on her canvases certainly don't owe much to her old man. And that is just how **Jeanne Modigliani**, 45, likes it. "Had my name not been Modigliani I would have started painting years ago," said she. In fact, the only thing the twice-married Parisian artist has in common with Papa Amedeo is her painting signature, which is almost identical. But that is enough. Visiting in Israel to set up her first major solo show next month, she offered eight small works for sale. Within two hours all were snapped up for $100 to $150 each. Yet the lady still protests. "Nothing makes me angrier," says she, "than the awe and reverence with which people regard me because of my father's name."

• • •

New York Democrats have been scratching around for months trying to find a candidate to oppose Republican Senator Kenneth Keating next November. Now a new name has been suggested. "I have reached a stage in life," said famed (*My Life in Court*) Attorney **Louis Nizer**, 62, "in which I would prefer to give such talent as I may have to public service rather than private clients." And he added: "I shall be earnestly receptive to the nomination, making no pretense, according to the political rule, that I am reluctant unless the honor is forced upon me."

• • •

Everybody called him **Ivan the Terrible**, but it must have been terrible for Ivan. He had back trouble, which made him just miserable every time he had to stand up or bend over. No wonder he felt like killing people. This fascinating historical tidbit came to light when the Russians removed Czar Ivan IV (1530-84) from his Kremlin tomb last year and turned the bones over to Anthropologist-Sculptor Mikhail Gerasimov, a specialist in reconstructing physical appearance from bone structure. Gerasimov got the backache idea from studying the skeleton, has now finished two busts of the 16th century ruler—one showing the muscles of Ivan's left side, and the other showing what he looked like. Ouch!

ISRAEL SHENKER

GERASIMOV & IVANS
Just terrible.

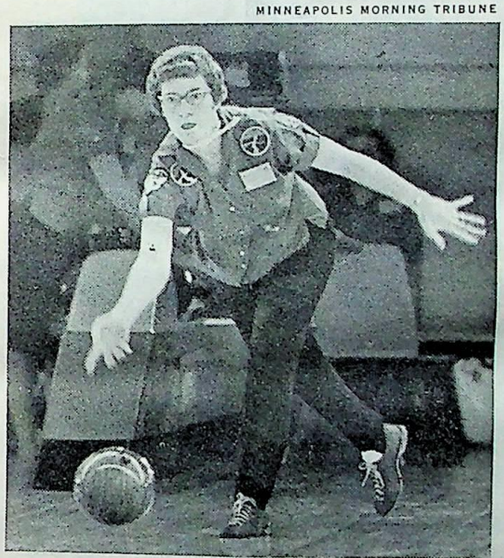
Midst laurels stood: Producer **David Merrick**, whose *Luther* and *Hello, Dolly!* won both Drama Critics Circle awards as best play and best musical; Socialite **Mrs. Winston ("Ceezee") Guest**, 44, made a Dame of the Order of Isabel La Católica, one of Spain's highest honors, in recognition of her charity work for that country; Bandleader **Lawrence Welk**, 61, created a Knight Commander of St. Gregory the Great by Pope Paul VI for his "wholesome family entertainment."

• • •

Bowling is very big in the lives of **Mary Ann** and **Andrew Fischer**. They met when both were unmarried members of a home town team, and bowled each other right over, what else. Then, last September, their family of five was suddenly doubled by the arrival of quintuplets. Goodbye ten pins, hello diaper pins. But last week Mary Ann, 30, turned up at the Women's International Bowling Congress at Minneapolis as captain of the United Mattress Team of Aberdeen, S. Dak. Still notably trim despite all, she rolled an average 164 for the tourney, ten points over her previous average. And the ten kids? Why, just like anyone else, Mary Ann got her mom to look after the darlings.

MINNEAPOLIS MORNING TRIBUNE



MRS. FISCHER
Still trim.

Not tony.

graven images at the world's foremost wax museum were not proof enough of their staying power, Boston Pops Conductor Arthur Fiedler had a bit more. He started including their songs in his concerts and got a reception on the enthusiastic side of mixed.

• • •

May Day weekend was at hand, and half of Paris gaily climbed into cars and headed out of the city for three days in the country. Meanwhile, at about the same time, a patient at the Cochin Hospital happily climbed into his car and headed for home. Half of Paris, no longer gay, sat and steamed until he got there. **Charles de Gaulle**, 73, recovered from his operation, was returning from the Left Bank hospital to the Right Bank Elysée Palace, and the police had thoughtfully blocked off all streets along the route. He made it in six minutes flat; the traffic jam took hours to unsnarl.

• • •

Eight and five were the magic numbers. 85 years of life, 58 years of marriage, and **James F. Byrnes** marked off both mileposts a day early. The former Secretary of State under Truman obligingly posed with a pair of cakes. "This is a great world in which to live so long," he said. And a young reporter asked what his outstanding experience had been. Byrnes smiled, thought back over his 40-odd years of public service and said simply: "Son, I hope you get to be 85 and somebody asks you that question."

• • •

Ill lay: New York World's Fair President **Robert Moses**, 75, in Manhattan's Roosevelt Hospital, "doing exceptionally well" after prostatic surgery; U.S. Ambassador to Japan **Edwin Reischauer**, 53, in Honolulu's U.S. Army Tripler General Hospital with a "presumptive diagnosis" of hepatitis, which hospital officials say developed independent of the nearly healed thigh wound inflicted last March by a deranged Japanese youth; British Spy **Greville Wynne**, 45, in London's Gordon Hospital "in an excitable and disturbed mental state" as a result of his 17-month Communist imprisonment.

MODERN LIVING

FAIRS

Into Stride

Each day last week produced new surprises for the folks at New York City's big new fair. King Hussein dropped by to dedicate Jordan's pavilion; Princess Christina came down from Radcliffe to open Sweden's. Jacqueline Kennedy and Daughter Caroline, with the late President's sister, Mrs. Stephen Smith and her two young sons, made a tour of eleven fun spots, lunched at the members-only Terrace Club, where the children begged in vain for hot dogs or hamburgers, settled for roast beef.

The Spanish Pavilion, after an early attack of *mañana*, finally got itself dedicated and hung its old masters—notably Goya's two *majas*, clothed and naked—which had been kept crated until the air conditioning was fully functioning to duplicate the exceptionally dry air of Madrid in the exceptionally wet spring air of New York. Even before the dedication, the Spanish had put on a handsome fashion show of seven Spanish designers. Displayed by an armada of imported Spanish beauties, the dresses were themselves spectacular enough—glinting with beads, swirling with bravura—to make many an observer feel that she simply had to be in Pamplona next year for the running of the bulls.

At the Illinois Pavilion, Audio-animatronic Abe Lincoln, who had been suffering from electronic megrims until engineers fiddled with the circuitry that makes his eyes blink, his voice rasp and his hands gesture, began to work. Abe rose to greet 500 people at a time, pushed back his coattails and gave them a ten-minute talk on liberty, gleaned from six of his speeches: "What constitutes the bulwark of our liberty and independence? It is not our frowning battlements, our bristling seacoasts . . . Our defense is in the preservation of the spirit which prizes liberty as the heritage of all men, in all lands, everywhere . . ."

There was more rain, and the rain was not good to Sinclair's Dino the Dinosaur, who somehow got a crick in the long neck he cranes—a crick that turned into a crack when the rain began to work into it. But contrary to pre-fair predictions of hideous tie-ups, fair-bound cars flowed in an untroubled, purring stream.

Best of all, attendance was well ahead of predictions. Despite three cold and rainy days, the fair tolled off a million visitors in its first week.

FASHION

To Keep Your Hand In

Murderers and motorcyclists are so mad about gloves that they wear them the whole year round. Others, less smitten, don them only in the winter, for warmth, or on the job (doormen, surgeons, morticians, ushers), to impress a boss (secretarial applicants who cannot type), keep up appearances (debutantes and chauffeurs), curry favor (prospective brides brought home to tea with prospective mothers-in-law). Once considered standard everyday attire, and the only way to get a decent duel going, nowadays no one but a grandmother *likes* to wear gloves.

Well-Bred Intentions. Though they come in the most radiant of colors and the lushest of fabrics, range in length from wrist-short to shoulder-high and in price from $1 (nylon) to $145 (mink-cuffed French glacé kid), the richest selection is scarcely splendid enough to make up for the bother. For one thing, women determined to look smart but who feel ill at ease with their hands encased will strip their gloves off at the earliest opportunity and spend the rest of the party looking for a ledge to lodge the gloves on; they generally end up wadding them into an overstuffed purse.

Some women do not bother to wear gloves at all, merely keep them in hand and make the rounds clasping the evidence of their well-bred intentions like a badge. After several such wearings most gloves begin to go limp, soon acquire wrinkles and creases no cleaner can cure.

One Way Out. But, astonishingly enough, there is hardly a woman who would be caught dead without gloves. Why? Largely because of etiquette. Even as "bold" and "modern" a social arbiter as Amy Vanderbilt, who last year went so far as to sometimes permit picking up chicken bones *by hand* (a custom she personally practices only at picnics), warns that "it is still not true that if one goes hatless, one also goes gloveless" and insists "they should be worn to complete a street or evening costume." For eating hors d'oeuvres "the right glove, at least, is removed or rolled back"; for dinner, "both gloves are removed completely." Particularly if there are chicken bones to pick up.

One proper way out: the girl with a shrewd eye toward a heavy social season ahead will buy a single pair of quality gloves, hang the expense, and put them

into the pocket of her favorite coat. From there, they can be hauled out when necessary. And to there, they can be swiftly returned, immediately after an entrance or exit. With a little bit of luck, they need never be worn.

THE HIGHWAY

The Brake Debate

Your car is traveling at 30 m.p.h. when the proverbial child dashes out in front of you. You hit the brake, of course. But with which foot?

A few years ago, the question would have been ridiculous, but today the ubiquity of the automatic transmission with its clutchless floor board is making it the subject of a great debate among motor-vehicle bureaucracies. Some states encourage left-foot braking (among them, South Dakota and Michigan); some disqualify or penalize any license applicant who does it (Massachusetts, New Hampshire, Utah). Most states have no policy at all. And there is, in fact, something to be said for both sides—or both feet.

Major argument in favor of left-foot braking is that (according to tests by Michigan State University) it reduces the braking time by three-tenths of a second, which means that a car doing 30 m.p.h. will stop 13 ft. sooner.

On the other hand, a driver trained to use his left foot on the brake is a positive menace in a stick-shift car, where his instinctive reflex will land his foot on the clutch—where it will do worse than no good, since it robs him of even the minor braking action of the engine. Inexperienced drivers taught left-foot braking also sometimes freeze in an emergency on both brake and accelerator (one of the incidental advantages of right-foot braking is that the driver necessarily has to take his right foot off the accelerator).

The American Association of Motor Vehicle Administrators, an organization of U.S. and Canadian officials concerned with driver licensing, has announced that it is giving especial attention to the foot problem and hoped to come up with a recommendation—right or left—by fall.

RECREATION

Seven Men on Four Horses

Whether he does it at Monte Carlo's casino or a bookie's back room, the little guy who beats the big system is an odds-on favorite to become a national hero. And so, when an aptly titled long shot named Historic Value won the ninth harness race one night last week at New York's Roosevelt Raceway, the holder of the winning $132,232.80 ticket was hailed by every $2 bettor as the man of the hour.

But where was the man? The world's most valuable twin-double ticket was finally claimed, not on the hour but nearly two days later, and not by the perennial underdog but by-a platoon of upper-income New Jersey businessmen who arrived at the track in a long green Cadillac and left behind them the distinct impression of a gamble involving neither luck nor love of the game but of a cold-eyed investment by men who know their way around.

Backwheeling & Alive. According to the group's official spokesman, Joseph J. Saker, 35, six out of the seven partners were at the track that night to watch a horse belonging to three of them, which was running in an earlier race. Once there, they decided to hang around for the twin-double (a package deal that covers four races—the sixth, seventh, eighth and ninth). The group liked No. 5 in the seventh race, "backwheeled" by coupling it with each of the eight horses running in the sixth race. They bought two $10 tickets on each combination for a total investment of $160. They could not lose the sixth, since every horse was covered. And when No. 5 took the seventh, the group perked up.

Two of their $10 tickets were still "alive." They exchanged them for ten $2 tickets, and spraddled their money across the next two races. They bet No. 1 and No. 4 in the eighth race, coupled each with five out of the eight horses running in the ninth. When No. 1 took the eighth, they stood a better than even chance on the ninth, but as it turned out, their victory was only accidental: the favorite tripped, causing a four-horse pile-up that left the way clear for Historic Value to jog unchallenged to the finish line.

Party of the Second Part. A yokel would have raced to collect on the spot. But every track buff in the world knows enough about taxes to realize that such a windfall may dwindle before his very eyes. The Government form he is obliged to put his name to is in duplicate, and the party of the second part is the Internal Revenue Service.

The winners were no yokels. When they appeared, finally, they were flanked by both a lawyer and an accountant. By their own admission, they were men "of substantial means" who did not "especially need the money"; among them, they had upwards of 28 dependents. Michael D. Sherman, 51, is a successful suburban real-estate dealer. William L. Bresnahan Jr., 31, is a dairy distributor, a partner with Joe Saker and his brother John E. Saker Jr., 30, in a 14-horse stable, Fair Acres Farm in Freehold, N.J. The Saker brothers also own a franchise in a supermarket chain. Their father, described as too ill and elderly to make the trip, owns the fifth share in the winning ticket. The sixth partner? Bresnahan's father, also too ill and elderly to make the trip. The seventh? His name was not immediately disclosed.

NEW YORK WORLD-TELEGRAM

ROOSEVELT'S RECORD WINNERS* CELEBRATING
It's not just a matter of luck.

But then there were lots of unanswered questions. And no one was more interested in the answers than the Internal Revenue Service, which stood to lose some $44,000 of the winner's loot. For where a single ticket holder (estimated on a fairly shortsighted basis to have a wife, two children and no outside income) would take no more than the standard 10% deduction and pay a whopping $67,000 tax, a seven way split figured on the same bas would net each partner $18,890 a leave the Government a measly $5- 000 total. Said the Revenooers st week: "We will take a pretty clos ok at all of this." In other words, ey wanted to be sure the cartel ca be- fore the horse.

ASTRONOMY

Pulsing Quasar

After studying nearly 100 years of star photographs from the University of Heidelberg, Dr. Harlan Smith of the University of Texas reported that the light from the heavenly body known as 3C-273 pulsates regularly on a 13-year cycle. Not that pulsating starlight is rare, but 3C-273 is not a star. It is a "quasar" (quasi-stellar object) that sends out powerful radio waves as well as light and is believed to be about 1 billion light-years away from the earth. Most astronomers think it is a galaxy in the process of exploding.

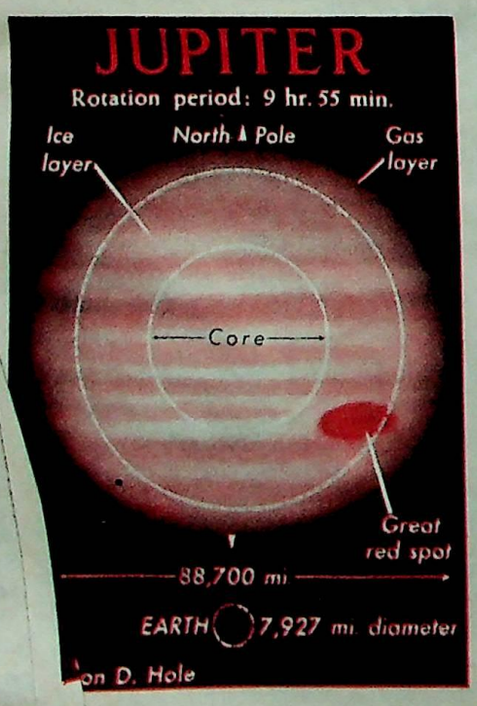
The astronomers have developed several theories to explain why galaxies can explode, but the 13-year pulsation of Quasar 3C-273 has them stumped. If the thing is really a galaxy, it must be many thousand light-years in diameter; light must take at least 1,000 years to cross a minor section of it, and according to relativity theory, nothing can move faster than light.

What mysterious influence, the puzzled astronomers asked, can make so large an object pulsate in so short a time as 13 years? Perhaps quasars are not galaxies at all, despite appearances. Perhaps in the far-off depths of space unknown physical laws are at work. Perhaps something can move faster than light. Scientists are impatiently searching for answers.

The Red Spot Mystery

It was astronomy week in Washington, but the astronomers who reported to the American Physical Society and the National Academy of Sciences seemed to be losing ground. For each problem that they solve, they have discovered a new mystery. One of the most intriguing of the new sky puzzles, Radio Astronomers Alex Smith and Thomas Carr of the University of Florida told the Physical Society, is posed by a brief question: What's happening on Jupiter? Radio signals that once came from the distant planet in regularly spaced bursts are now being received at 1.3-sec. longer intervals. "This is almost as surprising as if the city of Washington had begun to drift across the earth at the rate of ten degrees of longitude (530 miles) per year," said Dr. Smith.

The visible surface of Jupiter is a thick cloud-deck streaked with east-west bands. Its other conspicuous feature is the Great Red Spot, which has been observed since 1831 and is generally thought to be some kind of cloud floating high in the planet's thick atmosphere. But according to Dr. Smith, the Spot changed its period of rotation at about the same time the sources of radio signals changed. This may mean that the Spot and the signal are connected in some way. Planets cannot slow their rotation without some outside influence, and there is no influence known to be working on Jupiter. But Jupiter's radio waves may be controlled by its magnetic field, which might conceivably change direction because of some influence deep in the planet's unknown interior. How this change could affect the Great Red Spot, Dr. Smith does not know.



TECHNOLOGY

Magnetic Metalworking

In their elegant laboratories near La Jolla, Calif., General Dynamics scientists are doggedly attacking a difficult problem: how to extract controlled power from hydrogen fusion. The payoff for their work is hidden in the future, but the powerful magnetic fields they have built to hold reacting hydrogen gas at 100 million degrees has already yielded a valuable practical "fallout." Those same magnetic forces used on a smaller scale have proved remarkably versatile for shaping metal.

Swift Action. At a Detroit meeting of the American Society of Tool and Manufacturing Engineers, engineers from General Dynamics' General Atomics Division demonstrated how the principle works in practice. Magneform —a tool little larger than a home washing machine and using no more current than an electric range—has no moving parts at all. Its essential part is a coil of heavy wire that can take various shapes, including a cylinder, a doughnut or a flat disk. When a massive electric current from a capacitor is shot suddenly through a coil, it creates an intense magnetic field in the space around it. If a piece of metal is near by, the magnetism starts currents flowing in the metal. These currents are surrounded by their own magnetism, and repulsion between the two fields drives the metal violently awa from the coil. The action is over in m croseconds, but it is powerful enough push rigid metal into almost any shap

The different coils do different job When the end of a metal tube is i serted into the doughnut-shaped co it can be shrunk tightly around any i sert such as a plug or a threaded fittin To expand a metal tube, a cylindric coil is pushed inside it. A flick of t switch, and the tube expands to bi itself solidly to whatever surrounds To stamp a flat piece of metal with pattern, a trademark of elaborate tering, the metal is placed between flat coil and a die. When the co activated, the opposing magnetic fi in the sheet shoves it away from the c and presses it into the die.

Gentle Handling. Magneform is ready doing many useful jobs: alu num and copper are being joined porcelain insulators for outdoor wirin the metal bands around artillery sh are being fitted quickly without fuss. The auto industry is using Mag form to produce ball-joint and seal semblies for front suspensions. Mag form's principal advantage over w ing, pressing or stamping is its ab to shape metals without the rough h dling that such operations ordinarily quire. Automated assembly-line op tion can be managed easily, and M neform men are already looking tow the day when most subsidiary parts an auto engine—carburetors, pumps, etc.—are shaped and stuck gether by Magneform.

MAGNEFORM-ING

BY COMPRESSION:
Coil-induced magnetic field exerts strong inward pressure on metal.

MAGAZINES

Childish, Idiotic & Asinine

Most playwrights hate theater critics, and many politicians claim that political reporters misquote them. But last week an artist complained that almost everything that's wrong in this world is caused by people who write.

"The first mistake in this whole world was the invention of printing," said Architect Philip Cortelyou Johnson in an interview in *Vogue*. "I am sick and tired of all the word-minded people in this world. The word-minded people are the ones who set the standards. An artist or an architect conceives and creates, but then in the final analysis he's at the mercy of some *writer*—a man who knows absolutely nothing about what the artist spent his life trying to do—a man who uses up hours and days of his time asking him childish, idiotic, asinine questions and then, as a final irony, assesses him for all time. Why I'm submitting to it I don't know.

"The visual arts are simply unable to rise above our communicative publicity media—all of which are, by definition, words. An architect, on the rare occasion when he is allowed to come in by the front door, still ranks between the accountant, who is, of course, vastly more important, and the Fuller Brush man, who is only slightly less."

NEWSPAPERS

A Plum in the Valley

The double-page ad in the New York Times posed two flat-footed questions: "What *Evening* Newspaper Leads the Nation in Total Advertising Linage?" and "What *Morning* Newspaper Ranks Sixth in the Nation in Total Advertising Linage?" Readers who scanned the tables printed below must have done a double take when they saw the answers: the San Jose News and the San Jose Mercury. How did those papers get so far up on the lists? And where is San Jose anyway?

San Jose is in California, 60 miles down the bay from San Francisco, and the Mercury and News climbed so high* simply by being there at the right time.

Lebensraum. Neither San Jose nor its two newspapers were going anywhere in particular 15 years ago. The city seemed buffered from San Francisco by pastoral miles of Santa Clara County fruit trees, interspersed with canneries. Then the space age dawned in a thunder of rockets, and its artisans moved West in quest of *Lebensraum*.

Soon San Jose was transformed from a somnolent agricultural county seat into a hive of technical industry. Lockheed, IBM, Hewlett-Packard and United Aircraft all built big plants amid the plum trees. By last year Santa Clara County had surpassed San Francisco County in population, retail sales and annual payroll.

In 1952, prompted either by hunch or foresight, the Ridder newspaper group snapped up San Jose's dailies for what proved to be a bargain $3.5 million. From humble origins, this chain has steadily lengthened over the years until it now spans the continent. It was founded in 1895 by Herman Ridder, who had bought the German-language New Yorker Staats-Zeitung.

* The top ten in advertising linage:

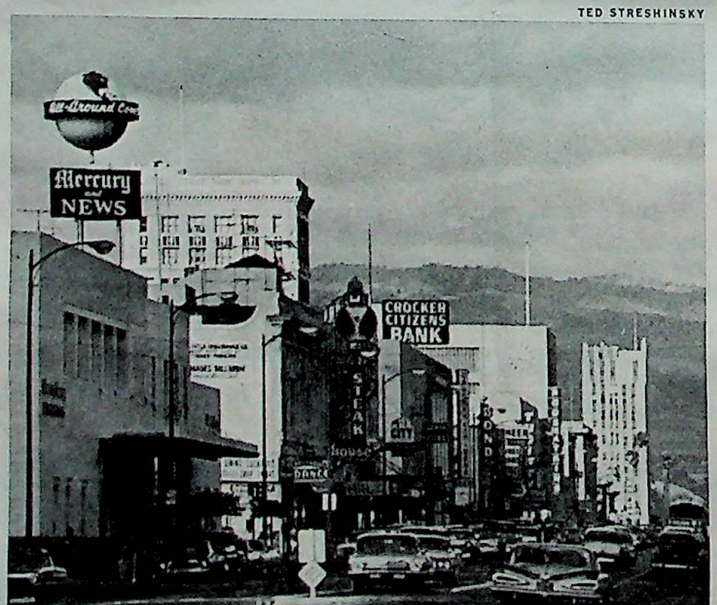
TED STRESHINSKY

JOSEPH RIDDER



MERCURY & NEWS PLANT IN DOWNTOWN SAN JOSE

Not newspapers, but catalogues.

Laissez Faire. Herman Ridder was less interested in earning a niche in journalism's record book than in providing newspapers for the profit of his male descendants. Today, there are 21 Ridders to work the chain, a figure that neatly corresponds with the number of Ridder newspapers. The papers vary in size from the Aberdeen, S. Dak., American-News (circ. 21,000) to the St. Paul Pioneer Press and Dispatch (227,000 combined). But they all have one thing in common: a Herman Ridder heir at the helm.

The Ridder in San Jose is Grandson Joseph B., 44, who went West after the acquisition, applied the laissez-faire Ridder formula, and still cannot quite believe in his luck. Like all Ridder newspapers, Joseph's pair are run as if the others did not exist. The last San Jose newspaper crusade petered out ten years ago, after the city built the new civic center that its two dailies had plumped for. By then the boom was well under way, and about all Grandson Joseph had to do was let it boom.

Daily circulation more than doubled, to 153,606. So did advertising. The time came when the groaning presses could handle no more, and the Mercury and the News reluctantly turned away ads. "We don't have newspapers here," says Circulation Manager Arvey Drown. "We've got catalogues."

Publisher Joe Ridder finds San Jose's growth enormously stimulating. "I've done everything to get the population here, and new industry too," he said last week, happily reflecting on the boom. As a journalist, he also feels challenged. What is his greatest problem? Joe Ridder knows the answer to that one. "Increase circulation," he says.

The New Thunderer

The message was hard to find, as messages often are in that uncompromising typographical thicket, the London Times. But when Conservative Party leaders found it, their faces turned the angry red of rare roast beef. "There come moments in the life of every party when it needs to wash off the last application of humbug and start fresh," said the Times. "Such a moment has come for the Conservative Party." For three straight days, the Times continued to dwell on Tory sins and shortcomings. It was a cruel birching from any quarter. What hurt most was that this one came from an old friend.

Predictably, the Times's series blew up a lively political storm. "The papers are all against us," cried an anguished Tory Cabinet minister. Then he sputtered: "The Times is the worst of them all. That damned fellow Haley can't wait until he has put a Labor government in Commons."

That damned fellow has no such aim. But Sir William John Haley, 62, ninth editor of the Times and a loyal Tory to boot, is determined to show that his paper is harnessed to no party. He is even more determined to restore the

THE TIMES'S EDITOR HALEY
Not harnessed, harassing.

Times's reputation as the "Thunderer." In the process, he has succeeded in making the Times the most controversial and talked-about paper in Britain today.

Privy to Everything. The Times's title of Thunderer was won in the last century when it was the biggest and most influential daily in the world. "I don't know of anything which has more power, except perhaps the Mississippi," said Abraham Lincoln to a Times correspondent sent over to report the Civil War. Disraeli was only half joking when he said that there were two British ambassadors in every foreign capital, one appointed by the Queen and one appointed by the Times. Its newsgathering apparatus seemed to be privy to everything. On Jan. 17, 1856, for example, the British government had to read the Times to discover that Russia had accepted the peace proposals ending the Crimean War.

A more urgent century, however, seemed to have beached the paper, like Britain itself, in the glorious past. Once the Times commanded more readers than all other national dailies combined; today it is the least of them, with 254,000 circulation: 2% of total newspaper readership and less than 5% of the circulation of that popular giant, the Daily Mirror (4,647,000).

In an era of hot copy and banner headlines, the Times even looks and sounds like an anachronism. Its patient reader must plod through the front-page classified ads, the sporting section, the Appointments and Situations columns, the parliamentary reports and the dry-as-dust Law Reports before reaching the Bill Page, which is the Times's Victorian name for the news. Once arrived, the reader is not likely to be surfeited. Even Sir William confesses that the Times is guilty of "blatant omissions," as when, a few years ago, it reported the resignation of the Spanish Ambassador to Britain without mentioning the adultery case that caused it.

No Man's Pocket. When Sir William became editor twelve years ago, the Times's image stood in sore need of burnishing. Competitors derided the paper as the "Whimperer." Its circulation had fallen to 230,000 and was to fall even farther. Sir William himself seemed an improbable choice as savior: a shy, austere man who, after twelve years as director of the British Broadcasting Corp., was irreverently remembered as "the man with two glass eyes."

Behind the Times lay the most ignoble chapters in its 179-year history. Under Editor John Thadeus Delane (1841-77), Prime Ministers had good reason to feel they had the Times tucked into their pockets. When World War II loomed, the Times obediently joined Whitehall's chorus of appeasement. "I did my utmost," said Editor Geoffrey Dawson of Hitler and his crew, "to keep out of the paper anything that might hurt their susceptibilities."

Sir William has devoted himself to producing a paper that swears allegiance to nothing but the truth, and to Britain. Last summer's Profumo scandal was reported so explicitly in the Times in the Law Reports, where the racy testimony ran verbatim—that Daily Mirror Tycoon Cecil King was moved to envy: "The Times gets away with legal pornography." But the Times also found a moral lesson that the rest of Fleet Street missed: "Eleven years of Conservative rule have brought the nation spiritually to a low ebb."

Total Anonymity. Even though the Times has moved into a $13.5 million new plant, its 300 editorial staffers still work in a cathedral atmosphere where everyone whispers, coats stay on, the copy glides overhead in miniature tramcars and the library is called the Intelligence Room. Times newsmen also work in anonymity. On the ground that only the Times, and none of its members, should make thunder, the paper has never used a byline.

The Times also remains a newspaper thoroughly conscious of its stature and firmly rooted in Britain's Establishment: the government, the nobility, the ruling class. A recent survey showed that 70% of the names in *Who's Who* read the Times, as against only 43% for the second-ranking Daily Telegraph. "The Times is a record," said Sir William in a recent policy statement. "It has a duty not only to its readers of today but to those a century hence." And under Sir William, to resume thundering.

FOREIGN CORRESPONDENTS

Double Duty in Canada

In Ottawa, Canada's capital, foreign correspondents are just about as rare as palm trees. There are only nine: one from Britain, five from Canada's next-door neighbor, the U.S.—and curiously, three from Russia. Why this heavy Soviet news focus on a government not regarded as of prime interest to Russian readers? If Ottawans wondered, last week Prime Minister Lester B. Pearson supplied an answer. He ordered one of Russia's three Ottawa-based newsmen expelled as a spy.

IZVESTIA'S SPY TARASOV
Not newsy, nosy.

The odd man out was Vasily Vasilievich Tarasov, 36, a blond, stubby correspondent for Izvestia. Canada accredited Tarasov after an urgent request that came straight from the Kremlin. After depositing his wife and young daughter in a modest apartment in Ottawa's Sandy Hill district, Tarasov scraped up an acquaintance with a minor government functionary.

To this man, Tarasov's inquisitiveness seemed to exceed the requirements of journalism, and he confided his suspicions to the Royal Canadian Mounted Police. Baiting their trap with a harmless but official-looking document, the police let the government man trade it to Tarasov for cash.

Canada has had Russian spy trouble before. The most notorious case was that of Igor Gouzenko in 1945, a Soviet code clerk who defected to the West. His confessions shattered a Russian spy ring. Among the Russians who fled Canada in advance of exposure were two men from Tass, the Soviet news agency.

As a Communist newsman doubling in espionage, Izvestia's Tarasov joins a far-ranging company. Since World War II, Soviet correspondents have been expelled on spy charges from Sweden, The Netherlands, Australia. Testifying before a U.S. Senate subcommittee in 1956, a former Russian intelligence officer who defected that year estimated that some 80% of the Tassmen scattered around the world serve the Russian government as spies. Vasily Tarasov is reputedly the first Izvestia reporter to be unmasked—a distinction that may or may not earn him credit points with Izvestia Editor Aleksei Adzhubei —Khrushchev's son-in-law.

Underground Gallery

Guy Astruc should have been concentrating on the road as he drove along the icy edge of the Lot River in southwestern France. But Astruc is a spelunker, always on the lookout for potholes to pop into. To him, the little frost-free spot he saw in a limestone cliff suggested a cave entrance that had become plugged up. He stopped to probe the spot with a crowbar. Stones and dirt caved in; warm air whooshed out. Suddenly Astruc was staring into a narrow tunnel. "I was alone," he says, "afraid to go in very far, or stay very long."

Stomach Crawlers. Astruc came back with fellow members of the Quercy Speleological Club of Cahors. They all crawled headfirst into the hole, soon found themselves in a passageway no more than 20 in. high. Exhaling to squeeze between rocks, rubbing their noses in the wet clay, they inched along. Then one of them saw carvings on the ceiling.

Next day the young explorers returned with cameras, lights and tracing paper. The more they searched the cave, the more paleolithic art they found. In all, close to 80 drawings were scratched into the rock. Among them were six deer, one complete horse and the heads or bodies of five others, an antelope, three handsome and complete bison, a bull, some mountain goats, and a catlike creature. Cavemen, it is believed, made images of the animals they hunted to gain power over them. There was a triangular fertility symbol, and one clearly visible figure of a man, headless, but obviously male.

Earth Movers. French Archaeologists place the ancient art work in two distinct periods. The first, Aurignacian, is roughly 25,000 to 30,000 years old, the other, Magdalenian, dates from 15,000 to 20,000 years ago. With the drawings fully authenticated (a thick layer of limy deposit, like candle wax, covers many of them, dismissing the possibility of a modern hoax), the cave is rated as a major archaeological find. Many art historians believe that cave art had magical meaning, purposely put in as cramped a space as possible in a sort of protective return to the womb. Though in an area famous for its subterranean paintings, its very magic may keep the new underground art gallery from ever becoming a tourist attraction. Only the hardiest visitors could crawl down to see the treasures 320 ft. below the surface of the Lot Valley.

Back in *Stijl*

Nothing could sound more universal than the Style, or *de Stijl* as its Dutch founders dubbed it in 1917. That was precisely what they wanted: a pure, pristine art that pierced beyond the world of appearances and individuals. In achieving it, *de Stijl* changed and unified the appearance of the world.

The staggered buildings of city planning, the glass boxes of much modern architecture, advertising layouts, type faces, furniture, all stem from the taste of *de Stijl* and other geometrically influenced art isms of the 20th century.* Fundamentally, *de Stijl's* hallmarks were 1) the right angle, 2) the primary colors (red, blue and yellow), 3) asymmetrical composition. Since these rarely occur in nature, they are the closest to abstract art.

But the Dutch art movement, whose standard-bearer was Piet Mondrian made more than rules for good design. It was a heavily Platonic philosophy of art, carried out in mighty Pythagorean paintings, that saw pure beauty as the universal means of reaching utopia. Wrote Mondrian: "Abstract art is opposed to the raw primitive animal nature of man, but it is one with true human nature."

Oddly, Mondrian's art paralleled the rather raw expressionism of his countryman, Van Gogh, until he was 37. Then, influenced by cubism, he began simplifying what he saw to horizontal and vertical lines. Flowering apple trees, building fronts, jetties into the sea soon dissolved into what he called "plus-and-minus" rhythms. He wrote that he was searching for a higher "reality detached from the transitory reality of forms."

In 1916 Mondrian met Bart Van der Leck, whose work (*see opposite page*), though sometimes representational, dealt with pure colors in flat planes. They tried to remove the traditional moat between the picture and the viewer. Mondrian's late paintings can be seen as the visible imprint of an invisible pattern surrounding the viewer. Even the walls of his stark studio were hung with movable panels that he rearranged to suit his desire, in effect making the studio a spatial work of art. Van der Leck used white in his work not as background but as space that separated his flecks of color, like atoms locked together in the Tinker Toy of their own energy.

Artists all over the Western world took constructive geometry as their guide through the 1920s and '30s. Even the names told the story: a Polish group called *Blok*, an international survey of the subject called *Circle*, the famed architecture school called *Bauhaus*.

Though Mondrian has been dead for two decades, the grip of *de Stijl's* geometry has never lessened, as is demonstrated in the 80-odd paintings on show at Manhattan's Marlborough-Gerson Gallery. Among the younger Dutch painters, Joost Baljeu, 39, makes mechanical totems of an order beyond emotion. U.S. Artist Charles Biederman, 58, saw that his mentor Mondrian had reached "the very limit permitted by the old hand medium of paint." He lays down the brush for what he calls "the new art tools of man"—machines—and makes his metal reliefs look untouched by human hands.

The haphazard crackling of aging oils is time's contemptuous comment on Mondrian's ice-pure ideals. He himself wrote in the mid-'20s that he preferred "a more or less mechanical execution" using "materials produced by industry," because *de Stijl* sought a rapport with the new technology that Van Gogh and other 19th century artists generally detested. In essence, the Stijlists felt that since the machine could not make nature, it must if properly used make art.

* Including suprematism in Russia, purism in France, vorticism in England, futurism in Italy, and constructivism in Russia.

PRO BASKETBALL

How to Make Contact

Basketball, as everybody knows, is a noncontact sport. At least that's what Dr. James Naismith had in mind when he invented the game in 1891. An "enjoyable form of recreation for mature individuals," he called it, and to keep it cool he specified that "no shouldering, holding, pushing, tripping, or striking, in any way, the person of an opponent shall be allowed." But Naismith figured without the pros—and particularly without the Boston Celtics, who won the National Basketball Association championship last week by trouncing the San Francisco Warriors in the roughest five games of basketball that memory could recall.

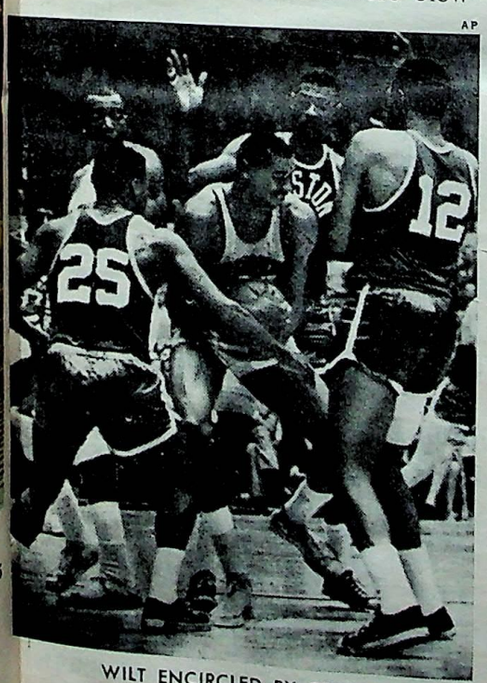
Target for Tonight. The Celtics' No. 1 objective was to stifle Warrior Center Wilt ("The Stilt") Chamberlain, the 7 ft. 2 in. giant who once scored 100 points in a single game. They had just the man for the job: brooding, bearded Bill Russell, 30, pro basketball's dark genius of defense. Time and again Chamberlain went up to shoot, and there was Russell to block the shot. Time and again Chamberlain lunged for a rebound, only to bounce into a shoulder or knee. Other Celtics tugged at Wilt's jersey, stepped on his toes, impaled him on their elbows. In the first game Chamberlain scored only 22 points, and Boston won 108-96. In the second game frustration finally got the better of Wilt: without warning, he hauled off and floored Celtic Clyde Lovellette with a whistling right to the jaw. Boston still won 124-101.

"We've got to beat the Celtics at their own game," said San Francisco Coach Alex Hannum. The Warriors retaliated enthusiastically, won the third game 115-91. The referees were blowing their whistles like riot cops. But big-time basketball is both hard-nosed and tricky, and the refs did not see half of it. The secret, explained Boston's Jim Loscutoff, is sneaky hands: "The idea is to stop your opponent from gaining momentum. You can't actually grab him; you feel and let go, feel and let go, and when he starts to cut, you feel him a little longer." By the time the fourth game ended (the Celtics won it 98-95), both squads were mostly walking wounded. San Francisco's Gary Phillips was out for the duration with a back injury, Guy Rodgers was playing with a dislocated thumb, and Al Attles was limping around with a pulled thigh muscle. Boston's John Havlicek had a gash on one knee, and Tommy Heinsohn sported a magnificent shiner.

Dressed to Kill. Back in Boston for the fifth game, Bill Russell walked into the locker room dressed all in black. "It's my funeral suit," he explained. "I wore it to the Cincinnati Royals' funeral in the semifinals two weeks ago. Tonight I'm wearing it for the Warriors." For most of the game, Chamberlain might as well not have been on the court. Blood was dripping from a cut on his left hand, and at half time he had scored only twelve points. Midway in the third quarter, Boston had an eleven-point bulge. Then Chamberlain began to hit—a jump shot, a hook, another jump. Point by point, the Warriors whittled away the Celtics' lead.

With 19 seconds left in the game, Boston led by only two points 101-99. Trying for the clincher, Forward Heinsohn fired and missed. Everybody converged on the basket, clawing for the rebound. Chamberlain reached up, but Russell got there first. Flailing like a wheat thresher, he bounded high into the air, plucked the loose ball off the backboard and, all in the same motion, rammed it through the basket—"all the way up to my elbows," he said later.

Fists clenched, Bill Russell flung up his arms in a gesture of victory. The Celtics trooped off the court, richer by $3,618 per man and world champions for the sixth year in a row. It was a record unmatched in U.S. professional sports, topping the New York Yankees' five straight (1949-53) World Series successes and the Montreal Canadiens' five straight (1956-60) Stanley Cup victories.



WILT ENCIRCLED BY CELTICS
The secret is sneaky hands.

HOCKEY

Why Bookies Have Ulcers

Even at 5-12 odds, it looked like the bet of the hockey season. The Toronto Maple Leafs, winners of the Stanley Cup for two years in a row, were shooting for three against the Detroit Red Wings. The Red Wings had all they could do just to finish fourth in the six-team National Hockey League. Their goalie, Terry Sawchuk, had 1) a pinched nerve, 2) a sick wife, 3) six kids and 4) a $100,000 liability suit over an automobile accident to contend with. And their star, Wingman Gordie Howe, was obviously slowing down. He would never see 35 again, and in 14 games against Toronto this season, he had not scored a single goal.

All of which goes to show why bookmakers wind up with ulcers. The Maple Leafs won it, but hardly the way a 5-12 favorite should. Howe picked up four goals and four assists in seven games, and Sawchuk averaged 31 saves a game. For the Maple Leafs, it was a matter of survival—with very little honor. Down two games to one, then three games to two, they scrambled back twice to tie, won the deciding game 4-0 when the exhausted Red Wings simply ran out of steam. "We acted like champions," said Toronto Coach Punch Imlach, "and we played like champions." Anybody else would have been content to say that the best team finally won.

GOLF

For Goodness' Sake, Hold On

What wears purple Bermuda shorts, walks like a man, hits like a man, and occasionally loses its temper like a man?

A lady golf pro.

In golf, the big difference between boys and girls is money. Last year Arnold Palmer won seven tournaments and took home $128,230. Mickey Wright, the ladies' champion who hammers her drives 250 yds. and more, won about twice as many tournaments (13), but her take-home pay was only $31,269. Not bad, of course, but hardly fair.

Last week in Augusta, Ga., Mickey and the rest of the girls got together for the 25th Titleholders championship, the ladies' equivalent of the Masters—except in cash. When Palmer won the Masters last month, he collected $20,000, and the rest of the field divvied up another $110,000. Total prize money at the Titleholders: $7,500.

It might have been a million as far as the girls were concerned. In the second round, Kansas' Marilynn Smith shot a

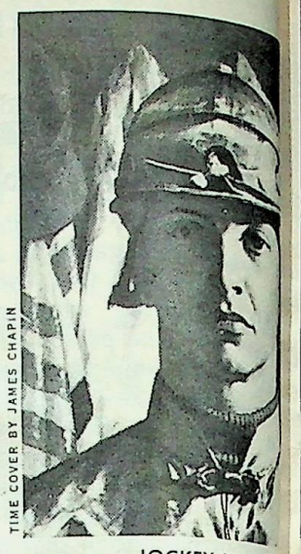
UPI

NORTHERN DANCER WINNING



TIME COVER BY JAMES CHAPIN

JOCKEY HARTACK

Horses, yes; people, no.

66, and even from the front tees, that's a score any man would be proud of. But then she shot a third-round 77, and had to score a one-under-par 35 for the final nine holes to beat fast-closing Mickey Wright by one stroke.

She also had to duck, just to stay alive. Midway in the last round, Marilynn's playing partner, Judy Kimball, missed a 3-ft. putt. Swinging her putter in teeth-grinding disgust, Judy sent it zinging right past Marilynn's ear (*see cut*). At least she had the sense to hold onto the handle. The penalty for throwing a club is $50, and at ladies' prices, that's no bargain. For winning the Titleholders for the second year in a row, Marilynn Smith collected $1,300. Mickey got $1,000, and Judy, who finished fourth, got only $625.

HORSE RACING

The Fourth Communion

Bill Hartack obviously gets along with horses lots better than with people. He has no use for sportswriters ("They're always misquoting me"), racing officials ("They have too much power"), or even his fellow jockeys ("None of them are my friends"). But with horses, Jockey Hartack, 31, shares a mystical communion. Nobody has ever won so many stakes (43) or so much money ($3,000,000) in a single season. And when it comes to the biggest race of all, the Kentucky Derby, Hartack is in a class by himself: going into last week's 90th Derby, he had three victories and one second in five tries.

Second Choice. So it was somewhat embarrassing to discover that he was only second choice for the horse he wanted to ride. Willie Shoemaker, a gentler genius, was supposed to ride Northern Dancer, a speedy bay colt owned by Canadian Millionaire E. P. Taylor. But Shoemaker changed his mind and switched to Hill Rise, the California champion (TIME, April 24). That left Hartack with Northern Dancer, and a chance to do a little embarrassing of his own.

In the paddock, Hartack got his orders from Trainer Horatio Luro, a transplanted Argentine, whose own Derby record (a first and a third in two tries) was nothing to scoff at. Luro kept it crisp: Northern Dancer was inclined to sulk when he was whipped. "I told Hartack that I do not care for any punishment," he said later, "none whatsoever. Beyond that, I did not tell him anything. He knew the horse. And he had won three Derbies, hadn't he?" Odds at post time: 7 to 5 on Hill Rise, 3 to 1 on Northern Dancer.

The field of twelve horses broke from the gate and swept around the first turn. Hartack kept the Dancer under a tight rein. Mr. Brick, a 16 to 1 long shot, set the pace through the backstretch; Hill Rise was sixth, the Dancer seventh. Then Hartack glanced to his right, saw Shoemaker flick his reins to urge Hill Rise forward. That was the signal. Hartack clucked to Northern Dancer, and in one wonderful burst of speed, the little colt bolted past Hill Rise, past Mr. Brick, past everybody, and into the clear. Turning for home, the Dancer had a two-length lead.

No More Time. Down Churchill Downs' long (1,234½ ft.) stretch the horses pounded. On the outside, Hill Rise was ranging up fast. At the furlong pole, just ⅛-mi. from the wire, the Dancer still led by two lengths. Whipping furiously, Shoemaker closed the gap. With 50 ft. to go, Hill Rise's nose was even with the Dancer's tail. Two more strides, and he was ½ length behind. Another stride—but there was no more time. The two horses swept past the wire, with Northern Dancer in front by a neck. Track stewards called for a photograph to make sure. Shoemaker knew that he had lost. "I tried," he sighed. "Lord, how I tried."

In the winner's circle, the garland of roses from his fourth Derby victory around his horse's neck, Bill Hartack heard the time: 2 min. flat, and a new record, ⅘ sec. better than the old mark set by Decidedly in 1962—with Bill Hartack aboard.

UNIVERSITIES

For Adults Only

By the standards of professional academicians, much of today's adult-education program is neither an education nor adult. Hence the unique reputation of Columbia University's School of General Studies, where a student body of 4,000 housewives, executives and workers, as well as undergraduates who have switched from other colleges, has instilled scholarly vigor into the pallid pastiche that often passes for adult ed.

With an array of 1,200 courses taught by a first-rate faculty (full- and part-time) of 570, G.S. has grown to become a third undergraduate branch of Columbia, along with the men's college and Barnard for girls. As evidence of its solid status, the school last month moved into its own home for the first time in its 60-year history, with completion of a $1,000,000 renovation on the old School of Mines building, now called Lewisohn Hall.

Tighter Standards. Since the majority of students have jobs, two-thirds of G.S. classes start after 5 p.m. Classes are small, averaging about 20, generating an intellectual intimacy that is rare in a big university. "The older people bring such a depth of understanding," marvels one 24-year-old. "It's an antidote to ivory-towerism"—and a stimulus to further education.

Most of the students intend to get degrees; of those who do, more than half go on to graduate school, often in the face of severe obstacles. A housewife from Leonia, N.J., spent 800 hours commuting by bus to Morningside Heights in upper Manhattan for four years to get a degree enabling her to continue graduate studies at Columbia's Russian Institute. Even the jet set touches down at G.S. Ex-Actress Jo Ann Bliss, wife of the president of the Metropolitan Opera Association, expects a degree in art history next year. Top student in the class of 1961 was Mrs. Hugh Auchincloss, sister of Washington's Bundy brothers, who won awards in history, philosophy, and social science; Mrs. Auchincloss dropped out of Radcliffe when she married in 1942, started at G.S. in 1954.

Time was when almost anyone could enroll in G.S. Dean Clifford L. Lord tightened admission standards by requiring candidates without college degrees to take a specially designed scholastic-aptitude test. The result was fewer students but brighter ones.

Off Course? Although the average age of G.S. students is about 28, one-third of them enter in their 21st year, often as direct transfers from other colleges. This has given G.S. a younger look and some of the same collegiate trappings (clubs, a snack bar, a newspaper) of Columbia's other two undergraduate schools. University President Grayson Kirk, attempting to correct what he calls a "substantial veering" from the original role of G.S., has revived proposals to boost the minimum age from 20 to 21.

Whatever the outcome, G.S. ought to remain as Lord* said in his farewell Dean's Day address, "Columbia's answer to the shifting needs of the collegiate generation." And their elders. Now both generations are housed under one roof in a fruitful familial relationship, with the younger students setting the academic pace and the older ones contributing their store of experience.

* Who next fall moves on to become president of Hofstra College.

LITERATURE CLASS AT COLUMBIA'S GENERAL STUDIES
Two generations under one roof.

PUBLIC SCHOOLS

Who's in Charge?

Hallowed tradition gives America parents enormous influence on the schools—and on the people hired to run them. Swallowing hard, most school superintendents would say that by and large this state of affairs works to the general satisfaction of both. But there are some glaring exceptions, where the violence of dispute between school board and school boss has split communities, demoralized teachers and distracted students.

Cleveland School Superintendent William Levenson recently resigned in anger after the school-board president took a policy squabble to the newspapers. Chicago's strong-minded Benjamin Willis quit when the city board insisted on a broader, faster student transfer plan than he wanted, returned to the job only after he got his own way. For months, New York City's able Calvin Gross has been forced to conduct a running battle with his board.

"Atheistic Unitarians." Nowhere is the struggle more bitter than in the swollen Magnolia School District of Anaheim, Calif., where the population has soared from 10,000 to 115,000 in a decade. In an atmosphere of raging partisan politics that has pitted Birchites and conservatives against anti-Birchites and liberals, the five-member school board has become an ideological football kicked back and forth by all sides.

Last week the district held its third recall election in three years to decide which faction had the majority to hire a superintendent it would find congenial.

The latest phase of the battle began in April, 1963 when three conservatives elected to the school board hired Charles Wilson to administer eight elementary schools with 6,400 pupils. Wilson soon offended many citizens whom he called "atheistic Unitarians" by distributing monthly patriotic and religious messages to kids in his school. When Wilson imposed a purely phonet

JULIAN WASSER

DEMONSTRATORS CELEBRATING IN ANAHE
Three recalls in three years.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

system of reading, seven school principals resigned, and anti-Wilson teachers, joined by a newly formed citizens' group, agitated for a recall election to oust the trio that had backed the superintendent. In last week's voting, 60% of the district's 10,000 registered voters streamed to the polls and by a surprisingly comfortable margin purged the three conservatives.

Popular Principal. If educational aims were obscured in Anaheim by public interference with the delicate relationship between school boards and superintendents, they have been virtually obliterated in an acrid fog of controversy that has settled on the isolated Massachusetts island of Nantucket.

Trouble there began brewing among the 3,500 year-round residents in 1955 when a Harvard-based team of outside educators surveyed the island's three schools, recommended some mild reforms. To some Nantucketers, who are suspicious in principle of off-islanders, the whole idea smacked of progressive education—and higher school costs. When Off-Islander Charles H. Minnich, who has been resident superintendent of schools only since 1962, proposed similar ideas this year, the already restive opposition went out for his scalp. Rallying around the popular local high school principal, Mrs. Mary P. Walker, who is satisfied with the status quo, conservatives won a three-member majority on the five-member school board. By a 3-2 vote at their first meeting in March, the board canceled Minnich's contract. Now Minnich is suing the three-member majority for breach of contract. At the same time, the Massachusetts Teachers Association is weighing an investigation of the Nantucket school system, which could result in a boycott of the island by teachers throughout the state.

Clear Warning. Whether the current argument between school boards and administrators is over politics and phonics as in Anaheim, over *de facto* segregation as in Cleveland, Chicago and, to some extent, New York, or over curriculum reforms and fierce local pride as in Nantucket, the rash of conflicts has confirmed the urgent need to define the roles and responsibilities of the public and the public servant in U.S. education. In Chicago, peace of a sort was reinforced when Willis and his board formally spelled out their separate jurisdictions on paper. The need to define roles and responsibilities came up time and again at last week's convention of the National School Boards Association in Houston. "Unless each side knows its place, "chaos results," said Mrs. Fred A. Radke, a Port Angeles, Wash., housewife and outgoing N.S.B.A. president. So far, however, neither school boards nor administrators seem certain of their limits. "The frequency and intensity of the local battles," said Mrs. Radke, "warn us clearly to get at the root of the trouble before we have a full-scale war."

METHODISTS

The Challenge of Fortune

(See Cover)

There are people in the pews, dollars in the collection plates, and 65 million Americans who claim to be Protestants. But the outwardly prosperous Christian churches are beset with inner anxiety. Ministers fear that their congregations are no more committed to the church than to the country club. Denominational leaders despair at the widespread lay unwillingness to recognize the race question as a moral issue. In the current national controversy over school prayer, and in the rising challenges to church tax exemptions, theologians detect a trend toward secularism that will soon call for a revolution in church attitudes and institutions. Changes in manners and morals summon Protestantism to find a new mode of relevance in a "post-Christian" world.

It is a crisis that faces every faith —but none more so than the Methodist Church, which last week opened its quadrennial General Conference in Pittsburgh's Civic Arena. With 10,234,986 members, Methodism is the second largest Protestant communion in the U.S.* After the Roman Catholic Church, it is also the wealthiest and the one that, because of its history and geographical distribution, has the best claim to be the only truly national Protestant denomination. This year many of the 858 Methodist delegates arrived at their conference with the deep conviction that their church had reached a turning point in history—and with a scarcely concealed fear that the vitality that once burned in Methodism was lost when fiery evangelism gave way to today's organized, institutional church.

The Better Way. Fear there may be, but not to the exclusion of hope. Methodism would not be itself without a large measure of Christian optimism, and the conference's sense of expectation was expressed by Bishop Gerald Kennedy of Los Angeles in the episcopal address that opened the meeting. The Christian task, he told the delegates and more than 8,000 visitors from Methodist churches around the world, is "to pursue our ancient course of attacking our own imperfections, keeping our life open to God, and perfecting our society. We are not trying to sell a system, but to demonstrate a Way which is incomparably better than all others, and shines with the promise of a more abundant life for all men."

Kennedy's episcopal address was a kind of spiritual state-of-the-union message, and he had been selected by his church's 81 bishops to write and present it in their name. The right man, in this case, was in the right pulpit, for the Bishop of Los Angeles has assumed the mantle worn by the late G. Bromley Oxnam as unofficial spokesman for Methodism to the rest of the U.S. Nobody gave Kennedy the job, and nobody could. Democratic Methodism has neither Pope nor primate; the presidency of the Council of Bishops—an office held by Kennedy in 1960 and currently by New York's Lloyd Wicke—passes yearly from man to man, and involves only the function of chairing the semi-annual meetings of the Methodist hierarchy. The church speaks with a united voice only once every four years, at the General Conference. Between times, Methodists everywhere in search of guidance listen with special care whenever Gerald Kennedy takes a stand.

Best & Worst. One reason they listen is that Kennedy is unquestionably among the four or five most dazzling preachers in the U.S. today—an oratorical genius with a commanding baritone and the pace and timing of a Broadway pro. The bishop is also a stylish and fluent writer whose lectures and books (his latest: *For Preachers & Other Sinners*) sometimes express complex theological issues as gracefully and clearly as did the works of Anglicanism's late C. S. Lewis. As writer, preacher and bishop, Kennedy is the contemporary Methodist who best seems to express the peculiar quality of his church's active, outgoing faith: pragmatic but perfection-aimed, equally concerned with personal morality and social order, loving discipline yet cherishing freedom. Kennedy calls it "sanctified common sense."

To Bishop Kennedy, the genius of Methodism is uniquely displayed at General Conference, which he describes as "democracy at its best and worst—the process of a large church trying to find its way." This year's conference suggests Methodist Layman Charles Parlin, a Manhattan lawyer and a co-president of the World Council of Churches, "might be historic." In twelve brisk days of debate—interspersed with sessions of prayer, preaching and hymn singing—the Methodist legislators are considering petitions and commission reports that could, if accepted, help rekindle much of the church's old zeal. Among the principal issues:

• WORSHIP. Almost certain to be accepted is a proposed new order of worship that will bring a welcome measure of austere dignity to Methodism's sometimes freewheeling Sunday morning. In language and spirit, the revised services resemble those contained in the Anglican Book of Common Prayer which Methodism first used. The order takes account of the contemporary liturgical revival by providing a great variety of seasonal prayers for the Christian year. Last week delegates approved the first new Methodist hymnal in 29 years. The songbook drops some familiar samples of 19th cen-

hymnody, such as Rudyard Kipling's *Recessional*, which Negro Methodists claim has an unmistakable racial slur in its reference to "lesser breeds without the law." Added are 122 new texts, including such non-Methodist favorites as *The Old Rugged Cross* and *How Great Thou Art*. Also new are 91 all-but-forgotten hymns by John and Charles Wesley, a number of Negro spirituals (cleansed of dialect wording), tunes and lyrics borrowed from Anglican, Lutheran and Roman Catholic hymnals. But the hymnal committee, Kennedy explained, did draw certain lines: it firmly rejected *I Want to Be a Jesus Cowboy in the Holy Ghost Corral*.

• ECUMENISM. Although it is traditionally wary of church-union proposals, the Methodist Church is almost ready to approve a formal merger with the 756,600-member Evangelical United Brethren, who are German in origin but close to the Methodists in doctrine and discipline. The conference will consider a proposal that the merger should be carried out in stages during the next twelve years, but it faces a sharp conference-floor fight. Some younger ministers believe that the timetable for union is too slow, while Southern Methodists are wary of the Midwest-centered Brethren's adding numerical strength to the church's Northern majority. Kennedy personally deplores the proposal to call the merged denominations the United Methodist Church. "We have spent more than a century getting rid of adjectives," he says.

• DISCIPLINE. The world will never be saved by organization, but it will never be saved without it, Methodists like to say. The church probably has more boards, committees and jurisdictions than any other U.S. denomination—and it spends endless hours tinkering with its ecclesiastical machinery. Scheduled for discussion at this year's conference are such problems as a reorganization of the big Board of Missions, a proposal to combine the deaconate and the ministry into a single order, a recommendation that bishops be allowed to move from one jurisdiction to another.

• MORALITY. Theoretically, Methodists are not supposed to smoke or drink, but many of them do. Says one Methodist pastor in Salt Lake City: "Try to fill posts of leadership in any church with nondrinkers and still get capable people. You just can't do it." This year, the Division of Temperance and General Welfare is offering a new statement on alcohol that urges Methodists to abstain not just in obedience to church law but out of their sense of Christian responsibility. For the first time, the church will probably come out and admit that "Christians may differ on the use of alcoholic beverages." Many younger ministers believe that the proposed new position on drinking is a healthy step in the right direction. "It recognizes the fact that Methodists do drink," says the Rev. James Bristah of Detroit, "and it challenges the people to find a new basis for abstaining."

• SEGREGATION. "The main issue before us now," says Kennedy, "is race." The Methodists include more Negroes (about 400,000) than any other integrated Protestant church; at the same time, almost half of the church's white membership is in the South. The major issue facing the conference was whether to abolish the nation-spanning Central Jurisdiction that governs most of the 2,900 Negro churches; white Methodist churches, by contrast, are divided into five geographical jurisdictions. Southerners wanted to preserve this separate-but-equal institution—and so, paradoxically, did many Negroes, since the Central Jurisdiction guaranteed them a disproportionately strong representation on church boards. For example, 10% of Methodism's active bishops are Negroes, although Negroes constitute only 4% of Methodist strength. But many young ministers and laymen from the North wanted to abolish the Central immediately, and held a prayer vigil at the conference to publicize their cause. Last week the delegates voted overwhelmingly to integrate Negro churches into white jurisdictions voluntarily over a four-year period. The compromise disappointed the civil rights advocates, but it reduced the likelihood of a walkout by Southern churches, increased the chances of a formal conference denunciation of segregation.

Beyond the Statistics. By its decisions, the General Conference will be measuring the current health or sickness of Methodism. Measured in statistics—a good Methodist way of doing it—the patient seems to be blooming. Last year parishioners put $599 million into their church collection plates—equivalent to the sales of the nation's 80th largest industrial corporation. The capital worth of Methodist institutions, including 79 hospitals and 105 colleges and universities, is more than $4.8 billion. Nashville's Abingdon Press is the world's largest religious publisher, with sales of $27 million and an output that ranges from Sunday-school texts to a new, scholarly three-volume history of the church (price: $27.50). More than 1,400 Methodist missionaries from the U.S. are spreading the Gospel abroad in 44 countries.

Methodists grant that there are statistical downs to match statistical ups. The church's growth rate is far smaller than that of the U.S. population as a whole, and Methodism is beginning to face a severe clerical shortage: there are only 900 ordained preachers graduating from seminaries each year to fill 2,697 ministerial openings. Nonetheless, the gravest issue facing the church is not a matter of numbers; it is whether Methodism has rightly adapted its structure and spirit to fit the shifting conditions of modern life.

Fellowship at the Center. In the time and place of its founding, Methodism was a great response to [illegible]

THE OLD PRINTSHOP

lenge. The 18th century was a time of torpor in the Church of England, which was slow to answer the antireligious skepticism of the Enlightenment and to meet the new missionary challenge of the unchurched poor in new industrial towns. John Wesley, a High Church priest turned highway preacher, found the answer. Instead of confounding the deists with reason, he responded to their arguments with religious fervor; and when the poor were reluctant to enter the church, he brought the church to them on city streets and country roads. In place of liturgy and creed, he put fellowship and the personal experience of salvation at the center of Christian life. It was an emotional faith, summoning men to work hard and live well for their Saviour's sake.

By 1760, lay preachers had carried Wesley's brand of religion to the New World, and 24 years later, at Lovely Lane Chapel in Baltimore, Francis Asbury convened the first conference of the Methodist Episcopal Church. Methodism proved to be a faith ideally suited to the U.S. frontier. In a land without churches, theological argument and orderly Communion services were as out of place as a Pope. What Asbury's tireless circuit riders provided instead, at impromptu worship hours in country kitchens and camp meetings, were florid sermons, full-throated hymns, and an upright way of life. They represented a puritanical church that separated the men from their women in prayer services.

"Methodism brought what the frontier needed," says New York's Bishop Lloyd Wicke, "a certain discipline and a moral sense. You didn't gamble because that was taking unfair advantage of a man. The church also forbade drinking, dancing and card playing: it was not the deed itself that the church was worried about, but what it did to a man's soul."

Preceding the Flag. While many other churches waited for the railroad, Methodism trekked west with the settlers—and thereby grew faster than any other Protestant denomination during the 19th century. The far-ranging circuit rider not only followed the flag; he sometimes preceded it. In 1838, Methodist Missionary Jason Lee rode from the Pacific Northwest to warn Congress about the southward expansion of Britain's Hudson's Bay Company, thereby spawned a westward migration that helped save Washington and Oregon for the U.S.

Around 1880, when the frontier began turning from a reality to a historical memory, Methodism began to consolidate its gains and became more of an ecclesiastical institution than a moving wind of evangelism. Born in poverty, Methodism gradually matured into a church for the nation's growing middle class—and in so doing became so close a mirror of all that was both strong and weak in America that sometimes the nation and church seemed inseparable. There was, for example, that formidable Methodist amazon, Frances Willard, who helped create the W.C.T.U. and grandmothered the "noble experiment" of Prohibition.

Conservative in personal morals, Methodists were often liberal in social ethics; many of their ministers, such as New York's stormy Bishop Francis J. McConnell, were leading advocates of the "social gospel"—the earnest, pre-World War I movement that attacked child labor and defended the right to unionize by directly applying Jesus' ethics. In the rural areas where they were strongest, Methodists less happily became active in the Ku Klux Klan, and in immigrant-hating nativist American movements.

Forgotten Roots? Today, a number of young Methodists detect more weakness than strength in their church, and complain that it has lost much of its spirit in the transition from frontier chapel to the Gothic "fortress church" of middle-class suburbs. "The church is so nondescript that it doesn't carry an ax any more," thunders the Rev. Ralph L. Roy, a leader in a reform-minded group of ministers and laymen called Methodists for Church Renewal. "It listens more to the voices of society than to the voice of God." To the rebels, nothing demonstrates this more than the open avowal of segregation by Methodist churches in the South—a stand dramatically proven last Easter when Boston's Bishop James Mathews and Negro Bishop Charles Golden were prevented from attending morning worship at a church in Jackson, Miss.

Methodism's critics-from-within complain that it ignores all of Wesley's ideals except his passion for detail. "The Methodists began among the so-called 'out of England," says the Rev. John Barclay of Boston. "But we have to a degree become fat and prosperous and forgotten the roots from which we sprang." Ministers complain that their churches have become "cults of congeniality" instead of societies for spiritual rebels, and that the old spirit of Christian fellowship has been all but lost in a swamp of "administrivia." Complains the Rev. John Lilly of Boston's Old West Methodist Church: "The local church has an organization that would rival General Motors'. It's ridiculous."

Mediocre Pietism? The new breed of minister wants a "tough" Christianity; instead he finds in Methodism a mediocre pietism with an increasingly narrow range of appeal. Rural pastors complain that the hierarchy has forgotten the needs—and the value—of small churches. Urban preachers sadly note that newcomers to city slums turn, if at all, to Pentecostal and Holiness storefronts—and rarely to the Inner City's empty cathedral-size Methodist churches left over from the days when the neighborhood was an enclave for the wealthy. What is left as an audience for Methodism is the suburb; in this kind of environment, charges the Rev. Thomas Oden of Enid, Okla., church thinking is oriented around an un-Biblical legalism which acts on the assumption that when we do good works for God, he accepts us because of our goodness."

But other Methodist voices are not yet ready to see the *Mene, mene* on the wall. "We've never been stronger," insists Lawyer Parlin. "Methodism is not a dying or decadent church." And Dr. Earl Brewer of the Candler School of Theology in Georgia. "It is a giant of a church—justly proud of its past, relatively satisfied with its present, slightly timid about its future." So another voice that chimes in—lo-

PREACHER KENNEDY IN THE PULPIT

"We are not trying to sell a system, but to demonstrate a Way."

and clear—to defend Methodism is that of its bishop for the Los Angeles area.

At 56, Gerald Hamilton Kennedy is still young for a bishop but old in term of service (16 years)—and he stands just about midway in the spectrum of Methodist opinion. He shares the concern for relevance that motivates the young ministers; with the older hierarchs, he speaks proudly of the church's accomplishments. Along with Bishops Fred Corson of Philadelphia, James Mathews of Boston, Richard Raines of Indianapolis and John Wesley Lord of Washington, he ranks among the most respected and influential figures in the church. "He's the best of the old wing," says one radical minister. "He's bright, creative, not stuffy at all."

Traveling the Connection. Kennedy is certainly not, as he puts it, "a very bishopy bishop." He is far more at home in sports clothes than in the hair shirt of clerical garb. He drives to work in a sports car—currently a white Karmann Ghia Volkswagen, which followed an MG, an Austin-Healey, and a Nash Metropolitan. In an age of episcopal administrators, Kennedy is primarily a preacher who happily forsakes paper work for the chance to deliver a sermon. He takes seriously the injunction in the Methodist *Discipline* that bishops should "travel through the connection," and averages 50,000 miles a year on inspection and lecture tours.

It is unthinkable to Kennedy—or to anyone who knows him—that he would ever have accepted anything but what he calls "the greatest calling in the world." Born in Michigan, the son of a Methodist lay preacher, he grew up in California, and with his parents' faith. "My whole life has been centered in the church," he says. "I went to church in my mother's arms and slept on the back seat while my father was finishing his Sunday evening sermons. It seemed inevitable to me that the ministry was my calling as long ago as I can remember."

Kennedy began preaching when still in high school; at 15, he was licensed as a lay preacher, and during his college years he spent his weekends as a supply pastor. "The church can stand anything," he wrote about his first charges. "When I think of those sophomoric sermons, I marvel at human endurance and at Christian forbearance." After high school, Kennedy went on to the College of the Pacific where, as a junior, he married his high school sweetheart, Mary Grace Leeper. He was 20, and she 18; today, Mrs. Kennedy notes, "we have a hard time advising young people against early marriage." Eventually, Kennedy's round-the-clock schedule caught up with him, and he got a resounding F in an Old Testament class —"which makes me the only bishop in the Methodist Church to have failed a Bible course in college," he says.

Kennedy made up for lost grades, and in 1932 started work on his Ph.D. at the Hartford Theological Seminary in Connecticut. Methodist churches in that part of the country were in short supply, so Kennedy accepted the pastorate of a nearby Congregational church. "But Methodism was in my blood," he recalls, "and I began to miss the organization, the quotas, the pressures, the programs." Returning to California in 1936, Kennedy was assigned to pastorates in San Jose and Palo Alto before moving outside the Western Jurisdiction to the St. Paul Methodist Church in Lincoln, Neb.

No Trade. During his years in the parish ministry, Kennedy earned church-wide fame as one of Methodism's finest young preachers. "If you keep on talking like that, young man," said Bromley Oxnam after hearing a Kennedy sermon, "you'll end up as a bishop." The prophecy was fulfilled one day in July 1948, when Kennedy was elected one of the four bishops in the Western Jurisdiction. At 40, he was the youngest member of the hierarchy and the first white Methodist bishop ever picked by one jurisdiction from another.

Kennedy spent four years as Bishop of Portland before moving to Los Angeles. He enjoys preaching so much that twice after his election he briefly contemplated resigning his office to accept pastorates; eventually he decided that being a bishop was not so bad after all. "I find it difficult to feel sorry for myself," he says. "I would trade salaries with some men I know, but I would not trade jobs with any man."

John Wesley thought that preaching at 5 o'clock in the morning was one of the world's best exercises. Kennedy has never tested his oratory on predawn Los Angeles, but he does rise at 5:30 for a quick breakfast, then scoots off to his office for an hour or two of serious theological reading (he still likes Reinhold Niebuhr best) before office work begins. Kennedy heads the fastest-growing area in his church; with his "bishop's cabinet" of nine superintendents, he heads 700 ministers and 460 churches, and his lay membership has grown from 143,000 to 270,000 in twelve years. In church circles, he is admired as a first-rate fund raiser who has built 24 new churches in the past three years. He is also considered a shrewd judge of personnel, with a knack for appointing the right man to the right pulpit—and for trading off weaklings to unsuspecting brother bishops. Kennedy seldom takes work home from the office, spends much of his evenings reading contemporary novels, which he reviews for the Methodist monthly *Together*.

Spare & Witty. Kennedy believes that a bishop should be a teacher as well as an administrator, and just about every Sunday of the year he finds a vacant pulpit to preach from. His sermons are a far cry from the stem-winding exercises in dour purple prose that 19th century congregations loved. His language is spare and unchurchy, larded with wit and timely references to the secular world around him. Yet his message is always related more to eternal truths than to the morning's headlines.

Like Oxnam or McConnell, Kennedy has never been afraid to discuss political and social issues from the pulpit, but he picks his controversies with care. "A fellow that's shooting off his mouth all the time—nobody listens to him after a while," he says. In 1957 Kennedy led a fight to elect some moderates to Los Angeles' conservative-dominated school board—and as a reward found himself named to the State Board of Education. Kennedy has been one of the church leaders most active in battling the campaign to repeal a state fair-housing law.

Is Separation Sinful? The bishop is willing to risk unpopular stands on ecclesiastical issues as well. Recently he approaches the topic of church union

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Methodist first and an ecumenist second, has long had grave doubts about Dr. Eugene Carson Blake's proposal that the Methodists should join with five other faiths to form a great new denomination, both catholic and reformed. "I don't use the term 'sinful' about our separation," he explains. "Our unity must be of the spirit. I don't think it demands one organization." Kennedy firmly believes that the sermon should remain at the center of Methodist worship. He has no patience with what he calls a "sloppy, unbuttoned service," but he is skeptical about claims that more and better liturgy is the solution to the church's problems. Says he: "The church with the most beautful liturgy is probably the Russian Orthodox, and they sat by while Communism took over their country."

Integration-now Methodists regard Kennedy as a reactionary on the racial issue because he shudders at the thought of Northern Methodists picketing churches in Jackson. Kennedy believes that men's hearts as well as church law must be changed if integration is to work—and he has quietly managed to do some of both in his own area. Last year he appointed a Negro pastor to a white congregation in Tucson, and he has pledges from more than 50 churches that they will accept any minister he assigns, regardless of color.

The Reluctant Caboose. Kennedy agrees that "the church has many weaknesses," but he also believes that the church has many strengths, and among them is the rules-laden organization that so many younger ministers complain about. To Kennedy, the right use of organization can foster successful evolution instead of schism-creating revolution. Methodism, he says, is a "strange combination of discipline and freedom—and it is the discipline that makes the freedom possible." Wesley's instinct for order was wise, he argues, "because nobody stands alone. We're a connectional church—and you just can't be a Christian standing alone."

In their actions, if not in their words, many of Methodism's modern rebels are halfway willing to concede Kennedy's point. "We look to the church to lead and often find it a reluctant caboose to the train of history," says the Rev. John Russell Jr., a chaplain at M.I.T. "The amazing thing, in the face of all that we have seen to be wrong, is the stark fact that we have not quit." And instead of abandoning the church, they have stayed to set it on a rightful course.

Serious Theology. It was Asbury's stern belief that "the saddlebags are the best schooling for traveling preachers." Today, says the Rev. Walter Vernon of the church's Board of Education, Methodism is "taking theology more seriously." The Methodists have no Tillich or Barth, but they have seldom before had so many competent and respected thinkers to boast about. Among them: Ecumenist Albert Outler, a Methodist observer at the Vatican Council

KENNEDY & WIFE AT HOME
Outside, a white Karmann Ghia.

last year, and radical young (37) Systematic Theologian Schubert Ogden.

Methodist seminaries—notably Drew in New Jersey, Southern Methodist's Perkins, and Claremont in California—are almost interdenominational in faculty and student membership, and are wide open to the study of fresh currents in modern theology. Last month, for example, Drew imported a number of ranking European thinkers for a seminar on hermeneutics—the science of reinterpreting the Bible's message for contemporary man. Out of this environment is emerging a new generation of preachers who sometimes annoy their elders by their contempt for church routine, but please them by their sense of commitment. "If they stay in the church," says one seminary professor, "at least they know why they are there."

Such signs of life impress critical observers outside the church. "Methodism was the hottest lava in the 19th century," says Lutheran Theologian Martin Marty of Chicago. "If it is true to its own genius, it should be a religion that 'heats up' again easier than some others." Some of the heat can be felt now in the Inner City slums, where young Methodist ministers are beginning to rehabilitate all-but-abandoned churches. It can even be felt in the suburbs, where thousands of Methodist laymen have formed Christian "cells" for Biblical and theological study.

And there is plenty of vitality in the Methodist debates on the moral issue of race and the relevance of the church. Obviously, it is relevant, and fully entitled to the optimism summed up by Gerald Kennedy in the episcopal address to the conference: "We do not share the current pessimism which speaks of a 'post-Protestant era.' We believe that the signs of the times proclaim that ours is still the relevant Word. Let the Methodist Church proclaim that so far as it is concerned, the best is yet to be."

MILESTONES

Born. To Edward, Duke of Kent, 2[illegible] madcap captain in the Royal Sco[illegible] Greys, cousin to Queen Elizabeth, an[illegible] Katharine, Duchess of Kent, 31: the[illegible] second child, first daughter (13th in lin[illegible] to the British throne); at Coppins, i[illegible] Buckinghamshire.

Born. To Princess Margaret, Count[illegible] ess of Snowdon, 33, and Antony Arm[illegible] strong-Jones, Earl of Snowdon, 34, por[illegible] trait photographer: their second child first daughter (seventh in line for the succession); in Kensington Palace, Lon[illegible] don, thereby completing this spring's quartet of royal babies—a boy to Prin[illegible] cess Alexandra and Queen Elizabeth and two girls. Burbled Tony: "She looks a super-baby!"

Married. Princess Irene of The Neth[illegible] erlands, 24, and Prince Hugo Carlos de Borbón y Parma, 34, in Rome (*see* THE WORLD).

Died. Harry Holt, 59, prosperous Or[illegible] egon farmer who in 1954 was so moved by a documentary describing the plight of Korean babies fathered by G.I.s that he and his wife adopted eight, went on to set up an orphanage north of Seoul, battle U.S. immigration quotas and or[illegible] thodox welfare agencies to place 3,000 more adopted waifs in American homes; of a heart attack; in Ilsan, Korea.

Died. Joshua Whatmough (rhymes with wha ho), 67, Harvard linguistics professor from 1926 to 1963; of a stroke; in Winchester, Mass. A real-life 'Enry 'Iggins, Whatmough spoke eleven languages from Hittite to Franglais, but was best known for his theory of the "selective variation" of languages, which held that they evolve by natural selection in a mathematically predictable course (by 3020, English will have lost most irregular verbs), a theory Whatmough developed in the 1920s, but could not demonstrate until the post-war development of computers.

Died. Sir Milton Margai, 68, Prime Minister of the diamond-rich West African Commonwealth of Sierra Leone (pop. 2,600,000), a British-trained gynecologist who spent 20 years in jungle practice before entering politics to champion the cause of his backwoods tribesmen against the more sophisticated coastal folk, led his People's Party to victory in 1951, ran the colony so well that Britain granted independence in 1961, after which he maintained conservative, pro-Western policies; after a long illness; in Freetown, Sierra Leone.

Died. Nancy, the Dowager Lady Astor, 84, the devil-may-care Virginia belle who became Britain's first woman Member of Parliament; after a long illness; at Grimsthorpe Castle, Lincolnshire (*see* THE WORLD).

THE LAW

THE SUPREME COURT

Marriage by Choice

Racial intermarriage is potentially the most combustible of all civil rights issues. Although marriage between whites and Negroes is actually rare in the U.S.—at least officially—miscegenation by cohabitation is another matter, rooted largely in the South's unspoken mores. According to one study by University of Wisconsin Sociologist Robert Stuckert, 21% of white Americans are "descendants of persons of African origin." By the calculation of Anthropologist Melville Herskovitz, 72% of U.S. Negroes have white ancestors.

The interracial statistics have piled up despite the fact that miscegenation under any circumstances at all is a crime in 19 states—including not only 17 Southern and Border states but also the Northern states of Indiana and Wyoming. Quite apart from local fears and customs even at this stage of the civil rights revolution, are such laws constitutional?

New Concept. Last week the Supreme Court took a giant step toward resolving the question by agreeing to review its first miscegenation case since 1883, when it upheld an Alabama law against interracial sexual relations (*Pace* v. *Alabama*). Now at issue is a Florida law that forbids a man and woman who are not married to each other and are of different races to "habitually live in and occupy in the nighttime the same room."

Connie Hoffman, a white woman, and Dewey McLaughlin, a Spanish-speaking merchant seaman of Honduran origin, were convicted under this law in Miami Beach in 1962. Each was sentenced to 30 days in jail and a $150 fine. The defendants appealed to the Florida Supreme Court and were turned down in light of what Justice Millard Caldwell called "the sound rule of *stare decisis*" (following precedents) and "the well-written decision" of *Pace*. Let the U.S. Supreme Court decide, added Caldwell caustically, "if the new-found concept of 'social justice' has outdated 'the law of the land' as therein announced."

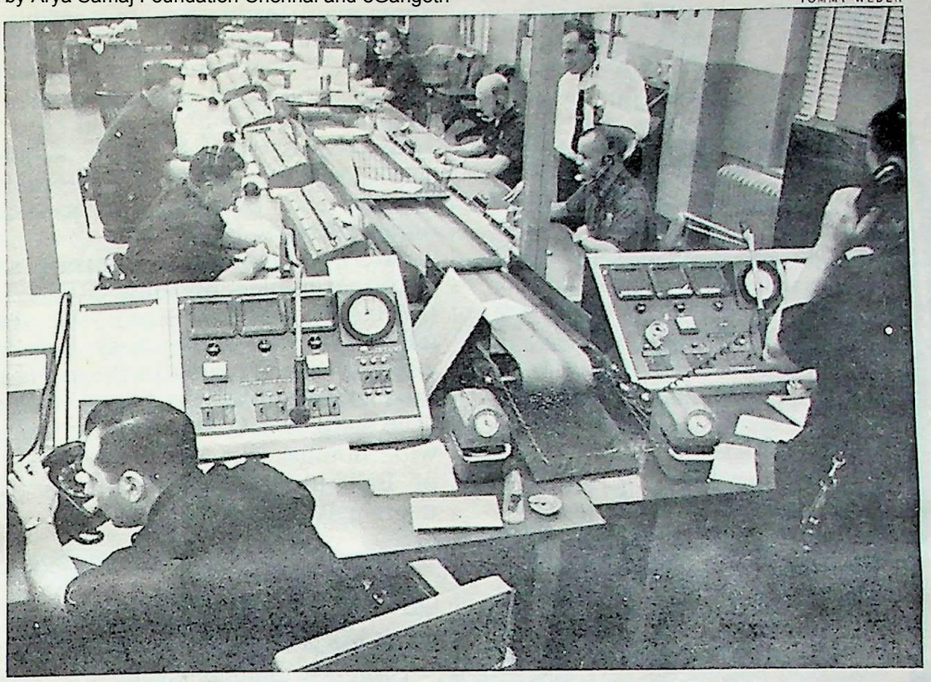
Frail Standard. To just that end, the N.A.A.C.P. argued in Washington that Defendants Hoffman and McLaughlin (who are still living together) were deprived of the 14th Amendment's guarantees of due process and equal protection of the laws. Florida does not ban cohabitation by unmarried persons of the same race, for example, and the defendants were unable to plead common-law marriage because Florida forbids intermarriage under another law, which the N.A.A.C.P. also wants struck down. Moreover, Florida's definition of Negro ("every person having one-eighth or more of African or Negro blood") is so vague that police merely identified McLaughlin as a Negro by "appearance," a frail standard on which to build a case.

How much the ruling in *McLaughlin and Hoffman* v. *Florida* will affect other state miscegenation laws will not be known until the court hands down its decision next fall. But the tide seems to be running against the old Southern custom. In 1948, the California State Supreme Court ruled California's miscegenation law unconstitutional under the 14th Amendment. Antimiscegenation laws have since been repealed in other states; in Nebraska one was wiped off the books only last year. Goal of the N.A.A.C.P. in this case: "Freedom to join in marriage with the person of one's own choice."

HOFFMAN McLAUGHLIN

A crime in 19 states.

TOMMY WEBER



POLICE ANSWERING EMERGENCY CALLS IN BROOKLYN

Meanwhile, try Addis Ababa.

POLICE

Car 54, Where Are You?

The law's most serious slowdown is not always delay in the courts—the months or years it can take a case to come to trial. Too often the problem is delay in the law's enforcement—the interminable minutes it can take to reach the police. In an age of computers and digit dialing, it may be easier to phone "Hiya" to a pal in Addis Ababa than to call "Help" to a cop a few blocks away.

The citizen who has just been mugged on Staten Island in New York City is likely to get a second unpleasant surprise. If he still has a dime and dials the officially listed police number, ST (for Saint George) 7-1200, he will get a business firm in Manhattan. The cops' correct number happens to be SA (for Saint George) 7-1200, but someone goofed when it came to listing it in the police roster. Manhattanites are told to call SPring 7-3100, which is hard enough to remember and even harder to dial in the dark. When help finally does arrive, apologetic cops often advise, "Next time, call CAnal 7-2000," which is not the emergency number but the more prosaic listing for "all other business."

Two-Hour Delay. Typifying the U.S. problem of slow police service, New York City has five boroughs with five separate police numbers that seem to endlessly confuse callers. The police department is now struggling to devise a system whereby a single "hot line" central number would automatically summon the cops in the caller's own borough—though even this would not eliminate delays caused by police operators who ask interminable questions before sending aid.

Even so, New York is better off than many other cities. Houston's emergency calls go through an all-service city switchboard, and police may be delayed by as much as two hours. In Los Angeles County's 75 incorporated cities, 27 of them policed by the county sheriff and 48 by local forces, the right number to call is often a mystery to the householder with a prowler hacking at his back door. Best advice: dial the operator and pray that she is not already swamped with other calls.

Two-Minute Rescue. Some cities are making progress. Chicago police have their own switchboard (POlice [illegible]) and a communications [illegible]

TIME IS MONEY

A Deposit Account with Lombard Banking Limited means all these things:—Real Financial Stability and an interest rate of 5%—the maximum safe and sure rate for your money to earn. Immediate interest accruing day by day paid or credited half-yearly. Withdrawals are easily made subject to the terms you arrange. Deposits accepted from any country in the world. No U.K. tax deducted. Complete privacy. No charges.

To earn 5% per annum the minimum initial deposit is £100, the minimum period of deposit and notice of withdrawal is six months. Your Deposit with Lombard Banking Limited is supported by paid up capital and reserves in excess of £12,000,000. Write now to the General Manager for further particulars and your copy of Deposit Account Booklet No. A.O. 306.

LOMBARD BANKING

LIMITED

Head Office:
Lombard House, Curzon Street,
Park Lane, London, W.1.
GROsvenor 4111 (30 lines)

MUSIC is a matter of interpretation, temperament. It lives only in performance. In reporting on the arts, TIME is concerned with the performer as much as the work; in following all the news, TIME is concerned with the personalities as well as the events.

three-man teams are responsible for each of the city's eight zones. Calls automatically go to the right team, seated before illuminated zone maps that pinpoint the position of all radio cars. Two men receive and record the details on IBM cards; the third simultaneously assigns a car. The whole process takes about 15 seconds.

Hot-line numbers are on the increase —for example, Boston's DE 8-1212, Cleveland's MA 1-1234, St. Louis' CE 1-1212; in some cases they bring police cars screeching to the scene in as little as two minutes. Things would be even simpler if U.S. police had a nationwide number like West Germany's 110 or Britain's 999, which can be dialed unerringly in the dark.

THE CONSTITUTION

Does Schoolroom Prayer Require a New Amendment?

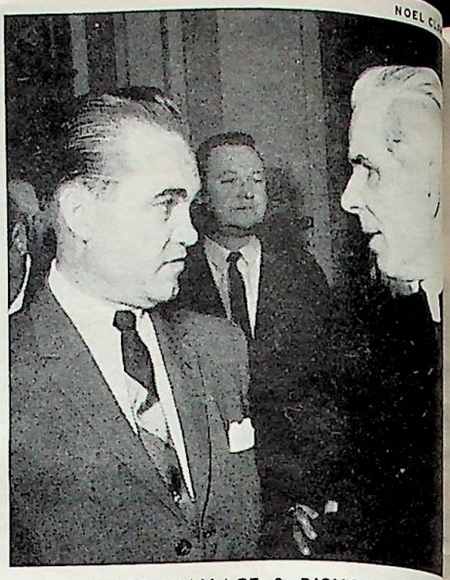
Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof . . .
—First Amendment

To alter the latest interpretation of those time-honored words, which go back to 1791, is the goal of 170 proposed amendments to the U.S. Constitution, now being hotly debated before the House Judiciary Committee. In an unprecedented assault on the Constitution's first ten amendments, which are known as the Bill of Rights, all of the new amendments, whatever their wording, have one aim: to reverse the Supreme Court's recent decisions against school prayers and Bible reading.

Dubious Business? From Alabama's Governor George Wallace to Roman Catholic Bishop Fulton Sheen, a parade of largely anti-court witnesses testified before the committee last week. Alabama refuses to "order God out of our neighborhood schools," cried Wallace. "We will stand up for God! We will stand up for America!" More constructively, Sheen suggested that no amendment was needed. But he added, "I fear for a country which outlaws prayers in schools." Said he: Let schools be allowed at least to adopt "the prayer that every member is carrying in his pocket —'In God We Trust.'"

Things looked good for New York Republican Frank J. Becker, author of an amendment approving voluntary school prayers. Becker claimed 167 signatures on a discharge petition, only 51 short of the number required to get his proposal out of committee and onto the House floor. But opposition was stiffening for one compelling reason: even mild tinkering with the First Amendment is dubious business. Said the Rev. Eugene Carson Blake, Stated Clerk of the United Presbyterian Church: "I take alarm at this experiment with our liberties. The Bill of Rights should remain unamended, for the rights are inalienable."

Much of the cry to "Get God Back in the Schools" reflects deep misunder-



GOVERNOR WALLACE & BISHOP SHEEN
In God they trust.

standing of what the court actually said. In *Engel* v. *Vitale* (1962), it overruled the required daily recitation of a nondenominational prayer composed by a governmental body, the New York State Board of Regents. In 1963's *Murray* v. *Curlett* and *Schempp* v. *School District*, it overruled school-required reading of Scripture in Maryland and Pennsylvania. All three decisions were based on what the court deemed to be an inescapable reading of the First Amendment's "establishment" clause. Far from being antireligious, the court simply aimed to keep government from interfering with religion.

Wrong Clause? Many constitutional lawyers who agree with the ultimate decision still fault the court on its reasoning. Its use of the establishment clause seems to proscribe any link at all between government and religion, yet such links are embedded in the real ties of U.S. society. To infer that government now has a duty to cut them may well force the court to later confront unnecessarily painful questions including the constitutionality of tax exemption for churches. Such future troubles could have been avoided, critics say, had the court arrived at the same school decisions by a somewhat different route—the First Amendment's "free exercise" clause, thus allowing the court to stress freedom of worship and thus to follow the logic of an increasingly pluralistic society.

Despite this criticism, most lawyers take a dim view of any Draconian amending of the Constitution to "authorize" school religion. Who but some governmental body would compose and control the religious observance? What official orthodoxy would result—against diverse U.S. beliefs in different bibles and different gods? The whole idea could nullify the First Amendment and its purpose of guaranteeing religious freedom. Warned New York Republican Representative John V. Lindsay: "It was that amendment that probably the founders of the country and the first immigrants fought for the hardest."

TOXICOLOGY

The 18-Hole Itch

The 51-year-old automobile-repair instructor had a flaming eczemalike eruption on his hands and arms, neck, face and legs. He told the University of Pennsylvania's Dermatologist Walter B. Shelley that he had first had it in 1959, soon after he took up golf. For the next two years it got bad in summer, better in winter. But after the 1962 season began, it stayed bad. He had noticed, the patient said, that it became "explosively worse" after he walked past workers spraying the greens. That was the doctor's clue.

The patient was given a cortisone-type drug and kept off the golf course. Within a week, he was much better. Then Dr. Shelley checked the spray used on the greens. It was a fungicide, and its active ingredient was thiram, a notorious cause of allergies. Since thiram is still used in processing rubber, Dr. Shelley notes in this week's A.M.A. *Journal*, "the thiram-sensitive individual must avoid such varied rubber products as art-gum erasers, bunion pads, eyelash curlers, condoms, gloves, goggles, dress shields, dental dams, bathing caps, headrests, garters, pessaries, elasticized garments, and mammary prostheses." And now, golf courses.

Dr. Shelley has added an extra hazard to the known perils of the 19th hole. Thiram is close chemical kin to disulfiram (Antabuse), which makes people sick when they drink. A golfer sensitized on the greens may have a serious reaction at the bar.

SURGERY

No Place for Amateurs

The potential benefits to humanity from the transplantation of organs are so great that they are tempting insufficiently trained surgeons, warns Dr. Francis D. Moore (TIME cover, May 3, 1963). For kidney transplants, pioneered at Boston's Peter Bent Brigham Hospital, of which he is surgeon in chief, Dr. Moore says that skill is needed in four specialties: kidney physiology, the surgery of blood vessels, treatment of urological disease, and the use of potentially poisonous drugs to suppress transplant rejection.

Expertness in any one of these takes years to acquire. Yet Dr. Moore reports in *Science* that the Brigham is getting a stream of visitors who hope to spend only a few days learning the techniques before returning home to try transplants. Some restraint is needed to protect patients, says Dr. Moore. And the hazards are not limited to such rare operations as transplants. Even so common a procedure as giving a general anesthetic, he says, still carries enough risk to demand practitioners who are both expert and experienced.

DENTISTRY

The Limitations of Transplants

Ecuadorian Indians faced up to the problem in the days before Columbus; so did U.S. dentists around the time of the Revolution: if someone had a hole in his jawbone where a tooth had just been extracted, why not fill it with any fresh, healthy-looking tooth that happened to be available? The answer seemed especially logical since many of these transplants apparently worked.

COURTESY DR. MOSES L. EHRLICH

ROWLANDSON'S "TRANSPLANTING OF TEETH" (1787)
More than the Indians, but not enough.

The price paid to donors for front teeth went up to 4 guineas a tooth in New York in 1772. The trouble was that neither the Indians nor the colonial dentists knew anything about immune mechanisms and the rejection of transplants. Most of the transplanted teeth fell out a couple of years later.

Last week scores of dentists met in Manhattan to trade up-to-the-minute data on the feasibility and success of tooth transplants. It soon became apparent that, although they have learned much about rejection mechanisms, they still do not know enough.

Crown & Root. A tooth is not a simple cutting or grinding tool, but a complex piece of living matter. The part that shows, which dentists call the crown, is made of bonelike dentine wrapped in an enamel shell. The part that is hidden, which dentists call the root, consists of bonelike materials surrounding the root canal, which is filled with soft tissue, blood vessels and the tooth's nerve.

So much of the tooth seems to be inert that some dental surgeons hoped that a transplant would not set off rejection reactions. They thought it might be possible to graft teeth from one person to another in much the same way as the bloodless cornea of the eye can be grafted, and for essentially the same reasons. Some dentists at last week's meeting claimed successes in person-to-person transplants that have lasted from two to four years. But they had no X rays to show that the roots were still healthy. Soon, their colleagues predicted, the crowns would drop off.

Fact is, concluded Cornell University's Dr. Stanley J. Behrman, teeth are far from immune to the processes of graft rejection. Even their enamel, he said, may touch off an immune reaction. The root is slowly whittled away by scavenger cells in the bloodstream of the tooth's new owner, and is replaced with soft tissue or new bone, which is why the crown eventually falls off.

Wisdom Growth. But all the experts agreed that transplantation of a tooth inside the patient's own mouth is indeed worthwhile. The likeliest occasion for using this technique is when an adolescent or young adult loses one of his first molars (as one in three does) because of decay. Then, if the patient has a "wisdom tooth" that has not yet broken through, or is threatening to become impacted, the dentist removes it and uses it to replace the lost molar. This young, "budding" tooth will take root and grow just like any other tooth, except that it will never develop a nerve connection. Since all the tissues are the patient's own, there is no problem of graft rejection. And the problems of surgical technique have been pretty well solved. Decay in the transplant can be treated as in any other tooth.

Los Angeles' Dr. Harland Apfel has tried six homotransplants (person to person), and all have failed. But he has done 350 autotransplants (with the patients' own teeth), and 97% are now successful. Homotransplants of teeth, with long-term success, will have to await the finding of safer and more effective drugs or new techniques to check the rejection process.

1. 750,000-volt transmission. General Electric has invested in this four-mile-long laboratory to answer just one question: How much can the cost of extra-high-voltage transmission be cut per mile? Savings could reach $10,000 per mile. Here, an impulse generator (inside bubble) produces up to 3 million volts of electricity for lightning and surge testing.

2. Cryogenics research at G.E. explores the phenomenon of superconductivity at extremely low temperatures, where certain metals lose all electrical resistance. This typical research effort could lead to sizable gains in equipment efficiency. Here, G.E. scientists induce low temperatures with liquid nitrogen.

3. Exotic power sources are under research at G.E. They make use of the latest advances in chemistry and physics. Here the source is thermionic conversion, in which heat is converted directly into the electricity that powers this motor.

4. Nuclear superheat fuel assembly is moved into dome of a new superheat reactor (12.5 MWt) that adjoins General Electric's pioneer Vallecitos boiling-water reactor in California. Here scientists will boost steam temperatures from the present 550° F to 1,000° F in an attempt to cut atomic-electric power costs by up to 0.5 mils per kwh.

5. Thermonuclear fusion has achieved multi-million-degree temperatures—releasing fusion energy at a peak rate of about 100 watts—using this equipment at the General Electric Research Laboratory.

6. Hydrocarbon fuel cell, being developed by General Electric, combines low-cost hydrocarbon fuels (here, diesel oil) with oxygen from the air to produce electricity directly—without steam, combustion, noise, vibration or moving parts.

7. Building greater efficiencies into power-generation equipment: over *70 per cent* of the turbine-generators in the 34 most efficient U.S. steam-electric plants were manufactured by General Electric.

8. High-vacuum research and studies in high-purity materials at the G.E. Research Laboratory permitted G.E. to introduce the world's first practical interrupter for quenching high-current power arcs in a vacuum.

9. Magnetohydrodynamics research aims to produce electricity by passing hot gaseous "plasmas" through a magnetic field. The General Electric Research Laboratory's 100-foot hypersonic shock tunnel aids these studies.

How we make certain you'll always get the most power for your money

There's no single, direct route to the breakthroughs that will help the electrical industry meet tomorrow's increased power needs. So at the nearly 100 laboratories of the General Electric Company, scientists are pursuing research and development on *many* fronts.

They've done everything from building a fault-free meter . . . to harnessing the atom . . . to developing a 700,000-volt transformer. The results speak for themselves: in a reliability factor of *99.6 per cent* for General Electric's modern-day, large steam turbine-generators, for example. (Total capacity of these 648 units: 77,600,000 kw.)

G.E. scientists can't afford to neglect any possibilities. Some of the new energy-conversion methods they're investigating—including the ones you see here—may someday help provide power more efficiently. But who can say which ones?

And meanwhile, our scientists are improving *existing* power sources. Improved metals for the G.E. gas turbine and steam turbine-generator will boost the efficiency of these proved products still further. (Already, over *70 per cent* of the turbine-generators in the *most efficient* U.S. steam-electric plants are made by General Electric.)

We'd welcome a chance to discuss our experience in everything from turbine-generators to turnkey projects to your industry automation problems. Contact your G.E. representative or write *General Electric Co., Dept.25-27TA, 159 Madison Ave., N.Y.C., N.Y.10016,U.S.A.*

Have you taken the new Bellett out for a test-drive yet? If you haven't, you're missing an eye-opening experience. Don't be satisfied with a casual inspection. It's not fair to the car . . . or to you. All you'll see is an economical 4-door family sedan with racy lines. Bellet has a lot more to offer!

Rev up the lively 1500cc powerplant, marry it to the four-speed gearbox . . . and go get some action! Heavy traffic? Bellett's rack-and-pinion steering gives you the maneuverability of a polo pony. Tight curves? Watch how Bellett's independent four-wheel suspension takes the kinks out of them. See what we mean? It's sporty!

Now you know why we call it a **family sports sedan**. It's Japan's first, and it's from Isuzu, Japan's automotive style leader. Bellett will be available soon in your area. Don't just look at it. Drive it . . . be a sport!

STATE OF BUSINESS

Warmth of Spring

U.S. businessmen had rarely basked in a warmer glow. As it reached the 39th month of economic advance, the U.S. economy was in the midst of the longest peacetime expansion in modern history. First-quarter profit reports from every part of the U.S. showed that corporations were earning on the average of 20% more this year than in 1963. General Motors' earnings of $536 million were the highest for any company in any three-month period in business history, and huge profit gains were reported by giants as varied as Eastman Kodak (up 25%), U.S. Steel (up 72%) and the Monsanto Co. (up 84%). Retail sales marched upward,

DON HESSE—ST. LOUIS GLOBE-DEMOCRAT

"HEY LOOK—THERE'S L.B.J."

nd so did construction contracts. Auto nd steel production continued at rec- rd or near-record levels.

New Attitude. Above and beyond all his spring growth was the warm breeze rom Washington. The President of the J.S. went before the annual meeting f the U.S. Chamber of Commerce (*see* THE U.S.) and spent a chatty our appealing for an end to suspicion nd distrust between Government and usiness. After the speech, Harvey Aluminum President Lawrence Harvey aid: "This signals a new attitude on he part of bureaucrats—business is our friend, work with it." Businessmen believe that Johnson thinks the way they think, point out that he is the irst President since Herbert Hoover to have had successful business experience. ays Boston's Eli Goldston, president f Eastern Gas & Fuel Associates: He's a good model of today's professional business manager."

To many businessmen, one good example of professionalism was Johnson's success in settling the long and complicated railroad labor hassle—and doing so without visibly bruising anyone. About 5,000 railroad firemen stand to lose their jobs immediately under terms of the Compulsory Arbitration law, whose constitutionality was upheld last week by the U.S. Supreme Court, but most will get severance checks or other railroad jobs. Labor chiefs applauded Johnson's concern for the displaced workers, and businessmen generally agreed that he had not overstepped the bounds of collective bargaining by persuasively pushing the settlement. Says Santa Fe President Ernest A. Marsh: "He and his mediators deserve a lot of credit for doing something that nobody else had been able to do."

An Accountant's Memory. The President has an accountant's memory for economic statistics, and he delights in exploiting the bullish ones in his speeches in a way that puts them onto Page One almost every day. In his speech to the Chamber of Commerce, he managed to mention 50 different statistics. Armed with figures on profits and take-home pay, Johnson has been using every possible chance to campaign against price and wage rises—gently warning businessmen that if inflation comes to eat away prosperity, they will have only themselves to blame.

But when it came to the wage rises he favors—for the men and women in the middle and upper reaches of Government—he took his case straight to the businessmen. He urged the Chamber of Commerce to support a federal pay raise bill—and put the request, as usual, in terms that any businessman could understand. "The middle level positions," said Johnson, "pay less than half the comparable scales of business and industry." Then he drove the point home by announcing that "one of the great economic advisers"—Walter Heller—was planning to quit the Government because his fixed salary ($20,500) could not properly support his family.

The Golden Opportunity. At midweek Johnson hosted a White House dinner for 61 top businessmen, including Henry Ford II, David Rockefeller, Roger Blough and Crawford Greenewalt. Johnson talked of a "golden opportunity" for the economy to achieve its full potential in the coming months, and invited them to help him realize it. "In the Old Testament," he said, "there is a verse which says: 'Seest thou a man diligent in his business? he shall stand before kings; he shall not stand before mean men.'* I can promise you that if you are diligent in your business, this President will always be pleased to stand with you—anywhere, any time." This sort of talk made most businessmen, even Republicans, feel warm all over.

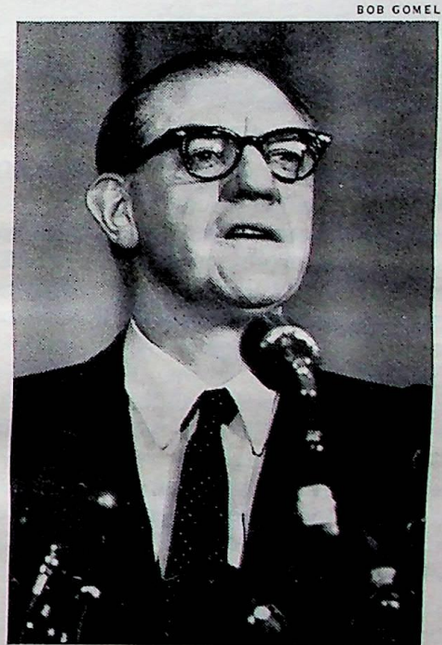
* *Proverbs 22: 29.*

STEEL

Speaking Out

U.S. Steel Chairman Roger Blough is a hard man to get a rise out of. Through John Kennedy's attack on steel, through price-fixing squabbles with the Government and sniping from stockholders and legislators, Blough has steadfastly stuck to the mild manner, bland words and faint smile that have become his trademarks. At his meetings with the press, he gives only perfunctory answers, usually volunteers nothing. Almost everyone was surprised, therefore, when Blough dropped his usual reticence last week at his quarterly press conference and delivered a firm defense of the steel industry's pricing policies. It came just three weeks after

BOB GOMEL



STEELMAN BLOUGH
Similarity can be good.

U.S. Steel and seven other big companies had been indicted on charges of fixing some prices on carbon steel sheets.

"If anyone inquires into it," said Blough, "he will find that there is plenty of competition in the steel industry, including price competition. In 1963 alone, on almost 100 separate occasions, we reduced one or more of our product prices. Some of the recent price changes were in galvanized steel, five major grades of stainless strip and sheet, and automotive upholstery spring wire. Now the price changes are occurring almost daily."

Though the steelmakers have also raised some prices, said Blough, the overall price level is only slightly higher now than six years ago. "Some of the price changes were initiated by U.S. Steel. Other times they were initiated by others. One of the best indications of price competition is that, under almost all circumstances, any [illegible] ducer is required to give the customer

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

LITTON ANNUAL REPORT IN RUSSIAN

Something to grace the samovar table.

UPI

FREE TRADER NEILAN

the lowest going price. It is not very usual for a customer to pay a higher price to one producer than to another. You might put it this way: that the similarity in prices is in itself real evidence of price competition."

To harden his point, Blough went on to announce that U.S. Steel would forthwith trim 12% to 14% from the prices of some types of wire and rods. Reason: stiff competition from cut-price European producers, whose steel shipments to the U.S. will exceed 6,000,000 tons this year.

TRADE

Can You Do Business With the Communists?

It must make fascinating reading for Nikita Khrushchev and his colleagues, and it surely graces many a samovar table around the Kremlin. But how did the annual report of Litton Industries, California's electronics giant, get distributed in Moscow—and in Russian? The answer illustrates an important change in attitude among U.S. businessmen. When Litton executives started working on the company's glossy 1963 report, they decided to print 2,500 copies in Russian, sent 1,850 of them to the highest comrades in the U.S.S.R., from Khrushchev on down. They obviously feel that there is potential for profit in dealing with the Soviet Union—and more and more U.S. businessmen agree.

Last week this widespread and growing belief got its most dramatic play to date in an unprecedented resolution adopted by the annual meeting of the U.S. Chamber of Commerce in Washington. With only a handful of the 3,800 delegates muttering disapproval, that normally conservative body urged the Government to pull down its barriers against the export of nonstrategic goods to the Soviet Union and its European satellites. Such controls, said the Chamber, "are not necessary for the security of the U.S. and result in discrimination harmful to its competitive position."

Shifting. Many months of politicking went into the resolution. Last September Washington Lawyer Joel Barlow, the Chamber director who earlier had engineered the organization's approval of the tax cut bill, proposed that the Chamber speak up for bigger U.S. business with the East. With the enthusiastic support of outgoing President Edwin P. Neilan, he organized a team of backers, including Caterpillar Tractor President William Blackie, Anderson Clayton Vice President Norman Ness and Christian Science Monitor Editor Erwin Canham, a former Chamber president.

When right-wing organizations mounted a counter campaign and 1,000 protesting letters rolled in from small-town businessmen, the sponsors nervously softened their proposal by writing into it their disapproval of granting long-term credits to the Communists. As it turned out, they overestimated the opposition. Only one Chamber chapter (from White Plains, N.Y.) voted against the proposal, and a group of leaders—including Edwin Neilan—wanted to go even farther by specifically endorsing trade with Red China.

Many businessmen explain their shift away from opposition to Red trade by stressing their belief that trade could somehow become a cold war plus for the West. Says Burroughs Corp. President Ray Eppert: "All-out trade in nonstrategic goods could be the West's secret weapon for exposing Communism's weakness as a system for providing better life for its people." But bene... such philosophy is usually a more pr... matic conviction that the U.S. is sim... losing a lot of good export business ... cause the Communists can get alm... anything they want from the U... trade-with-anybody allies in Euro... Western sales to the Soviet bloc ... growing by 10% a year, but the U... wrote up less than 2%, or $166 milli... of last year's $4.2 billion total. Since ... allies have not honored the U.S. e... bargo, says General James Gavin, pr... ident of Boston's Arthur D. Little In... "it is high time for the U.S. to prot... its own economic interests."

Softening. The Johnson Administ... tion, which would like to soften its ... forcement of the embargo, expects ... Chamber's resolution to help it get so... amendments to the 15-year-old Expo... Control Act. But there is strong su... port for the embargo in Congress, a... what promises to be a noisy brea... over amendments to the act will ... gin as soon as the civil rights fight ... settled.

Even if the longest embargo in mo... ern times is softened, how much can t... U.S. expect to increase its sales to t... Communists? Under czars and comm... sars alike, Russia has never been a m... jor U.S. customer because it had neit... enough hard money nor desirable goo... to offer in return. Before the one-s... U.S. wheat deal, the largest recent U... sale to Russia was $4,000,000 worth ... inedible tallow. Now Khrushchev s... that he wants to buy billions of doll... worth of industrial plants and eq... ment to make chemicals, fertilizer ... other products. For that, he proba... will need heavy loans. Considering ... U.S. law has prohibited long-term c... its to the Soviets ever since they ... faulted on Russia's World War I debt... and that any early change in that po... is unlikely—Khrushchev will prob... have to do most of his shopping ... Western Europe.

TOBACCO

Calling a Smoke a Smoke

With muscled men, gorgeous girls ... green valleys, the U.S. tobacco ind... has long pictured the cigarette as ... companion of sex and virility, of s... our and well-being. From now on, ... industry will have to call a smo... smoke—and pretty much let it g... that.

Last week the nine major U.S. ... arette makers, imposing the most s... self-regulation in their history, ... nounced a new advertising code. ... code is a clear attempt to forest... at least to soften, the Federal T... Commission's imminent controls ... cigarette advertising and merchand... which could include health-cautio... bels on cigarette packs.

The industry's code, like the h... surveys that inspired it, is largely ...

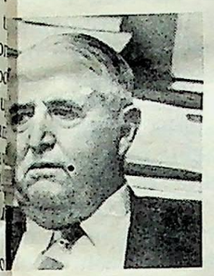
cerned with protecting young people. The companies began discussing a possible code even before the Surgeon General's report on cigarettes and cancer—but not until they had discreetly checked with the Justice Department to win antitrust immunity in this case. Some parts of the code, such as the elimination of cigarette advertising in college newspapers and a halt to the distribution of samples on campus, have already gone into effect. Other portions of the code cover general advertising, for which the industry has been spending some $200 million a year.

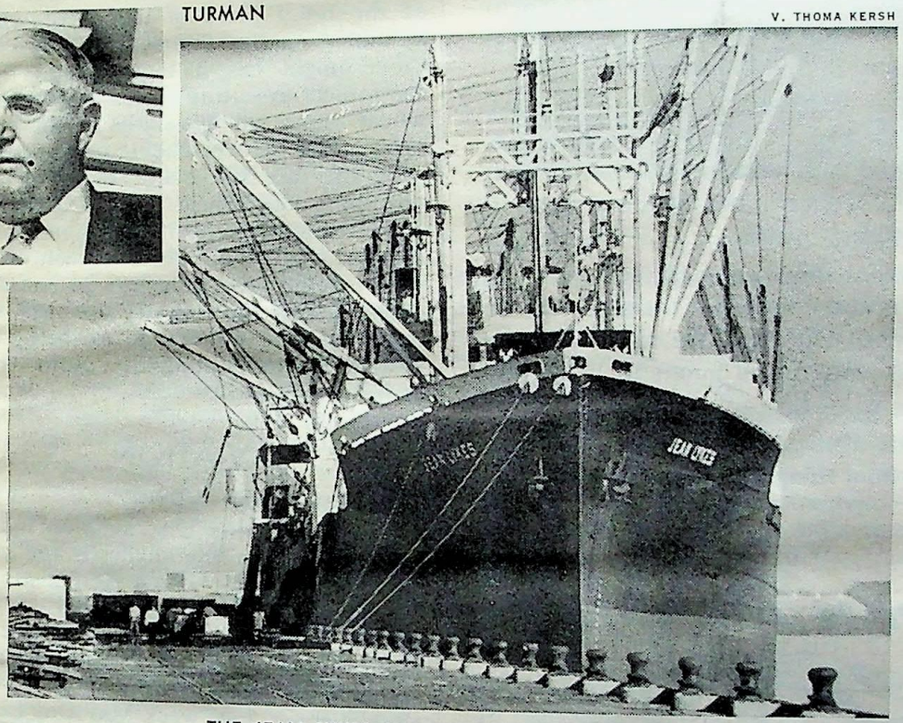
No more athletes' testimonials will be used, and no models in cigarette ads may be or look younger than 25. "Cigarette advertising," stresses the code, "shall not represent that cigarette smoking is essential to social prominence, distinction, success or sexual attraction." By that yardstick, the ads will no longer show such athletes as Arnold Palmer, who has been nonchalantly flipping his filter-tip on the grass before sinking a 60-footer, may also abandon such regulars as the menthol sweethearts strolling hand in cigaretted hand, the husky and tattooed Marlboro men, and the Chesterfield panels of distinguished smokers.

What ad campaigns will have to be scrubbed and what themes will be stressed depends on the man chosen to administrate the new code. Hopeful that they can satisfy critics with the kind of strong "czar" professional football has, cigarette companies will give their man broad powers. He cannot have any connection with the industry or own its stocks. Once chosen, he will have absolute veto over all advertising. Penalties for disobeying his veto will range up to $100,000.



TURMAN

V. THOMA KERSH



THE JEAN LYKES IN NEW ORLEANS

To get off the dole, automate.

SHIPPING

Turn-Around to Efficiency

Burdened with the world's highest labor costs, the 15 U.S. shipping lines are kept afloat financially only by the Federal Government, which pays the difference between U.S. and foreign operating costs. Since wages are unlikely ever to be rolled back, the shipping industry's sole chance of getting off the federal dole ($245 million in 1963) is to replace men with machines. Steaming ahead of all the others in that direction, Lykes Bros. Steamship Co. last week asked the Government for an unusual subsidy: to put up, in the interest of efficiency, half of the $6,000,000 required to modernize and automate 21 Lykes freighters that are already sailing the seas.

Daring & Saving. Lykes wants to install an electronic central control system that would enable one officer on the bridge to control the entire engine room, thus cutting each ship's crew from 46 to 35. Multiplied over the 25-year life of the ships, the crew reductions would save the Government $37 million in subsidy payments. The Government can hardly afford to pass up such an opportunity, and the unions cannot complain too loudly. Reason: they have already consented to similar crew cuts on twelve new automated freighters now being built for Lykes.

Such deft maneuvers are the work of Lykes Chairman Solon B. Turman, 64, the son of Tillie Lykes, who joined her seven brothers in founding the line. A tough-minded patriarch, Turman started out as a young man shoveling manure on Lykes's boats when the line was still ferrying cattle between Cuba and Florida. Now, with 52 ships regularly calling at 156 ports in 68 nations, Lykes is the largest U.S. dry-cargo shipping line. Turman runs the company so well that it earned $8,400,000 last year on revenues of $65.9 million.

Despite Lykes's present prosperity, there was considerable doubt only a few years ago about whether the line would keep on sailing. To qualify for continued Government subsidies, Lykes was faced with the necessity of raising $250 million to modernize its fleet, or the alternative: getting out of the shipping business. "We could have made a pile of dough by liquidating," says Turman, "but finally we decided that if any American shipping line could make a go of it, we could." To raise the money, family-owned Lykes went public in 1958, though the family still owns 64% of the stock and fills nearly all of top management.

Hours *v.* Days. Making a go of it, Lykes fought the Federal Maritime Administration to win the right to become the first U.S. line to design its own ships, though they are partly paid for by federal subsidy. As a result, each Lykes ship is so equipped that it can load and unload all its own cargo without help of dock booms, can "turn around" in port in as few as five or six hours. Efficiency applies at the home office too. Turman rises at 4 a.m., breakfasts with his staff before 7 in the bleak company cafeteria. The early schedule is the only way he knows to keep up with his European competitors, who, he complains, enjoy the advantage of being six hours ahead of him on the clock.

ANTITRUST

At the Belt

So far this year, the federal trustbusters have won twelve criminal indictments against U.S. industry for price-fixing in various fields. The number is by no means a record; 37 indictments were returned in 1962 and 17 last year. But each case seems to get closer to the consumer's wallet. Last month a federal grand jury indicted eight leading steel companies on charges of rigging prices in the steel that goes into cars, refrigerators and washing machines. Last week the trustbusters struck hard at the belt: in the biggest indictment yet brought in the food field, they made price-fixing charges against the twelve millers that grind 65% of the bakery flour used in the 40 states east of the Rocky Mountains.

The companies cited, which do a total business of $305 million a year, include the two largest millers, General Mills and Pillsbury. Since 1958, the Government charges, they have fixed prices in the flour made from the hard winter and spring wheat that goes into white bread. Along with these firms, three presidents and three vice presidents were named as conspirators [illegible] suit against the millers is

JAL

JAL flies more jets across the Pacific than any other airline

(14 a week)

Now you can enjoy delightful airline service unique in all the world and still match your U. S. A. itinerary with 14 JAL Jet Couriers a week—more flights than any other airline.

Choose from day or night departures from Tokyo. Then fly to Hawaii and on to California, or stop over in the Islands at no extra cost and enjoy the sunshine.

Chances are there's a kimono-clad JAL hostess leaving for the U. S. A. when you are. Why not join her? And be pampered with gracious JAL service in the Japanese manner.

TransPacific to the U. S. A.... throughout the Orient from Japan to Djakarta... to Europe over the Pole or via India. Only JAL, the Orient's largest airline, flies all these routes. Ask your travel agent to book you *"amid the calm beauty of Japan at almost the speed of sound."*

Flying from Hong Kong? *Four of JAL's U.S.A.-bound jets now originate in Hong Kong. The same DC-8 Jet Courier, JAL's new "Sunset Express," goes all the way.*

WEST GERMANY

A Giant Jailed

It was dessert time at the banquet marking Chancellor Ludwig Erhard's ceremonial visit to the Hanover Fair. Suddenly a *Nachtisch* of grim-faced police appeared. To the astonishment of the crowd, they arrested and marched away Fritz-Aurel Goergen, the president of the vast Henschel Works, whose $125 million in annual sales cover locomotives, trucks and heavy machinery. Before the week was out, two other Henschel executives had been arrested, and four had had their homes and offices searched. Germany was faced with what may be its biggest postwar business scandal, which quickly began making bold headlines and even bolder rumors.

Suspicion of Fraud. Under German law, prosecutors need not immediately bring charges against arrested suspects, and the Koblenz prosecutors directing the Henschel case were tight-lipped. Ruhr-born Goergen was simply confined to a Kassel jail on "suspicion of fraud against the German government." But in the German business community, the word spread that the charges involved faked invoices and old parts passed off as new in a $16 million defense contract awarded to the Henschel Works to provide spare parts for U.S.-built M-47 and M-48 tanks used by the West German army.

German businessmen were particularly stunned by the stature of the company and the colleague involved. Tapped by occupation authorities after the war as apolitical enough to manage part of the old Thyssen steelworks, Goergen built Phoenix-Rheinrohr into the nation's second largest steel company before he and Widow Amelie Thyssen, his principal stockholder, split in a disagreement over policy. With the $600,000 settlement that he received after resigning, Goergen bought into Henschel, once mighty steam-locomotive maker in Kassel that had sagged into receivership because it had underestimated the Amer[ican] diesel locomotive.

Loss of Honor. Working twelve-hour days, short, blunt-mannered Fritz-Aurel rebuilt the giant, expanded into industrial machinery and helicopters, sold 4% of his stock to such U.S. investors as Morgan Guaranty Trust and Yale University when German bankers refused to finance further expansion. Goergen lived like the entrepreneur he was. His suburban Düsseldorf villa, ranked by police for evidence, is filled with rich rugs, works of art and salons the size of tennis courts.

Germans found it hard to imagine that a magnate of Goergen's stripe would be involved in fraud, especially since defense contracts represent only 1% of Henschel's business. "It would hardly seem worthwhile for a company as large and important as Henschel to cheat for such a minor sum," said a Bonn corporate lawyer. Many Germans were jarred, too, by the blunt manner of Goergen's arrest and imprisonment, especially since no charge was filed against him. The uneasiness about how he was being treated was heightened last week when he suffered a heart attack in his cell and was transferred to the prison hospital.

WESTERN EUROPE

Hungry for Land

In their drive to win Britain's upcoming elections, the Laborites have heavily stressed the fact that rising land prices are making it increasingly difficult for the average Briton to buy or build his own home. To dampen widespread land speculation, Italy's left-leaning government is pushing for a law that would permit cities to expropriate land in rapidly expanding urban areas. In France, where Parisian land has jumped 70% in value in five years, an unfathomable maze of tax law has been passed to discourage profiteers. All over Europe, inflation on top of prosperity has sent the price of land soaring and caused aroused governments to search for some way to put on the brakes.

Out of Boxes. In many cases, prices have risen beyond all reason. Land along Zurich's famous shopping street, the Bahnhofstrasse, is now worth $1,000 a square foot—making it possibly the world's dearest land. The average cost of housing land in the London area has jumped from $24,640 an acre in 1951 to $173,040 an acre. It now takes $185 per square foot to get frontage on Munich's Marienplatz, and hilltop land outside Bonn that went for 1¢ per square foot five years ago now brings $4.65. On Spain's Costa del Sol, which has become almost honky-tonk as a result of a vast influx of tourists and land speculators, even rural land now sells for as much as $60,000 an acre—a price that the same lot in Florida's Coral Gables could not command.

The reasons for Europe's land rise are many: plentiful money searching for investment opportunities and for insurance against inflation, the rising resort business, a desperate need for more housing almost everywhere, and the desire of moneyed Europeans to break out of the tightly boxed cities. The entire Paris area has 3,200,000 dwelling units for a population of 8,500,000; some 500,000 of them have no running water and 1,400,000 no toilets. Yet rigid rent control laws and high mortgage rates (nearly 15%) discourage remodeling or new building. Around London, land use is dictated by community planning officials, who are dedicated to preserving an esthetically pleasing "green belt"; when they finally rule a piece of farm land free for building, the land value can jump overnight from $500 an acre to nearly $20,000. Occasional attempts by European governments to control or to tax land prices usually succeed in touching off a system of under-the-table payments that make mockery of the law.

***Lebensraum* with View.** While speculators and anyone fortunate enough to own land are delighted by the sudden riches they find underfoot, the high prices have already slowed construction of badly needed middle- and low-income housing in West Germany, threaten to do the same elsewhere. The land lust has also produced a long-distance effect: a Florida land [boom] in West Germany. Germans [buy]

bensraum with a View" are biting hard at tempting lures dangled by U.S. real estate men offering Florida land, sight unseen, for as little as 5½¢ per square foot.

EASTERN EUROPE

The Bulgarian Way

The plan was an ingenious and an obvious one—and one that could be used only in a country where people can be treated like puppets. In Communist Bulgaria a government survey showed that 64,000 jobs were going begging in chemical plants and heavy industries. At roughly the same time, another government survey uncovered 65,917 men who were working at desk jobs that could just as well be filled by women. Solution: effective immediately, the Bulgarian government ordered all able-bodied men under 40 who have held nonprofessional office jobs for less than ten years to transfer to harder factory work; their jobs will be filled by women. Failure to cooperate with this grand shift will mean dismissal from the white-collar position for the worker and a fine of $170 per person for the employer. And in Bulgaria, where there is also an acute shortage of housing, the loss of a job means loss of the worker's apartment.

JAPAN

Sewing Up the Game

A pretty young accountant named Ikoku Yoda last week won the 80-meter hurdles in Japan's eastern regional industrial championship in a sensational 10.8 seconds, only .3 of a second off the world record. Ikoku Yoda was only the top star of an extraordinary team that has become one of Japan's greatest advertising attractions. Before the two-day meet was over, almost all the track and field championships had been won by 70-odd athletes from a single company: Tokyo's Riccar Sewing Machine Co., Japan's biggest sewing machine maker.

Going for Gold. No one took greater pleasure in the victory than Shinji Hiraki, the company's founder and president—and no one has more confidence in Riccar's athletes. "I am sure that Yoda san will do better the next time," he said. Hiraki has a special reason for believing that playing games is good business. A third of his 18,000 employees take part in a company-sponsored after-hours sports program, and the top 100 or so athletes are housed in special dormitories and given practicing hours off with pay. Barring upsets and injuries, Riccar will contribute 14 athletes to Japan's team for the Olympic Games in Tokyo this fall, and Hurdler Yoda stands the best chance of any Japanese athlete to win Japan's first postwar gold medal in track.

Hiraki's almost mystical belief in sports dates back to the mid-1950s, when he was pioneering in selling sewing machines to the Japanese on U.S.-style installment plans. The innovat lifted sales, but it also lifted eyebr and stripped the company of cash w the income from credit sales did at first cover production costs. Ric foundered. Searching for a way to store investors' faith and to buck sagging employee morale until the come from installment sales began build up, Hiraki rounded up 20 base players from high schools and colle and put together Riccar's first base team. It won the Tokyo area ch pionship in its first season, and kept car in the ball game. "Investors tho we must be in good shape," says raki, "since we could field a pretty team." The price of Riccar's s climbed back to a respectable level, his employees' spirits rose. Says Hir "The day we became champion banzaied ourselves hoarse."

No Glowing Mantle. Riccar is champion in Japan's crowded manufacturers) sewing machine in try, outselling its nearest competitor 3-to-2 margin; last year its sales rea $48 million. Main source of the c pany's strength: its carefully cra machines—which cost up to 10% than other Japanese makes—and its work of 700 stores in Japan, manned by a skilled mechanic. The who created this aggressive, s minded company is no glowing Ma Sensitive and fragile, Hiraki is an complished painter of intricate Chi ink tableaux, likes to design Jap gardens, and owns a world-famous lection of Japanese wood prints. works a leisurely day, avoids all uous activity. His favorite sport, mits, is lounging around, gazing collection of prints.

OPERA

The Bland Giant

Roger Sessions has a solid reputation. He is known everywhere as a "distinguished" or "major" composer. The only trouble is that his music is seldom performed. His profound and satanically difficult works are all greatly admired by critics, but audiences rarely seem eager to hear them. His violin concerto waited 24 years for its first New York performance, and in the season just ending, only one of the nation's top four orchestras played a work by Sessions. At 67, he has endured 50 winters in music without any springtimes. His problem, quite simply, is that he cannot catch the ear.

Giant Step. Sessions keeps working. Last week he was in Berlin to hear his magnum opus, the opera *Montezuma*, in a première that was, ironically, pronounced a giant step forward in American music.* The first-night curtain at the Deutsche Oper fell on a somewhat bland performance, but two more renditions gave the intense, three-hour tragic work an emotional power and variety

HARRY CRONER

"MONTEZUMA" IN BERLIN
Again, a pale triumph.

that its first appearance lacked. And still the response was disappointing. Sessions' chronic distance from his listeners was more severe than usual in Berlin, since the audience showed up expecting something on the order of the two American operas the city had already seen—*Porgy and Bess* and *The Saint of Bleecker Street*. What the composer offered instead was music that verged on dodecaphonism, darkly illuminating a libretto that made the bitter story of Montezuma's defeat by Cortes a parable of good intentions gone astray. The late librettist Giuseppe Antonio Borgese worked directly from 16th century records and chronicles, but Sessions wisely kept his music free of any imitation Aztec feeling; the arid harmonies and the problematic tone-row melodies that mark Sessions' work are the perfect voice for the sense of fatal absurdity that modern tragedy requires.

Balcony Boos. The Deutsche Oper's stagecraft and *Montezuma's* declamatory style gave the production a Brechtian air. But when Sessions appeared with his cast for curtain calls, a chorus of boos rose violently from the balconies. The avant-garde found the work moldy and Schoenbergian; the traditionalists thought it a shade didactic and severe. Despite the critical praise that followed, no plans were made to perform *Montezuma* outside Berlin. Sessions, having spent 21 years working on the opera and two more getting it produced, was thus rewarded with the pallid acclaim that is his steady diet. In the fall he will return to teaching at Princeton, which is the way he sustains his career as a distinguished major composer.

* The cast included four Americans in leading roles, causing some comment on why the whole affair did not take place in New York.

JAZZ

The Audience Is Shrinking

"Through These Portals Pass the MOST" is, as it certainly should be, the motto painted above the stairway that leads down from Broadway into Birdland. Out on the street, the club calls itself "the JAZZ Corner of the WORLD," and, in fact, Birdland has long been everything to modern jazz that Colonial Williamsburg is to the D.A.R.—the cradle, the shrine, the place where things are perfect. But now, regrettably, the sign must come down.

"Birdland has gone off the cool," says Owner Oscar Goodstein, in the simple pursuit of "good nightclub entertainment." Since modern jazz no longer makes many pretenses about being entertaining to the foot stompers, Birdland is now proudly presenting such audience winners as Dodo Green, DeeDee Ford, the Allegros and the Jive Bombers. The new acts have a "visual" appeal, Goodstein says, that brings some new cheer into the room. As for their music, it is mainly of the clang-clang-clang-baby school, played with the thumping beat of a garbage can rolling down a flight of stairs.

Bop Ruled the Night. The esthetic decline involved in this defection is all but unthinkable to Birdland's old habitués, who knew the place as the remaining link to the great days of the early '50s, when bop ruled the night on 52nd Street and Broadway. The club was christened in honor of Charlie "Bird" Parker, and its stars have been mainly his musical descendants. Now Miles Davis is no longer welcome, and neither is Thelonious Monk or John Coltrane; their music, Goodstein thinks, has become too involuted and personal to please Birdland's current customers. The new regime is lively and loud, but it seems as anomalous as presenting harmonica players at the Philharmonic; the old hipsters come to the door, look on in sad disbelief, then wander away.

For jazz, the pain of such events is becoming more than merely artistic. "There's a parking lot there now" describes much of the old jazz scene in New York, Chicago and California, and even the best jazz musicians have to scuffle to stay busy. The scene changes from year to year—the Five Spot and the Half-Note in New York and the Jazz Workshop in San Francisco are now much like Birdland ten years ago—but the audience is steadily shrinking. Even in Manhattan, there are many nights when fewer than 200 people buy a drink to hear a serious jazzman play.

BEN MARTIN

NEW SCENE AT BIRDLAND
For the postlude, Jive Bombers.

Squares Are In. The players say the problem is that nightclubs have priced jazz out of the reach of its best and most understanding audience, but this is only partly true. Jazz has lost all its gaiety; its musicians commonly drive their listeners away by discouraging any pleasure in the act of perceiving the sounds. The audience that remains plays it cool, and the atmosphere that results is dire and deeply uncomfortable.

Jazzmen have done little to reverse these unhappy trends. Many musicians seem to feel that malaise in the audience proves the merit of the music; when the squares start enjoying themselves, something has gone wrong. But the shrinking of the jazz scene has already badly damaged the atmosphere for making music. There is so little sense of community among the 1,000 or so jazzmen in New York that a genuine after-hours jam session is as rare and astonishing as a triple play. And now, with Birdland gone, where's home?

A Backward Look

Psyche 59, starring Patricia Neal as a young London matron with problems, has practically everything it takes to keep a 1963 Oscar winner (for *Hud*) from parlaying her solitary statuette into a nifty pair of bookends. The handicaps include:

▸ Dark glasses. Allegedly suffering from "hysterical blindness," Pat hides her wonderfully luminous eyes behind specs, the better not to see the hanky-panky between her husband (Curt Jurgens) and her sister (Samantha Eggar).

▸ Dark dialogue. "My trouble's in the head," says Pat. "My brain won't transmit the images . . . there's a hole in my memory." The hole was sunk, she recalls later, one night when she caught Curt in Samantha's room, tumbled down the stairs, and had a baby. In that order.

▸ Dark camera work. Many long shots from odd angles, huge but meaningless closeups of eyes and mouths—and shooting through leaves at ground level. All accompanied by dark music. In Director Alexander Singer's version of an art film, people can't just mope around listening to the grass grow.

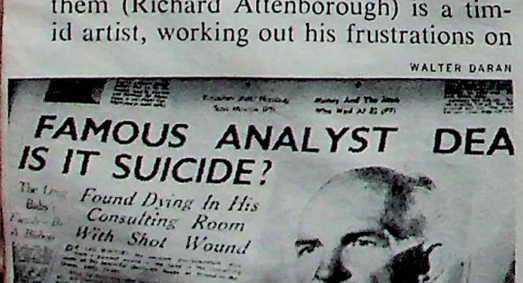
▸ Dark symbolism. Knocked down by a horse, Pat blinks, regains her sight, sees the worst, soon bolts up to her room and begins to eye a bottle of phenobarbital tablets. There's a clue there somewhere. But *Psyche's* knots hardly seem worth unraveling. By the time Actress Neal emerges into the sunshine, trouble-free, her broad, vulnerable smile illuminating far horizons, it is perfectly clear that what she has really been looking for is another *Hud*.

One for the Couch

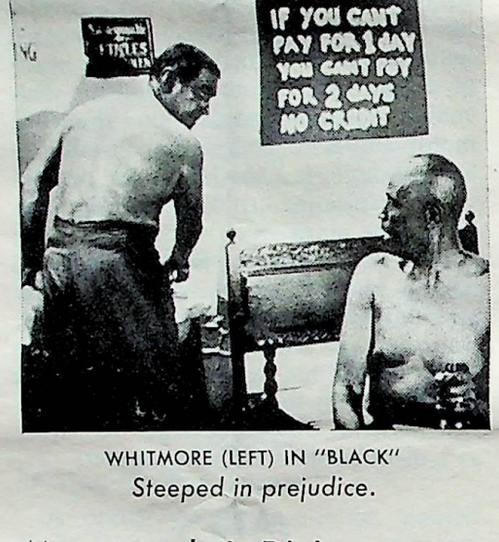
The Third Secret. When a prominent London psychiatrist commits suicide, Stephen Boyd goes nearly berserk. After all, if your doctor tells you that life is worth living, then goes home and puts a bullet through his head, where are you? Hey, wait a minute. Suppose the psychiatrist was murdered—ever think of that? The doctor's teen-age daughter (Pamela Franklin) has. So Boyd goes calling on the doctor's three other patients, looking for a "borderline schizophrenic" capable of murder. One of them (Richard Attenborough) is a timid artist, working out his frustrations on canvas. Another, blonde Secretary Dicane Cilento, kills herself because she felt guilty about something, but she felt guilty about everything, so it proves nothing. The third, Jack Hawkins, is a famous jurist with a deep dark secret.

The dialogue runs mostly to portentous outcries: "Is there no pity left? Did the last of pity die with the doctor?" No, the last of pity accrues to the actors—with a special nod to Stephen Boyd, who probably never should become involved in any predicament that he can't get out of by swinging a broadsword from a speeding chariot.

WALTER DARAN



BOYD'S PROBLEM IN "SECRET"
Three-way inquest.



WHITMORE (LEFT) IN "BLACK"
Steeped in prejudice.

Masquerade in Dixie

Black Like Me is a deep-dyed message film about a white man who passes for black. In it, James Whitmore conscientiously re-enacts the real life odyssey of John Howard Griffin, a Texas journalist who darkened his skin through the use of drugs, sun-lamp treatments and vegetable coloring, traveled through the South for a month or so, then summed up his experiences in a 1960 book that posed the question: "How else except by becoming a Negro could a white man hope to learn the truth?"

From that dubious starting point, Whitmore's journey runs a predictable course. He meets hate, violence, discrimination, segregation. He endures lurid encounters with whites eager to verify their surrealistic fantasies about Negro sexuality. Written and directed in sledge-hammer style, the movie revels in its own righteousness, too often substituting good intentions for good work. And Whitmore's makeup merely makes him look like a dark, wet actor doing *Gentleman's Agreement* in blackface. What's really wrong with the film, however, stems from Griffin's original thesis. His discovery of the Negro world was a clever bit of behind-the-scenes journalism, not a blow for human rights, and his uniquely personal experience does little but reaffirm the existence of bigotry. Magnified on the screen, it suggests unintentionally the public and private indignities fered by the black man appear so how more cogent, vivid and u when a white man has to bear them.

Comedy *Manqué*

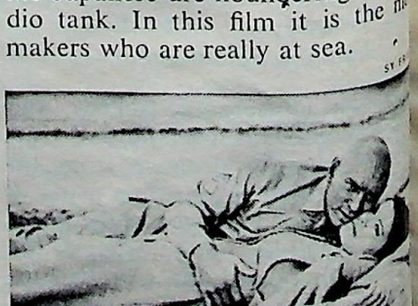
Don't Tempt the Devil. Over a night snack, lush Marina Vlady m over legal problems with her law lover, Pierre Brasseur. She has rece disposed of her wealthy husband, ne pinned the murder on his nurse-mistr But things aren't working out accord to plan. "I wish I hadn't bothered the serum," she pouts. Then, "Oh . . . next time." As a girl whose Mo Lisa face masks the soul of a Bor Actress Vlady almost turns *Devil* an elegant spoof of French justice. B seur, too, seems drolly aware that J tice is a lady who can barely make from bed to bench. The examining ma istrate, dryly played by Bourvil, upho the law's integrity as though he wo like to drop it and run. Given more opportunities, these accomplished *farceurs* might have brought off a dandy *suspense* comedy. But Director Christian Jaq and his scriptwriters apparently could decide whether to make a bad seri movie or a good funny one, so they t both. *Quel dommage.*

Three Rescueteers

Flight from Ashiya. There's so thing about a soldier. In the mov there's usually something sappy abo soldier. In this film, worse yet, the something downright phony about men of the Air Rescue Service.

Yul Brynner, for instance, looks right for his role as a crewman o search plane—after all, he has a bul radome—but it's hard to put m stock in the character he portrays Japanese Polack with a Russian ac and an Arab girl friend (Daniela G bert). As for Richard Widmark George Chakiris, they manipulate seaplane like a couple of toddlers p ing oogah in the old man's crate.

So oogah! and away they go to re the crew of a Japanese freighter. O way Chakiris and Widmark sleep a stick for as long as 20 minutes, w the customers fossick through expo ry flashbacks. No sweat, however, erybody can plainly see that the se plane is parked on a sound stage the Japanese are floundering in the dio tank. In this film it is the m makers who are really at sea.



BRYNNER & GAUBERT IN "ASHIYA
Built-in radome.

How to keep on schedule in Venezuela—Take the Cessna 310 to Maracaibo

"Okay . . . here's what's up." I set the 310's autopilot and turned to the group.

"This afternoon, Art, Seth and I were scheduled to fly to Maracaibo to estimate our bid on the undeveloped oil land."

"And . . ." Art said, "what's happened?"

"Nothing we can't overcome with speed and planning," I said. "An hour ago we received a radio call from Well #17 on the San Juan River. Core samples indicate she's ready to come in and when the capping equipment was uncrated, some of the parts were smashed."

"So that's what you loaded in the wing-lockers back in Caracas?" Jerry asked.

"Right . . ." I said. "And that's why I telephoned you and Hal at the last minute. You two will help bring #17 in, while Art, Seth and I fly back across Venezuela to look at that land. It'll be a full day."

"Well . . . it's 250 miles to #17," Hal said. "That's an hour's snooze if you keep her on autopilot. It's a lot smoother than your flying." He grinned and stretched out.

An hour later the San Juan appeared, winding its way through the thick, green jungle. I lowered flaps and gear and made a short-field landing on the strip we had hacked out of the jungle.

Two derrick roughnecks unloaded the wing-lockers while Hal and Jerry jumped out, and within five minutes we were off the ground, speeding toward Lake Maracaibo.

Passing Valencia I spotted a line of thunder-showers ahead. Caracas radio reported cloud tops at 15,000 feet. "We'll slip over the top of these clouds and it will be more comfortable," I said.

Art and Seth nodded and reached for oxygen masks. I added power and took her up.

For 15 minutes we raced along with the mist skimming by below. Then we broke clear and Lake Maracaibo was stretched out

like a silver blanket to the west and south. On the northwest shore we could see the smoke curling up from Maracaibo. It had taken 2½ hours to fly 525 miles of jungle.

"We'll have the data by dark," Art said.

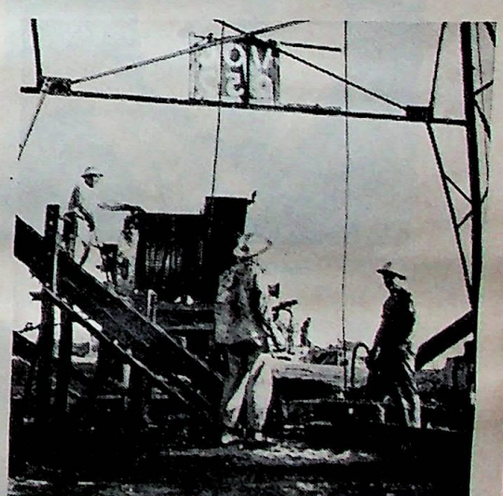
"Good," I said. "We'll make a night flight back into Caracas so you guys can work out the bid at the main office."

"And where will you be?" Art asked.

"I think I'll fly back down to #17 tomorrow to watch them bring her in," I said.

"Good idea," Art said. "You probably won't be any help but you'll feel better."

I throttled back to let down into Maracaibo and grinned. "That's one of the side benefits of having a Cessna 310."



FOR YOUR EVERYDAY USE OR FOR EMERGENCIES: See your Cessna dealer and find out which is the easiest way to fly your own Cessna. He'll study your travel costs and needs, and recommend that you join an aero club; lease, rent, or charter a plane; buy a used Cessna; or buy a new Cessna. (He may suggest the new 6-place 238 m.p.h. Cessna 310i shown here.) In any case, go out for a demonstration flight. Or, for more information, write Cessna Aircraft Co., Dept. TA 4-5, Wichita, Kansas, U.S.A.

When Papa Was Tatie

A MOVEABLE FEAST *by Ernest Hemingway.* 211 pages. *Scribner.* $4.95.

Unlike the glum testaments and boring memorabilia most men bequeath to the world, Ernest Hemingway left behind an invitation to laugh with him amid the scenes of his youth, where he was happier than he would ever be again. Almost, it seems like a last-minute appeal from a man who suddenly felt himself trapped in his own latter-day legend as "Papa."

These 20 well-tooled tales are of "how Paris was in the early days when we were very poor and very happy," when "we" meant a part-time correspondent for a Canadian newspaper and his redheaded wife Hadley. They were "Tatie" and "Binney" to each other and nothing to anybody else except a handful of fellow writers who shared the 25-year-old Midwesterner's tough belief in his own talent. He had sold a few short stories for marks in Germany and peanuts in the little magazines like *transatlantic review*. Gertrude Stein had told him he was not yet good enough for the *Saturday Evening Post*, and he was trying to beat the horses at Auteuil and Enghien to stake a trip to Pamplona to see the bullfights.

Nifty Thoughts. Paris may have been the capital of genius-in-exile, but Hemingway's feet were firmly planted on the *pavé*. When he remembers looking at James Joyce dining *en famille* in Michaud's on the corner of the Rue Jacob, he remembers also that he envied neither Joyce's genius nor his fame, but the *tournedos* the "Celtic crew" could afford to eat and he and Binney usually could not. On the one occasion they treated themselves to a Michaud dinner after a pony came home for him, the meal did not sit well. In a wistful, almost clumsy way, he tells how he was plagued by dark night thoughts. "Life had seemed so simple that morning when I had wakened and found the false spring and heard the pipes of the man with his herd of goats and gone out and bought the racing paper. But Paris was a very old city and we were young and nothing was simple there, not even poverty nor sudden money, nor the moonlight nor right nor wrong nor the breathing of someone who lay beside you in the moonlight."

Strange Talk. The reader may notice a peculiar thing about the way people talk in Hemingway's book—like Hemingway characters, in fact. Some characters—in or out of fiction—did learn to talk this way, but that was later. Yet here they are in the early 1920s, before *A Farewell to Arms* was ever written, talking like Lieut. Henry. Hemingway, of course, knows what he is doing, and it shows in the fact that he does not try to work the old conversational trick on those well-enough known to have a recognizable style of their own. Ezra Pound, for instance, who appears in the book as a tennis and boxing partner, gets to say very little. Neither James Joyce nor Wyndham Lewis gets to say anything at all.

Gertrude Stein is something else again. Indeed, *A Moveable Feast* should settle for all time the question of whether Hemingway learned his style under the tutelage of that strange lady. Hemingway was a generous man, and if a debt of this kind existed, he wou have acknowledged it. He does n and is at some pains to make clear th her experiments in written speech simple rhythms, using repetition a echo for subtle psychological effects ran parallel with his own. Hemin way's sketch of her is a masterpiece controlled malice in which she appea as a monster of obtuse egotism p siding over her manless ménage as o a shrine dedicated to herself, served Miss Alice B. Toklas and dominat by Pablo Picasso's portrait of herse

Fact or Fiction? Perhaps it is bet to read the book as fiction; Hemingwa recommends just that in an introducti where he says, ironically, that it "m throw some light on what has be written as fact." Take his account Scott Fitzgerald. The indictment-b anecdote is irresistibly funny, but wa the author of *The Great Gatsby* such petulant clown, fatuous snob, and pa thetic simpleton about sex?

On Hemingway's saying, Zelda Fi gerald almost destroyed Scott *(through)* her insane envy of his talent by con vincing him that he was sexually inad quate. Hemingway claims that realized she was insane long befo Fitzgerald was forced to accept t fact. As evidence, he cites the time th Zelda asked him: "Don't you think Jolson is greater than Jesus?" Perha the lost generation was not really l after all, merely mislaid.

Tragic Grace. The gay and art sketches (with a lifetime of craft hind each deceptively negligent li have a heartbreaking quality when reader recalls that these glittering tr were cut and polished by a man soon take his own life. So the reader searc for a clue to the tragic flaw in a nat that seemed all confidence and gallan and finds it in a pride so vast that it manded others live according to H ingway's own stern and complic code (even when they could not k the rules), a pride so touchy tha could make the humdrum busi of ordering a cup of coffee a mor combat.

Hemingway had to win, even w others were unaware that anything at stake. In lesser men, this is called one-upmanship, and it made ing for Hemingway the ordinary b ness of living. He aspired to the na grace and integrity of the truly sim man, but often seems to have achie something closer to the contrived s taneity of the method actor. The tions of pride were made tolerable an equally vast joviality—a hu that could be gentle or sardonic. served as mask, armor and weapo his severe stoicism.

He knew this well enough himsel one anecdote, he brilliantly re-creat scene at the Dôme café, where doomed painter Pascin is drinking two model-tarts or tart-models. grinned with his hat on the back o head. He looked more like a Broad

character of the '90s than the lovely painter that he was, and afterwards, when he had hanged himself, I liked to remember him as he was that night at the Dôme. They say the seeds of what we do are in all of us, but it always seemed to me that in those who make jokes in life the seeds are covered with better soil and with a higher grade of manure."

Is this a man writing the obituary of another man or his own?

Chronicler of the Barrios

PEDRO MARTÍNEZ *by Oscar Lewis. 507 pages. Random House. $8.75.*

In these days of Fidel Castro and the Alliance for Progress, the Latin American peasant has taken his place with the Mets fan as one of nature's most familiar and least understood noblemen. Silhouetted against a tropical sunset, there he stereotypically stands, leaning on his hoe and dreaming dreams of land reform and a greater gross national product per capita.

Genuinely getting to know him comes harder, and therein lies the value of Oscar Lewis, 49, a University of Illinois anthropologist gifted with facile Spanish, a guileless face and a pleasantly disarming manner. Lewis' method is to insinuate himself into the bosom of a Mexican family and stay for months, becoming as much a household fixture as the tortilla griddle, as comfortable as a worn pair of huaraches. The pencil scribbles across the notebook pages; the recorder spools gently turn.

The result has been a series of books that are a reproach to most novelists. *The Children of Sánchez,* published in 1961, was ostensibly a recording of the lives as-told-by-themselves of a poor

A9 - A New Semi-Automatic Welder

Already an established favourite in the semi-automatic welding field in Europe the A9 offers low-cost welding on many thin plate jobs. Employing the short-circuiting arc principle it welds with high speed and maximum economy thin plates of steel, stainless steel, copper, bronze or aluminium in any position. A unique and easily handled lightweight welding gun which is compressed air driven and a special rectifier, the LBA 200, maintain a constant wire feed speed and arc voltage. Gas used is CO_2, argon or mixtures. For further details write:

The equipment is compact and manoeuverable and ideal for production line work in automobile and similar industries.

family living in a poor section of Mexico City. It proved to be richer in incident than many a historical romance, and more vividly squalid than many a sociological novel of the Chicago school.

Whips & Sticks. Pedro Martínez, a fictitious name chosen to preserve anthropological anonymity, is a more fully developed character than any single Sánchez child, more intricately related to his country's disheveled past and closer to its soil. Pedro's setting is "Azteca" (another pseudonym), an ancient farming village in the stony highlands about 60 miles south of Mexico City. Like most Mexican peasant children, he had a haphazard upbringing. His father died when he was three months old, after which his mother, "being just a girl, she got herself a boy" and went off with him. Pedro was raised off and on by an aunt, a grandmother, a godmother, an uncle and, finally, by his mother and her new man. He went to school occasionally, but was endlessly yanked out to tend the oxen, water the hogplum trees, deliver the tortillas his mother made, and work as a hired hand on farms. He was beaten with fists, whips and sticks. Before he was ten, "there was this older girl . . . She needed a man already and, well, she forced me."

Caught up in the revolution of 1910, Pedro finally realized that young men like himself were being turned into cannon fodder by a variety of self-proclaimed generals and reformers. He deserted and went home. There he led the life of a poor farmer, struggling to grow corn on a rented field a good two hours' walk from his mud-walled house. He took women where he found them, ran his home with paternalistic authoritarianism. But he commanded enough local respect to become a political figure of sorts, first as a leader of his barrio, later as a town councilman, eventually as a judge.

Beat the Children. More than most peasants, Pedro had the leverage to improve for others the lot he himself endured on the way to eminence. For more than two decades, he worked at doing just that. But as a judge he took to convivial drinking with the courthouse gang, and to the customary *mordidas* ("bites," or small bribes) that are Mexico's traditional lubricant for the wheels of justice. At home he began flying into uncontrolled rages; he beat his children, until, resentfully, they began drifting away.

At 75, Pedro's conversations with Lewis become suffused with bleary disillusion: "At one time, I believed in a lot of things . . . Now I believe in nothing. The trouble is, there is no lawfulness here. Even the lawyers agree. The Governor . . . told me, 'Yes, the real law is money. If you have money, the law is yours. If you haven't any, there is no law, so don't you go believing in it.' "

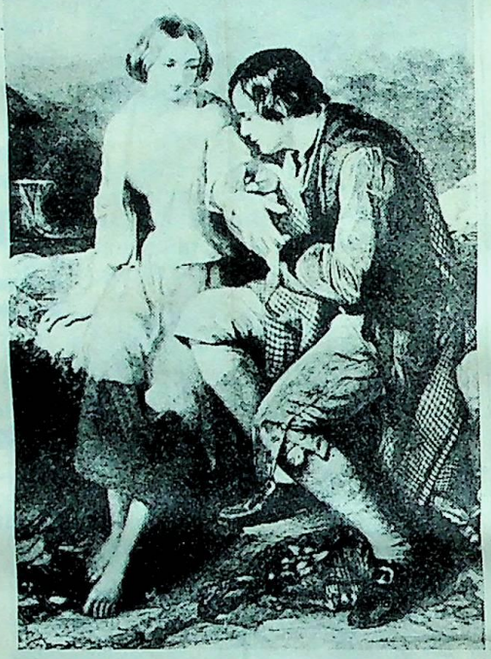
Anthropologically, *Martínez* does for Mexican village life what *The Children* [illegible] for a Mexican urban slum. But the reader begins to suspect that either every run-of-the-barrio Mexican is an innate storyteller of eloquence and rustic insight—or else that Oscar Lewis is an interviewer and editor of resourcefulness above and beyond the call of scientific duty.

The Bawdy Scot

THE MERRY MUSES OF CALEDONIA *by Robert Burns, edited by James Barke, Sydney Goodsir Smith, J. Delancey Ferguson.* 224 pages. *Putnam.* $5.

The literary underworld abounds with stories about great writers who were also great pornographers. Mark Twain amused himself and friends with outhouse humor; so did Benjamin Franklin. Passages of Swift are brutally obscene. Byron and Swinburne both dipped their pens in blue ink, while even Thackeray could line out a lickerish limerick. Perhaps the most famous respectable smutmaster is Robert Burns, whose collection of bawdy Scottish verse has been circulating in more or less clandestine versions for more than 150 years. The collection as now published is as close to the original as scholarship is likely to achieve, barring the rediscovery of Burns's own notebook.

CULVER PICTURES



ROBERT BURNS WITH HIGHLAND MARY
Earthy for its own sake.

Burns liked earthy humor for its own sake, and he transcribed in abundance the scabrous folk songs he heard from his countrymen, added more that he composed himself. But also, as *The Merry Muses* makes startlingly clear, he scrubbed and reworked some of these materials to create some of his most famous poems. One such poem with a bawdy original is *Comin' Thro' the Rye,* in which a much earthier verb appears in the line: "Gin a body kiss a body/ Need a body cry." Another ballad, *John Anderson, My Jo,* is known to every schoolboy as a touching tribute to the strength of marital affection in old age; its source, doubtless known to every schoolboy in all Scotland, turns out to be a ballad where the old wife mocks the decline of her old husband's sexual powers.

The book also offers a few poems interesting in themselves, a couple of rousing drinking songs, some Rabelaisian belly laughs, and one or two tenderly erotic lyrics. Otherwise the reader who is not a hard-core enthusiast will find the collection disappointing. The scholarly apparatus smothers the poems. What is worse for the prurient reader, Burns's Scottish dialect, which he usually trimmed to understandable proportions in his published work, is here often incomprehensible—even the dirty words.

Chimney-Corner Tales

COLLECTED SHORT STORIES *by Robert Graves.* 323 pages. *Doubleday.* $4.95.

Robert Graves has published [illegible] books, including scholarly works, novels and collections of poetry. He has also written scores of short stories, and the first collection of them demonstrates that Graves can do almost anything well—or at least, skillfully. The stories are largely autobiographical, and range in locale from the field of Flanders (where Graves was so badly wounded in World War I that he was listed "killed in action") to the small Majorcan village where he has lived the majority of the time since.

Christmas Truce is Graves's ironic account of the private cease-fire negotiated by a battalion of the Northumberland Wessex Regiment with the Germans in the trenches opposite them on Christmas, 1914. It went on for two days and was broken up by the practical French on the Wessex right flank, who opened a murderously unexpected fire with machine guns. But then, as Philosopher Graves, "the French get for New Year celebrations more than Christmas."

Earth to Earth is about the wartime couple who become so dedicated to the victory garden they are raising that they take to adding the bodies of air-raid victims to their compost heap. Splendid eccentrics abound. There is the young Spanish nobleman who must be sewn into his clothes as a protection against his sole aberration: a tendency to undress while attending Mass. There is the Count of Deia, an aging recluse who likes to disguise himself as gypsy, drunkard, peddler or pederast—and roam through the town trying to defraud the local merchants.

Most of his stories, claims Graves, are true: "Pure fiction is beyond my imaginative range." Perhaps, but in these rambling, chimney-corner tales it scarcely matters. True or not, they have the quality that Graves himself admires in the Spaniards on Majorca: a sense of astonishment, controlled and observed.

PRIME MINISTER TO A GROWING WORLD

Throughout the world, the real long-term measure is the market. Not decrees. Not legislation. *NO* individual. ■ In empires, kingdoms, and republics, what works best sells best. Fiat learned this first by producing an automobile that now sells in 125 different countries. As Fiat's cars got around, Fiat became familiar with the transportation needs of all those nations. ■ Next to the need for transport was the need for agricultural mechanization, and advances in industrial and marine power. That is why Fiat cars, trains, trams, trucks, buses, tractors, diesel-powered ships, gas turbines, and jet aircraft operate under just about every flag. ■ No one appoints you to a post like this. You find yourself in it. You have to work hard to hold it. One is watching you. ■ **FIAT S**

TIME LISTINGS

TELEVISION

Wednesday, May 13

THE ELEVENTH HOUR (NBC, 10-11 p.m.).* Rachel Roberts plays a terrified pregnant wife who cannot cope with the news that her husband may soon die. Repeat.

Thursday, May 14

THE NURSES (CBS, 10-11 p.m.). A television unit invades a hospital to film a story about doctors and nurses and wreaks havoc with routine. Barbara Harris and Kevin McCarthy guest-star.

Friday, May 15

THE OREGON PRIMARY. CBS gives results from 11:15 p.m. to midnight, ABC continues from 12:30 a.m. to 1 a.m., and NBC from 12:45 a.m. to 1 a.m.

Saturday, May 16

TRIPLE CROWN—THE PREAKNESS (CBS, 5:30-6 p.m.). The 88th running of the Preakness, from Baltimore.

SATURDAY NIGHT AT THE MOVIES (NBC, 9 p.m.-conclusion). *The Left Hand of God*, starring Humphrey Bogart and Gene Tierney. Color.

Sunday, May 17

MEET THE PRESS (NBC, 6-6:30 p.m.). Guest: Oregon Governor Mark O. Hatfield.

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). Portrait of Pierre Laval. Repeat.

Tuesday, May 19

MOMENT OF FEAR (NBC, 8:30-9 p.m.). Thirteen years after the fact, a conscience-stricken woman confesses the murder of her husband. Nina Foch, Dean Stockwell and Gary Merrill star in the first of selections from past series.

THE BELL TELEPHONE HOUR (NBC, 10-11 p.m.). Guests are Singer Harry Belafonte, Tenor Franco Corelli and Pianist Grant Johannesen. Color.

THEATER

On Broadway

HAMLET. Witty, virile, supremely intelligent, Richard Burton's Hamlet is a masterful prince of language, though never quite the fallen prince of tragedy.

HIGH SPIRITS. A house was never haunted by so blithe a spirit as Tammy Grimes, and Bea Lillie is the comic conjurer who brings her back to earth to tempt her husband and torture his second wife.

FUNNY GIRL shines in the refracted light of the most brilliant new star to rise over Broadway in several seasons, Barbra Streisand. She colors every song and caps all her clowning with the indelible impact of a fiercely magnetic stage presence.

ANY WEDNESDAY. Without even the help of her closetful of balloons, Sandy Dennis ascends from playmate to helpmate in two acts.

DYLAN. Alec Guinness probes the special hell in which Dylan Thomas found himself. His performance is moody, moving, taut with rage and sometimes bright with humor.

HELLO DOLLY! Cast as a matchmaker, Carol Channing dangles her gay, carrot-topped self in front of a stuffy moneybags (David Burns) who is slow off the m... Gower Champion's dancers set a ... pace for the chase.

NOBODY LOVES AN ALBATROSS. As a ... talking TV producer-director, Robert ... ton gives a sly, light touch to a play ... of caustic mass-media mockery.

BAREFOOT IN THE PARK. Elizabeth As... and Robert Redford spice an early ... ried life with dollops of humor and b... good looks.

Off Broadway

DUTCHMAN, by LeRoi Jones. In a ... York subway car, a white girl who ... twitchy, neurotic bundle of well-inform... clichés and sterile sexual aggressio... lures, taunts, degrades and destroys ... Negro in a Brooks Brothers shirt, but ... before he tells her, with profane and ... plicit brutality, how much Negroes h... whites. Though his one-acter repeats ... pattern of Albee's *The Zoo Story*, Jo... captures the contemporary mood of ... lence with raw and nerve-tingling fury.

THE BLOOD KNOT. Two half brothers... joined in kinship, disjunctively opposite ... color—prey on each other's weaknesses ... but stay together in a communion ... spirit that is full of laughter, envy, goo... intent and deep fears.

THE TROJAN WOMEN, acted in the rou... and with a classic chorus, is a powerf... tormenting image of humans bearing ... unbearable.

This white goop might well revolutionize the toothpaste industry

This goop contains Lustre-Phos*—the best dentifrice base made today. Without exception, Lustre-Phos is whiter, brighter, smoother, more uniform. So are toothpastes made with it.

Lustre-Phos has "controlled cleaning power": rigidly controlled abrasiveness that gives maximum cleaning with minimum risk of tooth damage. Booster abrasives are never needed in formulations using Lustre-Phos.

Monsanto makes Lustre-Phos synthetically. It has none of the property variations found in natural products. Lustre-Phos is always pure, uniform, stable. Always flows easily. Never cakes, never clogs equipment. Age and extreme temperatures won't affect its viscosity.

And Lustre-Phos is compatible with all commonly used toothpaste ingredients—including most therapeutic reagents.

Lustre-Phos even costs less than such commonly used bases as pyro- and insoluble meta-phosphates.

If your business is toothpaste, Lustre-Phos may sound too good to be true. We invite you to prove it to yourself. Contact your local Monsanto Sales Representative for a free laboratory sample toothpaste made with Lustre-Phos. write on your business letterhead: Mo santo Company, St. Louis, Misso 63166, U.S.A.

Test the Lustre-Phos sample. Compa it with your present paste. Brush w it. See how beautifully Lustre-Ph polishes teeth. See for yourself h Lustre-Phos makes your present den frice base a thing of the past. Monsan Company, St. Louis, Missouri, U.S.A

*Trademark of Monsanto; patent application has been filed on materials sold under this trademark.

phoses, also written in the 1940s, by the 81-year-old Richard Strauss.

MOZART: DIVERTIMENTO NO. 2 (George Szell conducting a chamber group from the Cleveland Orchestra; Epic). Mozart composed this divertimento (for flute, oboe, bassoon, four horns and strings) after two operas and 26 symphonies, but he still had something to say; he was 16. Szell makes the 200-year-old party music sound as bright and young as yesterday, and he insists that the dancing be both festive and mannerly.

PROKOFIEV: SYMPHONY NO. 5 (Erich Leinsdorf conducting the Boston Symphony; RCA Victor). Only a conductor with the sophistication and logic of Leinsdorf can keep rein on the tugging emotional and intellectual strands of Prokofiev's greatest symphony. The first and third movements are deeply felt, but never betrayed by theatrical effects; the second and fourth are lively and lyrical in turn, but edged with sudden ominous outcroppings.

CINEMA

THE ORGANIZER. Playing a sad, scraggly revolutionary who leads an unsuccessful strike of textile workers, Marcello Mastroianni sews up his status as the international cinema's most versatile leading man.

FROM RUSSIA WITH LOVE. Houris and hired assassins play it mostly for laughs when Sean Connery arrives in Istanbul as Ian Fleming's Bond bombshell, Secret Agent 007.

THE NIGHT WATCH. Five men plan an underground escape from a Paris prison—a commonplace theme developed with uncommon skill in this taut French thriller.

BECKET. A superior film spectacle based on Jean Anouilh's pungent drama has a prodigally talented cast headed by Richard Burton as England's 12th century religious martyr and Peter O'Toole as Henry II.

THE WORLD OF HENRY ORIENT. Teen-Agers Tippy Walker and Merrie Spaeth racket about Manhattan as a pair of metro-gnomes in hilarious pursuit of Peter Sellers, a playboy pianist with a yen for footloose matrons.

THE SERVANT. Hell-fire gleams through the tea-party façade of Dirk Bogarde, the conniving "gentleman's gentleman" who serves up Director Joseph Losey's message about class distinction in Britain with a dash of bitters.

YESTERDAY, TODAY AND TOMORROW. In three yeasty folk tales directed by Vittorio De Sica, Sophia Loren is a whole Italian street scene rolled into one woman. Marcello Mastroianni is head of the block.

THE SILENCE. A tortured lesbian (Ingrid Thulin) and her nymphomaniac sister (Gunnel Lindblom) dominate Ingmar Bergman's bold, beautifully acted drama—though a child and an old man furnish scraps of evidence that the human condition may not be hopeless.

TOM JONES. "Best" Director Tony Richardson's wonderfully wicked assault on Fielding's 18th century classic proves that the wages of sin add up to a boodle of 1963 Oscars—four in all.

BOOKS

Best Reading

A MOVEABLE FEAST, by Ernest Hemingway. Looking back 30 years later at Paris and himself on the threshold of fame, Hemingway re-explored—and perhaps reinvented—his friendships with established writers (Pound, Stein, Ford, Joyce), particularly his ambiguous relation to the ready successful young Scott Fitzgera

PEDRO MARTÍNEZ, by Oscar Lewis. A thropologist Lewis follows his brilli tape-recorded pastiche, *The Children Sanchez*, with the story of an old Mexic peasant whose passion and native e quence was spent on aborted uprisi and hopeless land-reform politics.

COLLECTED SHORT STORIES, by Rob Graves. These skillful tales show aga if further proof is needed, that Rob Graves can write anything well. Most the stories are set in Spain and feat lively eccentrics whose escapades ma astonishing reading.

SELECTED POEMS BY HERMAN MELVI edited by Hennig Cohen. The finest U.S. novelists was not an outstanding po but there are enough good poems in th chronological sampling, such as the fir lines of Billy Budd, to make it more thr just a literary curiosity.

IN HIS OWN WRITE, by John Lennon. Th oldest Beatle ("he's the arty one") e plains his startling collection of po Joycean jabberwocky: "As far as I'm co ceived this correction of shorty writty the most wonderfoul larf I've ever ready." His readers shrudlu too.

THE SPIRE, by William Golding. *In this* medieval parable a saintly, obsessed canon orders a huge stone spire to be built ato his fragile cathedral, only to realize at la that his monument was not to God's glor but his own.

KEEPERS OF THE HOUSE, by Shirley A Grau. Though miscegenation is the the of this deceptively artless novel, it has pejorative connotations for a large Louis ana clan until the heroine's racist husba makes a violent entry into politics.

EPISODE—REPORT ON THE ACCIDENT I SIDE MY SKULL, by Eric Hodgins. The a thor of *Mr. Blandings Builds His Dre House* tells what it was like to rebu his life after a major "cerebrovascu accident" (in layman's terms, a stro left him severely paralyzed four ye ago. Hodgins wrote this book with b point pens (he can no longer use a ty writer), but it has Mr. Blandings' old and wordcraft.

LETTERS

Cheers, Jeers & Ears

Sir: Your cover story [May 1] might well have been entitled "A Day in the Life of L.B.J." The five pages devoted to him were certainly as exhaustive (both in covering the subject and in effect upon the reader's imagination) as a book.

STUART J. MAHLIN

Philadelphia

Sir: Witty parries or glittery sophistication would not become this tall Texan who talks like a folksy fellow from the country who made good in the city. He is doing a great job, and that sound earthiness and solidity gave all of us strength at a time when we were badly shaken. The history-minded might recollect similar speech qualities in Abraham Lincoln.

LOIS WILMOT

New York City

Sir: Bustle is not accomplishment. Motion is not progress. With modern means of transportation, a President needs no great talent to cover great distances and make several stops in depressed areas. A whirlwind tour of depressed communities contributes little to an understanding or solution of their problems. Mr. Johnson would better perform the duties of his office by less talk and more study and reflection.

WILLIAM B. PENDERGAST
Director of Research
Republican National Committee
Washington, D.C.

Sir: You stated flatly that "no man in the White House has ever moved faster" than Johnson. In the hectic beginning days of the New Deal, F.D.R. announced the Good Neighbor Policy, called the bank holiday, passed the Federal Emergency Relief Act, took the U.S. off the gold standard, and started the CCC, AAA, TVA, HOLC, FDIC, FCA, NRA and WPA. And all that in 100 days, not five months. Johnson is a whirlwind, but Roosevelt was a cyclone.

JOE MCBRIDE

Wauwatosa, Wis.

Sir: It is difficult to tell whether our President is a statesman, a skillful politician or a clown. No great statesman could have said: "The one good thing about America is that our ambitions are not too large. They boil down to food, shelter and clothing." To say that our ambitions are not too large is appalling. This is not the spirit that has made the U.S. the greatest industrial nation the world has ever known. This is the spirit of mediocrity.

ROBERT C. BORDEN

Andover, Mass.

Sir: Johnson's brand of political maneuvering, which plays on the emotions and ignorance of the masses, is positively revolting. It should be obvious to everyone that his lavish promises to wipe out poverty and end racial strife are merely vote-getting tactics.

MRS. RONALD E. BOWRA

Wichita, Kans.

Sir: President Johnson must have read Tolstoy's *War and Peace*: "To have one's ear pulled by the Emperor was considered the greatest honor and mark of favor at the French Court." Beagles aren't French and L.B.J. isn't Bonaparte, but if there is political significance, remember Waterloo!

LEO A. MATHEWS

San Fernando, Calif.

G.O.P. Hopefuls

Sir: Governor Scranton [May 1] offers America the Eisenhower philosophy of moderate Republicanism and common sense. Many Republicans see him as a compromise candidate, even though he has discouraged campaigning on his behalf. It is my hope that the G.O.P. will realize his potential and nominate him as a clear-cut opposite to L.B.J. without the radical undertones of some G.O.P. hopefuls.

BILL COX

Owensboro, Ky.

Sir: Your timely excerpts from Governor Scranton's speech will help citizens to know the philosophy of this Republican. It makes no sense to me to transfer appropriations and authority from the Federal Government to the states. This, in essence, means that each state government would have more control over its citizens. In the final analysis, we would still be subject to more control by "government" which, moreover, would be closer than Washington. One form of authority would have passed away only to be replaced by another, more immediate authority.

RICHARD E. HALE

Omaha

Sir: Your recognition of Senator Goldwater's strength [May 8] is gratifying, despite its tardiness and restrained enthusiasm. You should try exploring the significance of the rising voice of sound, responsible, conservative ideology, because you are going to be living with it.

JAMES B. TUDHOPE

Chicago

Sir: If the Goldwater forces realize "that Barry could still blurt out some remark that would hurt his cause" in securing the Republican presidential nomination, how could he be trusted as President of the U.S. not to blurt out remarks that would hurt the cause of his country?

PAUL MORSEY

Bloomington, Ind.

Gentlemen Terrorists

Sir: Recently, in another city, it was my misfortune to hear the recruiting tape of the Ku Klux Klan [May 1]. I had not, till then, really realized the fantastic lengths to which these people are willing to go to keep the Negro in terror.

CHRISTOPHER TODD

Seattle

Sir: I am a Lumbee Indian, and my anger rises at the very thought of the K.K.K. So now the K.K.K. is turning over a new leaf and turning minority hatred into kindness? All I can say is that I fear it is too late; too many remember past treatment by the K.K.K.

BETTY OXENDINE MANGUM

Otsego, Mich.

Help!

Sir: After a satisfying lunch at the Stork Club, I was set upon and mugged. No one came to my assistance—no one except TIME, which thoughtfully supplied the number to call: CAnal 7-2000 [May 8]. I found there was no CAnal 7, but learned when one dials this number the response is Acme Fast Freight: BArclay 7-2000.

T. H. TRACY

New York City

▶ *Next time try CAnal 6-2000 for New York's fast cops.*—ED.

Bishop Kennedy

Sir: TIME's cover story on Bishop Gerald Kennedy [May 8] was a very fair presentation of "the people called Methodists" and their way of life in the 20th century.

CLARENCE F. AVEY
The First Methodist Church
Westfield, Mass.

Sir: As a member of the Albion College Choir, which sang for the Methodist General Conference on April 29, I had the privilege of hearing Bishop Kennedy speak for a few minutes in favor of the new Methodist hymnal. His was a speech that sparked the entire morning's proceedings; he is an intelligent, progressive man.

CATHY FORD
Albion College
Albion, Mich.

Sir: Your account of the Methodist Church and profile of one of our illustrious leaders, Bishop Kennedy, was eminently accurate. The obligation upon the churches to be relevant to the age is rightly emphasized; but that does not mean descending to the secular plane—"softening" its teachings to win acceptance.

It does mean that the individual Christian should endeavor to evince the power of Christ within himself in making this world a better place for all of our Father's children. The efforts of a Christian are most effective when conjoined with those of like-minded believers through the instrumentality of his own church.

PHILIP S. VANHOOK

Frederick, Md.

Sir: After reading your story on Bishop Kennedy, I've become convinced that in the leadership of the Methodist Church

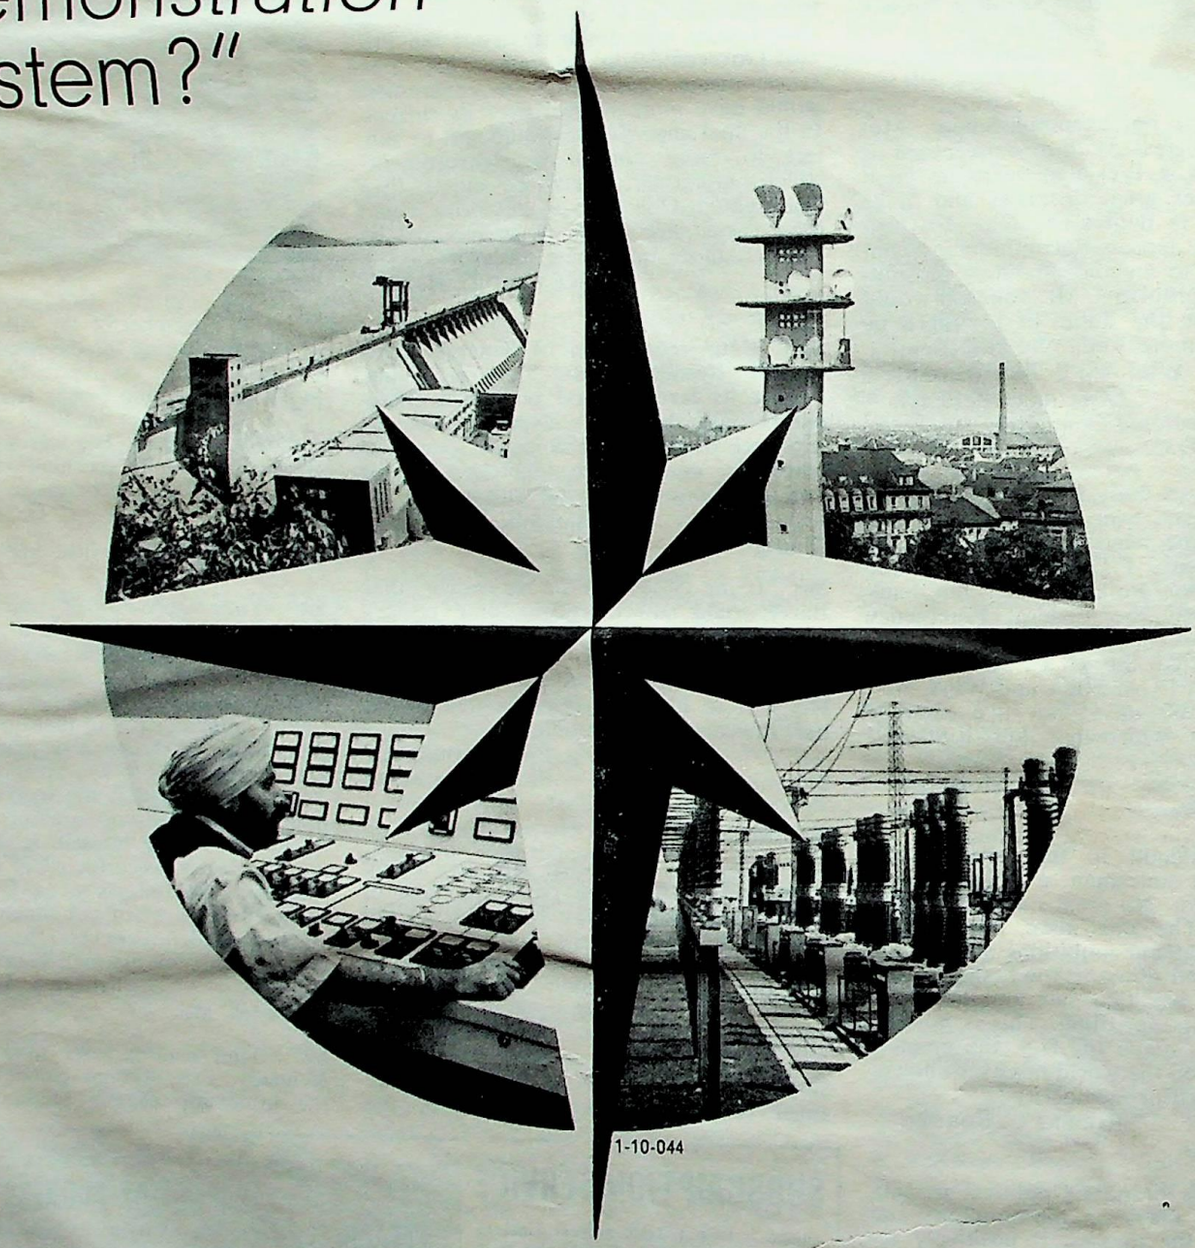
SIEMENS

If you ask us:

"Where can we inspect a demonstration system?"



1-10-044

In India and Africa, in Columbia and Brazil, in Argentina and Iran – Siemens systems are found in all parts of the world. Systems representing all branches of electrical engineering: telegraph and telephone networks, power stations and primary transmission networks, electrical equipment for industry and transportation.

Just tell us where your interest lies. A worldwide distribution network with experienced engineers in over 100 different countries is at your disposal. Whenever you face a new problem, we will solve it for you. And the system we build for you will be our next demonstration system.

The Siemens Group — your experienced partner in all electrical engineering projects

there are still men with the kind of vigorous faith that sent John Wesley into the streets of England.

JON ALAN ANDERSON

University of Hawaii
Honolulu

Chivalry in Pennsylvania

Sir: You said that "Pennsylvania Supreme Court Justice Michael Musmanno ungallantly declared that his lady opponent was ignorant [May 8]." This statement is categorically and absolutely incorrect. I never said that Miss Genevieve Blatt was ignorant. I also categorically deny that I ungallantly declared anything. I am proud to say that I have always been chivalrous, and am happy to emphasize I will always be respectful and chivalrous, to the ladies.

MICHAEL A. MUSMANNO
Justice

Supreme Court of Pennsylvania
Pittsburgh

Scholars & Teachers

Sir: The case of Woodrow Wilson Sayre's status at Tufts University [April 24] interests me for a number of reasons. I have been a college president and later a college professor. Along the way I have written several books—none of them "scholarly."

What makes a man a scholar—his ability to turn out monographs liberally besprinkled with footnotes, or his ability to inspire in his students his own curiosity and love of learning?

Two facts are worth considering: it was students who carried banners for Sayre; Sayre's book on his adventures on Everest, published in March, is already in its third printing.

Chapter 15 of that book, "Why Men Climb," contains more philosophical analysis than many pounds of run-of-the-mill theses. Here, if you please, is genuine scholarly research.

ALBERT BRITT

Nonquitt, Mass.

▶ *Professor Britt, 89, was a professor of history at Scripps College in Claremont, Calif., and from 1925-36 president of Knox College in Galesburg, Ill.*—ED.

Sir: I received damned good instruction from professors who could not weigh their monographs by the ton. Their production consisted of inspiring students to think. I wouldn't trade my experiences in their classrooms for a thousand monographs.

DICK HARLEY
Instructor of History

Howard County Junior College
Big Spring, Texas

Sir: The time has come, I think, for a statement in support of research activities at our universities. Implied in your article about "publish or perish" is that teaching and research are basically incompatible. I believe that research is teaching.

No subject or course content can be static today precisely because of the broad research under way in all fields. An educator can better carry out his obligations by challenging and rebutting proffered concepts of dubious value in writing. The cloistered classroom offers no proper audience for professional discourse because the arguments are all one way.

A. W. BUSCH
Associate Professor

Rice University
Houston

Death & Dismemberment Covered

Sir: In "Record Setter Mock" [April 24], you state that even Lloyd's of London refused to underwrite the trip. This is not the case. Through Lloyd's correspondents Leo B. Menner & Co., Inc., in Chicago, Lloyd's issued a $100,000 accidental death and dismemberment insurance policy covering Mrs. Mock during her record-breaking trip around the world.

D.A.T. RICHINGS

Leo B. Menner & Co., Inc.
Chicago

Pirouettes & Kicks

Sir: Your article on the New York State Theater and the ballet [May 1] was a well-written, well-constructed, very colorful and spellbinding piece of work. The pictures were beautiful.

WILLIAM COLSHER

Nashville, Tenn.

Sir: I am outraged at your article likening Balanchine's ballet to a jewel and comparing it to the Russian Ballet or the Royal Ballet. Balanchine's product is neither beautiful nor profound. It certainly is pathetic that a theatrical product that is morbid and depressing should open our cultural center and almost monopolize it as far as ballet is concerned.

PATRICE MCCOY
Artistic Director

The Classical Ballet Foundation
Burbank, Calif.

Sir: We would like to correct the impression that the City Center of Music and Drama has become an "abandoned old mosque." The City Center is now in the midst of its annual light-opera season, and is the permanent home of the New York City Opera.

MRS. EDMUNDO LASSALLE
Member, Board of Directors

City Center of Music and Drama, Inc.
New York City

Sir: Your critic's enthusiasm about the acoustics at the new State Theater compared with those in Philharmonic Hall underscores the subjective nature of listening and the absurdity of the whole recent furor about acoustics. For all his esthetic sensitivity, he apparently did not note that, as opposed to Philharmonic Hall, the State Theater uses amplified sound, and that the metal grille ceiling conceals a whole battery of speakers.

JAMES CORBIN

New York City

▶ *Acoustician Corbin failed to note that the speakers, most of which are located in the proscenium rather than in the ceiling, are used for musical comedy, not for opera and ballet performances.*—ED.

Sense of Value

Sir: The plan to spend $1,500,000 to move a bombed-out church from London to the U.S. for the Churchill memorial [May 1] is shocking! Such extravagance serves only to confirm already widespread belief about the irresponsible use of money by Americans.

HUGH HARRIS

Oxford, England

▶ *The church was donated to Westminster College in Fulton, Mo., by the Anglican Diocese of London. The cost of dismantling and moving the Christopher Wren-designed church will be raised by a fund drive in the U.S.*—ED.

HAMBURG-INFORMATION
Hamburg 36
Grosse Bleichen 23
Germany

Port of Hamburg

775 Years in the Service of Trade. The Port of Hamburg was founded in 1189. Its advantageous location for commerce soon made it a staple and transit port for continental merchandise. Up to the present this has not changed. Within the framework of the European economic blocs it assumes a key position at the intersection of the EEC, EFTA, and COMECON. All kinds of goods can be quickly and economically reloaded here, thanks to Hamburg's modern, efficient harbour facilities.
Hamburg's steamship and export firms, banks, insurance companies, and forwarding agencies, with their world-wide connections, are experienced advisors and partners in all fields of freight transportation in Europe and overseas. For trade between the Continents they have at their disposal a dense network of regular shipping lines which connect the Port of Hamburg with North and South America, the Middle and Far East, Africa, and Australia.

A letter from the PUBLISHER

Bernhard M. Auer

FEW assignments are more frustrating and less rewarding for U.S. journalists than reporting from the Soviet Union. Because of restrictions that are applied and implied, a man on the spot there can contribute less, perhaps, than he can from any other major capital where U.S. correspondents are at work. In the years since World War II, TIME has tussled with this problem in many ways and has been out of Moscow more than it has been in. When Stalin's iron-handed censorship tightened and our own reports were reduced to a useless trickle, we closed our Moscow bureau (1948). Then, as censorship began to ease under Khrushchev, we applied to reopen our office (1956) but were repeatedly turned down. The Soviets changed their minds and readmitted us (1958) but expelled one of our correspondents (1962) because they did not like his reporting on the Cuban missile crisis.

Two months ago, the Russians began a new chapter in their history with TIME. Correspondent Israel Shenker, our Moscow bureau chief since March 1963, was summoned to the Foreign Ministry in Moscow and read a formal statement charging that our cover story on Soviet President Leonid Brezhnev and the state of the Russian economy (Feb. 21) was "slanderous." Unless we changed our approach, he was informed, our office would be closed. In a reply to the Foreign Ministry we said, in effect, that we intended to continue reporting the Soviet Union as we saw it. Last week Shenker was called to the Foreign Ministry again and heard TIME denounced in language almost identical to the earlier charge, this time about the cover story on Lenin and the split in the Communist bloc (April 24). Shenker was ordered "to leave the borders of the Soviet Union," and our Moscow office was summarily closed.

Soviet officials have never been able to understand or accept or even get accustomed to our kind of reporting. They especially like coverage by reporters who use that frustrating and unrewarding technique of sending out just enough to stay in. What they read in their translations of TIME stories did not fit that pattern. Our stories on the Soviet Union come from a wide array of sources available to our writers and editors in New York and to our correspondents elsewhere around the world. Important among these is our Russian Desk in New York, staffed by specialists who work constantly at translating, studying and analyzing newspapers, magazines and a great deal of other information. From these many sources, plus press association coverage of day-to-day events, we will continue to report frankly and deeply on the Soviets despite last week's reading-out of our correspondent.

MORE on the positive side is a statement that will be read to a TIME staffer this week. The Albert Lasker Medical Journalism Awards Committee is presenting one of its annual $2,500 awards to Medicine Writer Gilbert Cant for the cover story on surgery (May 3, 1963). It is the second Lasker award he has won; the other was for the virology cover story (Nov. 17, 1961). The committee cited the surgery story and the accompanying twelve pages of color pictures for "graphically portraying the skill of the modern surgical team . . . assessing and putting into perspective a range of lifesaving procedures so radical in concept that they were almost unimaginable a few years ago . . . combining dramatic color photography and art with excellence in writing on a subject of major importance." The result, said the committee, was "a notable contribution to medical journalism."

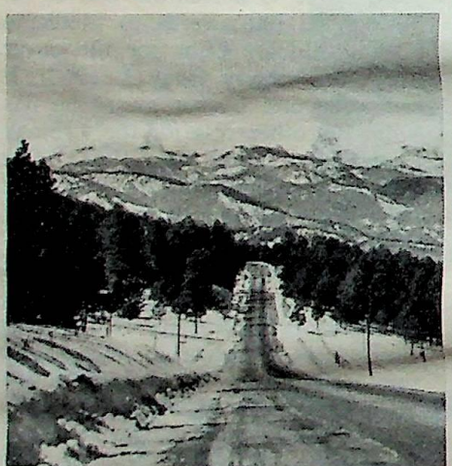
PLANNING A UNITED STATES VACATION?

THEN DIAL HILTON FOR COMFORT YOU CAN AFFORD!

The comfort and value of Hilton hospitality is only a telephone call away. When you've planned your United States vacation, simply call your nearest Hilton Hotel or Hilton Reservation Office. You can then reserve rooms in a Hilton Hotel or Inn in any of the twenty-seven cities throughout the United States.



Foothills of the Rockies, near Denver, Colorado

You've probably experienced or heard about Hilton comfort and hospitality. But you may not know how reasonably priced it all is, and what wonderful value for your money you receive.

And here's what you get for your money: a comfortable air-conditioned room. Courteous, helpful service from Hilton personnel, many of whom speak your language and a half-dozen others. And helpful little touches like changing your Francs, Guilders, Marks or Pounds into Dollars.

Food? Ah, how Hilton hospitality excels itself. You can enjoy anything from a modestly-priced snack in a Coffee Shop to a gourmet meal in a fine restaurant in any Hilton Hotel or Inn.

Children? We love them. And to prove it, there's no charge for children who share your room with you. So visit the U.S.A.—the Hilton way, and bring the family along. Does your itinerary include New York and the 1964 World's Fair? Select from among one of five fine Hilton Hotels in New York City. Chicago in the heart of America's great Midwest? Stay at the famous Palmer House, or the elegant Conrad Hilton. In Denver, the lovely mile-high city in the foothills of the Rockies, you'll enjoy the fine Denver Hilton. And if you decide to explore old French New Orleans, stay at the Hilton Inn, and enjoy Hilton hospitality in the Southern style.

THE U.S.

THE PRESIDENCY

When Patriotism & Politics Coincide

Lyndon Johnson had something for everybody—rich and poor, old and young, male and female, union leader and businessman, American and foreigner, Northerner and Southerner, student and sharecropper, cow milker and dog lover.

Republicans might suspect him of demagoguing around, but they couldn't really lay a finger on him. After all, he sought only for America what Americans seek for themselves—a strong nation and the good things of life. He knows what it is to be poor and he hates poverty. He also knows what it is to be wealthy, so he strives for prosperity. "I can't remember a time," says former Republican National Committee Chairman Leonard Hall, "when a President had prosperity and poverty going for him at the same time." But is it demagoguery to pick up a few votes while plugging for progress? And can Lyndon help it if his patriotic purpose just happens to coincide with his political plans?

A Bow to the Family. Again, the week was cyclonic. First, he set out to redeem himself in the eyes of dog fanciers, gently lifting one of his beagles by the ears and explaining to newsmen that it didn't hurt at all. Next, he went after the duffers' vote, replying to a reporter who asked him what his golf handicap was: "I don't have any handicap—I'm *all* handicap."

In blurred succession, he entertained 65 union leaders at a White House dinner, preached international tolerance to 800 foreign students ("The variety of human experience cannot be contained in a single law or a single system or a single belief"), urged Americans to back the National Multiple Sclerosis Society's fund drive ("We cannot rest in this country until we conquer it"), urged members of the Advertising Council to join him in his war on poverty ("This is a moral challenge that goes to the very roots of our civilization and asks if we are willing to make personal sacrifices for the public good").

Next came time for a bow to a revered institution: the American family. Lyndon ordered picnic tables set up in his backyard, piled them with cookies, stocked them with pitchers of pink punch, called for a press conference and invited reporters to bring along the wife and kiddies. More than 1,000 turned up. The Marine Band played *Merrily We Roll Along, Jingle Bells* and *America*. The children drank the punch, crumbled the cookies, meditatively tore up tufts of the White House lawn and, with a certain amount of nudging from their mothers, laughed politely when Lyndon told them: "I want to prove to you that your fathers are really on the job—sometimes."

The President really said very little at the press conference, but such is his skill that he earned no fewer than five headlines on Page One of the next morning's New York Times. After the conference, he mingled with the mob, gulped down four cups of punch and perspired as though he enjoyed it.

The Pageant. But all this was only a beginning. In the middle of the week, he went on a whirlwind 2,500-mile, two-day, six-state anti-poverty pilgrimage through the Appalachian region. It was a frenzied pageant. Some of the scenes:

• CUMBERLAND, MD.: Lyndon and Daughter Lynda Bird, 20, headed for the office of the Maryland Department of Employment Security to visit with people who were lined up looking for work. There, Johnson spotted Joe Click, 49, a one-legged coal miner who has been unemployed for 13 months, rushed over to him and said: "We're here because we care."

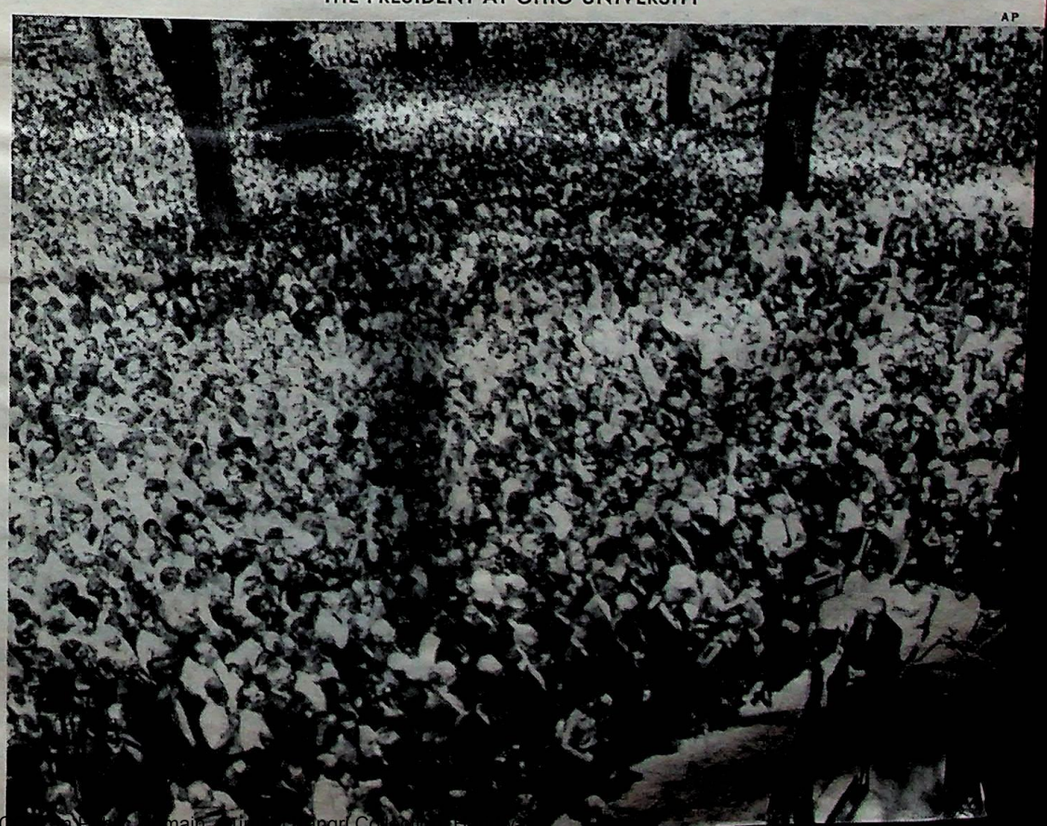
• ATHENS, OHIO: To 8,000 Ohio University students massed beneath huge elm trees on the campus, the President gave a near-perfect summation of his credo: "I know that we live in an age when it is considered correct to play it cool, when it is right to be reserved, when it is not good form to show great faith. But I believe with Emerson that no great work is ever achieved without enthusiasm."

• KNOXVILLE, TENN.: Touring the city's slums, Johnson selected a seedy apartment building at random and went to chat with a weary woman with a babe-in-arms and torn sneakers. He emerged looking grim. At Knoxville's Coliseum, he tore into political critics of his poverty crusade. "Those who oppose us are determined. They have already, last week on the floor of the House of Representatives, called this war on poverty a cruel hoax. I first heard that phrase in the 1936 campaign when they called social security a cruel hoax."

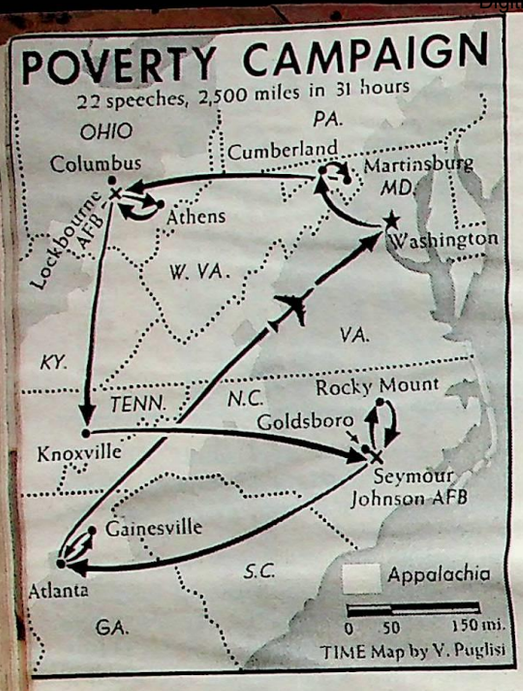
• ROCKY MOUNT, N.C.: The President visited the shabby home of Sharecropper William Marlow, 39, his wife, his

THE PRESIDENT AT OHIO UNIVERSITY

AP



Digitized by Arya Samaj Foundation Chennai and eGangotri



mother, and seven children. To prepare for Johnson, they had scrubbed their place for three days. At the request of the White House, an acre of oats was prematurely harvested to provide a landing pad for the Johnson party's helicopters. After Lyndon learned that Marlow, a Navy veteran with a back ailment, subsists on $1,500 a year, the President recalled his own Texas boyhood and how his fingers got sore from milking cows. He asked Mrs. Marlow if her children get enough to eat. She said: "They get about everything they need, but clothes is hard." Johnson asked Marlow about his back. "What you got? A disk?" Said Marlow: "Yes, but these boys do pretty well. They pretty well keep up the place now."

• ATLANTA, GA.: It was 11 p.m. when the President arrived, and he had been going hard for 15 hours. But he was refreshed by a cheering crowd of 5,000 at the airport. He shouted: "I haven't got time to talk, but I've got the strength. I get my strength from your faces." Next morning at a hotel breakfast with state legislators and members of the Georgia congressional delegation, he put away a generous helping of grits and sausage, delivered a tough, plain-talking speech for civil rights: "Because the Constitution requires it, because justice demands it, we must protect the constitutional rights of all our citizens, regardless of race, religion or the color of their skin." Surprisingly, the audience applauded; some even cheered. Cried Lyndon: "I love the people of Georgia." Hundreds of thousands lined the streets to see the President's motorcade pass by, and he stopped no fewer than eight times to talk to them through a brand-new bullhorn. Later, it was back to Washington.

But Lyndon was far from through. Next morning he flew into New York, where he appeared—always talking—at the 50th birthday party of the A.F.L.-C.I.O.'s Amalgamated Clothing Workers, at the dedication of the Venezuelan Pavilion at the New York World's Fair, at a hurriedly scheduled news conference, at a lunch at the Democratic Club, at the dedication of the John F. Kennedy Educational, Civic and Cultural Center on Long Island and, finally, at a Democratic fund-raising dinner in Atlantic City.

His face was ruddy from the sun and his voice was quite hoarse. Yet when a reporter asked if he planned to keep up his brutal travel schedule, Johnson replied: "We believe in giving the people a chance to see us and to hear us, and agree with us and disagree with us, to criticize us, to approve us. We have been in 13 states in the last 13 days. We may not cover that many states in the next 13—but we are not going into seclusion."

CIVIL RIGHTS

At Last, A Vote

Only five Senators were in the chamber when a well-dressed, goateed Negro jumped up in the gallery and shouted: "How can you say you are protecting the black man if only five are here? I thought this was America, the land of the free. This involves 20 million people." Guards moved in, took the man off for mental tests.

Had the Senate's critic showed up just two days later, he might have been happier. Now the chamber was jammed with huddling, whispering Senators. What was up? Unbelievably, a vote. Having consumed 32 days and some 3,000,000 words on the civil rights bill without getting anywhere, the Senate was about to vote for the first time on amendments.

Double Defeat. Four had been offered, dealing with jury trials in criminal-contempt-of-court cases. The first to be considered came from Kentucky Republican Thruston Morton. It required that juries be empaneled for all criminal contempt suits arising under the bill. Ordinarily on the side of the angels in civil rights matters, Morton now found himself being privately accused by some civil rights advocates of just trying to show the folks back home that he knew who buttered his [illegible] cakes every six years.

The first vote ended in a 45-45 t[ie] which meant defeat. To nail it do[wn] Majority Leader Mike Mansfield mo[ved] a reconsideration. On that vote, t[he] amendment lost again. Later that nig[ht] the Senate debated and defeated, 74 [to] 19, Kentucky Republican John Sh[or]man Cooper's plan to require juries e[x]cept in cases where local and state o[f]ficials are defendants. That left t[wo] more jury amendments. One, sponso[red] jointly by Mansfield and Republic[an] Leader Everett Dirksen, would li[mit] jury trials to violations that carried pe[n]alties of more than 30 days in jail a[nd] $300 fines. The other, offered by Ge[or]gia Democrat Herman Talmad[ge] would require juries in all criminal co[n]tempt suits, whatever law they violate[d]. Votes on both were postponed to t[his] week. The Senate resumed talking.

A Bit of Purifying. Almost dai[ly] Dirksen was huddling with key Repu[b]licans and liberal Democrats, Attorn[ey] General Robert Kennedy and Justi[ce] Department lawyers. Explained Ev[er]ett: "I'm trying to unscrew the inscrutable." That meant reaching some sort of agreement on some 70 amendments that the Republicans want passed in return for help in shutting off a threatened Southern gabfest.

Most of the amendments were tech[ni]cal—Massachusetts Republican Le[v]erett Saltonstall called them "purifying." But a few, like Dirksen's long-awaited changes to the bill's public accommodations section, were of great substantive importance. Dirksen's plan would bar the Attorney General from originating suits and seeking court injunctions against businessmen who resist serving Negroes. Kennedy objected, argued that unless the Government could initiate suits where discrimination was a way of life, the accommodations law would lose most of its punch. At week's end both sides retired to work on new drafts of the Dirksen plan, to be thrashed out when the conferences resumed this week.

REPUBLICANS

The Lodge Phenomenon

(See Cover)

In the early-morning gloom of Saigon's muggy pre-monsoon season, an alarm clock shrills in the stillness of a second-floor bedroom at 38 Phung Khac Khoan Street. The Brahmin from Boston arises, breakfasts on mango or papaya, sticks a snub-nosed .38-cal. Smith & Wesson revolver into a shoulder holster, and leaves for the office.

Outside, U.S. Ambassador Henry Cabot Lodge Jr., 61, winces at the blast of heat that is already approaching 90° with 90% humidity. With a Vietnamese plainclothes bodyguard, he climbs into the back seat of a Checker Marathon sedan. The car rolls past barbed-wire stanchions, stops 15 minutes later in front of the ugly U.S. Embassy building at 39 Ham Nghi Boulevard. There, barricades block sidewalk passersby, while barbed wire funnels visitors past South Vietnamese soldiers into a lobby guarded by U.S. Marines.

Lodge takes a rear elevator to his sparsely furnished fifth-floor office, unstraps his revolver, puts it into a desk drawer alongside a .357 Smith & Wesson Magnum. The Magnum has been there since last October, when Lodge received his umpteenth warning of a plot against his life. The ambassador regards the lethal little gat rather wryly. Says he: "I guess it wouldn't discourage a real mob for very long, but it packs all the authority you can put in a desk drawer."

Image to Spare. The personal weaponry, the guards and the barbed wire are no mere theatrical props. Last August, on his very first evening in Saigon, a top embassy officer insisted that the regime of President Ngo Dinh Diem planned to invite him on a field trip, stage a fake Communist Viet Cong attack and kill Lodge in the confusion.

More realistic are the tips received almost every day on Communist assassination plots. Last week Lodge narrowly missed possible death when he visited the Saigon waterfront to observe damage to the U.S. aircraft ferry *Card*, which had been dynamited by Communist saboteurs. A terrorist on a bicycle tossed a grenade into the street, injuring eight U.S. soldiers, just ten minutes after Lodge had left the site. For an aging, home-loving, peace-minded politician, Lodge takes a singularly calm view of these goings-on. Says he: "There's really not much point in worrying about such reports because there's no way of knowing which is the real thing. But you never know for sure what life's going to hold anyway."

If all this seems like something out of Ian Fleming, or at least Eric Ambler, it is not far removed. But drama has always marked the life of Cabot Lodge. In an era when "image" is the politician's most priceless commodity, Lodge has image to spare.

It is the image of the handsome fellow who went to the U.S. Senate at 34, only to resign and go off to fight World War II as a tank officer, emerging as a lieutenant colonel with six battle stars and the Bronze Star. It is the image of the man who returned to the Senate but sacrificed his chances for 1952 reelection by devoting himself to Dwight Eisenhower's drive for the presidency. It is the image of the expert U.S. representative to the U.N., where he fought and bested the Russians, often before nationwide TV audiences. It is the image of the man, beaten for the vice-presidency in 1960, who told the President he wanted to serve his country—and took the hot spot in Saigon.

And it is an image that has made Lodge, 10,000 miles from home, the people's choice for the 1964 Republican presidential nomination.

HARRY REDL—BLACK STAR

LODGE ON THE JOB IN SAIGON

"You never know for sure what life's going to hold."

Just Popular. Polls and primaries alike attest to Lodge's popularity. The latest Gallup poll shows him leading the Republican field with 37%, followed by Nixon with 28%, Goldwater with 14% and Rockefeller with 9%. A canvass of New York World's Fair visitors last week gave Lodge 8,800 votes to 3,239 for Goldwater, 2,771 for Nixon and 1,930 for Rockefeller.

Last March, without ever lifting a finger in his own behalf, Lodge easily won the nation's first presidential primary, rolling up 33,007 New Hampshire write-in votes to 20,692 for Goldwater and 19,504 for Rocky, both of whom had been slogging through the state's snow and slush for weeks. In Illinois, a bastion of Goldwater sentiment, Lodge received 52,322 write-in votes, while Goldwater, whose name was on the ballot, won with 512,616. In his native Massachusetts, Lodge got 71,000 write-ins to Goldwater's feeble 9,500. In Scranton's Pennsylvania, Lodge racked up an impressive 80,000 write-ins, behind Scranton's 225,000. Even in Texas, where G.O.P. leaders recognize no name but Goldwater's, Lodge landed a tidy 11,803 write-ins.

This week comes Oregon, the first and only primary in which Lodge's name appears on the ballot. Polls consistently have shown him leading and, win or lose, he seems certain to run strongly.

Some of Lodge's strength stems from public disenchantment with Goldwater and Rockefeller. But there is plenty of the positive in Lodge's appeal—a fact amply demonstrated in the almost evangelistic enthusiasm with which his rank-and-file admirers speak of him. Declares Thomas C. Nolan, a Gloucester, Mass., purchasing agent: "If God ever put anybody on this earth who belonged in the White House, it's Henry Cabot Lodge." Says suburban San Francisco's David Winslow, a former Marin County G.O.P. chairman: "In an era when American lives are being lost against a Communist cause on the other side of the world, there's a gentleman named Henry Cabot Lodge in the forefront. We're in an era where the traditional virtues—the honor, duty, country that General MacArthur emphasized—are not supposed to be loudly proclaimed. But I believe people have a thirst in their hearts for these things, and perhaps Lodge embodies them. He is, perhaps, the heir of a tradition which we covertly admire in our hearts, and are too bashful to talk about."

And so it goes. "He's an All-American boy out in the paddyfields blasting away at the Commies," says William Parker, a Los Angeles industrial relations consultant. Says Mrs. Adelia C. Shanks of Little Rock: "Lodge has not been one of those Lawd, Lawd, candidates. He's done, he's done silently from the heart." Even a Gol[illegible] Lead-Francisco's *Republi*[illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

er Ned Turkington, concedes: "The gentleman has grooming. He represents generation upon generation of a family devoted to public service."

The Blithe Spirits. The Lodge following is *decidedly* amateur. Closest to being professional politicians are Lodge's son George, 36, a former Assistant Secretary of Labor, who shares with his father the distinction of having been defeated for the U.S. Senate by a Kennedy, and New York Lawyer Maxwell Rabb, 53, an Eisenhower man who served as Ike's Cabinet secretary and White House adviser on minority affairs. Rabb accepted the job of national director of the Draft Lodge Committee after former Republican National Committee Chairman Leonard Hall turned it down. His strategy is simple in concept, but difficult to execute. "There is a connection," he says, "between popular approval and delegate approval, and our job is to prove it. We've got a candidate who can win not only a primary, but the election itself."

AP

CAPTAIN LODGE (1940)

Rabb, for one, believes that Lodge should stay right on in Saigon, waging war against Communism and declining to come home and get mixed up in the political battle. On this point, there is disagreement within the loose Lodge organization. Robert Mullen, a Washington public relations man now working as national coordinator of the Draft Lodge Committee, argues that the ambassador ought to come home right after Oregon.

The fact is that the Lodge people simply do not know what their man intends to do—and among those who are most interested but too busy to fret about it are Lodge's top field workers, a frolicking Massachusetts foursome who are having a barrelful of fun spending buckets of money they haven't got. Still owing $7,500 of the $25,000 cost of their New Hampshire campaign, they remain intoxicated with that triumph and have committed themselves to pouring $75,000 into Oregon. Explains the group's leader, Paul Grindle, 43, a bouncy scientific instruments importer: "Everyone says we can't contract for things without having the money. Then they give you some money because they don't want you to go to jail. This is as good a technique of raising it as any. Tell me a better one."

Grindle and Aides David Goldberg, 34, Sally Saltonstall, 23, niece of the Massachusetts Senator, and Caroline Williams, 23, work out of a barnlike two-story building in Portland, embellished with huge portraits of Lodge as a combat officer, at the U.N., with Ike, and with a wounded G.I. in Viet Nam. The Lodge organizers throw fancy titles around to volunteer workers with abandon, which inspires pride and makes for impressive letterheads. Explains Goldberg: "We don't care what they call themselves. Anyone who wants a title can have one."

About a third of the Lodge campaign budget goes into mail solicitation of voting pledges, another third into a TV campaign showing a 1960 film with Eisenhower extolling Lodge; the last is spent for miscellaneous items—and with a miscellaneous organization, there are plenty of these. Money is so scarce that when the girls forget to stuff an envelope, they carefully pry it open, insert the literature quickly, sit on the envelope to make it stick again. Yet the whole thing is done in a blithe-spirit fashion. Among Grindle's instructions to volunteer helpers: "It is a *happy* campaign. Smile and be pleasant. We think that's terribly important—that we not be grim."

Considering such dedicated workers, such widespread popularity, such pollster and primary election evidences of strength, why is there so much doubt that Henry Cabot Lodge will be the Republican presidential nominee? One reason is that Lodge's popularity with the Republican rank and file—which is the political phenomenon of 1964—is matched by his unpopularity with G.O.P. professionals, the people who go to conventions.

The Air. Among regular Republicans Lodge has never been one of the boys. There is about him a sort of aboveall air that for years made him an object of suspicion in many party circles. This feeling came to a climax during the 1960 campaign, when Lodge was Nixon's running mate. Even while conceding that Nixon did almost everything possible to bollix it up, many Republicans still believe that Lodge added the last losing touches.

They recall his reluctance to make more than one big speech a day, insisting that he spent too much of his time napping in hotel suites. They contend that national Republican campaign managers had to cut his appearance schedule in half, that he often refused to share either cocktails or dinner

WALTER BENNETT

CANDIDATES NIXON & LODGE (1960)

"Only a fool would choose to play it safe."

with local hosts, whisking onto the scene only to deliver his speech and then disappearing. They say he even declined to ride in cars with lesser candidates, declaring: "I ride only with my wife."

Most of the complaints come, of course, from Republican leaders already committed to other 1964 possibilities. But they are a significant factor in the campaign.

Says Arizona's Governor Paul Fannin, a true-blue Goldwater man for obvious reasons: "If Lodge had bested himself even one-half as hard as Goldwater did, or even one-half as hard as Rockefeller did, Nixon would be in the White House today." Declares New York Lieutenant Governor Paul Laxalt: "We don't want a guy who is going to sit on his big fat duff like he did in 1960." Says one of Nixon's top 1960 aides, a Californian: "I don't know any politician anywhere who worked in the Lodge campaign who isn't bitter about Lodge."

In Virginia, Richmond Republican Leader Richard Poage charges that Lodge "was lazy as hell during

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

campaign—he helped defeat the ticket." Recalls a Western manager for the 1960 ticket: "We had a big event scheduled for Lodge in Albuquerque. He got as far as St. Louis, then had to turn back home as his nerves were frazzled and he was worn out physically." New York State Chairman Fred Young calls Lodge "a tea-and-crumpets candidate."

Lodge's name is anathema in the South, where Republicans this year hope to pick up some electoral votes even against Lyndon Johnson. Texas' National Committeeman Albert Fay bitterly remembers how Vice Presidential Candidate Lodge, without consulting anyone, made a Harlem speech pledging the Nixon Administration to appoint a Negro as a Cabinet member. Nixon publicly disavowed the promise, but the damage was done. "That murdered us in Texas," says Fay, who also canceled a Lodge appearance in Houston when Lodge refused to stay at a segregated hotel. Says Florida State Chairman Tom Fairfield Brown: "You know, when he came to Miami, he wanted to play *Yankee Doodle* at the rally. Now, that's a fine song, but it's not the sort of thing you play down here. We had a hard time persuading him to drop it."

The Other Side. Other Republican professionals note that Lodge is a two-time loser who has not won an election in 18 years. True enough, but that is only part of the story. Lodge has nothing to be ashamed of in his record at the polling places. He won his first five times out: twice for terms in the Massachusetts legislature, three times for the U.S. Senate. He did lose to Jack Kennedy in 1952, which is no disgrace in Massachusetts, and it is hardly fair to blame Lodge for the Nixon-Lodge ticket's squeaky 1960 defeat. Rather, Nixon might have been better off if he had listened to Lodge's advice.

For one thing, Lodge strongly argued against Nixon's debating Kennedy on television; after all, Lodge had had some experience with Kennedy, and knew he was a fast fellow on his feet. Lodge also considered it poor tactics for the well-known Nixon to debate the lesser-known Kennedy. For another thing, Lodge urged Nixon to concentrate less on the South, more on the big industrial centers of the North and Midwest. Lodge also wanted to imprint some of his foreign policy ideas on the Nixon campaign, but he had trouble even passing them along, much less seeing the presidential candidate and talking things over. "Much of the time," recalls a Lodge aide, "we had almost no liaison with the Nixon camp."

The charge that he was lazy in his 1960 campaign enrages Lodge. He concedes that even under the pressures of a national campaign, he was relaxed enough to settle back on a sofa and snooze for 20 minutes or so. But he sees nothing whatever wrong about that. Instead, he often told his aides: "Two things are vital in any campaign. You have to stay well, and you have to stay in character."

Lodge makes no apology for the cutback in his campaign schedule. He simply saw no sense in trying to hit every hamlet and crossroad in the U.S. "I'm not running for alderman," he once exploded. "I'm running for Vice President." Thus, after one trip to Plattsburg, N.Y., where only a handful of people showed up, Lodge complained: "What a waste of time. I was shaking hands with myself."

Even the most loyal of Lodge's 1960 aides do admit that the promise of a Negro Cabinet member was a mistake—but they exonerate Lodge of the blame. Lodge, they say, had been booked suddenly for a Harlem speech. But during that day, he had several conferences on, plus work to be done on a foreign policy address to be delivered later at a major rally. He therefore instructed a couple of speechwriters to work up a talk that contained some positive proposals, not mere pious platitudes. The Negro Cabinet-member proposal was the result, and Lodge was dismayed when he saw it. But advance copies of the speech had already been delivered to the press, so Lodge decided to go ahead with it. As a final irony, it turned out that the appearance was in Spanish Harlem, where the voters cared very little about having a Negro Cabinet member.

Policy Line. After the election Lodge joined Time Inc. as a foreign affairs consultant, later became the first director-general of the newly formed Atlantic Institute, a private organization that promotes Atlantic unity.

Lodge had long since put in for an overseas post under the Kennedy Administration. In the spring of 1961, he volunteered his services to Secretary of State Dean Rusk "in any meaningful capacity." Nothing came of it for two years, until Lodge met Kennedy at a dinner honoring Lauris Norstad, retiring Supreme Allied Commander in Europe. The two got to talking, and Kennedy was impressed by Lodge's continuing desire to work in the national interest. Two weeks later the President sent his military aide, Major General Ted Clifton, to ask Lodge if he wanted to return to public life. Replied Lodge crisply: "Sure, if the assignment is tough enough."

It was all of that.

Lodge got to Saigon just as the Diem regime was afflicted with what Mme. Nhu rather indelicately referred to as the "Buddhist barbecues." There are those today who argue that Lodge, as the chief instrument for carrying out the policies of a Democratic Administration in South Viet Nam, cannot reasonably be the Republican presidential nominee. If that is the case, Lodge does not want the nomination, for he fully associates himself with the Kennedy and Johnson policies. Says he: "My attitude was and is exactly the same as that articulated by President Kennedy, which is to say that, as of last summer, changes in both personnel and policy were badly needed in South Viet Nam. That was a policy line I was expected to implement, and it was a policy with which I thoroughly concurred. If I had not, I would not have taken the job."

Lodge insists that neither he nor the Kennedy Administration wanted Diem overthrown by a military coup, although he was aware that one was highly possible. "After all," he explains, "when a government makes a practice of such things as yanking young girls out of their homes at 3 o'clock in the morning and sending them off to some camp for some real or fancied [illegible] it is setting in force some [illegible] sic and powerful em[illegible]

Fascinating sounds and sun-rotted fish.

he says, wanted "oppressive and inhuman" practices stopped, urged religious freedom and wanted Diem's malevolent brother Ngo Dinh Nhu sent into exile. But "absolutely nothing" was done "either to stimulate or thwart a coup."

Lodge says he desperately tried to save Diem and Nhu from death. "I was with Diem the morning of the coup and had gone home to lunch. I was eating when the firing began in the streets. Later in the afternoon I talked with Diem on the telephone and offered him safe-conduct out of the country. Even at that late date, I'm sure we could have delivered on that promise, and I'm reasonably sure the generals would later have accepted Diem's return as head of state. But Diem rejected the offer, and their deaths followed. It was needless and it was tragic."

For a While, Daylight. At first Lodge had hopes for the success of the junta's top general, Duong Van Minh. "Minh actually had been doing pretty well. We had a couple of good days out in the provinces, and people were beginning to respond to him. I actually thought I could see daylight ahead."

Then came another coup, which Lodge prefers to call "a shaking out of the knots and kinks" rather than a second coup. Lodge's reaction: "My first thought was, dammit, why did this have to happen?" But when Lodge met the new Vietnamese leader, General Nguyen Khanh, he was impressed. "He was obviously intelligent, obviously patriotic and obviously tough. Moreover, he seemed willing to listen to what we had to suggest, and if a change had to be made, well, then we couldn't ask for anything better than that."

Just as he always did at the U.N., Lodge considers his role as ambassador much more than a mere administrative function, explains: "In a job such as this I'm expected to give advice. I'm here to execute foreign policy, of course, but I'm also here to contribute to its formulation. In a place as active as South Viet Nam, the President of the U.S. must depend on his top man to help formulate policy on the spot."

To most Vietnamese, the 6-ft. 3-in. Lodge, towering over them as he mops his brow in the hot sun and exchanges light banter in excellent French, is a much-revered figure. His wife, Emily, who loves to shop for vegetables in Saigon's sidewalk stalls and is learning Vietnamese from a tutor ("I don't do much more than make sounds, but it's fascinating"), is popular too. Lodge delights the local folk by spreading foul-smelling Nuoc Mam, a sauce made from sun-rotted fish, on Vietnamese dishes and acting as though it were edible. General Khanh regards Lodge almost as a father figure, recently told an American newsman: "If his people call him, then he has no choice, he must go back to the U.S. If he does that, I ask only one thing: that you send us another Lodge—another straightforward man whose word can be trusted."

Will Lodge actually return to the U.S. to run for the nomination? No one knows but Lodge himself. He feels deeply that he still has a vital duty to perform in Viet Nam. He is also most reluctant to plunge back into the hurly-burly of American politics.

Excitement & Responsibility. Yet Cabot Lodge is a man with a strong sense of mission. Said he in a recent moment of reflection about his present job: "Sometimes I wonder how I ever got here. Then I remember that I'm no youngster any more, that I'm a grandfather many times over, and I've been a very fortunate man. I've had a life full of great excitement and great responsibility, and it's the combination of those two that makes life worth living, gives it its flavor. You take those things into account, and you understand that I felt that if there were any way in which I could invest what's left of my life in doing something my country needed, then that's what I should do, whatever the price.

"If you can do something that's worthwhile, that contributes, however little, to your country, and if you can have some fun while you're doing it—why, only a fool would choose to pl it safe."

The Dream. This feeling presumab extends to Lodge's sentiments about a tively seeking the Republican nomin tion. He is known to believe that Bar Goldwater would be a disaster to t G.O.P. if nominated, and to the U.S. elected. Those closest to him say th the only thing that would get him ba to the U.S. before the July 13 San Fra cisco convention would be an effort stop Goldwater.

For that, it may already be too la By most counts, Goldwater already h at least 550 of the 655 delegates need for a first ballot nomination, could s up the rest by convention time. The d namics—or lack of them—of the R publican Party so far this year ha favored the man who is out collectin delegates, not the man who is winnin the polls and primaries. One reason that many Republicans feel that nobod not even a vote getter like Lodge, ca beat Democrat Johnson in November.

But this defeatist attitude is pretty si ly. Sure as his political moves have been Johnson could still stumble politically. And healthy as the President may seem, there is always that dread possibility o disablement or worse. The Republica nomination is therefore nothing to giv away for the mere asking.

Lodge's backers hope for a big Ore gon win, are moving to stop Goldwat by backing Rockefeller in the June winner-take-all primary in Californ where Lodge is not on the ballot, writ ins are not allowed, and 86 delegat are at stake.

But most of all, the Lodgemen have dream, and it goes something like this

It is only a few weeks before the R publican National Convention. A tran Pacific jet lands at Los Angeles Inter tional Airport. Henry Cabot Lodge ge out, speeds away to the Palm Des cottage of his old boss and frien Dwight Eisenhower. There, before hu dreds of newsmen and a battery television cameras, Ike throws an a around Lodge, extols his virtues a without naming Goldwater, decla that what the Republican Party need a candidate after his own ideal of "p gressive Republicanism." Despite t send-off, Lodge still insists that he is seeking the nomination. Rather, he s he is in the U.S. because "I am Amb sador to Viet Nam, here to try to a the American people to the situation the Far East, to its well-known dang and also to the chances for victory." this basis, he appears on scores of t vision programs, addresses a joint s sion of the Congress. Meanwhile, war is stepped up in Viet Nam, and ports of battles won are on the fir pages. Delegates begin wavering, th turning to Lodge. The stampede is o and there can be no doubt about name of the G.O.P. standard-bearer.

A foolish fantasy? Perhaps. But is one of the most enchanting th about U.S. politics: dreams can and come true.

Down in the Dumps

Barry Goldwater ordinarily is an amiable sort, a man with an earthy sense of humor who enjoys a drink with friends. With delegates entering his camp in ever-increasing numbers, he ought to be feeling good. He isn't. The hard campaign for the Republican nomination is getting on his nerves.

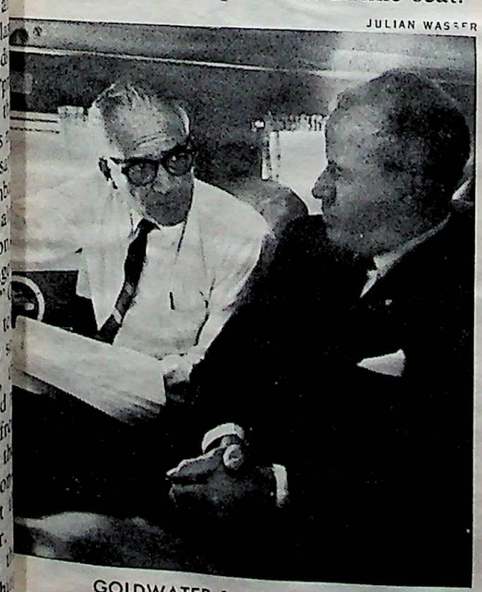
On a recent trip to Atlanta, Goldwater stepped from his plane, strode wordlessly through a cheering crowd. A radio reporter popped up with a microphone, asked: "How was the trip, Senator?" Goldwater just scowled. An admiring girl tried to clap a big white hat on his head. Goldwater shoved it away, snapping: "I don't want that." The radio reporter tried again. Goldwater spoke a few words, but the reporter wanted more. Goldwater pushed the mike away and growled: "Get that damn thing out of here."

"I'm Through." He later apologized for his impatience. "I'm sorry," he said. "I'm a little tired." His aides could wholeheartedly agree with that statement. Says one: "The pressure of the whole thing has really been getting him down. You know, he's always had a hot temper, and we used to joke about the day he'd punch some fresh jerk in the mouth. Let me tell you that in the past month or so it's ceased to be a joke."

At the Sacramento airport late one night, Goldwater was greeted by about 100 boosters chanting "We want Barry." Goldwater turned to California Campaign Manager Bill Knowland and said angrily: "I'm not going to get off this plane until you get those people away from here." And again, in home town Phoenix, Barry was annoyed when a few newsmen and a dozen or so autograph-hunting youngsters met him at the airport. He crossly told an aide: "I don't want this to ever happen again."

More and more, Goldwater complains that because of his coast-to-coast campaign commuting, "my backside is taking on the shape of an airline seat."

JULIAN WASSER



GOLDWATER & AIDE AIRBORNE
The question is when to take off.

In mid-April he returned from a hectic California trip and laid down the law to his staff. "If this is the way it's going to be," he said, "I'm through."

"I'm Leaving." With that, Goldwater cut his campaign schedule in half. Now, instead of spending eleven more days in California before the primary, he plans to spend only five. "But of course," he adds, "if the convention chooses me, then we'll start doing it differently. Then we'll have to take off."

Last week he took off instead for four days of golf at West Virginia's Greenbrier resort. "I have told Greenbrier," he said, "that the first time a reporter or photographer shows up, I'm leaving."

PRIMARIES

More of the Backlash

This appears to be a great year for losers in U.S. politics. Last week, in Indiana's presidential primary, Barry Goldwater rolled up 260,557 votes, won all the state's 32 Republican Convention delegates. But who got the headlines? Why, none other than GOPerennial Harold Stassen, who got 104,200 of what can only be described as protest votes.

On the Democratic side, Governor Matthew Welsh, a favorite-son stand-in for President Johnson, amassed 368,401 votes. But who got the headlines? Why, none other than Alabama's trouble-hunting Governor George Wallace, with 170,146.

Wallace campaigned in Indiana as "a man with a mission," spent about $50,000 on his effort against what he calls the "civil wrongs" bill. In conservative Indiana, he hoped to surpass the 34% of the Democratic vote he received in last month's Wisconsin primary. His 29.8% fell short of the mark, but Wallace took it as a triumph anyway. "This vote," he cried, "is shaking the eyeteeth of the liberals in both parties."

At that, civil rights forces did have cause for concern, for the Indiana voting showed the so-called white "backlash" still in evidence. Wallace actually carried populous Lake County, which includes industrial, heavily unionized Gary, Hammond and East Chicago. He also won in adjacent Porter County, a recently developed steel center that has been afflicted with racial conflict. If the backlash in such areas continues through November, it could cause serious trouble for the national Democratic ticket.

In his own Alabama, Wallace scored the first real victory of his noisy presidential campaign. Alabama's voters overwhelmingly chose a Wallace-backed slate of ten presidential electors over a slate, endorsed by U.S. Senators Lister Hill and John Sparkman, pledged to support the national Democratic ticket. What that means is that Alabamians will probably not be able to vote for Lyndon Johnson in November, since his electors will not be on the ballot. And no matter how Alabamians vote, the Wallace electors will do as Wallace says.

AP

BOB TAFT & WIFE
Slow and steady won the race.

Young Bob

Ohio Republicans figure to send another Senator Taft to Washington next year. As a first step, they gave Robert Taft Jr., 47, an immensely impressive primary victory last week over Ohio Secretary of State Ted W. Brown, a respectable vote getter who has been winning in statewide elections for 14 years. The count: Taft, 605,505; Brown, 160,504.

"Young Bob," as he is inevitably known, is no boy wonder. The grandson of a U.S. President and the son of a man who came to be known as "Mr. Republican," Bob Taft, Jr., always wanted to make the political grade on his own. By deliberate decision he spent a decade in a slow but steady rise in Ohio politics. He served four terms in the state legislature, the last as its majority leader. In 1962 he turned back the pleas of old family friends that he run for the Senate against Democrat Frank Lausche, stood instead for U.S. Congressman-at-large and won 60% of the vote.

Toward the end of this year's primary campaign, Brown hitched himself securely to the Barry Goldwater bandwagon, attacked Taft as a liberal. Taft replied in words his father might have used. "I," he said, "am a thinking conservative."

In November, Taft will face salty Democratic Senator Stephen M. Young, 75, who easily won renomination over an opponent who was officially absent from the race: Astronaut John Glenn, still ailing from a bathroom fall almost three months ago. Young got 515,362 votes to 201,175 from never-say-die Glenn admirers.

A Taft-Glenn contest would have been fascinating. But on the basis of his showing last week, young Bob could probably take on a couple of Youngs with a John Glenn for good measure.

Off the Sideline

Oklahoma happens to be football-happy, and for 17 years the state's No. 1 hero has been Bud Wilkinson, now 48, coach of the always dangerous Oklahoma University Sooners.

Tall, slim, clean-living Bud Wilkinson has for some time shown signs of political ambition. Both parties vied energetically for his allegiance. Thus it was to vast Democratic dismay and great Republican rejoicing that Wilkinson last February announced his candidacy for the G.O.P. nomination for U.S. Senator.

On the campaign field, Wilkinson was disappointing, proving himself mostly a master of the end run around issues and of the long-bomb cliché. "I believe with all my heart that it is high time for common sense in fiscal affairs," cried Wilkinson across the state. When that didn't set the electorate on fire, Wilkinson declared: "We must conduct our foreign affairs with confidence and dignity befitting the greatest nation." That one didn't score many touchdowns either, so Wilkinson came up with the old Statue of Liberty declaration. "We must," he thundered, "act with unwavering courage." When asked if he was a liberal or a conservative, Minnesota-born Wilkinson said only: "I'm an Oklahoman." And when he was questioned about how he felt toward a right-to-work law, a hot issue in the state, he blandly replied: "That's for the citizens to decide."

No matter. Such is Coach Wilkinson's standing in Oklahoma that he easily won his party's nomination, piling up 105,044 votes to 19,170 for his nearest opponent. But November's Election Bowl could be a different matter. There Wilkinson will face the May 26th winner of a runoff between incumbent Democrat J. Howard Edmondson, a former Governor, and State Senator Fred Harris. Neither of these is any great breakaway runner, but after all, Oklahoma has only had one Republican Senator in the last 33 years.

Deep in the Heart of It

Texas' Republican presidential primary was low-key and lackluster. Practically no bandwagons, billboards or ballyhoo enlivened the political landscape. They weren't needed, since the state already was buttoned up for Goldwater. In the Republican voting, he got 100,823 votes, 75% of the total cast. Following him was Write-In Candidate Lodge, with 11,803. Rockefeller, who tried to keep his name off the ballot, got 5,998.

The Republican Senate primary was more lively. Four men ran—each trying to sound more devoted to Goldwater than the others. Houston Oilman George Bush, 40, the son of former Connecticut Senator Prescott Bush, finished first with 62,574 votes, must vie in a June 6 runoff against Democrat-turned-Republican Jack Cox, 42, a Houston businessman, who got 46% of the 1962 gubernatorial vote against Democrat John Connally. This time Cox got 44,080.

The winner of the Bush-Cox runoff will face Senator Ralph Yarborough, who beat Radio Station Owner-Announcer Gordon McLendon, 43, after a cactus-nasty campaign in the Democratic primary. McLendon, who bills himself on-air as "the Old Scotchman," made shameless use of his radio outlets to boost his own candidacy, rattled on for months before the primary about the liberal tendencies of "Smilin' Ralph". The vote: Yarborough 903,211, against 671,806 for the Scotchman.

In Texas' Democratic gubernato primary campaign, Governor Con allowed as how he would keep th going pretty much the way he had ing his first term. His opponent, H ton Attorney Don Yarborough, a lib who is no kin to the liberal Sena belittled the Governor's achieveme ended up buried under a Connally la slide—1,124,700 to 471,874. Conn faces no meaningful Republican op sition in November.

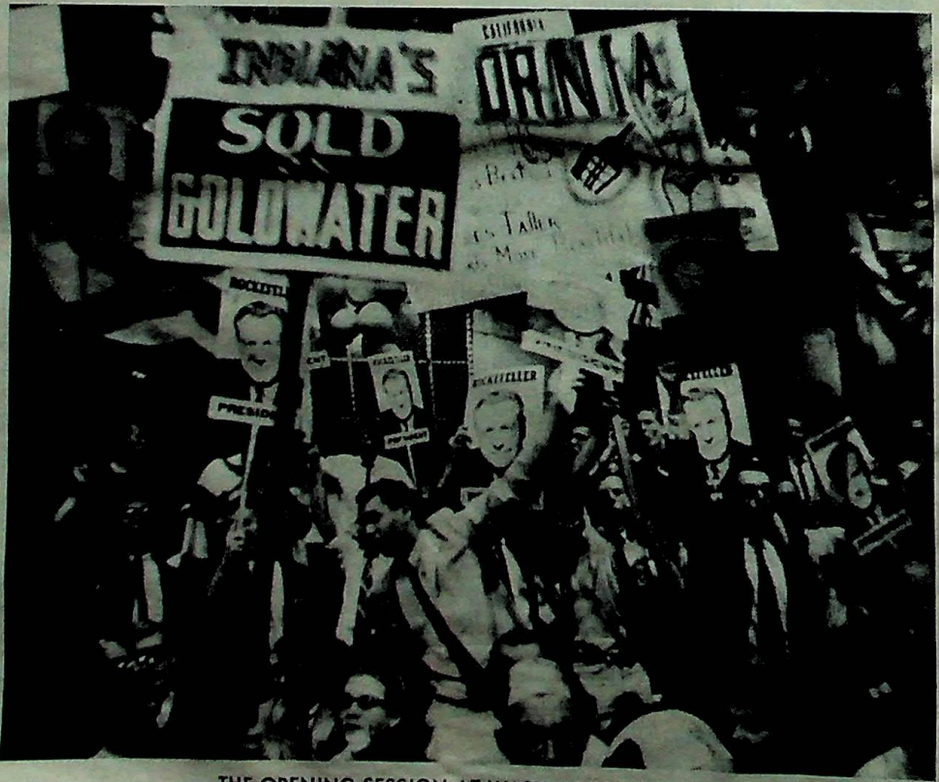
POLITICS

Amid the Rah-Rah: Reality

People who think U.S. college are apathetic might change their mi after watching that widespread qu rennial campus phenomenon—the mo political convention.

Biggest and boomingest of them held in the Washington and Lee U versity gymnasium in Lexington, V last week. The 1,256 just-prete Republican delegates were in dead e nest. Months ago they had polled rea life G.O.P. state leaders, learned ho they might vote at the real Republic convention in July. Now the kids we committed to vote as nearly like t actual delegation as possible—so ma so that many mock delegations go stream of telephoned instructions fr real politicians throughout the conv tion. Beside that, tough-minded thoroughly grown-up G.O.P. pro sionals backing Rockefeller, Goldw and Scranton were in town push their candidates. They brought mo for convention expenses: $800 fr Rocky's camp, $400 from Goldwa $100 each from the war chests Scranton, Nixon and Lodge.

The keynote speaker was no m orator either. Former Minnesota C gressman Walter Judd, who perfor the same function at the 1960 Re



THE OPENING SESSION AT WASHINGTON AND LEE

On the sidelines, the pros were coaching.

lican Convention in Chicago, told the collegians: "We must get a Republican elected who understands the world situation and not one who will crawl to get a concession. You've got five months to save the U.S. and save the world. Work hard!"*

In the voting, the Washington and Lee delegates nominated Barry Goldwater on the second ballot, named Pennsylvania's Governor Scranton his running mate. Through it all, Barry stayed near a phone in Washington, was plugged into the gymnasium public-address system minutes after he won and said solemnly, "I accept with great humility. I hope and pray it is a good omen for July and November."

Among dozens of other mock Republican conventions held on U.S. college campuses this spring:

▶ At Ohio's Oberlin College, which boasts the oldest campus convention in the U.S. (the first was in 1860), delegates picked Scranton on the fourth ballot, chose Kentucky Senator Thruston Morton for Vice President.

▶ At Vanderbilt, delegates from 34 colleges showed up, orated for six hours and six ballots before they picked Nixon for President, were so exhausted they then took less than 20 minutes to name Morton as his running mate.

▶ At California's Claremont Colleges, spring-fevered delegates came within a whisker of nominating Bishop Homer Aubrey Tomlinson of the Theocratic Party as the Republican candidate, cooled off by the second ballot and picked Scranton, with Oregon's Governor Mark Hatfield for Vice President.

▶ At Wellesley, where delegates from 50 colleges assembled, campus cops shut off the lights in the auditorium just as vociferous Goldwater backers were steamrolling toward victory. Crafty Rockefeller supporters had spread the rumor to police that a riot was in the works, and the convention broke up in the dark without naming a candidate.

▶ At Morgan State College, a Negro school in Maryland, Scranton got 720 votes, Rockefeller 323 and Goldwater, a nonadvocate of the civil rights bill, a meager 99.

▶ At Brooklyn College, delegates from 25 colleges yelled, pushed and got in a convention-floor fist fight before they picked Goldwater and Morton.

▶ At City College's Baruch School of Business Administration in New York, delegates argued about whether Martin Luther King, 35, is old enough to be nominated for President (he is), finally picked Scranton, with New York Senator Jacob Javits as Vice President.

▶ At Ohio University, delegates rode motorcycles through the gymnasium, watched coeds do a striptease, then picked Henry Cabot Lodge and Michigan's Governor George Romney.

* In 1956, the Washington and Lee keynoter was former Vice President Alben W. Barkley, who uttered his last sentence—"I would rather be a servant in the house of the Lord than sit in the seats of the mighty"—and fell dead at the podium.

MASSACHUSETTS

Corruption Is Commonplace

"It has been quite a week," sighed Massachusetts Attorney General Edward Brooke. And that was an understatement. For even the Massachusetts Statehouse, where corruption is commonplace, had not seen anything like this in a long while.

A grand jury last week indicted 26 individuals and nine corporations on 217 counts involving bribery and conspiracy. The charges were the result of work by a seven-man crime commission set up in 1962 by Republican Governor John Volpe. The biggest name involved was that of Democrat John Thompson, 43, hard-drinking speaker of the Massachusetts house, whose tight-fisted control of the legislature earned him the nickname, the "Iron Duke."

Thompson was charged with conspiring to thwart state control of the profitable small-loan industry through bribery and legislative manipulation. Indicted with him was Republican Charles Gibbons, 62, a former house speaker appointed by Volpe to head a special commission supervising construction of a $60 million state-government center in Boston. Frank S. Giles, 48, state police chief appointed by Volpe and recently suspended, was charged with perjury before the crime commission.

The apparent hero of the massive dust-up was Attorney General Brooke, the nation's highest Negro elective-officeholder, who ramrodded commission findings through to the grand jury. But Brooke too had problems. As the indictments emerged, he admitted that he had been under income tax investigation by the Internal Revenue Service for the last 16 months. The IRS has made no charges, but nonetheless took trouble to interview Brooke's father on his deathbed last November in its quest for information. Brooke's lawyers insist that the IRS efforts add up to a flagrant case of harassment.

DISASTERS

The Way Out

Five thousand feet high and 40 miles out of San Francisco, a Pacific Air Lines turboprop F-27 checked in with the approach control tower at nearby Oakland. The radio conversation was routine until the last transmission from the plane, which was garbled. Control called: "Say again." But at that very moment the F-27 was screaming toward the earth to crash in an explosion of flame.

PILOT CLARK

AP

CRASH SCENE IN CALIFORNIA

After the shout, nothing.

Pilot Ernest Clark, his copilot, stewardess and all 41 passengers were killed. Many of the passengers were returning from the gaming tables at Reno.

A task force of investigators began probing for the cause of the crash. Over and over again they played back a tape-recording of the last radio transmission to Oakland Control. The only clue, they felt, lay in the garbled call from the plane. Finally, with special playback equipment, the garble began to make sense. It was the voice of the pilot or copilot. He had shouted, "I've been shot! I've been shot! Oh God! Help!" There was nothing else.

At the crash site searchers found a Smith & Wesson .357 Magnum with six empty shells in its chambers. In the first hours of study, there was no way to tell whether both the pilot and copilot had been shot, or just one of the men, or whether it was bullet damage that had destroyed the mechanism operating the plane's control surfaces.

In a matter of hours, investigators traced the revolver to Passenger Frank Gonzales, 27, a member of the Philippine yachting team in the 1960 Olympics, who later moved to San Francisco. He had bought more than $50,000 in flight insurance, had named his estranged wife as beneficiary. Gonzales had a penchant for gambling, [illegible] to the suspicion that he [illegible] in Reno and had [illegible] horrible way [illegible]

UNITED NATIONS

A Case of Dodocide

In a set speech straight from the Communist handbook, Soviet Delegate Pavel Shakhov declared in the U.N. that "brutal" British colonizers have methodically oppressed and exploited the "indigenous inhabitants" of Mauritius, the Seychelles and St. Helena. Actually, replied Britain's Cecil Edward King last week, the situation "is even worse than the Soviet delegate realizes."

On Mauritius, said Delegate King, "I am afraid the original inhabitants were all liquidated within a few years of the arrival of the first explorers. They were birds of the species Dodo,* which is extinct and thus unable to press its claim to be granted independence on the basis of one bird, one vote." As for the Seychelles, King pointed out, "the original inhabitants were giant tortoises. Fortunately, these are not completely extinct, but they have shown no interest in political advance." On St. Helena, "the first explorers record the presence of pheasants, partridges and other birds, including the wide-awake or hack-backed tern, but alas, no indigenous inhabitants."

King did not deny Shakhov's charge that St. Helena's present-day population has an infant mortality rate of 33.6 per 1,000. Instead, he referred the Russian to the U.N. statistical yearbook, which lists several European nations as having even higher rates. Among them: "Bulgaria, Hungary, Poland, Rumania and the Soviet Union."

* Properly—and appropriately—known as *Didus ineptus*, the Dodo was an ungainly, turkeylike bird that could not fly. As U.S. Humorist Will Cuppy wrote: "The Dodo seems to have been invented for the sole purpose of becoming extinct, and that was all he was good for." Not quite. It was the far-from-dead Dodo in *Alice in Wonderland* who organized the Caucus-race.

DIDUS INEPTUS IN "WONDERLAND"
No bird, no vote.

Let 'Em Stand

When Malta's 129,649 voters approved independence by a small majority last week, their tiny Mediterranean island joined Malawi, Zambia and Tanzan* in a gaggle of emergent nations that are twisting tongues and ending any pretense of proportional representation in the U.N. Others clamoring for nationhood include British Guiana (pop. 620,000), Southern Rhodesia (4,000,000), Bechuanaland (335,000) and Angola (circa 5,000,000).

In time, no doubt, all the rest of the non-Soviet world's 40-50 million people now living under some kind of colonial administration will also join the parade, even though they mostly inhabit hundreds of tiny islands and enclaves that have few of the ethnic and economic prerequisites for nationhood. If the 100 million non-Russian residents of the Soviet Union could have their way, such new nations as Azerbaijan and Yakutia would also be independently seated in the U.N.

As it is, each new state enjoys one vote in the U.N. General Assembly—as do all the major powers save the Soviet Union, which wheedled three votes for itself at the San Francisco Conference in 1945. U.N. officials see no way of stopping this proliferation, and in a stop-gap move to accommodate it, the General Assembly Hall has just been redone to seat 126 national delegations, 14 more than present membership. After that, presumably, there will be standing room only.

* Nyasaland (pop. circa 3,500,000) will be known as Malawi after independence, July 6; Northern Rhodesia (3,500,000) will become Zambia Oct. 24; the United Republic of Tanganyika and Zanzibar, pop. circa 10 million, is already a member of the U.N.

COMMUNISTS

The Afro-Asian Arab

It was quite an entourage. Accompanied by his family, his Foreign Minister, the editors of Pravda and Izvestia, and star performers from the Bolshoi Ballet and Moscow Circus, Nikita Khrushchev arrived in Egypt last week. His stated purpose for the trip was the inauguration of the Aswan High Dam's first stage—a project into which Russia has pumped $272 million and at least six engineers' lives.

In fact Khrushchev's first visit to Africa was a shrewdly timed riposte to Red China's Premier Chou En-lai, who spent two months stumping Africa last year. Chou's blatantly racist pitch sought to raise what Moscow called "a great Chinese wall" of prejudice between white and colored races in hopes of driving Khrushchev's brand of Communism out of Africa. To demonstrate the practical difference between the rival camps, Nikita came to Egypt bearing gifts: $164 million in aid and credits above the $400 million Moscow had already allocated. "We Russians," runs Moscow's current line, "are Afro-Asian Arabs too."

After touring Alexandria's narrow, flag-festooned streets in an open Cadillac, Khrushchev and Egypt's President Nasser boarded an air-conditioned railroad car for a tumultuous whistle-stop tour of the Nile Delta. The fellahin fêted all over their beaming visitor, and when the train pulled into Cairo's Ramses Station, repainted for the first time since it was built at the turn of the century, half a million Egyptians lined the route to the Kubbeh Palace. It was the largest crowd in Cairo since the revolution in 1952, and as Nikita dropped off to sleep in the gingerbread edifice where boy King "Freddy" Farouk used to frolic, he could rest assured that he was the most loved visitor to Egypt since Antony barged in on Cleopatra.

Nikita's Boy

The next of kin of Russia's great have often lived in fear and died in horror. Ivan the Terrible and Peter the Great slew their sons; Catherine the Great killed her husband. Stalin shot his wife in 1934, later tried perhaps to make amends by corrupting his son Vasily with unearned honors that did him little good; in 1962 truculent Vasily died in exile, probably from alcoholism.

In this, as in most other respects, Nikita Khrushchev's style is more bourgeois than Borgia. His only son Sergei, a bespectacled engineer who shuns the limelight the way Papa relishes it. What really interests Sergei Nikitovich Khrushchev is butterflies and home movies.

SERGEI NIKITOVICH IN ENGLAND
No Monster, no Ben Hur.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Before joining Papa in Cairo this week, Sergei, now 29, visited London with a top-drawer delegation of Soviet aviation experts headed by Air Minister Petr Dementiev. Outranked by most of his associates, he remained respectfully mum in their presence. Most of the time he was too busy to talk. As the delegation was feted and followed for twelve days through Britain's top aircraft plants, at banquets, soccer matches, theatrical performances and historic monuments in England, Scotland and the Channel Islands, Sergei got enough 16-mm. cinefilm to reach from Krasnovodsk to Komsomolsk.

On one of his few private side trips, he spent fruitless hours on the shores of Loch Ness, hoping for a shot of the monster. His only other consuming ambition was to see the movie *Ben Hur*. It was not showing anywhere in London, so his British hosts thoughtfully took him to see *How the West Was Won* instead. The West has yet to win Sergei. Given a free shot of whisky at a Scotch distillery, he grimaced: "No, too strong, I prefer dry Georgian wine." But he finished it.

threaten war over Cyprus; London and Washington are at odds over British trade with Cuba; France in effect has withdrawn her navy from NATO command. The most sensitive issue of all promised to be the question of NATO's basic command structure, which has drawn a rising barrage of criticism in recent months. At the heart of the controversy lies the conviction of most NATO members that they should share control of the West's nuclear deterrent with the U.S. Last week Washington made clear its own views on this perennially irksome subject.

In an outspoken address at Georgetown University's Center for Strategic Studies, U.S. Under Secretary of State George Ball emphasized Washington's conviction that the multilateral force represents the only practical means of giving NATO nations partial control of nuclear weapons. As advocated by the U.S. since 1960, MLF would consist of 20 Polaris-armed surface ships manned by mixed allied crews. Though the U.S. would initially retain its veto power over the use of the missiles, the fleet would ultimately be controlled by some form of executive body representing the participating nations. So far, eight NATO members have joined in a working group to examine the MLF proposal, but only West Germany and Italy are demonstrably enthusiastic about it. Though France's own *force de frappe* probably will not be operative until 1967, Charles de Gaulle is the only allied leader who is flatly opposed to MLF. But De Gaulle's nuclear nationalism faces mounting criticism in France: last week in the Paris suburb of Sceaux, a sea of demonstrators shouting "*A bas la bombe!*" rose in flat opposition to the French nuclear force.

Greater Cohesion. Not until Europe has achieved a modicum of political unity, Ball warned, can it expect anything closer to "a true nuclear partnership." The lack of political integration also hamstrings NATO as "an instrument for effective political consultation," and Ball decried the "rigid philosophical differences" that prevent NATO from enforcing sanctions against Cuba. Without naming Britain or France, both of whom trade with Castro, he put his finger on NATO's real problem: its members' "limited sense of world responsibility—as distinct from national interest."

The U.S. is willing to hear Europe's arguments for minor revisions in the NATO command structure. However, said Ball, "effective solutions will not be achieved by tinkering with the structure, but rather by progress in achieving a greater cohesion in relations among the member nations." In short, the allies may well find ways to make NATO work more smoothly and gradually assume greater responsibility for their own nuclear defenses. Meanwhile, in Ball's words, "the burden of decision" will have to rest with the U.S.—not by "deliberate American choice" but because "policy and responsibility cannot be divorced."

CZECHOSLOVAKIA

Understanding Kafka

It was in Prague in the '20s that Franz Kafka wrote his chilling allegories of men condemned to lingering deaths by a malevolent bureaucracy. "People didn't understand him 25 years ago," mused a Czech writer recently. "Now, after 16 years of Communism, they understand Kafka very well."

They should, for Czechoslovakia itself seems today to be smothering in a Kafkaesque nightmare. Prague was once known as the "Golden City." Nowadays it is best seen after dark, for night alone can mask the soot and uncollected refuse that mar its crooked old streets. The only Central European capital that was spared the ravages of World War II, physically and ... logically it seems now to be ... ennui and neglect.

Queues of grey-faced ... workers, all clutching the inevitable scuffed brief-

MAY DAY IN PRAGUE
After the parade, protest.

cases, wait meekly outside shops that offer limited supplies of costly, clumsily packaged frozen meat and fish. Ancient streetcars labor creakily through streets empty of all but the lightest traffic. What few private automobiles there are seem to have escaped from an antique museum. When the government recently began issuing drivers' licenses, many battered Buicks and monstrous Mercedes of prewar vintage returned to the streets after years of exile in garages. Czechoslovakia's railroads, once among the best in Central Europe, today are the worst, and their coal-burning engines add to the gritty smog that cloaks the capital. In Prague's restaurants and bars, Scotch and French cognac sell for $2.50 an ounce. Tipping is simple: all waiters want is a few American cigarettes.

Baron von Novotny. The economy may be chronically short of workers, but it supports a Parkinsonian proliferation of officials. There are 29 "technical" specialists for every 100 production workers in industry as a whole; in some heavy-engineering plants, two out of three employees are "experts." Czech clerks dully obey detailed instructions that minutely specify every routine from stowing their rubber stamps to writing form letters with "psychologically effective opening and closing phrases."

Czechoslovakia's President Antonin Novotny, an unregenerate old-line arch-Stalinist, has doggedly resisted the "liberalization" urged by Moscow. Though Novotny has purged a few of the most loathed and offensive Stalinists from his government, notably ex-Premier Viliam Siroky and colleagues who were responsible for the show trials of 1952, Czechs have no illusions about the nature of the regime. Says one Prague cynic: "Why don't they just come right out and admit what they are? We wouldn't mind if he became Baron von Novotny and had his estates."

The Price of Poetry. In style, if not in name, Novotny leads a baronial life in Prague Castle, high above the city. He seems aloofly indifferent to the restive talk that fills the bars, coffee shops and cabarets in the city below. Prague's pent-up ire came to a head on May Day, when 3,000 students from Charles University gathered for a poetry reading in Kinsky Park before the statue of Romantic Poet Karel Mácha (1810-36). Novotny had banned the students' reading last year, and this time the crowd was infiltrated by plainclothes security cops. Before it could begin, uniformed police surrounded the group and ordered it to break up.

When the students refused, the cops waded in with truncheons and police dogs, arrested 25 "ringleaders." Word of the police action spread, and an hour later nearly 15,000 people gathered in protest at Wenceslas Square around the reviewing stand where Novotny earlier had taken the salute at the mammoth May Day parade. Shouting blatantly counter-revolutionary slogans such as "Long live freedom!" and "Down with the Gestapo!", the crowd withstood another police charge before it dispersed, leaving five more "ringleaders" in police hands.

However, in Prague, unlike other satellite capitals such as Budapest and Warsaw, students' demonstrations have never yet stirred violent reactions from the workers and bureaucrats whose mass support is essential to any serious challenge to the government. The nation's intellectuals also merely reflect discontent; they do not foment it. Indeed, as a venerable, non-Communist Czech author points out, "Novotny shouldn't be afraid of a revolution. No one is interested in politics any more. All anyone wants is to have more fun and more money. And a little, a really modest amount of freedom."

SOUTH VIET NAM

Dynasty's End

At sundown they carried the pris on a stretcher to a soccer field at gon's Chi Hoa prison. A slight man greying hair and steel-rimmed sp cles, ailing from diabetes and a attack, he was lifted to his feet by guards, hung slackly against the a few seconds. Then he walked s by himself across the sparse grass, muring responses to the pith-helm Roman Catholic priest who accom nied him.

The prisoner was strapped to a w en stake and, against his wishes, folded with a black scarf. Then a tary police captain barked an ord the black-helmeted, ten-man squad lined up 30 ft. from the pris and the soldiers raised their U.S.- carbines. The captain shouted: "B (Fire!). DIENBIENPHU: Could It Happen Again?

FROM Pyongyang to the Yangtze, Asia's Communists last week celebrated the tenth anniversary of Dienbienphu, the savage battle that cost France her century-old Indo-Chinese empire. In Hanoi, loudspeakers blared a specially composed song, *Liberation of Dienbienphu*, and thousands of North Vietnamese massed to commemorate the feat of arms that General Vo Nguyen Giap, the Red victor of Dienbienphu, called "one of the greatest victories in the history of the armed struggle of oppressed peoples."

Nor did the anniversary go unremembered in France. At a round of reunions in Paris, business-suited survivors of the debacle hoisted nostalgic toasts to "the Angel of Dienbienphu," Geneviève de Galard-Terraube, who was the only woman nurse on the battlefield. (Now 39, Geneviève is a retiring Paris housewife and mother of two children, married to a former French paratrooper.) They were poignant get-togethers, for Dienbienphu holds as deep emotional implications for Frenchmen today as Verdun or Waterloo did for earlier generations.

Tanks & Tablecloths. Many veterans of the fighting blame France's defeat on General Henri Navarre, his government's commander in chief for Indochina. But Navarre, a World War I infantryman, only personified the Maginot mentality of most French career officers. Though warned that it would be fatal to fight a conventional engagement from a fixed base, Navarre concentrated 17 battalions in the North Viet Nam outpost, which lay in a ten-mile-long river valley. His strategy was to draw the Communist Viet Minh guerrillas into a set-piece battle in which French heavy weaponry would prove decisive. Along with tanks and artillery, his officers moved in their mess silver, embroidered white tablecloths, stocks of wine.

Though Dienbienphu was surrounded by hills, Navarre was unworried, since he was convinced that the Reds had no artillery. Dienbienphu's two air strips, its only lifeline to the outside, were within easy field-gun range of the mountains. Under Cavalry Colonel Christian Marie Ferdinand de la Croix de Castries, who was promoted to four-star general during the battle, the garrison had been organized into ten separate commands. With Gallic gallantry, each had been given a woman's name—Gabrielle, Béatrice, Anne-Marie, Françoise, Isabelle, Dominique, Claudine, Huguette, Eliane and Junon.

Bicycles & Backs. What the French did not know was that Red China had armed the Viet Minh with 200 artillery pieces. Hacking paths through jungle trails, traveling up to 50 miles a day on foot, the guerrillas lugged the dismantled guns into positions on their backs, then set up the batteries under rock cover. To fill Viet Minh bellies, 50,000 Chinese coolies bicycled in relays down the narrow mountain footpaths, each straining under a load of 600 lbs. of sacked rice. From November to mid-March, while his 60,000 guerrilla troops sparred with patrols from the fortress, Guerrilla General Giap quietly slid his noose around Dienbienphu. Then one morning Viet Minh artillery boomed a death knell.

In four days, Béatrice, Gabrielle and Anne-Marie fell. As monsoon rains set in, French tanks became immobile. "To go on the offensive," despaired one French officer, "we would need 10,000 mules." With both air strips raked by Red shells, the French had to rely on airdrops for supplies. More than half the food, ammunition and medicine—as well as De Castries' brand-new general's stars and a bottle of congratulatory cognac —drifted behind Red lines. Unable to locate the Viet Minh's well-hidden big guns, Dienbienphu's guilt-stricken artillery commander committed suicide.

Corpses in the Chamber Pot. While Paris tried clumsily and in vain to obtain a U.S. bomber strike, outgunned, outmanned French forces were pounded for 56 days by human-wave attacks. By night, the Reds tunneled like ants under many outposts. Dienbienphu's defenders fought back with machine guns, flamethrowers, hand grenades and bayonets. Latrines filled and festered, the water supply turned foul; French officers bitterly endorsed their valley's nickname: "*le pot de chambre*." The living grew too weary to bury the dead, and the stench of putrefying flesh even forced the guerrillas to wear gauze masks.

On April 2, Command Post Françoise was abandoned. In the first days of May, Dominique and Huguette crumbled. Ordered not to surrender, De Castries on May 7 radioed Hanoi: "It is the end. The Viet Minh are only a few yards from where I speak." His operator added: "Say hello to Paris for me. *Au revoir*." By that night, the last three commands—Eliane, Claudine, and isolated Isabelle to the south—were overrun, and for the first time in six months the smoke-shrouded valley lay silent.

Lessons Learned. Of Dienbienphu's 12,000 defenders, 2,293 were killed, and the rest, including most of the 5,134 wounded, began the long death march to Viet Minh prison camps. The debacle resulted in the partitioning of Viet Nam and thrust ultimate responsibility for Indochina on the U.S., which today grimly supports South Viet Nam's struggle against the Communist Viet Cong. Whether from lingering humiliation or its dreams of reasserting French influence in a neutralized Southeast Asia, or both, the France of Charles de Gaulle holds that the U.S. will inevitably meet its own Dienbienphu in Viet Nam.

U.S. military planners virtually rule out any such prospect. For all their difficulties, South Vietnamese troops and U.S. advisers command enormous fire power and mobility, have learned never to box themselves into a static defense against fast-moving guerrillas. The Viet Cong of late have launched several attacks in battalion strength, but their numbers are nowhere near comparable to the Viet Minh, which moved entire divisions into Dienbienphu. Moreover, Dienbienphu was only 80 miles from Red China; the circuitous supply line to South Viet Nam is ten times longer. The Viet Cong have yet to deploy artillery or antiaircraft guns. And French air power was puny compared to the swarms of rocket-firing helicopters, transport craft and fighter-bombers that the U.S. has in South Viet Nam. With so great an advantage in air and fire power, U.S. advisers would like nothing better than to see the Viet Cong blunder into an open, pitched battle.

Giap's Goal. Biggest difference between the two wars, of course, is that the French were defending a tired colonial regime. They had scant encouragement from the government of Premier Joseph Laniel in Paris, which insisted that it could spare no more men or money. The U.S., by contrast, has repeatedly pledged full support for Viet Nam's defenders until the Viet Cong are finally routed. And, unlike the French, the Vietnamese are at least attempting an ambitious civic reform program.

The main dangers today, after two coups in six months, are that yet another upheaval might bring a neutralist government to power in Saigon, or that a series of coups could erode the people's will to resist. As General Giap has suggested, Communist strategy now envisages not one big Dienbienphu but a lot of small, frustrating engagements. Says Giap: "The enemy will pass slowly from the offensive to the defensive and be caught in a dilemma; he has to drag out the war in order to win it and does not possess, on the other hand, the psychological and political means to fight a long-drawn-out war." What the Communists hope for, clearly, is a Dienbienphu [illegible].

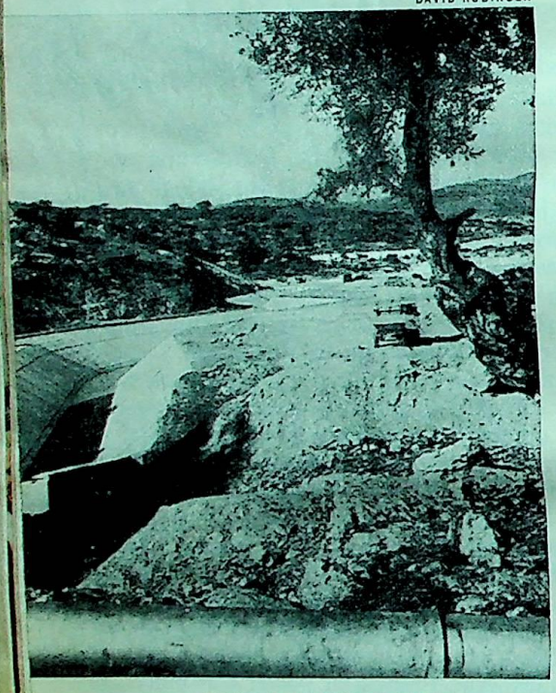
ISRAEL

Storm over Galilee

In a limestone cave beside the Sea of Galilee, not far from the spot where Jesus performed the miracle of the loaves and fishes, two giant hydraulic pumps hummed into action. The pumps sucked in the sweet water that flows into the sea from the Jordan River, pushed it through nine-foot conduits up an 845-ft. incline to the top of the Galilee Hills, then sent it coursing down an open spillway toward the central plains of Israel and the parched Negev Desert in the south. Thus last week Israel successfully completed the first full-scale test tapping in its critical and controversial Jordan waters project.

For the thirsty nation, the $150 million scheme is a modern equivalent of Christ's miracle of multiplication. Eventually, 85 billion gallons of water a year

DAVID RUBINGER



JORDAN WATERS PROJECT
Miracle of multiplication.

will flow through Israel's 154-mile network of pipelines, channels, siphons and tunnels. It will replenish the overexploited water table of the citrus-growing central plains, slake the thirst of existing Negev settlements, and provide enough water to sustain some 15,000 new families in the desert. But, momentous as the plan may be to Israel's future, the government last week went to great pains to play it down. In the nation's biggest newspaper, the afternoon tabloid Maariv, the dry, 93-word official announcement landed on page 15.

Israel had reason to bury the news. The Arab nations, well aware that the waters will sustain a more populous, prosperous Israel, threatened war if the project ever went through.* Then last January, at a summit meeting of 13 Arab leaders in Cairo, Egypt's President Nasser and Jordan's King Hussein persuaded their colleagues to drop the war talk and concentrate instead on a scheme that would, in effect, leave Israel high and dry. "We are not going to attack Israel," says Nasser. "We are going to build our own projects to utilize the Jordan headwaters before they reach Israel."

Accordingly, Arab reaction to last week's initial Israeli tapping was notably restrained. But the danger of war has not entirely evaporated. In Syria, the shaky Baathist regime might decide that it could profit from a little external diversion, such as an attack by jet bombers on Israel's main pumping station—which is buried deep underground to guard against such contingencies. But if the Arab nations go ahead with their plans to divert the Jordan's headwaters, Israel has already warned that it would treat any such move as a clear "act of aggression."

* However, Arab leaders rejected a formula, worked out by Special U.S. Envoy Eric Johnston in 1955, that would have given Israel 40% of the Jordan's annual flow of some 335 billion gallons. Jordan would have received 45%, with Syria and Lebanon sharing the other 15%.

ADEN

It's No Eden

Though some scholars maintain that the Garden of Eden was in Aden, the country today seems more like purgatory than paradise. A British protectorate since 1839, Aden is a sun-scorched moonscape of thrusting volcanic mountains and rock-strewn wadies. Temperatures commonly rise to 110, and survival rations for British combat troops there include at least two gallons of water daily—for drinking, not washing. Aden is a tempting prize nonetheless. In a determined attempt to defend it from guerrilla bands sweeping across from Yemen, Britain last week airlifted hundreds of seasoned troops there.

Britain's last, vital bastion in the Middle East, Aden is the cornerstone on which Whitehall aims to build a stable Federation of South Arabia from more than a dozen disparate sultanates, sheikdoms and emirates along the nether rim of the Arabian peninsula. With easy access to the Red Sea and Indian Ocean, Aden is also the major staging post and bunkering station in the area and a key base for the defense of sources that supply Britain with an annual half-billion dollars worth of oil. Not surprisingly, Egypt's President Nasser would also like to "liberate" Aden. With 40,000 troops in Yemen supporting the rebels who deposed the despotic Imam Mohammed el Badr in September 1962—Nasser's force has actually grown by some 12,000 since he agreed a year ago to begin withdrawing his troops—he has been turning more and more heat on the British outpost.

Foul. For months, Aden has been under sporadic attack by some 500 to 1,000 dissident border tribesmen known as the Red Wolves of Radfan. Primed with arms and ammunition from Egyptian caches in Yemen, they have been harassing the key trade route between Dhala and Aden. Half the federation's 4,000-man, British-officered army assigned to end the "state of re last January. By March, frustrate rebel strikes from Yemen as well British bombed the Yemeni fortre Harib after warning civilians to out, earning a sharp rebuke fro U.N. Security Council.

Last week it was Britain's turn t foul. At a press conference in A Major General J. H. Cubbon, mander of Britain's Middle East forces, said he had "reliable info tion" that two British soldiers had killed in an ambush and decapi Their heads, he said, were then pa around the Yemeni town of Ta stakes. The report was later disco by U.S. diplomats in Taiz. Nonethe as the Laborite Daily Herald r the two soldiers "were killed—and were killed in a war which drag with no end in sight."

Trapped. It was an ugly, bloody tle war at that. One day last week, ing to root the Red Wolves out of mountain redoubts, 120 British p troopers attacked the mud-walled v of El Naqiil at dawn with fixed b nets. The rebels scampered up slopes, dug in, and with deadly s fire pinned the paratroopers to ground in shimmering heat. T hours later, at dusk, the British f broke out of the trap and route rebels, killing twelve. Two Britons

In the House of Commons, P Minister Sir Alec Douglas-Home tiently rejected Opposition charge the Aden conflict was the governm fault: "The situation in the Middle does not depend on British goo alone," he said. "There must be reciprocity. We have seen precio tle of this up to now, I must say suming that none would be forth ing, Britain beefed up its forces in with strategic reserves from Keny the Lancashire Fusiliers on 24-ho in England. If still more muscle is ed, warned Sir Alec, "troops w moved from Germany."

SPAIN

A Prevalence of Pretenders

As sunrise touched the jagged of Montejurra last week, 60,000 iards followed wooden crosses a battle flags up steep paths to plateau on the mountaintop. The the heart of the old northern ki of Navarre, they gathered for annual commemoration of two 19th century civil wars in which ancestors fought to put a Carlis on the throne of Spain.*

BALLANTINE'S BODYGUARDS

At Ballantine's Dumbarton Distillery a unique and highly efficient burglar alarm operates day and night. Geese! 70 white geese – all completely dedicated to their job of helping to guard the vast stocks of Ballantine's.

If anyone should wander near the warehouses where the Scotch matures, he'll get quite a shock. A barrage of piercing shrill cackles will explode in his ears, bringing out the authorities at full speed.

Thus the 42 fine Scotch whiskies that go to make Ballantine's can age undisturbed. Expertly blended, these top quality whiskies will one day become Ballantine's – the Superb Scotch.

It's worth taking good care of Ballantine's. Any knowledgeable whisky drinker will tell you why.

THE MORE YOU KNOW ABOUT SCOTCH, THE MORE YOU LIKE BALLANTINE'S

daughter Isabella assume the crown. Her right to the throne was contested by Ferdinand's younger brother Don Carlos, and ever since, his descendants and their supporters have been trying bravely but futilely to seize power. The Carlists are the most rabid and fanatic rightists in Spain, and their political ideas seldom go beyond reviving the Inquisition. Though they view Franco as a woolly liberal, *los Requetés*, the rugged Carlist fighting men, nevertheless provided *El Caudillo* with some of the best battalions he ever had in the Spanish Civil War.

Donning their traditional red berets, the Carlists at Montejurra were out in force to honor their current pretender to the throne, Prince Carlos Hugo, who last month married the wayward Princess Irene of the Netherlands and hopes to use her considerable fortune to advance his ambitions. But the problem of the reign in Spain is anything but plain, for Prince Carlos has prestigious rivals:

▶ Handsome Juan Carlos de Borbón y Borbón, 26, grandson of Alfonso XIII, the last King of Spain, who was deposed in 1931. His father, Don Juan, has never formally withdrawn his claim to the throne, but has long been in Franco's bad graces. Juan Carlos, married to Princess Sophie of Greece, is supported by Spain's grandees, higher clergy and bankers, but has little popular following in the country.

▶ Don Jaime Borbón y Battenberg, 55, twice-married oldest living son of Alfonso XIII and uncle of Juan Carlos, who looks every inch a king but once renounced his right of succession because he is a deaf-mute. Last week Don Jaime rescinded his renunciation and laid claim to the throne as head of the house of Borbón.

Though Generalissimo Francisco Franco has ruled Spain for 25 years, he has always insisted that the country is a monarchy, his own role merely that of a regent who would ultimately restore the king. Which one? Franco personally seems to incline toward Juan Carlos and reportedly intends to step down in 1968, when he will be 75 and Juan Carlos a mature 30. But Franco is also deeply indebted to the Carlists for their sturdy support in his war against the Spanish republic. Moreover, Prince Carlos Hugo's marriage to Princess Irene establishes a link, however tenuous, with a royal family that not only has a throne but is also the wealthiest in Europe.

Spurting Wine. Nonetheless, under pressure from the followers of Juan Carlos, and with his own chronic misgivings about anything that remotely threatens public order, Franco let Carlos and Irene know that it was his "wish" that they not attend the Carlist rally at Montejurra. Since his future depends on Franco's whim, Carlos meekly flew off with his bride to the Canary Islands instead. His younger sister Cecilia, wearing an ivory dress and red beret, went in his place. Priming their parched throats with spurts of red wine from goatskin *botas*, the Carlists cheered lustily for Carlos and shouted their contempt for Juan Carlos, whom they scornfully call "Juanillo." Proclaimed one Carlist banner: "We don't want Juanillo even if it's an order from *El Caudillo*."

With pretenders to the throne growing more numerous and more clamorous, Franco may well decide to sit tight and let the royal claimants fight it out. They have little else to do.

NEPAL

Royalties for the King

Nepal's King Mahendra is a poet, tiger hunter and consummate wheeler-dealer. As monarch of a mile-high, landlocked nation, one of whose principal exports is the steely little Gurkha soldier, Mahendra labors not only to hold his throne but also to keep his little kingdom from the jaws of its giant neighbors, Red China and India. He does this so successfully that, far from becoming a tasty morsel for its neighbors, Nepal has wheedled all manner of goodies from both—not to mention the U.S. and Russia.

Last week the King was wheeling and dealing in style. It began one morning in the ornate state hall of Singha Durbar, where Nepalese and Chinese officials signed an agreement by which Peking will build two warehouses and a brick-and-tile factory for Nepal. That afternoon, wearing his habitual dark glasses, Mahendra and his pretty, petite Queen Ratna attended the formal inauguration of a U.S.-financed, 26-mile aerial cableway that will bring freight and food from the Indian border across the Mahabharat Mountains to the capital city of Katmandu.

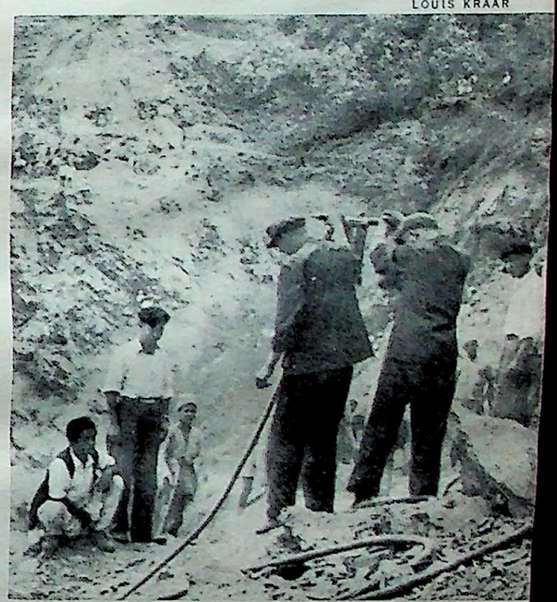
New Market. Next day, King and Queen boarded their Soviet helicopter, were flown by the Russian crew to Paanchkhal to inspect the 70-mile road being built by Red Chinese engineers from Katmandu to the Tibetan border town of Kodari, where it connects with another highway leading to Lhasa, the Tibetan capital. Thousands of Nepalese workers using picks, shovels and crowbars are carving the road from the sheer slopes of mist-hung mountain passes. Chinese instructors patiently show the Nepalese how to operate rock drills while other Chinese clear away rocks and dirt with bulldozers; still others are busily surveying and mapping every hill and valley in a country ideally suited to guerrilla war.

Mahendra and his officials hope that when the road is completed at year's end it will open a new market to the north for Nepal's surplus food, thus ending the country's dependence on India for virtually all its industrial imports. When it was pointed out that the road will also enable the Red Chinese to penetrate the heart of Nepal, Mahendra airily replied: "Communism does not travel by taxi." In fact, as Nepalese officials readily admit, China can simply walk into their country any time it chooses.

Invented Word. Back in his capital, Mahendra heard reports on negotiations with the Soviet Union for a sugar mill, cigarette factory and hydroelectric plant. At week's end, he flew to Bhaisalotan in India's Bihar state for the dedication of the Indian-financed, $109 million Gandak hydroelectric project, which will provide his kingdom with power and irrigation and will eventually be handed over to Nepal.

For the first time since he suffered a stroke last January, Prime Minister Jawaharlal Nehru left New Delhi and flew to Gandak to meet Mahendra, who is still more fearful of the Indian giant than the Chinese. As late as 1962, Nehru looked the other way while Indian-based Nepalese exiles staged guerrilla raids against Mahendra's kingdom. It took the Himalayan war with Red China to awaken Nehru to the danger in the north. Since then, India has not only restrained Nepalese guerrillas but has also pledged $18.4 million—far more than Peking has given—for Mahendra's current three-year plan.

LOUIS KRAAR



RED CHINESE ROAD BUILDERS
A short taxi ride from Tibet.

At Gandak, Mahendra made it clear that he intends to be treated as an equal and not a dependent. He told Nehru and a crowd of 100,000 Indians that friendship "on the basis of parity" can only be "mutually beneficial." Next week King Mahendra plans to make a state visit to West Germany, which is discussing several possible aid projects for Nepal; on his way home, he will stop off in Pakistan for talks with President Ayub Khan. Mahendra, who calls his policy one of strict nonalignment, claims that his Foreign Minister [illegible] Giri actually invented the word [illegible] as it may, few other nations [illegible] it pay such handsome

THE ALIANZA

A Matter of Tone

One of the architects of the Alliance for Progress is on his way out of Washington. He is Teodoro Moscoso, 53, the Puerto Rican businessman who helped mold the Alianza as its first U.S. coordinator. Last December Moscoso was moved out of the top job in President Johnson's general reshuffling of Latin American policymakers. Last week it was announced that he is resigning as a special adviser and U.S. representative to the new Inter-American committee (CIAP) that is supposed to guide the program. Wrote Johnson: "It is with the greatest regret that I accept the resignation of this able and dedicated man. His counsel will be sorely missed."

Noble Rhetoric. The expressions of regret seemed genuine enough—despite rumors of disagreement between Moscoso and the Johnson Administration. For two and a half years, Moscoso was the apostle of the Alianza, the man charged with President Kennedy's sweeping declaration "to transform the 1960s into an historic decade of democratic progress." Noble rhetoric, but the performance fell far short of the mark. A start was made on building low-cost houses, schools, roads, clinics and water systems. But Moscoso was frustrated by bureaucracy that delayed loan approvals, and many Latin Americans grew impatient waiting for instant progress. Few nations kept their half of the Alianza bargain by drawing up master development plans; the low rate of private investment was bitterly disappointing.

After Kennedy's death, Moscoso recognized that Johnson would stamp his own brand on the program. Johnson's first act was to bring in Thomas C. Mann (TIME Cover, Jan. 31) as Assistant Secretary of State to boss both the Alianza and the State Department's Latin American end. So far, the difference is largely one of tone. Mann is a pragmatist, a believer in the art of the possible. He has muted the old-style Alliance hoopla for his own soft sell, and encourages such practical reforms as the new computerized tax-collection that helped Mexico enlarge its tax rolls by 1,200,000 people in eight months.

Renewed Pledge. Some Latin Americans are fearful that the tempered approach indicates a fading U.S. interest in the Alianza. With Moscoso's departure, Johnson made a Texas-size point of dispelling any such notion. He called all Latin American ambassadors in Washington to the White House this week to discuss Alianza problems. And he will personally sign new loans to Brazil, Chile, Colombia, and a raft of other countries. Said Johnson last week: "In my first official foreign-policy statement as President, I pledged to the representatives of Latin American countries the best efforts of this nation toward the fulfillments of the Alliance for Progress. We're carrying out that pledge."

BRAZIL

The Unmissing Man

Brazil's favorite guessing game for the last four weeks has been "Whither Brizola?" A demagogic leftist Congressman and brother-in-law of deposed President João Goulart, Leonel Brizola had last been seen two days after the revolution, scooting up a Pôrto Alegre street in a green Volkswagen—an angry, rock-throwing crowd chasing him on foot. Then he dropped from sight. Was he hiding out in his home town of Pôrto Alegre? "Impossible," sniffed the Pôrto Alegre military. "We would have captured him." Uruguay? "Impossible," echoed the border patrol. "We have the strictest vigilance."

ALFREDO TESTONI

BRIZOLAS IN EXILE
Everywhere and nowhere.

Brazilians saw him everywhere—and nowhere. In one 24-hour span, the cops in three Brazilian cities thought they had him cornered; in Pôrto Alegre, he was reported 21 times, even after gauchos began shearing off their Brizola-like mustaches. Four times, sensation-mongering newspapers declared Brizola dead. Then came Brizola's voice over a radio transmitter somewhere in the south. When Brizola's wife Neuza joined Brother Jango and his family in their Montevideo exile, she claimed that Brizola was somewhere in Uruguay. But ten days later, a Rio paper front-paged a letter from Leonel "somewhere in Brazil." "I have traveled thousands of kilometers," he wrote, "and visited hundreds and hundreds of homes and ranches. Everywhere I was received as a so-

Police were still chasing down bl alleys when the prodigal leftist fin turned up last week in Montevideo. had apparently spent the last few d in Pôrto Alegre, tidying up his affa and now he planned to visit "seve Latin American countries" with his fa ily. "I am an engineer," he said, "a can support my family by workin But how had he smuggled himself acr the border? Simple, says Brizola. just hopped in a car and drove over.

CUBA

Anything Going to Happen on May 20?

On a lonely stretch of coastline Las Uvas Key, 100 miles from Hava a loyal fisherman found a "terrori arms cache that included twelve pisto 15 rifles, ten antipersonnel mines, magnetic bombs, 84 packages of e plosives, and assorted detonators, m chetes, fuses, knives, a portable rad and other equipment. At least tha what the Cuban radio reported l week, crying that the arms came fr "North American espionage agencie

In Washington, U.S. intelligen sources quickly denied any new und cover campaign against Castro. T U.S., said a spokesman, has not slipp arms into Cuba since just before t abortive Bay of Pigs invasion in A 1961. Castro may have uncovered of those old caches. But the grea likelihood was that he had found it l ago, and had just now decided to m an issue of it.

Why? One possibility was that might be trying to whip up his peo against a new attempt at guerrilla w fare by some of the 300,000 anti-Ca Cubans living in exile. The exiles h been relatively quiet since the Bay Pigs, but now they are on the m again—with or without U.S. help. N bers of young exiles, many of them w U.S. Army training, have disappea from Miami and other cities recen exile guerrilla-training camps are ported operating in Nicaragua, C Rica and other Central American h aways. At least one of these is run Manuel Artime, a leader in the Bay Pigs landing, who occasionally pops in Miami. Another exile leader, Mar Ray, once one of Castro's chief lieu ants, has pledged that he will return Cuba to revive the anti-Castro un ground by May 20, the 62nd anniver ry of Cuba's independence from Spa

Castro himself sounds edgy gloomy about the future. In his Day speech, he dourly conceded some day his Communist regime m be toppled. "Most of us—the leader today—would disappear in that str gle; but the people would remain. the party would remain." Surely people would remain.

The riots that bloom in the spring, tra la. And the first students to gallop out of the labs and libes for the annual monkey-see, monkey-do monkeyshines were the fair sons of John Harvard. Seems some sycamores along Cambridge's Memorial Drive were due for the ax (TIME, Feb. 14), and before anyone could bellow "Rinehart!" 2,000 undergraduate tree lovers rushed to the defense. "Two, four, six, eight, sycamores foliate," chanted the Cantabs fiercely. Then the crowd decided to block traffic instead. That brought the cops, who brought four dogs, which brought indignant cries of "Cambridge, Cambridge" (Md., not Mass.). A few yips and nips later, the discretion-filled Harvards were headed for home, leaving poor John on high to turn crimson with shame at the perfidious fainthearts.

. . .

At his death in 1962, Arthur Vining Davis regarded himself as one of the U.S.'s richest men, worth on the order of $400 million. But when his holdings —mainly in Aluminum Co. of America and in Florida real estate—were finally totted up for a court accounting, he turned out to be worth considerably less, $87,629,282.83 to be precise.

. . .

Just the other night Lady Bird Johnson went to the Metropolitan Opera in Manhattan, the first member of the First Family to do so in 19 years. She made a sweeping entrance with lissome Mrs. Anthony Bliss, wife of the Met's president, that had wide-eyed bystanders glomming the glamour, and Lady Bird was still drawing stares and applause as she returned to her box for the third act. As she smiled and acknowledged the attention, she started to sit down, then—ploop—she disappeared. The audience gasped, but quickly relaxed as she bobbed up unhurt and laughing. Met General Manager Rudolf Bing had been holding her chair, and he pulled it away to exchange it for one more comfortable. That's the story, anyway.

NEW YORK DAILY NEWS

MRS. BLISS & MRS. JOHNSON
Glomming the glamour.

. . .

"Shall we make peace again? Today? Here? Shall we again become friends?" The moving plea was extemporaneously put by Pope Paul VI in a special Sistine Chapel service to several hundred painters, writers, musicians, sculptors and actors, and it marked the first time a Pontiff has tried bridging the century-old chasm between art and the church. Abstract art still disturbed the Pope. "The result is a language of Babel, of confusion," finger-wagged Paul. But the culture-loving Pontiff wanted a change: "We need you. For, as you know, our ministry is that of rendering accessible, comprehensible and also moving, the world of the spirit, of the invisible, of God, of the ineffable. And in this you are the masters. It is your trade."

. . .

When he's happiest is when he's snorting, and he did plenty of it. But in his 80th birthday week, Harry Truman was all choked up between potshots at the press, the Republicans, and everyone else within BB range. President Johnson telephoned Kansas City with early congratulations. "I wanted to call collect," ho-hoed L.B.J., who then added: "When you blow out those candles, I hope you think of all the lights you have turned on during 80 years." But the biggest thrill came during a birthday appearance on the Senate floor. After eulogies from no fewer than 25 Senators plus a standing ovation, H.S.T. stammered: "I'm so overcome. This is one of the greatest things that has happened to me in my whole life." Afterward he was still touched. "If they had cussed me out, I would have known what to do."

. . .

Charlton Heston was not lynched last week. The reason this is remarkable is that he was actually trying to be fair to a studio. No big star is supposed to do this. But Heston had an attack of ethics. Though it was not in his contract, he had browbeaten Columbia Pictures into doing a couple of scenes his way in the just-completed *Major Dundee*. "In effect," he explained, "I applied the muscle without the legal right. The only ethical thing to do was to return my salary." Return his what? Yep, the whole estimated $200,000 salary he got for the flick. "Ghastly precedent," thought his fellow performers. "Gem of a notion," thought Columbia.

. . .

He is more untouchable than Eliot Ness, more famous than Dick Tracy, and more widely respected in his job than just about anybody. John Edgar Hoover, 69, has been head of the FBI so long that people forget he could have been replaced by any incoming Administration. Last week he completed ... years in the post, and Lyndon John... weighed in with his own endo... ment. Next New Year's Day the ... lawman will reach the compulsory ... tirement age of 70. "I know ... wouldn't think of breaking the law," said L.B.J. So to offset the requirement, the President signed a special executive order that will allow the hale and hearty bachelor to continue serving "for an ... definite period of time."

METHODISTS

Beyond Lip Service

"Whenever we try to achieve something here," complained the Rev. James Laird of Detroit, a leader of the integration-minded Methodists for Church Renewal, "we are told, 'all right—but not now.' " By the end of the Methodist Church's quadrennial General Conference in Pittsburgh last week, the 858 delegates had given more than lip service to civil rights, but had not forced integration on white-only congregations.

The pursuit of compromise made the conference sometimes seem more like a political convention than a church meeting, as delegates caucused in hotel corridors and committee rooms to work out approvable resolutions. In the end, conference moderates, led by such powerful Methodist figures as Lawyer Charles Parlin and the Rev. Harold Bosley of Manhattan's Christ Church, devised a number of carefully hedged stands that satisfied the South without totally alienating the North's firebrand integrationists.

The all-Negro Central Jurisdiction was voted out of existence—on a gradual, voluntary basis. The delegates went on to pass a resolution that said: "All persons, without regard to race, color, national origin or economic condition, shall be eligible to attend worship services, and be admitted into membership anywhere in this connection." But some Southern clergy argued that the resolution did not really bind white churches to accept Negroes, and the delegates shelved a proposal to make refusing anyone admission to worship an ecclesiastical crime.

But the conference did pass a resolution approving orderly civil rights demonstrations "in rare instances where legal recourse is unavailable." When one Southern delegate complained that the statement was an incitement to anarchy, Bosley answered: "We won't give an inch on this principle." In other mood-showing votes, the conference set up a fund to help Methodist ministers who may have suffered "economic deprivation" by joining in civil rights activities, and forbade church agencies to discriminate in their hiring practices.

ATHEISTS

The Woman Who Hates Churches

Atheist Madalyn Murray boasts that "we do everything properly, through the courts." What she has already done through the courts, however, strikes millions of people as so improper that she has earned the epithet: "the most hated woman in America." Last year the belligerent Baltimorean won a Supreme Court ban on school prayer. Last month she started suit again to kill a new Maryland law permitting compulsory school "meditation." Next month she goes for the brass ring: a suit against the State of Maryland that is clearly aimed at destroying tax exemption for all U.S. church property. Churches are "leeches on society," she says. "If no other American has enough guts to fight them, then I will."

Unbeliever Murray is a tough, wisecracking divorcee of 45 whose forebears arrived in Massachusetts in 1650. Daughter of a Pittsburgh contractor, she served on Eisenhower's staff in World War II as a WAC officer-cryptographer, later studied law at Ohio Northern University and South Texas College; she has spent 17 years as a supervisor of social workers. A former member of the leftish Socialist Labor Party, she claims to have forsaken Christianity at 13, after reading the Bible; since then, reason has been her only faith, and she boasts: "Nobody has ever beaten me in an argument yet."

"Christian Neighbors." Wildly irreverent, she sprinkles her conversation liberally with "Oh God." After giving her father a religious funeral, she cracked: "People god-damned well better not do that to me." When someone painted "Communist" on her fence, she named her dogs Marx and Engels.

Not surprisingly, her oldest son Bill, 17, rebelled in 1961 against "that hogwash" of school prayers. Delighted to assault what she calls "hypocrisy," Mrs. Murray then and there embarked on a new career as a kind of court mother. The Baltimore public welfare department fired her from her supervisor's job. Various persons—whom she delights in describing as "My Christian neighbors"—have trampled her flowers, broken her windows, beaten up Bill and his young brother more than 100 times. Flooded with abusive letters, she has received everything from a psychotic document endlessly repeating the word "kill" to a newspaper picture of herself smeared with excrement.

But she has also been deluged with dollars (top source: doctors), now runs both the Freethought Society of America, Inc., and Other Americans, Inc., a legal-action group whose 5,000 members pay at least $1 per month to fight her court battles. Among her future targets: Government-paid military chaplains, courtroom oaths, and income tax deductions for church contributions. Other Americans already owns 80 acres in Kansas for a projected "Atheist University of the Americas."

Lease-Back Loophole. Whatever their personal feelings, lawyers concede that Mrs. Murray's tax-exemption suit is not without merit. She argues that such exemption forces her to pay higher taxes and support churches—in direct conflict with the First Amendment's prohibition against laws "respecting an establishment of religion." All 50 states, including Maryland, repeat this prohibition in some form in their own constitutions. Yet 33 state constitutions also make church property tax-free. All other states accomplish the same end under other statutes.

No one is quite sure how much potential revenue is involved. One study shows that church groups own 14% of all taxable property in Pennsylvania, 17% in Maryland, 18% in New Jersey. In other areas, churches own relatively little of total tax-exempt property; in Baltimore, for example, where $528 million worth of property is tax-exempt, only $80 million worth is owned by churches (schools and hospitals account for much of the rest). Even so, few dispute the fact that church property is widely undervalued.

FRANCIS DI GENNARO

MRS. MURRAY & SONS WITH LAWYER (RIGHT)
Wildly irreverent, but important.

As Mrs. Murray sees it, the most blatant constitutional violation is church-owned property that is not used for religious purposes. Many state laws are so broad that churches—and fraternal organizations—may buy such property with lease-back arrangements under which they rent it to the former owners; income from the rents and leases is tax-free. The Roman Catholic Knights of Columbus do not pay income taxes on their rental revenue, which comes from such sources as the land on which Yankee Stadium stands, a Detroit steel warehouse and a Connecticut steel mill. In New Orleans, Jesuit-run Loyola University pays no federal income tax on its revenues from its radio and television stations, and thus is in a [illegible] position to compete for business with its leading rival.

Determined to [illegible]

Digitized by Arya Samaj Foundation Chennai and eGangotri

in eleven states, Mrs. Murray has begun at home. Maryland forbids church lease-backs, exempts only property used for church purposes. The state's lawyers will argue that limited tax exemptions are not grants that provably infringe on church-state separation. Moreover, they will claim that Mrs. Murray's financial loss is too small to make her case justifiable.

The Catholic and Episcopal dioceses of Baltimore have joined the case as co-defendants because they want a definitive constitutional decision. Church lawyers will argue that tax breaks spur vast church contributions to the public welfare through church schools, orphanages and hospitals. Another argument: tax breaks may actually be mandatory

SPELLMAN WITH FOUNDLINGS
A good shepherd should be . . .

under the First Amendment's guarantee of "free exercise" of religion.

Some churches—notably the Methodists and United Presbyterians—concede that there is an inequity in the laws and either pay their full taxes or a sum equivalent to levies from which they are exempt. But a majority of the clergy probably agree with Mrs. Murray's Baltimore opponents, who are determined to battle her up to the Supreme Court over what one Roman Catholic lawyer sees as "the beginning of a hostile interpretation of the First Amendment." Says he: "As a person, Mrs. Murray is not important. But what she's trying to do is important."

ROMAN CATHOLICS

The Pastor-Executive

If any one aspires to the office of bishop, he desires a noble task.
—I Timothy 3

The Roman Catholic Church has 2,500 bishops, and they perform their tasks in almost that many different ways. Some are brilliant theologians, some skillful spiritual teachers, some church politicians, some Jeep-riding missionaries, some discreet bureaucrats. But in the U.S., the dominant mold is the pastoral executive: the brick-and-mortar man whose memorial is a building program and whose theological concern takes second place to pragmatic interest in shepherding his people.

Such a man is Francis Cardinal Spellman, who this month is celebrating his 75th birthday and his 25th anniversary as Archbishop of New York. Last week nearly 4,000 guests crowded into four ballrooms of the Waldorf-Astoria for a banquet in his honor, and piles of gifts, letters and telegrams spilled across his office desks at 452 Madison Avenue. In part, the tributes came because Spellman is a genuinely warm and kindly man, a gregarious and sociable prelate whose gentle smile and sly Irish wit can charm Presidents as well as plumbers. But there was also the respect paid to an administrative genius whose record can be measured in construction bills and concrete growth.

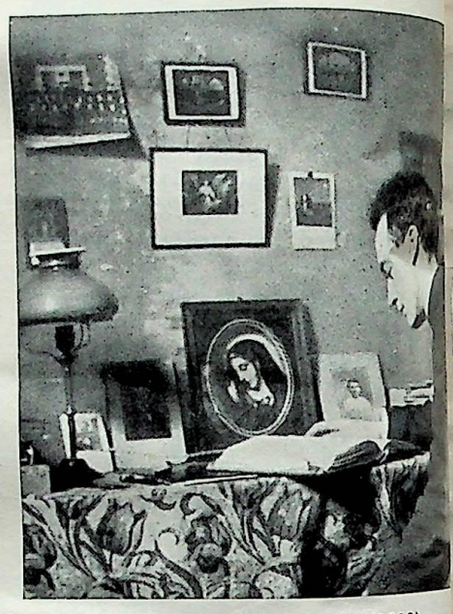
"Cardinal Moneybags." When Pope Pius XII named Spellman as its archbishop in 1939, New York was probably the richest see in the U.S.; it is now the richest in the world. Spellman's spiritual empire, running from Staten Island to the Catskills of Ulster County, has almost doubled in size, to 1,782,000 faithful. To serve his growing congregation, Spellman has built 37 new churches, 130 schools and five hospitals (including the New York Foundling Hospital, his favorite charity); almost every year he is responsible for $90 million worth of construction. Much of this he managed by consolidating all parish building programs into his own hands, thereby getting better interest rates from bankers.

Spellman's influence, however, goes well beyond his diocese. As the Pope's Military Vicar in charge of the nation's 920 Catholic chaplains, he is bishop of the Catholics in the armed forces. He also bears a major responsibility for the church's largest charity, Catholic Relief Services, a $176 million foreign aid program that sends food and clothing to 79 countries around the world, from Moslem Algeria to Catholic Peru. In grudging tribute to his financial power and financial skill, Rome sometimes calls him "Cardinal Moneybags."

Admiration & Criticism. It also respects him as the second most powerful man in the church. One reason has been his close personal friendship with Pope Pius XII and now with Pope Paul. Another is his unique ability to help out the church in useful ways that seldom get into print. After World War II, he convinced Pius of the need to internationalize the Vatican's Italy-centered investments. Later, they say in Rome, he donated more than $1,000,000 to help the Holy See pay for the Ecumenical Council. Spellman would never be so indiscreet as to interfere in another bishop's diocese—yet the Vatican seldom takes any action affecting the U.S. church without an inquiry first to the "powerhouse" in Manhattan.

As an executive, Spellman has almost universal admiration; on other grounds, he is a target of criticism for excessive prudence. Some Catholic laymen deplore the fact that his voice, loud and clear in condemning *The Deputy*, dirty movies and the Communist threat, is rarely heard on such social issues as segregation and political corruption. Catholic book publishers seldom try to get Spellman's imprimatur on anything more controversial than the life of an Irish saint, and there is an undercurrent of complaint from young priests about the steady-as-you-go conservatism of chancery decrees. Says one Manhattan curate: "It's easier to preach about socialism in New York than to advocate liturgical reform."

Outside the church, he is still blamed for using seminarians to break a cemetery workers' strike in 1949, and for engaging in a bitter public quarrel with Mrs. Franklin Roosevelt over federal aid to parochial schools. And although he now appears frequently at interfaith meetings, non-Catholic churchmen regard him as generally indifferent to ecumenism.



AS SEMINARIAN IN ROME (1913)
. . . a good builder.

Close to the People. Spellman is a product of Massachusetts' lace-curtain Irish, and readily admits that he does not "believe in change just to change." But he is an unpredictable conservative. He voted with the progressives on most issues that came before the Vatican Council, and last fall he took to Rome as his personal theologian Jesuit John Courtney Murray (TIME Cover, Dec. 12, 1960), who had been excluded from council preparations because the Holy Office objected to his views on church-state relations.

Spellman is now a trifle slow of step and dim of sight, and he yearns to be remembered not as the good builder but as a good shepherd. His greatest consolation, he says, has been his annual Christmastide visits to the troops overseas, "which gave me a chance to do something pastoral. That has always been my ideal—to be close to the people. That is what the church has always done and always should do."

Neat holes in eggs don't matter...

but in industry, they do. The neater the hole you drill, the better the job you do, or the product you manufacture. Precision drilling calls for correct speeds, right lubricants, and the perfect drill. Check for the famous P&N symbol on the shank. This guarantees the drill has been manufactured to rigid specification during each stage of production. It ensures you a clean, perfectly symmetrical hole every time. Remember — when precision counts, you can depend on the drill by P&N. There's one specially designed and better-made for every drilling application and material.

For all drilling problems call in your P&N Technical Representative. His expert advice is yours, free, any time you require it.

Available in Black Jet or Silver Jet precision finish by P&N holders of sole Australian rights to the Rohde & Dorrenberg roll forging process . . . for maximum economy and longer drill life.

For further details of R & D processed drills ask for P&N Tool Data Sheet No. 115.

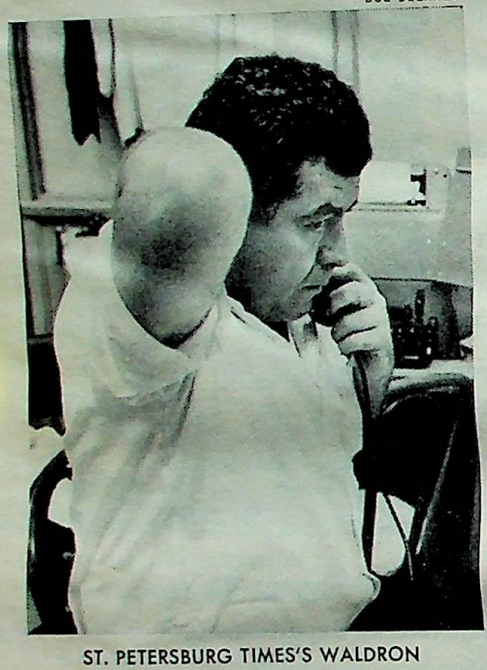
PRIZES

Just Doing the Job

Before John Hammer was thrown out of office as chairman of the Florida Turnpike Authority, he sent a complaining letter to Governor Farris Bryant. It concerned a reporter for the St. Petersburg Times, Martin Oliver Waldron, 39, who, said Hammer, had been "rude, discourteous, ungentlemanly, and roared at my employees." No one from the governor on down could challenge the accuracy of that description—or wonder why Hammer should be so annoyed. For it was the rude, discourteous, ungentlemanly and roaring reporter from the Times who cost John Hammer his job.

BOB DELANEY



ST. PETERSBURG TIMES'S WALDRON

JACK THORNELL

LEXINGTON ADVERTISER'S SMITH

A roar against a turnpike and a call for reason.

Drawing Flies. Anything less than a roar would sound inadequate coming from a man who stands six feet tall, scales 240 lbs. and sometimes has to go sideways through a door. Waldron roars at everybody. Once, when Leroy Collins was still governor, Collins stamped up and down the cabinet room for four hours demanding that Reporter Waldron disclose his source for a certain story. For four hours, Waldron stamped right along with the governor, roaring refusal. Then the governor gave up trying.

His reportorial behavior goes over big with statehouse tipsters. Sooner or later, they all visit Waldron, and the tales they tell are music to a man who defines his job as a daily search for crooked politicians. In due time, Waldron's questing eye turned on Florida's Sunshine State Parkway, a four-lane asphalt ribbon winding the 211 miles between Miami and Orlando. If ever a state project might draw flies, thought Waldron, that was it.

While Waldron was working on this suspicion, a tipster called from Tampa—collect—and invited him down. There he learned something about the extravagant tastes of John Hammer, Governor Bryant's appointee as Turnpike Authority chairman. While on the job, Hammer stayed at a $65-a-day hotel room, paid as much as $30 a day to eat, and put corsages for his secretary on the tab. He chartered a plane, and charged taxpayers for more hours aloft than the plane was actually flown. Under Hammer's loose hand, headlined the Times, a $100 million road had stretched to $400 million.

Plugging the Leaks. Unraveling this skein of questionable public arithmetic took 4,500 inches in the Times: about 150,000 words. It was worth the effort. Out went the high-living John Hammer, and in went five new state laws that plugged the holes through which millions of tax dollars had leaked. It was a prime example of the kind of investigative reporting that a good reporter on a crusading newspaper ought to do. So it should have been no surprise last week when the Pulitzer Prize for meritorious public service went to the St. Petersburg Times. Martin Waldron was not mentioned in the award—an omission that did not bother him one bit. "I don't get any money out of the prize," said he, "so it isn't like being paid for doing your duty."

Among the other Pulitzer prizewinners in journalism:

▶ The United Press International's Merriman Smith, 51, known to millions of televiewers as the slim, mustached man who ends presidential press conferences with the words, "Thank you, Mr. President." On the day John Kennedy was shot, Smith, who was riding in the motorcade three cars behind the President, grabbed the car phone and got out a U.P.I. bulletin six minutes ahead of the competition. Smith's later eyewitness story won him the prize for national reporting.

▶ The New York Times's David Halberstam, 30, and the A.P.'s Malcolm W. Browne, 32, shared the international reporting prize for their coverage of Viet Nam, up to and including the coup that deposed the Diem regime. Bad luck probably eliminated Neil Sheehan, 27, the U.P.I. man in Saigon, from consideration. Although his reporting matched Halberstam's and Browne's, often with remarkable fidelity, Sheehan flew out to Tokyo for a week's rest—and thus missed the coup.

▶ Mrs. Hazel Brannon Smith, 49, editor and publisher of the Lexington, Miss., Advertiser and three other weeklies (TIME, Nov. 21, 1955). Mrs. Smith couldn't be more unpopular in Mississippi if she were an integrationist, which she isn't. But she is the next best thing. Her papers and her editorials have fearlessly called for reason on the race issue, whether she is challenging the white Citizens Councils ("If they have their way, the free press in Mississippi will be destroyed, and *with it* the liberty and freedom of all Mississippians"), or reporting a concert by Metropolitan Opera Star Leontyne Price in Laurel, where Miss Price was born ("Leontyne does not need Mississippi, but Mississippi needs Leontyne"). She won the prize for editorial writing.

Not Enough Merit

Although journalists get most of the Pulitzers, awards are also made in the field of arts and letters. But on this larger hunting ground, the judges have had chronic trouble finding, or at least recognizing, enough merit to cover the seven divisions.* The fiction prize has been skipped seven times in 48 years, the drama award eight times. This year the Pulitzer jurors withheld awards in music, drama and fiction.

Under those headings, the jurors saw not a single nomination to the University of Columbia board of trustees which picks the winners. Some of the other arts-and-letters awards, they testified to a painstaking search for merit. The history award went to *Puritan Village: The Formation of a New England Town*, a book that was rejected by two publishers before Author Sumner Chilton Powell found a printer. Powell fielded his prize with special gratitude. He hoped, he said, that it might help him on his newest project, finding a suitable job.

Author Powell's publisher, the Wesleyan University Press in Middletown, Conn., was not far behind him in gratitude. Although the university got into book publishing only seven years ago, it published another of this year's winners, *At the End of the Open Road*, a volume of verse by Louis Simpson.

* Music, fiction, drama, history, biography, poetry, and something the Pulitzer committee calls "general nonfiction."

SPORT

TRACK & FIELD

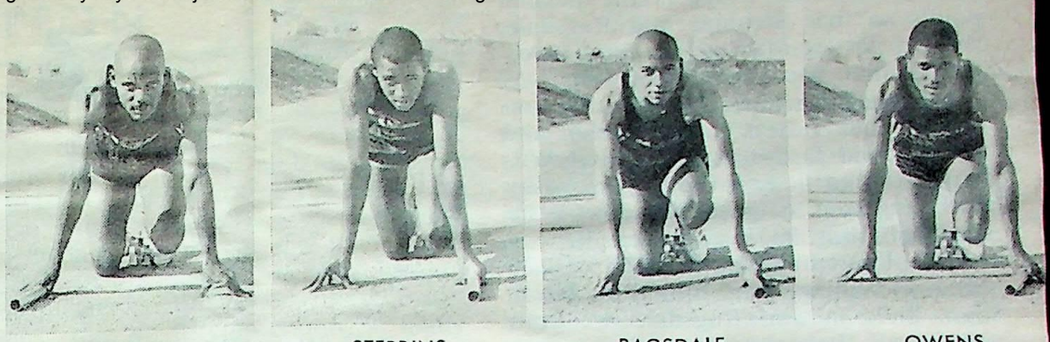
Ten Years After

Of all track's "impenetrable" barriers —every one of which has now been broken—none seemed more solid, a little over a decade ago, than the 4-min. mile. In the years between 1934 and 1942, the world's best runners could only lower the record .6 sec. (from 4 min. 6.8 sec.), and in 1945 when Sweden's Gunder Hägg ran a 4-min.-1.4-sec. mile, that seemed to be just about the ultimate of which any man was capable.

Then came Britain's Roger Bannister, a dour, monkish medical student, who attacked the 4-min. mile the way a researcher attacks a microbe. Bannister approached the barrier as if it were strictly physical. He built up his lung capacity until he could absorb 5¼ qts. of oxygen a minute—125% the normal rate. He lowered his pulse rate to 50 beats per minute *v.* an average 72. Finally, on May 6, 1954, Bannister ran the mile in 3 min. 59.4 sec.—and nearly killed himself in the process. He was half unconscious with anoxia. His pulse had soared to 155 counts per minute. He was temporarily color-blind. "Real pain overtook me," he wrote later. "It was as if all my limbs were caught in an ever-tightening vise."

Roger Bannister retired at the end of the 1954 season, his theory proved—or so it seemed. But no, it turned out that the 4-min. barrier was only mental after all. One after another, other milers began to break 4 min. John Landy did it. Jim Beatty did it. Australia's Herb Elliott did it 17 times. And there was New Zealand's Peter Snell, who holds the current world record (3 min. 54.4 sec.) and breaks 4 min. practically every time he steps on a track. In one race alone last summer, the first six finishers all beat 4 min. By last week, the barrier that Bannister had labored so long and hard to crack had been smashed by 44 men from 15 nations a total of 143 times.

And what of Roger Bannister now? Married, 35, the father of four children, he is a consultant on neurology at three London hospitals. Last week, to celebrate the tenth anniversary of his historic run, he went out to supper with Chris Chataway and Chris Brasher, the two runners who had paced him to the record—and talked about a new "absolute limit" for the mile. He set it at "about 3 min. 30 sec. This is the physiological limit," he said, "with our bodies made the way they are."



MEADOWS STEBBINS RAGSDALE OWENS

A slap for speed.

Looking for a Challenger

Grambling, La., is a sleepy Negro town in the heart of the pea-patch and catfish country. The best way to get there is by car from Shreveport, over a highway that is partly pitted blacktop, built by Huey Long in the 1930s. But there is not much point in making the trip—unless, of course, you happen to be an athlete. Grambling is the home of Grambling College, a state-operated school with only 3,700 students, half of them girls, and year after year some of the best college football players in the nation. At last count, 17 Grambling alumni were playing with the pros, including All-Pro Safety Man Roosevelt Taylor of the Chicago Bears, 315-lb. Tackle Ernie Ladd of the San Diego Chargers, and End Willie Davis of the Green Bay Packers.

Football is fine, but track is even finer. It is newer, too. Grambling had neither a track nor a team until five years ago. What's more, Track Coach Tom Williams, a onetime halfback with the Los Angeles Rams, gets only ten athletic scholarships a year. But he makes the most of what he has. Williams can field nine runners capable of cracking 10 sec. in the 100-yd. dash, a 174-ft. discus thrower, a 26-ft. broad jumper —and the best sprint relay team in the U.S.

Say "Hey!" This season, four Californians dressed in Grambling black-and-gold have run off with practically every sprint relay in sight, and their times (40 sec. for the 440, 1 min. 23.3 sec. for the 880) are the fastest in the U.S. Last week, at the Southwestern Athletic Conference meet in Houston, they romped to yet another 440-yd. victory, in 40.4 sec. Better still, they have only begun to hit their stride. Donald Owens is only a junior, but he is the captain of the team. The others—Richard Stebbins, Vernus Ragsdale and Donald Meadows—are all sophomores running in their second varsity season.

Key to the sprint relay is the baton pass—a complicated maneuver that must be accomplished blindly but precisely. Grambling's Coach Williams learned the secret from the British. Impressed by the fact that the British national team had beaten the U.S. in international competition, Williams studied movies of the teams in action. The Americans were faster, but they tended to slow down for the tricky pass, while the British made the transfer at full speed. The Americans also had a habit of waiting, hand low, palm down, trying to snatch the baton from their teammates. The British on the other hand, reached back, hand high, thumb up—and the incoming runner simply dropped the baton into his teammate's open palm.

Williams decided to crossbreed the two styles. His runners hold their hands palm down, in the classic American style, but the incoming runner slaps the baton upward into his teammate's [illegible] alerting him just before [illegible] shouting "Hey!" In [illegible] where even a fracti[illegible]

portant, Williams staggers the passing points so that Stebbins and Ragsdale, the two fastest men, get to run 10 yds. farther than Meadows and Owens.

Stayers & Anchors. Most coaches simply run their fastest man as anchor and their second fastest as No. 1, but Williams tries to fit each boy's personality to the leg he is assigned. Meadows is no speedball, but he is a stayer: he can match almost anybody for 110 or 220 yds.—so Williams runs him as the No. 1 man. Stebbins and Ragsdale are both convinced that they are the fastest sprinters in the country, so they run No. 2 and No. 3. Their job is to build up a lead for Anchor Man Owens, who runs best when he starts in front.

The closest anybody has come to beating Grambling in the 440- or 880-yd. relay all year is .3 sec. back at the tape. That makes Williams proud but unhappy. "These boys need a challenge," he says. "They have never yet been in a race where they all had to put out their best effort." If that ever does happen, officials are unlikely to believe their watches. Meadows already has clocked 21.2 sec. for a 220 leg this year; Owens has done 20.2 sec., Stebbins 20 sec. and Ragsdale a fantastic 19.5. Together, those times add up to 1 min. 20.9 sec. —almost two full seconds faster than the world record for the 880-yd. relay.

GOLF'S TOP TRIO

After 15 P.G.A. tournaments, in three of which neither played, Jack Nicklaus and Arnold Palmer were battling it out as usual for the lead in money winnings. The only thing still up for grabs was third trumpet on the Fort Knox bandwagon. Puerto Rico's Juan ("Chi Chi") Rodriguez was tooting mightily, and only a connoisseur would have the bad sense to ask whatever happened to Tony Lema. The standings last week, before the Colonial National in Fort Worth:

	Jack Nicklaus	Arnold Palmer	Juan Rodriguez
Los Angeles Open	Did not play	Tie, 3rd $2,775	Did not play
San Diego Open	Did not play	Tie, 15th $725	Did not play
Lucky Open	Tie, 12th $1,200	Tie, 3rd $3,100	1st $7,500
Phoenix Open	1st $7,500	Tie, 9th $1,450	Cut 36 holes
New Orleans Open	Tie, 2nd $3,400	10th $1,500	Tie, 2nd $3,400
Pensacola Oper	Did not play	Tie, 2nd $2,300	Did not play
St. Petersburg	Tie, 4th $1,400	Did not play	Tie, 24th $226
Doral Open	2nd $4,000	Tie, 18th $794	Tie, 27th $525
Greensboro Open	4th $2,550	Tie, 13th $845	Did not play
Masters	Tie, 2nd $10,100	1st $20,000	Tie, 21st $1,100
Houston Classic	2nd $4,000	Did not play	3rd $3,300
Texas Open	Did not play	Did not play	Tie, 2nd $3,100
Tournament of Champions	1st $12,000	9th $1,850	Tie, 4th $3,020
	$46,150	$35,339	$22,171

JERRY A. ROSE

MALE (LEFT) ATTACKING FEMALE

KITE FLYING

A Man's World

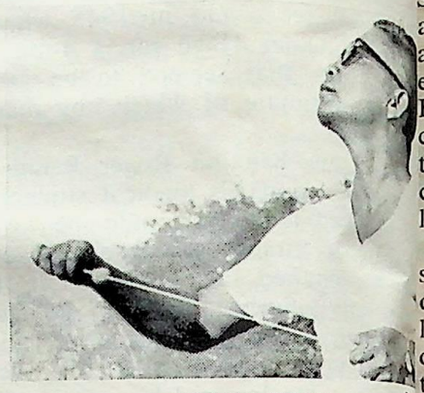
"Go fly a kite," an angry housewife snarls at her husband—but imagine her surprise if he actually went and did. There was Ben Franklin, of course, with his handkerchief, his key and his lightning bolt, and if Orville and Wilbur Wright had not been kiting enthusiasts, a Russian might have invented the airplane after all. But the adult U.S. male who shows up at the park with kite and twine is certain to be suspect unless he has a passel of kids in tow. And there is something definably foreign about the doughty Somerset Maugham hero who preferred to rot in jail rather than pay his ex-wife alimony—all because she had smashed his favorite kite.

Perhaps it is just that Americans have no sense of the sublime. "My kite rises to celestial regions," wrote a 9th century monk. "My soul enters the abode of bliss." On Formosa, the ninth day of the ninth moon is the Day of Ascending Heights, a holiday in honor of kites. In Japan, kite flying is so popular that it was once legislated out of existence, so that people could keep their minds on their work. And nowhere is kiting pursued with more passion than in Thailand, where legend has it that a young lover found his lady fair by following the string of a runaway kite.

Talons & Nooses. From February to May, when the Lom Ta-Phao wind blows from the southwest, the sky above Bangkok resembles a vast aerial Disneyland. Long (up to 25 ft.), hinged kites, shaped like kraits and cobras, wriggle sinuously in the breeze. Peacock and butterfly kites flutter their iridescent wings; owls roll their eyes, and paper hawks wheel and dive. Thai boys get their first kites about the same age that U.S. youngsters get their first baseball gloves, and most of them dream about growing up to be another Poon Yuvaniyom, who is the closest thing to a Mickey Mantle west of the Mekong.

A telephone company executive, Poon, 55, is the kite-fighting champion of Thailand—and in Thailand, kite fighting is a big-league sport. It has its teams (sponsored by private companies, like U.S. bowling teams), its league rules (72 of them), its umpires and World Series, the All-Thailand championships, held each spring in Bangkok Phramane Grounds. In India, where kite fights are also common, strings are coated with ground glass; in South America, frames are studded with razor blades.

The Thais are too sophisticated for such crude devices. Their fighting kites, which cost up to $18, are made of paper delicately stretched on a frame of bamboo frame, and come in two sexes: the star-shaped *chula*, or male kite, and the diamond-shaped *pakpao*, or female. Each has its special weapon. The *chula* sports five bamboo talons called *chanpas* (literally: fruit pickers), and the *pakpao* carries a long noose called *nhiang*. The male kite tries to capture the female's control string in its talons and drag it to earth; the female tries to encircle the male with its noose and ride it to the ground.



WINNER POON
A sense of the sublime.

Courtly Advantage. The battle is not really equal—but that fits perfectly into the oriental scheme of things. Only 2 in. sq., the dainty *pakpao* is less than half as big as the bulky (85 in. sq.) *chula*, which takes as many as 50 men to control. But the *pakpaos* line up along the north side of Phramane Ground, and the steady southwest wind gives them courtly advantage to the weaker kites. The female kites bank on speed and guile: sometimes two *pakpaos* will pounce on a single *chula*, like night fighter planes attacking a lumbering bomber. Even if an opponent's kite is captured, the fight is only half over; it must be grounded on the attacker's side of the field.

Poon Yuvaniyom is strictly a classic devotee, and he is an old hand at outwitting wily females. "I'm a man," he says, "and I like male kites." This year's All-Thailand championships started in the middle of April and went on for three weeks. While vendors hawked spicy fish and chicken in the milling throngs of fans, Poon maneuvered the control ropes of his *chula* with hands calloused by 30 years of kiting. He and his Thailand Telephone Organization team had little trouble winning their third straight national title and the King's Cup—thereby proving that, for the moment at least, it's still a man-kite's world.

UNIVERSITIES

Big Voice in Little Egypt

In the first six weeks after Delyte Wesley Morris took over as president of decrepit Southern Illinois University in 1948, he gained ten pounds on the banquet circuit. Morris' nonstop message: S.I.U. would reverse its own sad state and with it the fortunes of the region—a depressed, despairing, violence-ridden enclave known as Little Egypt (or Egypt, after Cairo, Ill., the southernmost city in the state). "Not one of them had the foggiest thought that anything would come of our efforts," he says—and quietly adds that now "the change has come."

Morris' listeners had a right to be skeptical. The S.I.U. campus at Carbondale 16 years ago was a jumble of old, leaking buildings in a lifeless town whose only reason for existence was the fact that the Illinois Central Railroad had chosen to establish a division headquarters there. The school itself was a mediocre state teachers' college, whose sense of the future was typified by an earlier S.I.U. president whose pride it was to send back money to the legislature from the school's meager appropriation. Even Morris did not come with a big reputation. The son of an auto insurance salesman, he was born in Little Egypt, was professor of speech at Ohio State when he got the offer to head S.I.U.

Direct Approach. But Morris, 56, is a hard-driving, restless fellow. From the start, he aimed for twin goals: improving life in the 31 sprawling counties of Little Egypt, and creating a school of excellence. He believes that "you can have pursuit of knowledge for knowledge's sake along with a practical, direct approach to society."

Now, by way of direct approach, teams of specialists from S.I.U.'s department of community development are constantly scouring the region, tempting new industries to settle there. The university's booming Vocational-Technical Institute offers some 160 courses ranging from cosmetology to court reporting, and 10,000 people take adult-education courses. In an area where only a decade ago only 19% of the population over 25 had attended high school, researchers at S.I.U.'s internationally known education department have strengthened dozens of local public schools by curriculum improvements and new teaching aids. University scientists have tackled such regional problems as water pollution, crop diversification and transportation. Even the S.I.U. symphony is a regional enterprise; half the members are students, and the other half are jobless coal miners and other amateurs.

But in pursuing scholarship, S.I.U. is doing even better. "The progress has been incredible," says a member of the North Central Association of Colleges and Secondary Schools. More than 60% of the S.I.U. staff have doctorates, which puts the school among the top 15%-20% in the U.S. For the first time in Little Egypt's history, students are coming from other parts of the state and from other states. They are attracted by strong faculties in the liberal arts and in such specialties as microbiology and theater design. Among the 260 students from 40 foreign countries, many are taking courses at a novel center for the study of crime and correction that works closely with a model federal prison in nearby Marion. The university press, which published its first book in 1956, is now working on its 125th; among its notable volumes are the *Selected Poems of Herman Melville* (TIME, May 1) and *Modes of Being*, by Paul Weiss, Sterling Professor of Philosophy at Yale.

Pacesetter. From 3,000 students only 15 years ago, the school now has 18,200 students (apart from adults), of whom 80% are the first in their families to attend college. The faculty has grown from 250 to 1,150. By the end of the decade, with completion of a second permanent campus now rising out of the wheatfields near Edwardsville, 110 miles northwest of Carbondale, the university's capacity will reach 36,000 students.

Next month S.I.U. becomes one of the few universities in the U.S. to operate on a four-quarter academic year. Coupled with a 78-hour week of classroom use that runs from 8 a.m. to midnight, officials have squeezed the most out of the educational facilities—and educators. S.I.U. was the first university in the nation deliberately to hire visiting professors who were retired or soon to be retired at other schools. Among dozens of such luminaries have been Harvard Astronomer Harlow Shapley, University of Chicago Theologian Henry Wieman and Designer-Dreamer Buckminster Fuller (TIME Cover, Jan. 10).

Autonomy. The Illinois legislature used to starve S.I.U., but Supersalesman Morris, with the aid of regional politicians and a separate board of trustees appointed by the Governor, got the school a total appropriation of $103 million for 1963-65 (still far less than the favored land-grant University of Illinois). More than 60 new buildings have been completed or are going up in Carbondale alone, including a 17-story dormitory tower. Students have also pitched in to expand S.I.U., though 4,000 of them work to help support themselves. They paid for a $4,500,000 student union, with 16-lane bowling al-

ARTHUR SIEGEL

PRESIDENT MORRIS & STUDENTS AT SOUTHERN ILLINOIS UNIVERSITY CENTER

To stoke a comeback, a mine of knowledge.

Morris thrives on such displays of university spirit. Along with Little Egypt's awakening from economic and cultural torpor, it is proof of his promise that S.I.U. "must do more than promote good teaching. We must take the university to the people."

STUDENTS ABROAD

Le Stop

In the U.S., it's called hitchhiking, and although many a student with a sign (GOOD CONVERSATIONALIST ALBUQUERQUE PLEASE) can still be seen, expressways and police are driving the custom out of style. But in Europe, the *autostop*, as hitchhiking is known in internationalese, is a thriving student institution. In universities across the Continent, and on many U.S. campuses too, college kids are about to dust off knapsacks and take to the open *Autobahnen, routes nationales, carreteras* and *autostrade*.

West Germany is a favorite for practitioners of the *autostop*. At border crossings, West German police have been known to halt a car and order [illegible] to take aboard a wholesome *stoppeur*. Neatness [illegible]

HOPEFUL HIKER IN GERMANY
The king had 1,000 jokes.

notes respectability; so does a pair of knobby knees (male), because Germans like outdoorsiness. The thumb is a U.S. import; native custom dictates an erect forearm and a vigorous loose-wristed wag of the hand. One student last summer became king of the *Autobahnen* by carrying a sign that said: I KNOW A THOUSAND JOKES.

Spain is also popular, because it issues a free formal card to hikers if they supply character references. By using the card, the *stoppeur* automatically renounces the right to sue his benefactor in case of accident, and gets maps and a small national flag. Drivers who help a hiker get a coupon toward membership in the honorary "Brotherhood of the Highway." In Italy, more cars and better roads have raised the country's ranking on the *autostop* circuit, though the hot-blooded national temperament sometimes makes hitchhiking a perilous means of transportation. Italian men are markedly hospitable to foreign girls ("Because you never know how it might wonderfully end," says one driver).

Stoppeurs were panicked recently by a rumor that France had outlawed *le stop*. It turned out that only persons under 18 were forbidden to hitchhike, and the situation soon returned to normal. Yet for single girls who do not happen to be judo champions, a women's magazine darkly warns that white slavers cruise the roads for recruits. Military uniforms and Boy Scout getups are a help for hitchhikers, and two Canadians in Nice recently made it in record time to southern Spain by dressing in cassocks.

A handful of daredevil *stoppeurs* have developed their own system; the hiker slaps the side of a moving car, then quickly falls down. The driver screeches to a stop and out of fear and sympathy takes the traveler aboard, or so survivors report. A commoner, and safer, technique is to spot the license of an oncoming car and whip out a national flag to match.

CHAMBER MUSIC

The Revelers

The plans were enough to prostrate the most gallant music manager. Isaac Stern, Leonard Rose and Eugene Istomin—three top-dollar virtuosos—had teamed up to make chamber music together. Their audience might shrink to the size of the small halls in which trios usually play—and the take, of course, would be split three ways. But the trio had played an intriguing handful of concerts in the past, and bound by 20 years' friendship, they defiantly formed their alliance. Last week, solidly established as the best in 50 years, the Stern-Rose-Istomin Trio played their fifth sell-out concert of the season to a house so full and enthusiastic that it made even Carnegie Hall seem just the right size for chamber music.

A Mirror of Tone. The concert—one trio each by Beethoven, Brahms and Schubert—displayed both the sweep of each man's virtuosity as a soloist and the perfect rapport the three share when playing together. Istomin hulked mightily over the keyboard to delve deep into the music with the sensitive phrasing that distinguishes his playing. Stern and Rose were so perfectly matched that Rose's 1662 Amati cello seemed at times the baritone voice of Stern's Guarnerius violin. In passages in which phrases are repeated alternately between them, each provides a mirror of the other in phrasing, tone, even vibrato. Their precision and ease suggests an immense reserve of talent that the evening's program had not required.

Each of the three has discovered in the trio a reward beyond mere music. "There are many miraculous little things that happen during each performance," says Rose. "We play to one another in a sort of musical conversation." Says Stern: "Music is something to revel in—and when we play together we revel. I'm so proud of this trio I want to shout it from the housetops."

Keep It Gala. It took nearly six years of prodding by Stern before all three mustered the time and determination to get together; each has a highly prosperous career as a soloist, and abandoning private schedules is costly. Now that the three are committed to each other, they plan to spare a month or so each year for work as a trio, making plans far in advance, insisting on ideal halls for chamber music, hand-picked the piano. "We want to keep it gala," says Istomin.

Together with the Juilliard String Quartet (TIME, Aug. 23), the new trio gives the U.S. unsurpassed mastery of chamber music. Critics struggling to define its excellence find no one around to compare it with. They hark back instead to the years before World War II, when French Pianist Alfred Cortot, French Violinist Jacques Thibaud and Pablo Casals were the presiding maestri. Even the great trio of the '40s—*Heifetz*, Feuermann and Rubinstein—is not in the running, for Stern, Rose and Istomin make up a trio unique in attitude as much as accomplishment. They play not if for themselves, and in the playing each achieves a reach of music higher than any he could gain for himself.

COMPOSERS

The Way to Write Music

All week, the rotund, grey-haired man in the rumpled brown suit guarded the decrepit-looking envelope as if it were stuffed with gold. "It's always on my mind," he said, quietly aware that the envelope contained what everyone hoped might prove a musical triumph. An evening or so later, Carlos Chávez, Mexico's top music man and a major composer in any hemisphere, joined some 2,600 concertgoers to hear his *Symphony No. 6* performed by the N

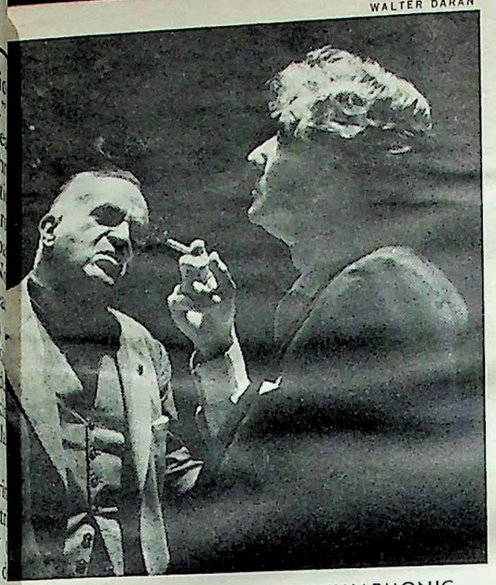
WALTER DARAN



CHÁVEZ & BERNSTEIN AT PHILHARMONIC
A setback may improve with age.

York Philharmonic and conducted by Leonard Bernstein in its world première. Nearly everyone was disappointed.

A latecomer among ten works commissioned to mark the opening of Lincoln Center's year-and-a-half-old Philharmonic Hall, the Chávez symphony won respectful applause. But critical hosannas did not follow. The piece is bold, ruggedly impressive in spots, yet oddly ineffectual—a virile epic with all its bones removed.

At 64, however, Chávez is a pioneer modernist who seldom lets a setback take him by surprise. He believes that a new work must mature in the minds of maestro, musicians and public. His patience has often been rewarded. In 1928 he became the founder and conductor of Mexico's first major symphony orchestra. Giving free concerts, he taught his musically illiterate audiences the wonders of Bach, Beethoven, Stravinsky, Schoenberg and Chávez. His own early compositions, such as the brilliant, flavorful *Sinfonia India*, in which indigenous folk tunes were distilled with impressive originality, earned him a reputation for localism that Chávez now frankly deplores. To critics who affect to hear the wind through the mesquite or the flapping of serapes in everything he writes, he has often protested that "I am Mexican, Beethoven was German —but music is international."

Though he often returns to his home, Chávez has freed himself from more than two decades of dedication to his country's culture. Just back from Germany, this week he will conduct a concert in Portland, Ore., and is slated for another in Chicago. But his lively performances on the podium do not stanch his virtually uninterrupted flow of symphonies, concertos, ballets, string quartets, songs and toccatas. While New York reconsiders the merits of his *Symphony No. 6*, Chávez is polishing off a new percussion piece and is halfway through *Symphony No. 7*. "When you solve one problem," he says, "go on to the next. That's the way to live life—and the way to compose music."

MILESTONES

Married. Durie Desloge, 22, daughter of Palm Beach Socialite Durie Desloge Shevlin; and Roderic Iain Bullough, 28, London blueblood, Oxonian, former Coldstream Guardsman; in Manhattan.

Died. Rico Lebrun, 63, Italian-born West Coast painter and sculptor, a wistful, wiry Neapolitan whose lifelong preoccupation with the grotesque and the macabre led critics to think of him as a 20th century Goya, produced a savage, semi-abstract body of work illustrating grim themes classic and modern, from Dante's *Inferno* and the Crucifixion to Dachau and Buchenwald; of cancer; in Los Angeles.

Died. Franklin Delavergne Jones, 65, Pennsylvania chemist who in 1944 discovered the nation's most widely used herbicide, 2, 4-D; of cancer; in Philadelphia. Experimenting with synthetic plant hormones, Jones found that one killed broad-leaved plants instead of stimulating growth, leaving such narrow-leaved plants as corn unscathed; it soon became the standard ingredient in preparations for controlling poison ivy and dandelion, paved the way for a host of other weed killers.

Died. Ataullah K. Ozai-Durrani, 66, an immigrant Afghan who in 1941 walked into the Manhattan office of a General Foods executive, set up his portable stove and demonstrated a quick-cooking rice he had developed, so handy that General Foods marketed it as Minute Rice, which with its imitations accounts for 25% of all rice cooked by U.S. housewives, filled its inventor's ricebowl with royalties estimated at more than $1,000,000; of cancer; in Denver.

Died. Martin Quigley, 73, Manhattan publisher of the trade magazine *Motion Picture Herald* who, in 1929 with the late Jesuit Father Daniel Lord, prepared a guide governing the treatment of sex, crime, religion and "repellent subjects" in movies that became Hollywood's official production code; of a heart attack; in Manhattan.

Died. Admiral Kichisaburo Nomura, 86, Japan's Ambassador to the U.S. on Dec. 7, 1941, who called on Secretary of State Cordell Hull one hour after Japanese bombs had fallen on Pearl Harbor to deliver a note breaking off peace talks because of "U.S. bad faith"; of a stroke; in Tokyo. At least to Westerners, Nomura will be best remembered for the tongue-lashing administered by Hull: "In my 50 years of public service I have never seen a document more crowded with infamous falsehoods and distortions, on a scale so huge that I never imagined until today that any government on this planet was capable of uttering them."

PSYCHIATRY

The Kennedy Round

In Los Angeles last week, no less than in Geneva, it was "the Kennedy round." When the curtain went up on the annual convention of the American Psychiatric Association, a huge portrait of the late President was the backdrop. The opening session was programmed in mourning type: "*In Memoriam* John Fitzgerald Kennedy."

Speaker after speaker reminded the 5,000 psychiatrists that no President ever did as much to aid the fight against mental illness as John Kennedy. His mental-health message to Congress last year represented the sort of official recognition for which the Psychiatric Association had been waiting for a century. Said the association's new president, Dr. Daniel Blain of Philadelphia: "Because of his understanding and because of his own family situation, he chose to become a champion of the cause."

Kill the Father. An offbeat splinter group, the Academy of Psychodrama and Group Therapy, got into the act by staging a curtain raiser for the main meetings in the form of a Kafka-style reconstruction of the personalities and possible motives of Lee Harvey Oswald and Jack Ruby. Said Manhattan's Dr. Jacob L. Moreno, who invented psychodrama as a medium for acting out emotional disturbances and thereby treating them: "We are all suffering from a tremendous amount of unresolved guilt and confusion over what happened to President Kennedy. After all, if you can 'kill the father,' anything goes. We are all involved and we must all be cured together. We need a mass psychotherapy—a mass catharsis."

Dr. Moreno had asked Dallas Judge Joe B. Brown to let Ruby out to play himself on the psychodrama stage. Predictably, Judge Brown refused. Moreno also had asked former Defense Counsel Melvin Belli to re-enact his own part. Belli accepted, then failed to show. But every role had volunteers, and though members of the audience who sat as a mock jury took no vote, their consensus was plain: if the Dallas jury box had been packed with psychiatrists, Ruby would have been found "insane."

Most orthodox psychiatrists are skeptical of psychodrama, but at play's end, the entire audience of 400 seemed to feel better—as if the doctors of the mind had needed to get something off their minds. Next day, they turned to the main business of the A.P.A.

JULIAN WASSER

DR. MORENO AT OSWALD-RUBY PSYCHODRAMA
With a jury of psychiatrists, a different verdict.

Road to Immortality. Political assassination, said Dr. G. Wilse Robinson of Kansas City, Mo., did not change from the time of Cain to that of the Medici, but in the modern era there has been a change in the character of the assassin. Today's hired killer wants no part of any attempt on the life of a prominent political figure. Such work is too dangerous. That leaves two types of assassinations: the conspiracy, as in the death of Lincoln, and the person-to-person attack. But the conspiracy against Lincoln was conceived and directed by John Wilkes Booth, Dr. Robinson argued, so even Booth really fits the more modern pattern: "A single man with a desire that results from long brooding to destroy a leader who is antagonistic to some belief that is very important to the assassin. The political figure has become a personal enemy of the assassin and must be destroyed."

Booth, said Dr. Robinson, had told his friends: "What a glorious opportunity for a man to immortalize himself by killing Lincoln!" This concept may motivate more assassins than is now realized. "It may have been a major motivation to Lee Oswald. We know Oswald was unhappy in school, in the Marine Corps, in the Soviet Union, and in his own country. He probably would have tried to become an anarchist if he had lived around 1900.

"Perhaps we can say that in Booth, in Leon Czolgosz who shot McKinley and in Oswald we have three men who were very much alike in basic personality defects. We must assume that they did not expect to change the basic political philosophy of the country. There must have been other motives. Two interlocking concepts seem possible: 1) that they were seeking immortality, and 2) that they were destroying the symbol of the highest authority. Their victim was a symbol of their general basic anger against the social order."

NUTRITION

Cutting Calories

The affluent life in the U.S. of the 1960s is also the sweet life, the fat life and the soft life—or so the top U.S. experts have decided. Last week they announced that if the average American male wants to stay lean and healthy he should cut 300 calories out of his daily diet and his wife should cut 200 from hers.

The change has come about since 1958, said the Food and Nutrition Board of the Government-sponsored National Academy of Sciences-National Research Council. The board sets up "recommended dietary allowances" for what it calls a "reference man"—a healthy 25-year-old who weighs 154 lbs. and leads a moderately active life. By the board's 1958 findings, that man was supposed to stay healthy and not be hungry on 3,200 calories a day. Now he is advised to get by on 2,900.

The difference is the caloric content of two average martinis. The board has soberly concluded that Americans are drinking more, and that more Americans are drinking. This is boosting the calorie intake even of people who are telling the truth when they say they don't eat too much. Another factor in the board's reasoning is that mechanization is reducing the amount of body fuel that modern Americans burn up in physical activity. The power lawn mower figures in the need for the reference man to eat less, and electric washing machines and clothes dryers are important contributors to the recommendation for a 25-year-old, 128-lb. woman to cut back from 2,300 to 2,100 calories a day.

The board's recommended food allowances for adults of all ages have been reduced in the same proportion by about 10%. The experts counsel perfection: nobody should gain weight after age 25.

MOVIES

Mixed Marriages at Cannes

Today the smallest child can tell a movie (it is "made" in Hollywood) from a film ("created" anywhere else), and serious students of the cinema know the U.S.'s last big one was *Birth of a Nation*. So critics at Cannes's 17th annual film festival were startled last week to see that the picture they gave the longest, loudest ovation in nine years was 100% American.

Comfortingly enough, *One Potato, Two Potato* is no Hollywood product. A delicate semidocumentary on the indelicate issue of racial intermarriage, it was directed by ex-TV Actor Larry Peerce, 34, son of Metropolitan Opera Tenor Jan Peerce, and produced by a friend and colleague, Sam Weston, 36. The film was shot in Painesville, Ohio, and has no big stars. When the scant $250,000 budget started to run dry, Producer Weston doubled as actor.

Major Hollywood studios, every bit as frightened by miscegenation as by Communism, approached the finished film with asbestos gloves and judged *Potato* too hot to handle. British Lion felt differently, snapped up world distribution rights, and a special screening in Paris so impressed foreign critics that they got the festival to accept the picture as an unofficial American entry.

Child custody is ordinary movie fare and positively trite in television, but if the child is white and her stepfather black, the subject gets special in a hurry. Julie Cullen (Actress Barbara Barrie) divorces her husband on grounds of desertion. With her child she moves to a small Midwestern town, takes a job in a factory. Her friendship with a Negro fellow worker (Bernie Hamilton) turns gradually to love. His parents are appalled, warn him "not to marry any damn white woman," and accept the union only when a son is born. Four years later, Julie's first husband turns up. He has made good money, he says, and he demands custody of Ellen. An understanding judge finds the Richards' family life "exemplary" but cannot defy the social structure, and he sends the child home with Cullen.

AFP-PICTORIAL

GIRARDOT & ALTER EGO
Hairy but happy.

. . .

Some mixed marriages simply won't do, even in Cannes, and Italy's *La Donna Scimmia* (*The Monkey Woman*) is at the head of the list. The hero is a Neapolitan con man who marries a girl covered tip to toe with monkey fur (played by pretty Annie Girardot, who spent two hours getting hairy every day, three hours shaving every night). He has a purpose: he figures he can put her in his sideshow and his fortune will be made. He does, he prospers, then—alas—she gets pregnant. Worse yet, she dies in childbirth. But all is not lost. He has the corpse embalmed, puts it on show, and trade is as brisk as ever.

Nervous American exhibitors were considerably soothed to learn that their version will have "a happy ending." The monkey woman loses all her hair at death, and even her reluctant husband concedes that the corpse is too normal and unsightly to put on exhibit.

The Girls of *Henry Orient*

The official U.S. entry at Cannes is *The World of Henry Orient*, due for festival screening this week. It is a genuine Hollywood product and, simultaneously, an exception to the norm: bright, breezy and brimming with fun, it doesn't celebrate sex. It thwarts it. The thwarters are two little girls who develop a crush on Peter Sellers and tumble after him all over town, inadvertently wrecking his sleazy love affairs.

Films about teen-agers almost never ring true, but *Orient* does. To find the girls and begin his extraordinary feat of verisimilitude, Director George Roy Hill reached into the unsuspecting halls of two Eastern girls' schools and plucked forth two genuine specimens. Their names are Tippy Walker and Merrie Spaeth.

Tippy wears a decaying fur coat that all but sweeps the sidewalk behind her, and her hair hangs down so thoroughly over her eyes that she appears to be the youngest daughter of a woolly mammoth. Actually, her father is a man named Gordon Walker, who is an engineer with Allied Chemical Corp. in Manhattan. He lives in Rye, N.Y., and sends Tippy to the Masters School in Dobbs Ferry, where she clings giddily to a B average and writes for the literary magazine, *Panache*.

"What writer do you most admire, Tippy?"

"John Lennon," she says, probably without blinking, although with her screen of hair it is hard to tell. John Lennon, of course, is the married Beatle, and author of such poems as "On Safairy with Whide Hunter" and "Deaf Ted, Danoota (and me)."

Amiable Opposite. Elizabeth Tipton Walker is 17 and light enough to be lifted in one arm. Her speech comes forth in sporadic marvels, and her feet don't quite brush the ground. Adults instinctively want to shield her. Merrie Marcia Spaeth, on the other hand, has hair that is always carefully waved, an unpuzzled look in her eyes, and an air of absolute balance. As on film, she is an amiable opposite to Tippy.

WALTER DARAN

TIPPY & MERRIE
A father would take one of each.

She is 15 and a sophomore at Philadelphia's Germantown Friends School, where she maintains an A-plus average. She is an accomplished student of piano. She knows what she wants to do—study language at a college like Middlebury, study acting at London's Royal Academy of Dramatic Art, and then pursue an acting career.

Skirts & Sheaths. Merrie's mother was once a fashion model, and her father is an ophthalmologist. The family lives in Chestnut Hill, Philadelphia's social ionosphere. "I don't need to prove I'm sophisticated by wearing a bikini," says Merrie, "if it's in bad taste."

"I love bikinis," says Tippy Walker, tossing her hair away from her eyes. "I'm going to wear one some day if I get the courage."

Merrie calls her father "Sir." Tippy calls Walker "Daddy" and saves empty Walker-Gordon milk bottles for him because his name is Gordon Walker. In a situation when Merrie wears standard, tasteful red lipstick, pleated schoolgirl skirts and loafers, Tippy wears heels, sheath dresses and no lipstick. When Merrie walks, she moves with rhythmic and graceful steps. Tippy takes enormous, preoccupied strides. [illegible] walking with them can [illegible] self: "I'll take one [illegible]

Boxing Match

Andy Warhol, 32, is the Pop artist who won fame painting pictures of Campbell's Soup cans, and then topped that by making reproductions of shipping cartons for them. This accomplishment did not entirely satisfy him. Somehow, says he, "they didn't look real enough." Then one day, in a supermarket, he saw a stack of boxes used for shipping Brillo steel-wool pads. He was overcome with envy and a sense of beauty. So he had a carpenter make 120 Brillo-size boxes, and ordered a silk-screen stencil of the Brillo design. He stenciled it on all the boxes, just in time for his current show at Manhattan's Stable Gallery, where they are selling for $300 each.

James Harvey, 35, is also an artist, but he draws his inspiration from religion and landscapes rather than supermarkets. At nights, he works hard on muscular abstract paintings that show in Manhattan's Graham Gallery. But eight hours a day, to make a living, he labors as a commercial artist. Harvey likes to keep up with the newest in art, and when he heard that Warhol was having a show, he dropped in. What he saw made him choke back an impulse to start a paternity suit. For it was Harvey who a few years ago designed the original Brillo box.

Grounds for a paternity suit?

Endless Sculpture

No modern artist has stepped as far out into thin air as wan, visionary Frederick Kiesler, 67. More than steel, stone, bronze, wood or oil paints, his medium is space.

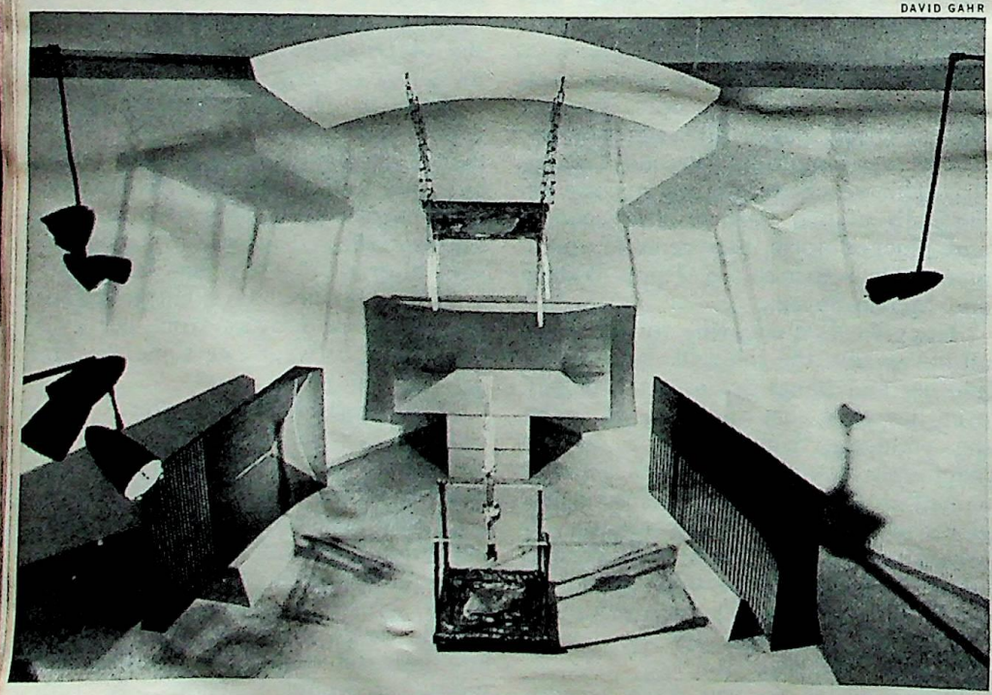
As a member of the idealistic de Stijl group (TIME, May 8) in the 1920s, he planned spiral buildings before Frank Lloyd Wright built the Guggenheim Museum, and proposed horizontal skyscrapers on cantilevers before Le Corbusier built them. Rarely has he realized what he has designed on paper; he has, for example, never built the "endless house," a sculpture to live in, that made his fame.

"We know we belong to the stars," explains Kiesler. "We are related to them in just a matter of intervals." His objective is continuity in space, in which no art work would exist by itself, frozen away from man's activity. In fact, his wife says that "whether eating an omelet or filling out his income tax, everything is space and continuity." "Museums today look like laundromats," he says of paintings unrelated on the walls, like separate peepholes into separate worlds. Says he: "Space is something that cannot be looked at through a keyhole."

So when Kiesler made a show of "Environmental Sculpture" that opened last week in the Guggenheim Museum, he proposed to do over an entire gallery. "You can't absorb the room in one glance," explains Kiesler. "You must know what's above, below—against the totality." Part of the whole, called *The Last Judgment*, consists of a huge bonelike shaft of fire-gilt bronze that thrusts through a Plexiglas slab at counterimages of heaven and earth. It leans up at an aluminum table whose bronze legs look like lightning bolts and jabs down at a white bronze floor plate. "Feel it," urges Kiesler, "the metal is warm like a woman's belly."

Flanked by panels painted with false perspectives, other bits of bronze, chunks of pavement, ax-hewn and charred wood catch the eye. Some parts of the sculpture peep from behind doors; others curlicue underneath canopies. One piece, or "galaxy" as Kiesler calls them, is titled *The Crown of Prometheus*, and appropriately contains a burning smudge pot. To encourage people to contemplate the work, Kiesler cast two 85-lb. aluminum stools that are exactly placed in reference to larger parts. The problem is that Kiesler has had to borrow his most precious commodity—space—from the polygonal room in Wright's animated museum. Nothing can dissolve the walls and the sculptures seem strangers to them. Yet, even in failure, Kiesler makes more out of nothing than many do out of everything.

DAVID GAHR



KIESLER'S "THE LAST JUDGMENT"

In eating omelets, everything is space.

Father of Impressionism

Until the mid-19th century, nobody looked at a landscape while painting. An artist could sketch out of doors, but he repaired to his studio to finish his work. Nature, the neoclassicists held, needed ennoblement by man: the faithful reproduction of it was imitation rather than creativity.

Some dissident painters who left Paris for the leafy countryside around Barbizon changed all that. One such artist

Charles François Daubigny,* bought a 29-ft. houseboat which he named *Le Botin* and turned into a floating studio. For 21 years he sailed the waterways of France in search of nature as freshly seen as newly picked lettuce, and he was a more influential forerunner of impressionism than all the others.

Misplaced Piety. Barbizon painters yearned for compassion in an era of harsh industrialization. Later they fell into disfavor for supposed sentimentality, but now scholars have resurrected them from the charge of Victorian piety and have shown that their passion for nature was closer to the scientific quests of Darwin than to unqualified love for small dogs and flowers. Now the U.S.'s first exhibition of Daubigny, some 82 oils, prints, and drawings, is on view at an out-of-the-way but ambitious institution, the Paine Art Center and Arboretum in Oshkosh, Wis.

For a living, in the 1840s, Daubigny worked for travel books and magazines, doing graphics of a candidness that showed his immediate vision of nature. The more dependent his landscapes became on fleeting optical visions, the flatter they grew, as if no matter how far away an object was, it registered equally on his retina. In the eight years between *Morning on the Oise* and *Field in June*, Daubigny traded the traditional depth of his predecessors for the surface impact of red poppies. Eventually, even such panoramas were replaced by the narrower vision that the eye can encompass without moving.

Rough Drafts. "He copies nature with his soul," wrote a French critic in 1857 of Daubigny. Unlike his forerunners, Claude Lorrain and Nicolas Poussin, the gentle naturalist looked more to the effects of nature than to rearranging its contours into earthen architecture. He and his Barbizon mates abandoned the brown studies of strong lights and darks that the Dutch masters used to dramatize thickets and glades that never existed outside their minds. Instead, Daubigny sketched directly from nature, in the volatile light and weather of the moment.

For such a precise, scientifically honest approach, Daubigny was criticized by some of the best brains of his times. In 1861, the French author Théophile Gautier tut-tutted Daubigny, said that his paintings were just "rough drafts." He continued: "It is really too bad that this landscape painter, who possesses such a true, such a just, and such a natural feeling, is satisfied by an impression and neglects details to this extent." Scornfully, Gautier noted that the brushwork was "merely spots of color juxtaposed."

As history shows, the French impressionists went on to make "spots of color juxtaposed" into the greatest art movement of the century.

* Other greats of the Barbizon school: Jean Baptiste Camille Corot, Jean François Millet, Théodore Rousseau.

THE LAW

TORTS

Outguessing the Jury

"Litigation doesn't pay," says Cleveland Lawyer Philip J. Hermann. He means that it takes years to get a personal injury case to trial, and the delay makes it far better to settle out of court. But for how much? Fact is, most lawyers do not know; 50% of them, says Hermann, lose money in injury cases for both their clients and themselves.

Lawyer Hermann claims to be on the way to licking this problem with a unique if simple device: prediction tables based on the amount that juries actually award for all kinds of injuries all over the U.S. Put out by Hermann's new Jury Verdict Research, Inc., the tables are now consulted by 25,000 of the nation's 296,069 lawyers and by most insurance companies. Able to predict a probable jury award to within 7% accuracy, says Hermann, both sides can skip trial and settle immediately.

ED NANO

HERMANN & PREDICTION TABLE
See you in Cincinnati.

Hermann cites a typical plaintiff with a fractured femur suffered by slipping on an oily factory floor in Chicago. By consulting his four-volume tables, a lawyer figures the going verdict for a fractured femur as $13,500, with 5% more expectable in Chicago, which boosts the claim to $14,175. Unfortunately for the plaintiff, the factory has movies showing that he does not limp, which indicates a 27% cut, to $10,347.75. Since juries like round numbers, he asks for $10,000—and settles.

All this overlooks such unpredictable factors as the defendant's reputation or the plaintiff's sex appeal. But the technique could solve thousands of run-of-the-mill personal injury cases, the main road block in clogged U.S. courts. Meanwhile, Hermann's researchers have uncovered useful facts —for example, that 72% of all injury verdicts are for less than $10,000.

The best place to sue is Cincinnati, where jury awards are 30% above the national average. One of the worst places: Lansing, Mich., where awards sag 20% below the U.S. rate. Of all U.S. plaintiffs in negligence cases, 61.3% win. The top state recovery rate: Pennsylvania's 74.3%. In Philadelphia, it hits 78.3%.

COURTS

Slowdown for Quickie Divorces

When Mrs. Martin Wolf went to court in New Jersey to force her estranged husband to support her, she got a shock. Architect Wolf, she discovered, had already divorced her more than a year earlier in Alabama. Moreover, she had "agreed" to the action. Her signature was on the papers.

Mrs. Wolf was one more victim of Alabama's "quickie" divorce racket, which the state legislature itself created in 1945. Until then, Alabama required one year's residence for plaintiffs seeking divorce from outside-the-state spouses. But under a brief amendment, the residence requirement was waived if "the court has jurisdiction of both parties." As Alabama lawyers saw it, this allowed even a single day's residence to serve for purposes of divorce so long as the plaintiff claimed "intent" to live in Alabama. All a lawyer needed in addition was the defendant's signed agreement that the case be tried in Alabama. Mrs. Wolf says that her husband's divorce was even easier: someone forged her agreement.

Hidden Records. In the quickie heyday, thousands of outsiders flocked to Alabama to get divorced between lunch and cocktails. Alabama acquired—for at least an hour—such famous citizens as baseball's Hank Greenberg, Mrs. Aristotle ("Tina") Onassis and TV's John Daly (so he could marry the daughter of Chief Justice Earl Warren). Some quickie lawyers raked in as much as $200,000 a year. In 1961 the Alabama Bar Association threatened to disbar lawyers knowingly involved in phony quickies. That cut the Alabama divorce rate by almost one-third, but quickie business persisted, notably in the town of Geneva (pop. 3,840), seat of a Florida-border county that in 1962-63 granted more than 2,500 divorces, including Mrs. Wolf's.

With Mrs. Wolf as a star witness, the bar association has just finished hearings in Geneva. Lawyer Edward C. Boswell and [illegible] have been indefinitely [illegible] practice. Suspended [illegible]

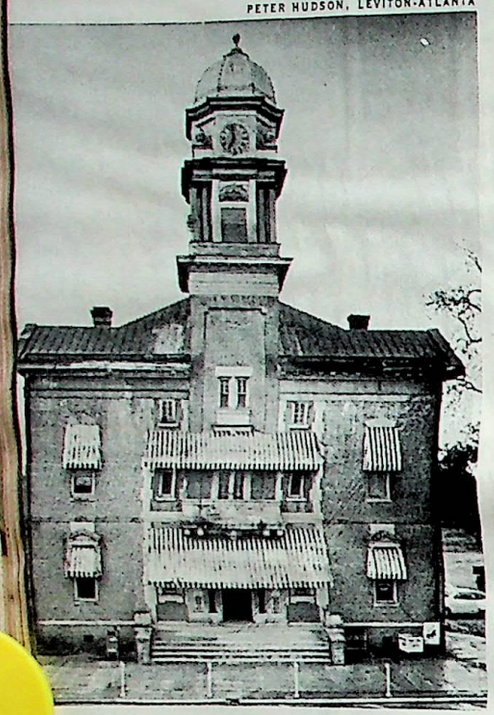
PETER HUDSON, LEVITON-ATLANTA



GENEVA COUNTY COURTHOUSE
The bar fell on Alabama.

Senator Neil Metcalf, charged with falking the residence of a New Jersey woman who got home just in time to present her husband with a divorce on Father's Day. Similarly suspended was Judge George Black of Geneva County Inferior Court, where investigators found a locked room containing hidden quickie records. Architect Wolf's own lawyer, Ned Moore, faces a further hearing in nearby Andalusia.

Foreign Courts. All this may slow down Alabama quickies, although the state legislature has yet to reform the law. But outsiders already divorced in Alabama may be in for trouble. The U.S. Constitution's "full faith and credit" clause (Article IV, Section 1) requires all states to honor the court decisions of other states unless the "foreign" courts are shown to lack jurisdiction. In legalese, an Alabama quickie is open to attack if the plaintiff was not a bona fide resident, or if the defendant's signature was obtained by threat or forgery. In one recent New York case, a wife sued her second husband for separation. He counterclaimed for annulment, saying that she had married him on the strength of a shaky Alabama quickie. He won, having her without support, let alone alimony. For years to come, such Alabama reverberations are likely to spread across the country.

Of Booze, Broth & Anguish

"Law is not a science, but is essentially empirical," said Mr. Justice Holmes. Law also deals with everything under the sun—in the highest courts as well as the lowest:

The Florida Supreme Court ruled that a price may be put on human anguish over a dog's death. In West Hollywood, a privately employed garbage man laughingly hurled an empty can at Phyllis La Porte's pet dachshund, Heidi. When the blow killed the dog, Plaintiff La Porte's "marked hysteria" won her a $3,000 jury verdict against the garbage company. An appellate court reversed the verdict, hewing to the general rule that a dog owner may collect only his pet's market value. The state Supreme Court disagreed and set a new precedent: "We feel that the affection of a master for his dog is a very real thing, and that the malicious destruction of the pet provides an element of damage for which the owner should recover, irrespective of the value of the animal."

▶ The New York Supreme Court's appellate division reversed a $4,604 workmen's compensation award to Business Executive Guy F. Hancock, who was badly injured in a plunge from a hotel balcony while on a business trip to Chicago. Reason: Hancock fell in the act of tossing "hats and coats over the balcony railing," apparently after too many drinks. Said the court: "The frequenting of cocktail lounges with unknown female companions cannot be considered part of employment under the guise that this is accepted business activity."

▶ The Massachusetts Supreme Court struck a blow to "save our world-renowned fish chowder from degenerating into an insipid broth." As all seasoned slurpers should know, New England fish chowder is full of dangerous objects—from bones to bits of shell. And when Priscilla Webster swallowed without seining at Boston's Blue Ship Tea Room, she got a bone in her throat that required hospital extraction. Miss Webster sued, won a jury verdict of $1,800. On reversing it, the Supreme Court absolved the restaurant of responsibility for the damage done by "the bone of contention," even though "we sympathize with the plaintiff, who suffered a peculiarly New England injury." The court's reasoning: to force all restaurants to grind up chowder chunks would destroy "a hallowed tradition." Said the court: New Englanders "should be prepared to cope with the hazards of fish bones."

SEARCH & SEIZURE

Be Sure It's Legal

One of the great safeguards of U.S. law is the stern refusal of criminal courts to accept illegally seized evidence. Yet many a lawyer has been moved to ask: Has this well-intentioned "suppression doctrine" reached a point of endangering the public safety?

An uneasy yes is the answer given by Judge Warren E. Burger of the U.S. Court of Appeals in Washington, D.C. In a notable lecture at American University, Judge Burger traced the suppression doctrine back to 1886 when the Supreme Court banned evidence consisting of a man's private papers (*Boyd* v. *United States*). In subsequent and often conflicting opinions, frets Burger, judges have construed the doctrine as proscribing evidence ranging from narcotics to a murder victim's body. As a result, says Burger, more and more criminals are going free on what newspapers call "technicalities." Those technicalities are clearly the errors of policemen who are so ignorant or complacent about the doctrine that they go on making futile searches and seizures in an illegal manner.

Judge Burger offers a solution: independent boards in each city that would review police illegalities, much as expert investigating teams move in after a plane crash. Consisting mainly of lawyers, but also including policemen, Burger's boards would have the power of subpoena and the authority to recommend disciplinary action. The overriding purpose would not be to subvert the suppression doctrine but to train every policeman to make arrests that will hold up in court.

Burger hopes to provoke criticism and debate, particularly among police themselves. Initial police reaction last week was strongly defensive. "Citizen review boards," snapped former FBI Agent Quinn Tamm, now executive director of the International Association of Chiefs of Police, "would be nothing more than useless superstructures on a system of justice which has proved as workable as any ever devised."

Tamm has a point. More than 100 U.S. municipalities have experimented with citizen review boards in recent years. Nearly all have died aborning—but mainly because their very establishment spurred police to internal reform. In Rochester, for example, a citizens' board set up last year has still heard only one case. Meanwhile, the Rochester police force has organized its first truly effective internal disciplinary system. In light of this reaction, Judge Burger is delighted that Policeman Tamm also extended an olive branch: he wants the judge to state his case before a forthcoming meeting of police chiefs from all over the U.S.

Transport...

INTERNATIONAL HARVESTER®

To facilitate the trade and travel of mankind is a major challenge to International Harvester.

As the world's largest manufacturer of heavy-duty trucks and a major supplier of buses, International Harvester puts wheels under a vast share of the world's goods and people.

At the same time, as a leader in the fields of construction and industrial equipment — bull-dozers, loaders, scrapers and earthmovers of many kinds — International Harvester helps build and maintain the roads and bridges which carry the world's motor traffic. International equipment also works on the wharves, harbors, rail installations and landing fields that serve transportation by land, sea and air.

All around the earth, in 144 different countries . . . wherever men or materials travel, you will find International Harvester as a construc tive force . . . helping to meet a basic need o mankind . . . transportation.

INTERNATIONAL HARVESTER

Supplying world markets from factories in Argentina, Australia, Brazil, Canada, England, France, Germany, Mexico, Philippines, South Africa, Sweden and the U.S.A.

CHEMISTRY

Mining the Sea

Chemists located the treasure long ago, and the knowledge that many valuable elements, including gold, are found in sea water has nourished a long dream of riches. But try as they would, no seawater miners could recover precious metals in practical quantities. Germany's famed Chemist Fritz Haber spent years after World War I trying to extract gold from the ocean to pay off his country's war reparations. He failed,

KLAUS GÖHNER

PROFESSOR BAYER
Sea squirts also do it.

and finally gave up the struggle. But in *Angewandte Chemie* (Applied Chemistry) another German chemist tells how he took a long step toward success, using subtle modern techniques.

Copper Blue Blood. While Professor Ernst Bayer of Tübingen University was still a graduate student, he began to study the ability of marine animals to concentrate some of the rare metals found in sea water. The sea squirt, *Phallousia mamillata*, for example, has 1,000,000 times more vanadium in its blood than the water it lives in; the deep blue blood of the octopus has 100,000 times as much copper. If sea squirts and octopuses can do the trick, asked Bayer, why shouldn't human chemists?

From octopus blood he extracted hemocyanin, a protein that picks up copper because its molecule has a structure that a copper ion fits into neatly, like a key into a lock. But proteins are hard to handle and almost impossible to synthesize, so Bayer looked for simpler compounds that would do the same job. After many tries, he put together a black granular material that picks up copper and uranium only. When this "chelating agent" worked well in the laboratory with simulated sea water, Bayer took it to Naples, put it in a glass column and ran 100 liters (26.42 gal.) of real sea water through it. Then he [illegible] the chelating agent with dilute hydrochloric acid. Analysis proved that the acid had picked up 450 micrograms of copper and 50 micrograms of uranium, the precise amounts present in 100 liters of Bay of Naples water.

.000000049 Oz. His achievement was impressive, but Bayer had his eye on the much more difficult feat of capturing the ocean's gold. He concocted another chelating agent with an appetite for gold and went back once more to Naples. There he put a pinch of the new compound in 100 liters of sea water and shook the mixture mechanically for twelve hours. Then he filtered out the chelating agent and washed it with acid. The result: 1.4 micrograms of gold (.000000049 oz.), the exact amount in 100 liters of Naples sea water.

Dr. Bayer himself is not much interested in the practical aspects of ocean gold mining, but he suggests that his method be tried in more favorable places where the water contains more gold than the Bay of Naples. Placed in a stream of sea water that is being pumped through a power-station condenser or a desalinization plant, the chelating compound would work quietly, collecting gold that could be extracted at intervals by washing with acid.

AERONAUTICS

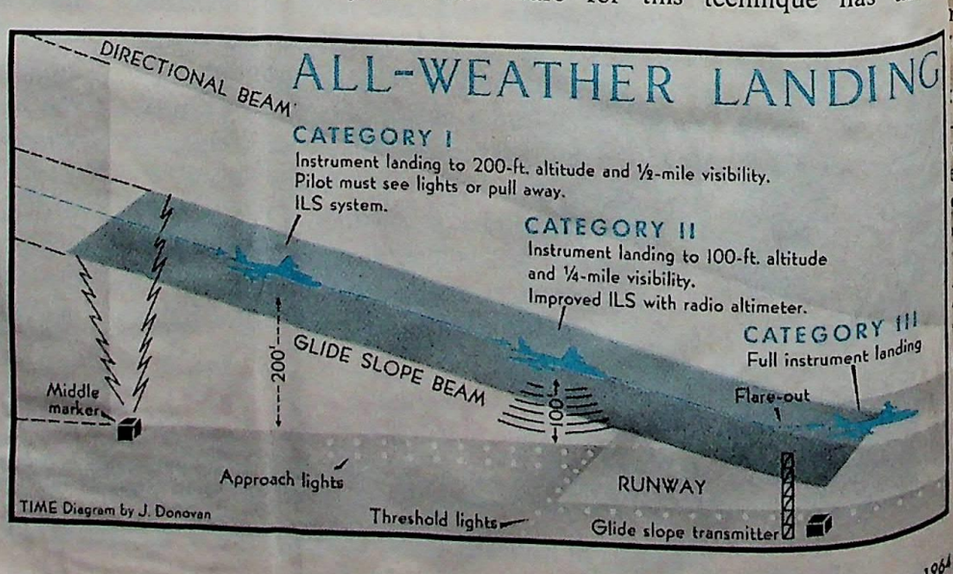
How to Come in Blind

Except in dire emergencies the pilots of U.S. commercial jets are far too cautious to try blind landings with zero-zero visibility. When weather conditions at their target runways are worse than 200–½ (200-ft. ceiling, half-mile visibility), they are diverted to the nearest usable airport, which may be hundreds of miles away. The system is remarkably safe; during 1963 no fatal accident to a scheduled airline was caused by bad landing visibility. But passengers who were taken to Montreal instead of New York were seldom grateful, and airlines suffered financially. The Federal Aviation Agency figures that weather delays, diversions and cancellations cost $67 million last year. With air traffic increasing sharply, and supersonic airliners hopefully only a few years away, a better bad-weather landing system is a crying need. Last week a string of FAA officials told an Atlantic City meeting of the National Business Aircraft Association that the technical problems are practically licked.

Using the present Instrument Landing System (ILS), the pilot of a jetliner approaching a fog-shrouded airport hears the sound pattern of a "localizer" radio beam when he is approximately eight miles from the end of the runway. He follows the beam, and soon a radio beacon warns him by means of a sound signal in his earphones and a purple light flashing on his instrument panel that he is five miles from touchdown. A few seconds later, he picks up the "glide slope" beam, which controls a pair of pointers on the plane's instrument panel. By flying his plane to keep the pointers properly positioned, the pilot can keep to the center of the sloping beam. He sees nothing but fog ahead, and he knows that the runway is approaching at 150 m.p.h. A second beacon sounds its signal, to warn him when he has dropped to an altitude of 200 ft. At this point he must spot the brilliant runway lights. If he cannot see them or the runway markings, regulations require that he pull up and try again—or fly to another airport.

Guiding Cables. Below 200 ft. the glide slope beam of conventional ILS is not dependable because of ground interference and reflections from nearby buildings. In Britain, where fog is frequent and nasty, magnetic cables have been laid leading to the runways. Instruments enable a pilot to keep between the cables and glide down safely, even below 200 ft. But magnetic cables are not considered the final answer, even in Britain.

In the U.S., where dense, long-lasting ground fog is not nearly as common, the FAA is approaching blind-landing problems by two stages. The present system is Category I. Category II will permit properly equipped jetliners to land when the ceiling is 100 ft. and the visibility is one-quarter mile. The hardware for this technique has already



CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

been developed, says FAA. It consists chiefly of new antennas that give more dependable localizer and glide slope beams. One of them will soon be tested on an instrument landing runway at New York's La Guardia Airport.

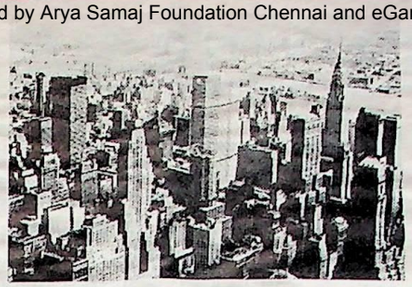
To make sure of their altitude, Category II airplanes will probably carry radio altimeters, which are free of the uncertainties of barometric instruments. An airport that qualifies for Category II must install many "transmissometers" to measure local visibility along its two-mile runway, and it must be equipped with the best and brightest of runway and approach lights. With all this gear in working order, a Category II airport in the U.S. will seldom be forced to order incoming airplanes to go somewhere else. At New York's Kennedy International Airport, for instance, the ceiling is below the permitted 100 ft. on only about 16 hours per year.

Flare-Out & Glide. The FAA is not sure that Category III, true blind landing in which the pilot gets not a glimpse of the ground, will ever be popular in the U.S. where most pilots disapprove violently of giving up their critical control when bringing an aircraft to earth. But the British feel differently. At London Airport the ceiling is below 100 ft. for an average of twelve full days every year, and sometimes the fog is so thick that passengers cannot see the wingroots from the cabin windows.

When supersonic transports become an actuality, the case for Category III is bound to improve. The SSTs cannot afford to circle above an airport waiting for fog to lift. Diverting them to other airports would be almost prohibitively costly. Many advocates of the SSTs believe that they cannot operate effectively without the capability of unrestricted blind landings.

The British have taken dead aim at Category III, though they know its difficulties only too well. The most serious problem is "flare-out," the flattening of an airplane's glide just before its wheels touch the runway. If flare-out is started too soon, the airplane may overshoot the runway. If it is too late, wheels hit the ground with a dangerous force. During a Category III landing, electronic instruments must judge the precise moment and control the flare-out maneuver through the autopilot.

After ten years of work a British government group called BLEU (Blind Landing Experimental Unit) has developed beam antennas, radio altimeters and other equipment that make completely blind landings comparatively easy and reasonably safe. British airlanes have made more than 10,000 fully automatic landings, and at last week's Atlantic City conference the FAA reported on a DC-7 prop-driven plane that it outfitted with British instruments with U.S. trimmings. Up to last summer, it had made 1,149 automatic landings at 47 different fields with only trifling errors.



PRIDE OF FUJITSU AT THE 1964 N.Y. WORLD'S FAIR

IN RECOGNITION OF UNSURPASSED PERFORMANCE

FUJITSU's FACON 231 Automatic Computer was chosen by the Japanese Government for display at the 1964 New York World's Fair. This electronic computer system has already established its international reputation in the business and scientific fields for accuracy, economy and versatility in application. Japan's pioneer manufacturer of computers and today its leading manufacture of communications and electronics systems is internationally ranked FUJITSU.

RECREATION

Down to the Sea

Boats, like horses, were once used for transportation; now they are mainly for pleasure. When it is your own boat, this is called cruising; when it is not, it is called taking a cruise.

Cruises come in all shapes and sizes, from the *Caronia's* annual round-the-world ($2,875-$14,000) to Eastern Steamship Corp.'s all-expenses weekend sprees starting at $59 between Miami and Nassau. There are special cruises emphasizing bridge (with Charles Goren), culture (Japanese brush painting and photography). And for the "adventurous"—meaning those with a hankering for hardship, seamanship, courtship or strong drink—there is something called a "Windjammer Cruise."

Beating through Bahamian waters this week, as they are almost every week of the year, were the schooners *Yankee Clipper* (197 ft.), *Polynesia* (151 ft.) and *Mandalay* (128 ft.), loaded with sun-peeled cargoes of businessmen, secretaries, airline stewardesses, honeymooners, second-honeymooners, sexagenarians and swingers. Most of them seemed to be having a wonderful time. And all of them were making money for a tall, swarthy ex-submariner from Newark, N.J., who calls himself Mike Burke.

In 1947, Mike Burke was a small-time building contractor in Miami named Mike Schwartz who had a 48-ft. sloop for weekend recreation. In time, he found he had more friends than he had room for and was both ; the bill and doing the work. He sold his business, bought a 94-ft. schooner called *Tondeleyo*, changed his name to Burke, and went into the cruising game. "Now here I am with five boats, all going strong, catering to about 70 or 80 people a week all year round. I didn't plan it that way at all. It was just a fun weekend that got outa hand." Out of hand, that is, to the tune of $1,200,000 last year.

Boys & Girls Together. Prices for Burke's ten-day Windjammer Cruises through the Bahamas range from $185 for bachelor quarters (six men to a room) to $310 for deck cabins with private bath (only available on the *Yankee Clipper*). Inside cabins for two cost $210 per person, outside cabins $260. This buys everything, including one ration of 140-proof rum per day. The rest of the drinks are sold at about cost.

The Windjammer booking office does its best to match age brackets and interests. In addition to sailing, skindiving, etc., two of the interests that can be checked off on the application forms are "Boys" and "Girls." "Sometimes we tell girls who apply that on a different trip from the one they want, there'll be a better balance of boys and girls," says Burke. "Nine out of ten write back and say, 'By all means, I'll wait.' And guys will write in and say, 'I want a trip with a lot of girls.' That's fine by us. We let 'em know when we got one."

Shuddering Nature. It's not all this kind of call of the wild, though. Many middle-aged couples sign on for the informality and the chance to play the role of old sea dogs, and Burke's crews give them all the work they want—polishing brass, taking the wheel, standing watch. "They love watches," says Burke. "It's so shippy when the watch is awakened by a crewman at 2 a.m. saying 'It's your watch.' "

Sometimes, of course, things can get a bit too shippy. One Detroit advertising still shudders at the memory of a cruise last Christmas on the *Polynesia* (promptly dubbed the *Polynausea*), which was complete with 12-ft. waves, several broken bones, plus a passenger who went berserk and jumped overboard rail. On one hairy occasion, three missionaries were washed overboard, and the only passenger who seems to have been lost permanently is Miss Sara Reiser, 70, who disappeared last month during a walk on one of the Galápagos Islands—a port of call on Burke's round-the-world cruising brigantine *Yankee*.

But in a time when the Bahamas and the rest of the West Indies are suffering from creeping civilization—even on the best powder beaches, people no longer lie on the sand but in chaise longues, swim not in the ocean but in shoreside swimming pools, and at night prefer the soft mechanical thunder of the air conditioner to the sound of the tropical breeze through the palms—Burke offers the uncertain pleasure of putting the escapist back in touch with elemental nature.

LYNN PELHAM

WINDJAMMING ON "MANDALAY"
Sometimes things can get too shippy.

THE CITY

Not Getting Involved

New York City, the truism goes, is not America. But it is the American Big City—increasingly so, as the homogenizing forces of the 20th century make all cities, all towns, all countrysides, and the people in them, interchangeable. In recent weeks, two New York crimes have dramatized facets of big-city life that have implications beyond New York's five boroughs.

First came the murder of Kitty Genovese in the predawn darkness of a quiet, middle-class community of Kew Gardens. The murderer was a man who had never seen her before. In 35 minutes; the killer left and returned three times to stab her again and again, while Kitty Genovese staggered and screamed and dragged herself along the street. The interesting thing about it is that the police established that at least 37 neighbors, roused out of bed by Kitty's screams, had stared out their dark windows at one time or another, but none of them, in all that 35 minutes, called the police. When it was over, a man—after phoning a friend for advice—crossed the roof of his building to a 70-year-old woman's apartment to get her to call the police. "She didn't want to get involved," he explained later.

At 3:40 one afternoon last week, 18-year-old switchboard girl Nancy Olga Romero hurtled naked and screaming down the stairs of a building on busy East Tremont Avenue in

CC-0. Panini Gurukul Kangri Collection, Haridwar

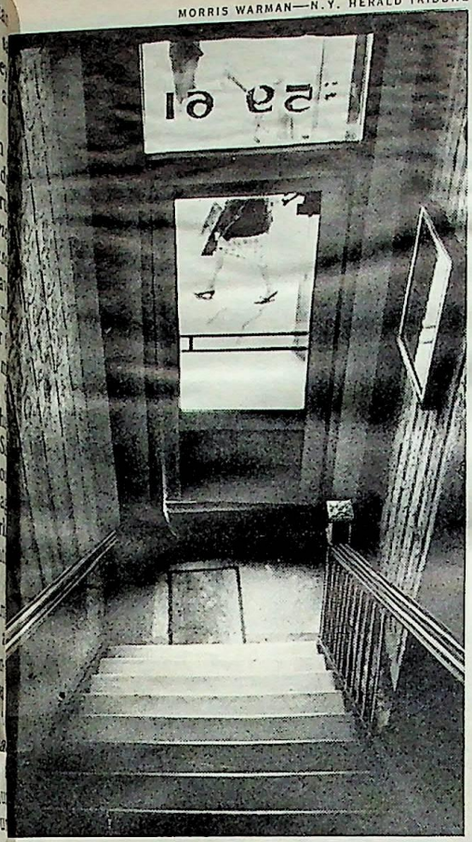
MORRIS WARMAN—N.Y. HERALD TRIBUNE



DOWN THE STAIRS ON TREMONT AVE.
Who cares?

Bronx. In the vestibule, in plain sight of the street (the door was open), she lay screaming and bleeding, while a man struggled to drag her upstairs again. "Help me!" she cried again and again. "He raped me." Heads popped out of offices along the hallway, and a crowd of about 40 gathered outside to watch. No one made any move on her behalf. No one called the police. It was sheer chance that two officers pushed through the crowd.

What has happened that these things should be possible? One thing, certainly, is that the sense of community has been lost in the bigness and bureaucracy of big-city life. In small-town America, people wanted neighbors for a defense against loneliness; in big-city America, people feel that neighbors are merely crowding in on them and threatening their privacy. Nobody knows his neighbor—and doesn't want to.

And no one wants "to get involved" with these unknown and unloved neighbors—it may cost time to testify in court, maybe bring on a lawsuit for interference or for some nameless offense. The Decent Citizen and Taxpayer is apt to feel that taking any kind of action is unwise, unsafe—and unnecessary.

The Roads of Rome

Like great beasts sickening with a common plague, the world's big cities have long been struggling to keep from choking to death on the automobile. During the past few years, in the wake of Italy's economic miracle, Rome developed an advanced case of the disease in its streets designed for chariots and its piazzas designed for people.

Ten-minute trips turned into hour-long undertakings, and it was always rush hour in this siesta city, where people normally go home to celebrate the three-hour lunch. Business suffered, and so did social life; instead of zipping across Rome in their Ferraris to make three parties a night, the glitter set began going only to parties in the immediate neighborhood. Last week Rome was incredulously experiencing something nobody thought would ever happen again—traffic was moving.

How had the miracle been wrought? By a series of simple edicts, issued by Traffic Commissioner Antonio Pala. On 57 main streets in Rome's three-square-mile central area, all parking—even stopping—was banned. Everywhere else, parking was limited to an hour, and all parked cars were required to display cardboard disks showing the hour of arrival and the hour of expiration. Not even M.D.s were exempt. "A doctor can do almost anything in an hour," a traffic official declared. At the same time, a fleet of midget buses was launched to ferry people from parking areas on the edge of the disk zone to the center of the city.

At the end of the Pala plan's first fortnight, Rome was wondering whether it could possibly last. Other cities, including New York, have tried much the same measures, but they have usually foundered on the failure of the local patrolmen to enforce them (a $10 bill in the right hands from time to time works wonders in any town, in any country). Could the Roman cops—so much more noted for their ballet technique of directing traffic than for their enforcement of law—maintain the zeal that has them handing out more than 5,000 tickets a day? And how long would it be before Roman individualism rose triumphant to beat the system?

"If I put my car in a garage, it will cost me $56 a month," one descendant of Romulus mused. "And if I leave it on the street and get a $1.60 ticket five days a week, it will only set me back $32. But suppose the cops give me one ticket for every hour overtime? And suppose they raise the fine?"

TRAVEL

ARCH to the Rescue

A popular gag of the wondrous jet age is "Breakfast in Berlin, lunch in London, dinner in Detroit—and baggage in Bombay."

At any given moment, the airlines estimate, some 2,500 pieces of U.S. luggage are somewhere they shouldn't be (a total the U.S. airlines consider not unreasonable in view of the 100 million items they handle each year). Nothing much, apparently, can be done to stop losing them, but this month 20 American airlines began to do something about finding them faster.

Into operation went ARCH—which stands for Airline Baggage Recovery Clearing House.

Any bag that is unclaimed for three days is opened—an invasion of privacy which may be justified by the number of suitcases that look identical—and its contents are described by Teletype to ARCH headquarters in Chicago. The information is coded according to a standard format that assigns a number to each of the 89 most frequently carried articles: 12 is food, 27 is suspenders, 40 is sneakers. The fuming passenger is read a list of the articles and asked which of them his luggage contained. From there on, it is simply a question of matching up punch cards. Getting bag back to owner is up to the airline.

THE ECONOMY

s Just Wonderful
nat It's Not Too Good

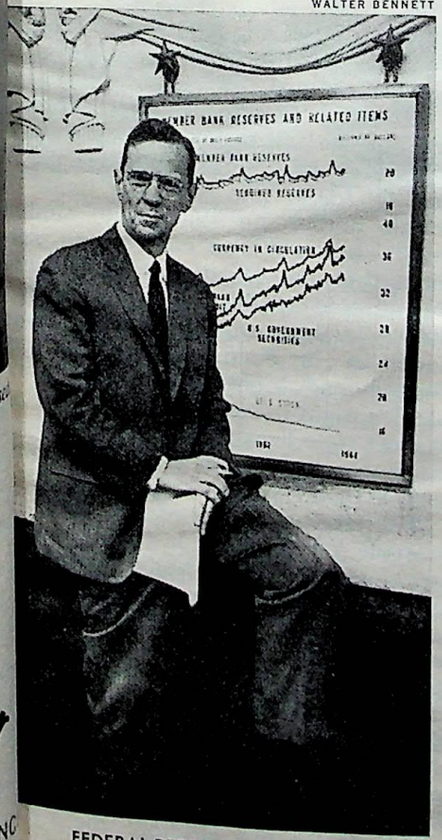
Every week is full of good news about e U.S. economy, whether the news mes from cold statistics or from the emingly inexhaustible interest of Pres- ent Johnson in the affairs of business. he economy is doing so well, in fact, at the main concern of economists in d out of Washington is to prevent a eady and solid advance from turning to an overheated boom that could er cause trouble. To that end, the tion's economic planners last week unded almost apologetic when they d to report good news, and relieved nen they could point to signs that a al surge has not yet begun.

Backing & Filling. There was Treas- y Secretary Douglas Dillon, for exam- e, talking about the best news that e U.S. has had about its internation- payments in the past three years: balance for the year's first quarter. ow could Dillon play that down? Well, managed deftly by describing the w payments figures as "alarmingly od." Talking before the Advertising uncil, Federal Reserve Board Chair- n William McChesney Martin Jr. emed relieved to report that the de- nd for money had fallen below his pectations, largely because of high rporate profits and heavy cash flow. e result: the Federal Reserve's Open arket Committee decided that high- er interest rates are not necessary now.

Throughout the U.S., economists who had predicted that February's $11.5 billion tax cut would touch off a strong wave of consumer spending were pleased to find that so far they have been wrong. Retail sales are rising nicely, but the consumer, whatever he has done with his tax savings, has shown no signs of going on the splurge expected of him. Perhaps partly for this reason, economists for the prestigious 100-man Business Council, which met in Hot Springs, Va., stuck steadfastly to their cautious prediction of a $620 billion gross national product for 1964—even though the Administration expects the G.N.P. to hit at least $623 billion and some private economists feel that it may go higher. Viewing all this backing and filling, Associate Dean Walter D. Fackler of the University of Chicago Business School saw some irony in the situation: "The optimists are pessimistic and the pessimists are optimistic."

Psychology & Downturn. The shrewd reluctance of the optimists to push the good news too hard—many of them feel that President Johnson does that all too well—is based on their experience of what a boom psychology can produce. When they feel a boom coming on, businessmen often tend to overestimate the market for their products, stockpile inventories in anticipation of inflation and expand their capacity more than they will eventually need—thus helping to bring on an economic downturn. Just in case anyone felt that that could not happen again, President Johnson said last week: "I wouldn't say for a moment that recessions are not possible." Warding one off as long as possible is the motive behind the sudden negativism of so many economists.

WALTER BENNETT



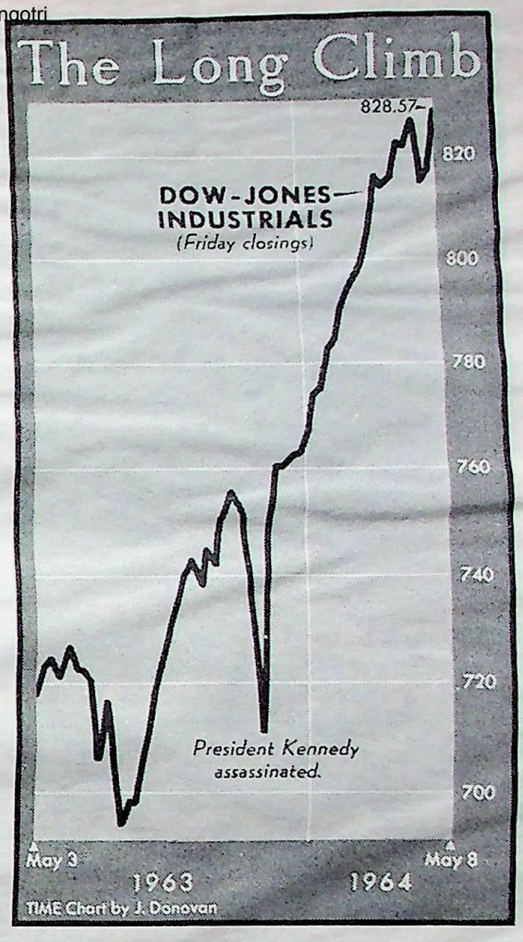
FEDERAL RESERVE'S MARTIN
Even the pessimists are optimistic.

WALL STREET

On Toward 880

Only a few weeks ago, the bears were out and growling on Wall Street. The Dow-Jones industrial average faltered after a sustained rise that had sent it smashing through the magic 800 mark; in the sharpest daily decline since the assassination of President Kennedy, it dropped 6.77 points in one day. As the bears saw it, this was the start of the major shake-out they had been expecting all along: it was time to dig in for a slide to well below 800. But the market barely gave them a passing nod before it turned around and galloped up 18 points in only eight trading days. Last week it set a new record of 830.17 before settling back at week's end to 828.57—and there was hardly a bear on the Street.

No Kiting. The market has given the bulls many strong points to bellow about. April, with an average of 5.6 million shares traded every day, was



the third most active month in Big Board history (behind June 1933 and October 1929). Daily trading volume is now poking above 6,000,000 so often that hardly anyone gasps any more, even though just two years ago the daily average was a paltry 3.8 million. What especially pleases the bulls is the high quality of the most popular stocks. Leading the upswing are such solid blue chips as General Motors, Jersey Standard, Singer, International Harvester, Pittsburgh Plate Glass, Motorola—a sure sign that the buying is still dominated by the professional investors and the wealthy, who usually do not bite at untried glamour stocks or frighten easily at a slight downturn.

The small investor is still slowly returning to the market, but, says Eastman Dillon Partner S. Logan Stirling, "he is no longer in the silly stage looking only for new issues." One of the signs of the instability of 1961's runaway bull market was the ridiculous kiting that amateurs gave any new stock that came out. Today each one gets a cold eye, and wild successes are few. One pending exception: Communications Satellite Corp., the first blue chip of space, which last week set the price of its stock (expected to be issued in June) at $20 per share. Brokers were immediately swamped with orders, and many turned down all but their own customers.

Values Untapped. There will certainly be temporary drops in the Dow-Jones average this year as the market pauses every once in a while to catch its breath. But with the U.S. economy looking stronger than ever and the

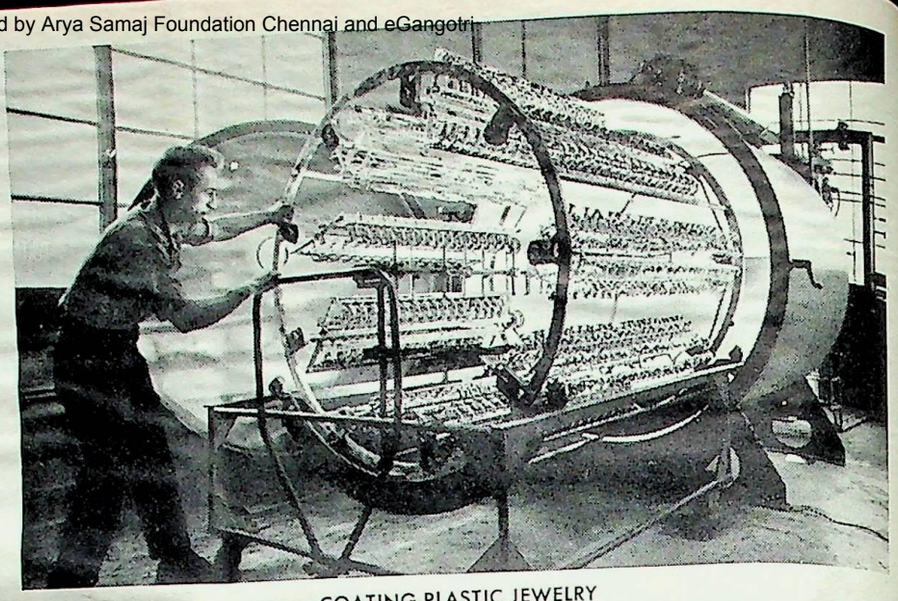
WELDING IN A VACUUM



COATING PLASTIC JEWELRY

Much can be done with nothing.

stock market so free of speculative excesses, only a few cold-nosed bears still sniff a sharp price break in 1964. Most Wall Streeters rub their hands with glee when they behold the market still so full of untapped values, of stocks selling at only 14 or 15 times the company's earnings. The most common prediction on the Street: the Dow-Jones will hit 880 before year's end.

TECHNOLOGY

The Useful Void

Though nature abhors the vacuum, businessmen have learned to regard it highly. By emptying air from sealed chambers to create a void, U.S. industry keeps the $16 billion electronics industry going, adds life to jet engines and makes the vitamins in cod liver oil easy to take. Sales of the machinery used to produce vacuums for industrial uses are growing 10% to 15% a year; awareness of the vacuum's almost limitless potential is growing even faster. Last week in Toronto this potential was probed at a meeting of physicists who specialize in working with vacuums. Though their esoteric experiments in the labs are far in advance of industry's needs, they will almost certainly produce new uses. Said Dr. Robert Bakish of New Jersey's Electronics & Alloys Inc.: "The developments of this conference today will go to business tomorrow."

Sucking a Straw. Taking advantage of vacuums is nothing new; everyone who sucks a straw, works a pump or runs a vacuum cleaner uses the principle. But the first big breakthroughs in efficient methods of using vacuums industrially did not come until World War II, and improvements and refinements have piled up so quickly since then that industry has achieved vacuums equivalent to conditions in outer space. While dozens of companies turn out vacuum-making equipment, including such giants as G.E. and Westinghouse, the biggest in the field is Rochester's Consolidated Vacuum, a subsidiary of Bell & Howell, which produces a line of pumps and airtight vacuum chambers for all industrial and laboratory uses.

The value of the vacuum to industry lies in the fact that materials act differently when not surrounded by air than they do when surrounded by it. In a vacuum, atoms of gas in any material float away because they are unobstructed by air pressure. Last week U.S. Steel announced that it will build a giant vacuum "degasser," similar to one already at Jones & Laughlin, that releases contaminating gases from hundreds of tons of molten steel in minutes. Result: steel with so few harmful impurities that castings made from it for automobiles last 25% longer.

Loose particles of any material tend to travel in a straight line in a vacuum —a phenomenon that made television a reality by allowing the direction of electron beams to be precisely controlled in a vacuum tube. Liquids, from water to molten metals, boil and evaporate quickly at low temperatures in a vacuum and condense in an even film on any surface they strike. Thus industry has been able to lay thin metal grids in microcircuits (TIME, Feb. 7) and coat cheap plastic jewelry, auto trim or Christmas wrappings so that they look like gold or silver.

Cool Boil. Cool boiling in vacuums has also revolutionized the food industry. To concentrate its frozen orange juice, Minute Maid boils the water out of regular orange juice in a vacuum at such low temperatures that the juice does not take on a cooked taste. But Antle Inc., California's largest lettuce grower, cools whole boxcar loads of lettuce at once by spraying them with water and evaporating it quickly in giant vacuum chambers, thus extending shelf life by 20%. Armour & Co. has a quick freeze and a vacuum process, called freeze-dry, that removes 98% of the moisture from such foods as beefsteak and stew so that they will keep up to five years without refrigeration. As for the vacuum approach to cod-liver oil, producers now extract heat-sensitive vitamin A from fish oil by cool boiling, then dole it out in candy-coated pills.

LABOR

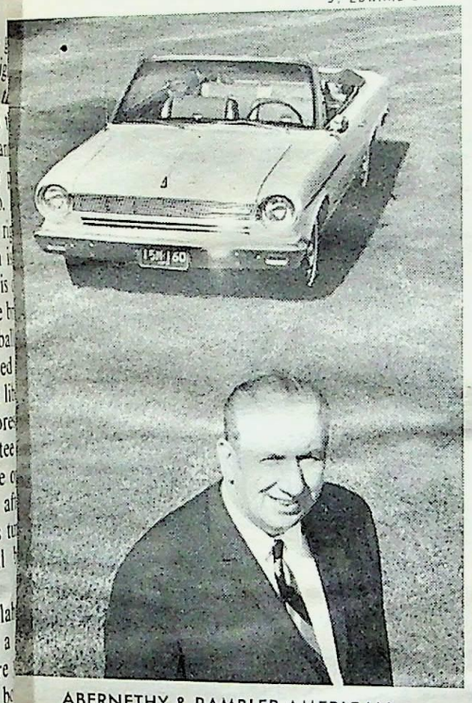
the national average. One of the reasons advanced by labor: unions in those states, among the poorer states to begin with, have lost an important part of their power.

AUTOS

American's Troubles

While the U.S. auto industry speeds toward its first 8,000,000-car-sales year, the only U.S. automaker failing to share in the boom is the one that needs it the most: American Motors Corp. Sales of its Big Three competitors have risen 7% above last year's level, but American Motors has so far sold 8,800 fewer cars this year than last. Last week AMC announced a 17% drop in earnings for its first fiscal half at a time when the other car makers are setting new profit records. So many Ramblers remain unsold that cigar-chomping President Roy

J. EDWARD BAILEY



ABERNETHY & RAMBLER AMERICAN
Thinking bigger.

Abernethy, 57, next week will lay off 800 workers, probably will not recall them until new-model production begins in August.

Compact Crusade. American Motors' troubles came only five months after the demise of Studebaker as a U.S. automaker, but the two cases have few similarities. With efficient plants, strong dealers, and no long-term debts, AMC is by no means another Studebaker. Despite difficulties, its sales hit $551,-1,239 in the fiscal half, and are heading toward the second-best business year ever. But in the most critical measure of an automaker's performance—the share of the market—AMC has slipped from 6.4% of all U.S. auto sales in 1960 to 4.5% last month.

Ironically, AMC's present troubles are rooted in the philosophy of the man who rescued the company from the junk heap in the mid-1950s: George Romney. Romney steered AMC to pros-

perity by bringing out the compact Rambler and crusading against Detroit's "gas-guzzling dinosaurs." Believing that compacts would corner 50% of the U.S. auto market, he concentrated his company's efforts exclusively in the compact field. Though Romney is now Governor of Michigan, AMC is still selling Romney-selected compacts because of the two-year lead time needed to produce new models. Meanwhile, the auto-buying public's taste has strongly swung back to bigger, flashier and more luxurious cars. Compacts now account for only 18% of auto sales, and AMC is stranded without the right variety of cars for today's prospering auto market.

Sensible Change. President Abernethy has done what he could to liven up AMC autos by adding plush touches to the interiors of his cars, bringing out an optional V-8 engine for the Ambassador and Classic, and introducing a limited-production Typhoon sports car that is powered by a spirited, brand-new six-cylinder engine. But Abernethy's first real chance to reverse AMC's decline comes this fall with the introduction of the first models for which he is responsible. The big change: the Ambassador has been redesigned and enlarged to compete with the Big Three's intermediate-class cars, will be available in eight models ranging from a station wagon to a convertible. Abernethy has also given the Classic a face-lift and tooled up for a fastback sports car that will probably be called either the Marlin or Sceptre. The handsome American compact will continue almost unchanged. Abernethy has no intention of abandoning the image of making "sensible cars" that Romney created for the company, but, being a sensible type himself, he wants to have models in the bigger class where affluent Americans are now spending the bulk of their auto dollars.

ADVERTISING

Hershey Sees a Need

The chocolate company that Milton S. Hershey founded 61 years ago is the only major U.S. corporation that does not advertise. It got into the business on the ground floor, rode up through the years, prospered so well that its sales in 1963 reached $203 million. At no time have Hershey executives claimed to be dogmatic about advertising. "We've never been against it," says one. "We've always said it was a tool we would use when the need arose." Last week the need seemed to have arisen.

Cranking up a $7,000,000 plant in Smiths Falls, Ont., to serve the Canadian market, Hershey took a look at the entrenched competition—Fry-Cadbury, Neilson, Rowntree and Lowney—and hired Manhattan's BBDO to create a Canada-wide Hershey campaign. Did Canadian advertising mean a weather change in the U.S.? "When, as and if we think we need advertising here at home," said a Hershey man archly, "we'll turn to it."

PERSONALITIES

COCA-COLA CO.'s expansion have recently put it into orange-juice, diet-pop and instan business. Last week Coke announ new addition that fits in with President J. Paul Austin calls its "total refreshment" concept. It quired Houston's Duncan Foods purveyors of coffee under a ma of brand names (Fleetwood, Bo Nut, Admiration). Austin, 49, joined Coca-Cola's legal departme 1949 and was named president years ago, sees the merger as an step toward Coke's first $1 billion (1963 sales: $637,424,475). A vardman ('37), Austin started out ing light bulbs door to door in Grange, Ga., later crewed on the team in the 1936 Olympics. One o youngest presidents Coke has ever he spends long hours earning his $ 000 a year. The pause that refreshes meaning for him, but anything seems out: he last took a vacation years ago. Austin's quick pace and company's new concept mix well: the first quarter, earnings are up 2

WORLD TRADE

A Disappointing Start

It was heralded as the greatest and most important tariff-cutting meeting in the history of world trade, but it began with the style and promise of a shotgun wedding. As 300 delegates from 66 nations gathered in Geneva last week for the long-awaited trade talks under the General Agreement on Tariff and Trade (GATT)—labeled the Kennedy Round because the late President gave them impetus—the air was heavy with torpor and reluctance. After more than a year of preliminary parleys that tried to lay a groundwork on which the conference could proceed, all the delegates had really agreed on was that they still have monumental disagreements to overcome. GATT Executive Secretary Eric Wyndham White, whose job was to open the conference with a ringing keynote, had to admit the seriousness of the failure to set so much as the terms for negotiating. "This is disappointing," he said, "and it would be foolish to pretend otherwise."

Even the setting was unsettling. Because the United Nations trade conference had pre-empted the grandiose Palais des Nations, the GATT delegates had to forgo the peacock lawns and lakeside vistas to meet amid six scraggly potted palms in the salon of the Batîment Electoral, where the Swiss hold cantonal elections. On a floor below, the brass band of the Geneva Landwehr could be heard holding its rehearsals. The remarks of Chief U.S. Negotiator Christian A. Herter were punctuated by the faint oom-pah-pahs of the Landwehr as he warned: "The longer we procrastinate in setting the formulas by which these negotiations will proceed, the more we risk the success of the entire negotiations."

Disparities Despair. Fundamental to the lack of progress so far is that the U.S. Congress passed the Trade Expansion Act that inspired the Geneva talks for the express purpose of breaking down Common Market trade barriers to expand U.S. exports. The U.S. thus wants to negotiate a flat across-the-board percentage cut on 5,000 items in international trade. The Six, understandably, want to open up world markets for their own industry and farmers. Since their tariff walls are already generally lower than the U.S.'s, they reject a flat cut that would only perpetuate the disparities, prefer instead a selective approach that would make progress toward equalizing all trade barriers. Further complicating the talks is the failure of the Eurocrats to set a Common Market farm pricing policy, without which it is impossible to discuss agricultural tariffs—an issue vital to the U.S. because it sends $1.2 billion worth of farm exports to Europe yearly.

The world economic situation has changed since the Trade Act was passed. Then it looked as if the Common Market, with its lower labor costs, would chop away U.S. world markets; instead, inflation is now racking most of the Six, while U.S. prices have remained relatively stable. Result: U.S. trade and payments balances are improving against the Common Market's, a fact that makes the Six all the more wary of dismantling their trade barriers.

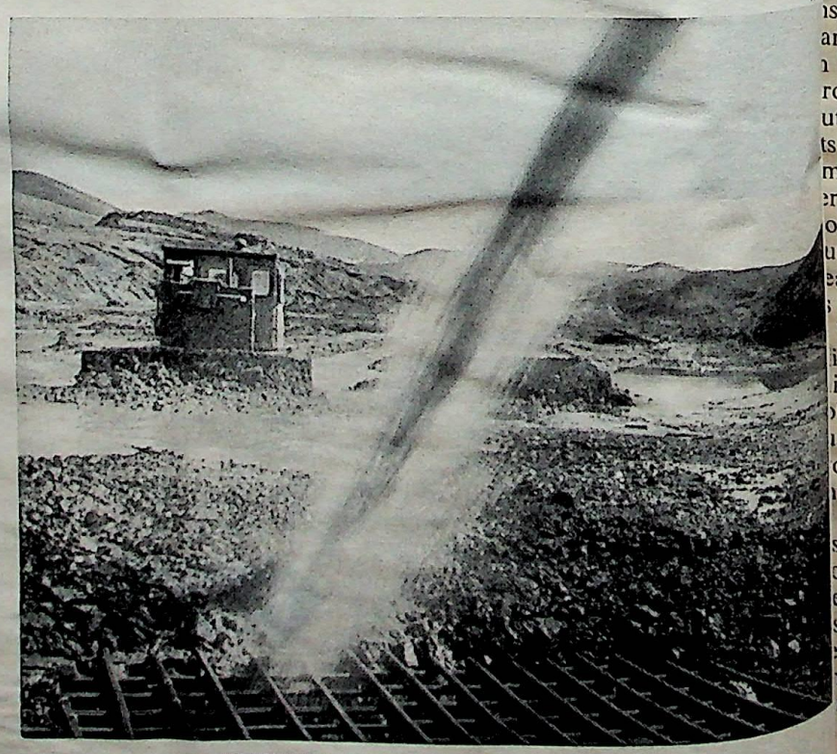
No Blast. The first week's talks did produce one agreement: after a battle of semantics, the negotiators agreed to accept as a "working hypothesis" the aim of reducing tariffs by 50%, the goal set forth in the U.S. Trade Act. On the surface, it looked like a clear U.S. victory; actually, it was a mere formalism that left the big questions still open. The fact is that the U.S. has been forced to move closer to the European point of view. It has conceded that items on which tariff disparities exist should be dealt with separately, after long opposing any such concession. A tacit understanding is also developing that the U.S. will allow negotiations over agricultural tariffs to be put off until Europe's farm quarrels are settled. To cast the week's efforts in the most encouraging light, Christian Herter was driven to new heights of diplomatic double-talk. The agreement, said he, was "a definite step toward moving ahead."

The event that caused the most stir last week was one that did not take place at all. France's Charles de Gaulle has few good wishes for the success of the talks, and no one in Geneva would have been particularly surprised if he had scuttled the whole conference in a single blast. Instead, French Finance Minister Valéry Giscard D'Estaing, who ed his time, made no statement at all. "I think," said he after the meeting, "that St. Thomas Aquinas was right: 'Talk only when you have something to say to someone.'* I had nothing to say." This was encouragement of a sort. But the general dissatisfaction expressed by the delegates over the lack of real progress so far provided grounds for further hope. At least no nation is deluding itself that the negotiations will be anything but long and arduous, and that many compromises must be patiently worked out if the Kennedy Round is ever to come close to fulfilling its promise.

That Russian Gold

"When we are victorious on a world wide scale," bragged Lenin in 192 will make public toilets out of go the streets of the world's largest ci Last week Russian gold was flowing into some of the world's lar cities—but for reasons that make nin's grand vision seem even more surd than it did in 1921. Into Lo and Paris flew ungainly Aeroflot 114 airliners bearing gold bars im ed with hammer and sickle for de to Western customers. To cover huge purchases of Australian, Can and U.S. wheat, and their incre trade with non-Communist nation Russians are selling gold in the

* A loose rendering of a letter said been written by Aquinas to a Dom novice, in which he advised: "I exhort be chary of speech, and to go into versation room sparingly."



WASHING DOWN GOLD AT SIBERIAN MINE
And they owe it all to Bret Harte.

t twice last year's pace. They have lready delivered about $200 million worth so far this year, and before year's nd are expected to sell at least another 350 million worth.

Stalin's Scheme. Though the Soviet Union has somewhat suddenly emerged s the world's second largest exporter after South Africa), the big influx of Communist gold has failed to upset the West. Actually, the Soviet gold is welomed by the U.S. Federal Reserve and European central banks, which have ormed a consortium—called the Lonon gold pool—to buy up gold as it omes on the market. Reason: the new upply of Soviet gold has eased the West's acute gold shortage and helped tabilize the free market price of gold at ery near the official U.S. price of $35 er ounce. The Soviet gold has not only ased the pressure on the dollar but has lso alleviated much of the drain on U.S. gold reserves, since European ankers are now able to bolster their oldings with Soviet gold. Chiefly beause of the Russian sales, the U.S. parially replenished its own reserves by uying $300 million in gold from the ondon pool last year.

Gold mining in Siberia, a big business nder the Czars, ground to a halt after he Revolution. It did not get started gain until 1927, when Stalin, after eading Bret Harte's novels about the alifornia gold rush, set up a gold trust hopes that renewed mining in Siberia ould spur a mass migration to that arsely settled area. His scheme proced no substantial population shift, ut the Russians so rebuilt and expanded eir mining industry that by 1938 their nnual gold output was worth $183 illion.

Party's Call. Russia's main mines are ocated near a city named Bodaybo in entral Siberia, at Magadan on Siberia's ast coast, and on the Chukotskiy Penula on the Bering Strait. Last month ame reports from Russia of new strikes Kazakhstan and Transcaucasia that romise to be richer than the combined utput of the Siberian mines. The Sovits keep as closely guarded secrets the mount of their gold output and reerves, but estimates by gold experts in ondon and Paris place Russia's current utput at $500 million to $1 billion a ear and reserves at perhaps as high $8 billion.

What is not secret is that Soviet gold ining has been plagued for years by ievery—even though trafficking in old is a capital offense in Russia. When uards were posted and a fence erected ound one Siberian mine, production mediately rose 25%. Lax discipline the mines prompted the Commust Party's Central Committee a few onths ago to call on the miners to "exed output goals and reduce production sts." The exhortation reflected the Soet Union's growing recognition that so ng as Russian agriculture remains disnted and inefficient, the country's surbreadbasket is its rich gold mines.

Stretching Spaghetti

While the Common Market is having its trouble agreeing on common tariff policy, one export seems to be welcome everywhere. For some reason, perhaps better left to psychologists and cooks, Europe is taking to a food that has long been largely an Italian preserve: pasta. Though Italians are still the heartiest eaters (66 lbs. per year), Italy's pasta exports have risen 1,400% in a decade, crossing practically all national borders. Much of the increase has been the work of Paolo Agnesi & Sons, Italy's oldest pasta maker and (with $10 million annual sales) one of its largest. Anticipating a 50% increase in exports this year, Agnesi has just opened a milling plant that processes 600,000 lbs. of grain daily for 75 varieties of pasta. It is the largest plant of its kind in Europe.

GIANCOLOMBO

PAOLO AGNESI

PUBLIFOTO

PASTA PACKING LINE

Shocked by the Germans.

Only by Fork. The 140-year-old family-owned Agnesi company is a heterogeneous blend of old and new. The new plant, so automated that only three men handle all milling operations, sits among old buildings in Imperia, 80 miles southwest of Genoa. Surrounded by hills and served by a wheezing one-track railroad and the winding two-lane Via Aurelia, a relic of the Roman Empire, Agnesi's Imperia businessmen air-freight their goods to Scandinavia more easily than they can ship it to Rome. From their isolated offices, they ring up the highest long-distance telephone bills in Italy. Third-generation Family Head Paolo Agnesi, 93, who wears handle-bar mustaches and goatee, for 76 years has arrived at the plant with his laborers at 6 a.m. His grandnephew, Paolo, 24, recently returned from New York's Syracuse University, where he studied computer applications to spaghetti-making.

In the new Italian mass market, which has tempted some businessmen to stretch olive oil with water and parmigiano cheese with sawdust, the Agnesis steadfastly insist on quality. Their spaghetti is made only from expensive durum wheat; lately it has become even more expensive because the company began importing U.S. and Canadian wheat when demand outran Italian supplies. But Agnesi spaghetti also sells for more, and proud Nonagenarian Paolo further insists that it be consumed correctly—with only a fork and with as little sauce as possible. Shocked when he heard that Germans were eating spaghetti as a side dish to sausage, Agnesi dispatched Imperia's best chef to the Munich trade fair to cook up 35,000 servings and teach the *Hausfrauen* their spaghetiquette. Germany is now the company's second biggest export market, after Switzerland.

Scoop, Slurp & Chop. Looking beyond Europe, the Agnesis plan another aggressive campaign in Japan, which, curiously, is second in world pasta consumption, and in Australia and South America, which have sizable Italian-descent populations. Aiming also for the big U.S. market, Agnesi hopes to overcome the American complex about weight by stressing that hard-wheat spaghetti contains only 300 calories a serving and is rich in B and E vitamins. Agnesi hopes to prove that it is also so filling that Americans, who can be distinguished at the table by their knife, fork, spoon, twirl, twist, scoop, slurp and even chop, techniques, reach for richer foods at

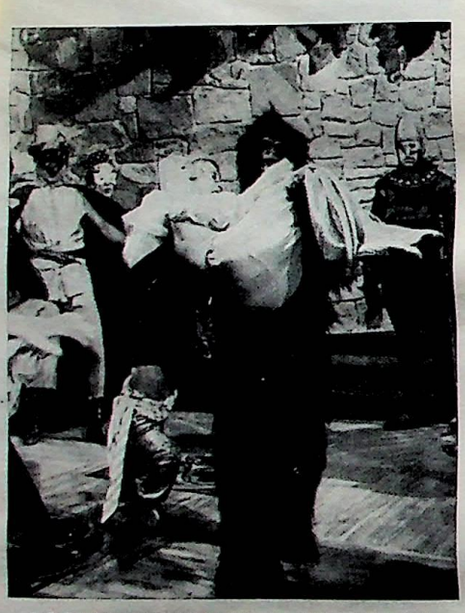
Werewolves—And Other Dogs

Nothing is less appetizing than last year's ghoulash. Dracula and Frankenstein were fun the first time—and were still fun in later films, when they met each other, their own progeny, and mates worse than death. But in the '40s and '50s, the customers got bored with movies that cried werewolf, got fascinated with atomic-age monsters like The Blob, The Thing, The Great Green Og, and a colossal purple caterpillar filled with green radioactive goo. In the '60s, the fashion in fright has become eclectic: mad scientists, mole people, teen-aged werewolves and creatures from outer space have all done a bloody good business. And recently the technicians of terror have also produced a peculiar breed of hybrid horrors that mingle maniacs and muscles, gore and giggles, and even set monstrosity to music. Some recent screamières:

The Masque of the Red Death dusts off a trifling Poe classic and adapts it to fit the collected smirks of Vincent Price. Poe's original described a masked



DOOMED PARTYGOERS IN "RED DEATH"
Poe, Price, and the plague.

ball at which the vulgar Prince Prospero and all his company succumb when Death appears disguised as a plague victim. In the elegant, elongated movie version, Prospero is a Satanist who scourges the entire 12th century countryside. He tortures peasants, tries to corrupt a village maid, and lets his pet dwarf barbecue a guest. Fortunately, by the time Death gets to the party, most of the nicer people have fled.

Black Sabbath is a three-part demonthology. *The Drop of Water* tells what happens to a nurse who steals a jewel from a corpse: she is hounded to her doom by a fiendish faucet. *The Telephone* tells the story of a girl who gets a phone call from a boy friend she sent to the gallows. "I want that beautiful

KARLOFF & VICTIM IN "SABBATH"
Murder, mystery and a monster emeritus.

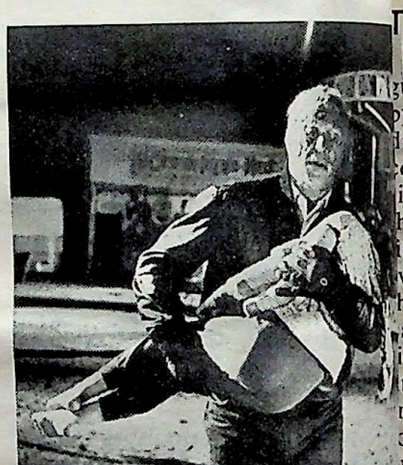
body of yours," he murmurs lustfully, and later he comes to get it. Terrified, she stabs him to death with a kitchen knife, but an instant later the phone rings, and when she answers it the voice of the dead man ironically reassures her: "Don't worry, darling. You can never kill me."

The Wurdalak, longest and scariest episode in the picture, represents that hoary old horror, Boris Karloff, as an East European vampire who carries somebody's head around in a canvas sack, and one dark night, while everybody is sleeping, tears the throat out of his four-year-old grandson. Silly stuff, of course, but it's nice to know that a monster emeritus can somehow manage to eeeeeeeeek out a living.

Comedy of Terrors is a lushly produced little parody of Hollywood scream fare, hopefully labeled a "horroromp." Vincent Price and the late Peter Lorre play a team of New England undertakers. When business is slack, the two wheel off in the hearse to raise the death toll, chew the scenery, and feed each other jokes. But the jokes lack nourishment. Foppishly appraising a coffin, Price sneers: "Nobody in their right mind would be caught dead in that thing." True enough. So Basil Rathbone gets buried alive, while Boris Karloff, in a minor role, eyes his former gloommates and a dose of poison with equal distaste. "When I was young," Karloff grumbles, "we knew how to live." They also knew how to die—back in the days when a tongue in the cheek was soon pickled in brine.

Goliath and the Vampires improbably combines a routine fang film with a beefcake B. Kobrak, the villain, is a vampire who drinks the blood of gorgeous girls from a golden goblet, appears and disappears in a pretty little puff of bright pink smoke, assembles an army of zombies with which to conquer the world. Goliath (Gordon Scott), the hero, is a fellow who has obviously spent more time in Malibu than in Gath. According to a studio release, he stands 6 ft. 3 in., weighs 212 lbs. and sports 50-in. bust—bigger than Jayne Mansfield's and, strange to say, almost as voluptuously formed. What's more, even though he plays a country boy, Goliath's nails are exquisitely manicured, his teeth are expensively capped, and his wardrobe apparently includes a cloth by Balenciaga. But he's tougher than he looks. In one scene he punches a fist through a paving stone (well, anyway, it looks like a paving stone) almost a foot thick. In another, he connects with an uppercut and rockets his opponent 30 ft. into the air. In the final reel that nasty old Kobrak turns himself into Goliath's double, and at the climax Gordon beats Gordon to a bloody pulp, rips off his smiling mask, displays the inside of his head. It looks like the inside of a pumpkin.

Pyro glosses over its terror with a sort of Hitchcock-and-bull story photographed in Spain in flamenco hues and bathed in bucketfuls of blue butane flame. The film casts Barry Sullivan as a pyromaniac wanderer who becomes a firebug when his cast-off Playmate Martha Hyer sees



SULLIVAN & PREY IN "PYRO"
Glossy, ghastly, with a carbonized

his house up in flame. His wife and daughter dead, Barry survives, a hideously deformed monster with a "carbonized" brain. Crazed, hunted, he plots fiery vengeance, he hides behind a mask that inexplicably looks just like himself. To keep the movie's audience from straying out for a smoke, there are some stunning pyrotechnics, a view of the rugged Spanish landscape—at last—the ghastly terrain of Sullivan's singed face, done to a turn by a mad makeup artist.

The Curse of the Living Corpse in spite its air of amateur Grand Guignol, unreels with grisly assurance. The plot involves "a homicidal maniac—bent on revenge by the most horrible means possible." Though locked in the family vault, a late and unlamented patriarch seemingly wants to settle his estate only by heir. One morning the butler comes up on the dumb-waiter head. Head only, in fact. Subsequent

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are cruelly disfigured, dragged behind a horse, stabbed, burned alive, or drowned in the bath. In this orgy of supermarket sadism, the blood looks like Brand X catchup, but there's plenty to splash around.

The Horror of Party Beach, billed as "the first horror monster musical," gets off to a swingin' start with a bunch of teen-agers engaged in puberty rites at the shore. But man, dig that cat out there on the jetty. He's real cool. Looks like a stalk of asparagus with an artichoke heart for a head. Marinated by radioactive waste, maybe. And there's more where he came from. Crazy? Let's dance. Yeah, yeah, yeah. When a trio known as the Del-Aires isn't pushing that Big Beat, the big beasts claim several dozen victims. "Sounds like somebody big walkin' in the mud," says one terrified chick. Some 20 others come to grief at a slumber party when they leave the front door ajar, expecting the boys from the nearby frat house to stage a raid. *Horror's* best song: *You Are Not a Summer Love.*

Triumph at Rome

The Grand Olympics is a blood-and-guts thriller of more heroic cast. Filmed by 22 Italian cameramen under the direction of Romolo Marcellini, this color documentary dazzlingly synthesizes the glory that was Rome's during the summer Olympiad of 1960. The film begins with a helicoptic view, swooping over the dome of St. Peter's, then briefly darts away to Greece to catch the sun's rays igniting the traditional torch through a burning glass at Olympia. Soon some 5,000 athletes from 85 nations parade through Rome to the vast Stadio Olimpico. The flame arrives, the Olympic flag is hoisted, and a battery of pigeons soars skyward.

Having thus taken wing, the spectacle seldom falters, for the cameras perform in a virtuoso style that rivals the competitors on the field. Again and again, with slow-motion photography and telescopic lenses that reveal an athlete's face in stunning close-up, the moment of truth is seized; an Italian cyclist, narrowly losing one contest, bursts into tears; the barefoot Bikila Abebe sprints through torch-lit Roman streets to win the 26-mile marathon and Ethiopia's first Olympic gold medal; U.S. Decathlon Champion Rafer Johnson consolingly embraces his close friend and runner-up, Taiwan's C. K. Yang. Poignant drama erupts when a Russian pole vaulter disastrously breaks his ankle. There is comedy, too, as a narrator dryly remarks of Britain's winning, waddling roadwalker: "One cannot honestly say that he presents an impeccable silhouette."

A kinesthetic ballet, brilliantly edited to dramatize the human body at its magnificent best, *Olympics* flings a bold challenge to the Japanese team now preparing to film the Tokyo Olympics of 1964.

The Austere Heretic

GAUGUIN *by Henri Perruchot.* 398 *pages. World.* $6.95.

"I regret what I said to you about Gauguin," the painter Paul Sérusier wrote to a fellow artist in 1880. "There is nothing of the humbug about him." Sérusier was wrong. There was a great deal of the humbug about Gauguin, as his latest biographer convincingly demonstrates. In fact, it was mainly the humbuggery that gave Gauguin a reputation—long before Somerset Maugham set his pen to *The Moon and Sixpence*—of being the very prototype of the artist in revolt against his society. Gauguin was aware of his reputation, gloried in it, assiduously cultivated it. And he was such a consummate natural actor, Biographer Perruchot believes, that he constantly — sometimes disastrously — deluded himself into believing it.

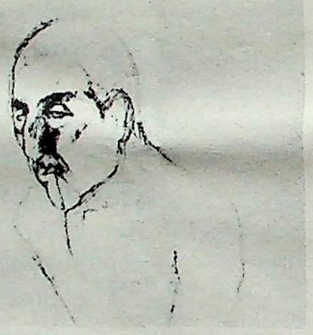
COLLECTION: J. MUCHA

GAUGUIN IN PARIS, 1893

SAO PAULO MUSEUM

SELF-PORTRAIT, 1896

COLLECTION MME. A. JOLY-SEGALEN



SKETCH FOUND IN HIVA OA HUT

Searching for a vision he would never find.

Perruchot, who has written critical biographies of Manet, Cézanne and Toulouse-Lautrec, tackled Gauguin once before in a 1948 study that he now regards as "superficial and sentimental." His conclusions in the present volume were drawn from long study of Gauguin's private journals and correspondence, conversation with people (particularly in Brittany) who still remember the painter, and, most important, a study of 600 unpublished documents in the library of the late Painter Daniel De Monfreid, who was Gauguin's chief correspondent while Gauguin was in Tahiti.

Lost Paradise. Perruchot is not always convincing as an armchair psychologist, but he makes a good case for the fact that Gauguin was a rebel long before he walked out of his marriage and successful career as a Paris stockbroker at the age of 35. For one thing, he was a stockbroker only by happenstance. When he returned to Paris at 23 after six years before the mast, he casually accepted a minor position in his guardian's brokerage house. Gauguin was a gambler, and while the market continued to rise he prospered; but he was persistently scornful of his colleagues. More important, he was by nature a wanderer—committed half-consciously, thinks Perruchot, to a search for a vision he would never find: "the lost paradise of his childhood in Peru." Gauguin had spent five years there with his widowed mother after his journalist father died. And he remembered Peru as "this enchanted land peopled by a primitive and simple race." He was still looking for it when he died.

Gauguin's strange marriage to Mette Gad, a plump, passionless Danish girl who liked to wear men's clothes and smoke a cigar, has never been adequately explained. Perruchot adds little to the story. They lived together for twelve years and produced five children, yet neither, according to their later testimony, ever had an inkling of what the other was like. By the time their third child was on the way, Gauguin was beginning to send his paintings to exhibitions. Through a meeting with Camille Pissarro, he was drawn into the group of eccentrics known as the impressionists—Manet, Monet, Renoir and Pissarro himself.

A Great Criminal. When he turned his back on business and family to become a fulltime painter, he announced the decision with a typically self- scious flourish: "Oh, yes, I am a criminal. What does it matter! M angelo was too!" He exchanged stockbroker's black business suits fisherman's blue jersey and high b retreated to cultivate a new role— austere heretic," in Pissarro's w who "pontificated and was followe a train of young men."

Gauguin talked taller than he Actually, he was a little (5 ft. bantam of a man. But he walked Aven's streets with a nautical swa his great jut of a nose tilted in th looking like an evangelist pirate ca He spouted maxims: "A line is co since it can only be born from the tour of spaces," or "The ugly ca beautiful, the pretty, never." To wife, who was supporting the five dren at her family's home in Co hagen, he sent periodic sermons d ing his new position ("The differ between us is the difference betw the mediocre and the creative").

Gauguin's instinct for self-dram tion came alive most fully *after he* tled in Tahiti, where he painted some his most celebrated canvases, took a hitian mistress and fathered two dren. He saw himself as "a savage turning to savagery," and he was pl delighted by the effect of his de ture, as described to him in a l from Europe: "You are at the mo that extraordinary, legendary artist from the far Pacific, sends disconce inimitable works, the definitive wor a great man who has, so to speak appeared from the world."

But as his health became wors suffered from eczema, asthma and ilis) and the demand for his pain declined, Gauguin saw his withd in another light: he had "buried talent among the savages; no mor be heard of me; for many, it will s to be a crime." Despondent, he cli the slope of a mountain, swallow senic and waited to die. But his st failed him: he merely became i had to climb down again, "condo to live."

Hatred & Vengeance. It is P chot's belief that Gauguin's ob concern with how he appeared world sapped his powers after h treat to the South Seas (where he six years in Tahiti and the last 18 m of his life in the Marquesas). He w the last year writing *Before and A* a hysterical book of self-declared tred and vengeance" directed a his wife and the Danes. It was an last word for the "austere heretic

Gauguin died of a heart attac 1903 in his hut on the island of Hiv A sale of his possessions was held an "expert" had rummag through the watercolors and draw throwing most of them "on the ru heap—that is, their proper pl Among the surviving papers was a mentary note reading, "I am now and out, defeated by poverty." LOOMIS DEAN

LESLIE FIEDLER
Culture climbing—or dope?

Quick! Everybody Take Cover

WAITING FOR THE END *by Leslie Fiedler.* 256 pages. *Stein & Day.* $5.95.

Here comes Leslie Fiedler again, and as the U.S.'s angriest critic, he throws bombs. His biggest blockbuster so far was *Love and Death in the American Novel,* in which he declared among other things that the best U.S. fiction, from *Huckleberry Finn* to Hemingway and Faulkner, has shared a theme of repressed homosexuality. But in just four years the shock waves from that book have been absorbed: it already appears on required reading lists at U.S. universities. So now Fiedler returns to the attack.

▶ On the next generation: "Our youngsters at least begin the shift from a whisky culture to a dope culture."

▶ On Hemingway's suicide: "One quarry was left him only, the single beast worthy of him: himself. And he took his shotgun in hand, improbably renewing his lapsed allegiance to death and silence. With a single shot he redeemed his best work from his worst, his art from himself."

▶ On Kennedy and the arts: "John F. Kennedy as Louis XV seemed up to the moment of his assassination the true symbol of our cultural plight; not only our first sexually viable president in a century, after a depressing series of uncle, grandfather and grandmother figures, but the very embodiment of middlebrow culture climbing."

Death of the Novel. There is much more, in what will surely prove the most infuriatingly quotable book of the year. While some of it is cocktail-party rant, most is meant seriously. Fiedler, for 20 years professor of English and now chairman of the department at Montana State University, is convinced that fiction and poetry really matter, not just because they delight or possibly instruct the reader, but because they are the symptoms with which to psychoanalyze a civilization. And in his exhaustive survey of novelists from the '30s to the present day, Fiedler concludes that the novel is probably dying and society is very sick.

"Surely there has never been so large a cluster of egregious flops in the span of a couple of years," he declares in a sweeping judgment on the recent works of such eminent names as Katherine Anne Porter, Mary McCarthy, Bernard Malamud and James Baldwin. "There are various ways to declare the death of the novel: to mock it while seeming to emulate it, like Nabokov or John Barth . . . or to *explode* it, like William Burroughs, to leave only twisted fragments of experience and the miasma of death."

Hope from the Poets. The sickness Fiedler most fears in society he finds expressed in Burroughs and other hipster writers who are high on "hashish and yoga, heroin and zen" and drugs like mescaline that alter consciousness. "There is a weariness in the West," he writes, "a weariness with humanism itself which underlies all the movements of our world, a weariness with the striving to be men." And he sees these writers in love with that weariness saying in effect: "Let the focused consciousness blur into the cosmic night; let the hallucinatory monsters bred of fragmented consciousness prowl that night again; let the perilously sustained absurdity of the 'soul' be abandoned."

Only the poets give Fiedler a little hope and the reader some respite. In four effortless, brilliant final chapters, Fiedler charts the continuities of U.S. poetry over the past century, demonstrates how the poets of the past decade have brought the healthy "reappearance of Walt Whitman as a considerable force in our poetry, as well as the rejection of the objectivity and the metaphysical-*symboliste* tradition sponsored by T. S. Eliot." Ironically, some of these poets are the very beatniks whose novels most disturb him. Yet they have at least got poetry out of the classroom and "into the cafés: a kind of solution."

Rome on Wry

MORE ROMAN TALES *by Alberto Moravia.* 254 pages. *Farrar, Straus.* $4.75.

The slight, polished pieces in this latest assembly of Alberto Moravia's fiction illustrate one of publishing's awkward truths—that while there is a good deal to say for the short story, the short-story collection is a bestiary that should not be. Not that the stories are bad, but that they resemble each other like so many peach-pit monkeys.

Moravia's pattern is distinctive but invariable: a Roman lowlife, male, gives a fourth-drink, first-person account of some minor downfall, failing to see its subtleties and thereby allowing the reader a faint, wry smile. The only thing wrong with the formula is that it does not require much space, and the reader is given only four or five pages between wry smiles. If the book is used as a table literature, even the weariest zen cannot achieve unconscio without meeting, say, the indignant of Federico the upright thief, the teen-ager who lives to dance, an impassioned auto-accessories who smashes his car for love. reader is the least bit wakeful, he on to meet Consolina, the servan who admires blond men and Clar fortuneteller's fickle daughter. face begins to ache from all the smiling, and insomnia sets in.

The flaw, clearly, is not in the uct but the packaging. There sho a way to enjoy Moravia's stories at a time. Until some publisher better idea, why not bind small quets of them, like cinema shor jects, into the first pages of the 500-page novel about Rome?

Higher production for all 3 types of compaction—here's why

Your compaction investment works harder for you with the Hyster C500A pneumatic compacter. Advanced Hyster design features give you top performance in embankment, base course and asphalt surfacing.

4-inch true vertical plane oscillation assures equal tire loading on all 9 wheels at all times. Result: uniform compaction and higher densities—"bridging" and tire scuff are eliminated.

"On-the-go" dashboard control of tire pressure* permits operator to quickly change tire pressure while rolling for most efficient compaction at any stage of asphalt, base or embankment construction. Result: faster, more uniform compaction.

Exclusive center-point steering maintains tire overlap for better coverage on curves—reduces the number of passes needed for required densities. High maneuverability with 9-foot inside turning radius—identical steering, either direction.

Exclusive all gear drive sealed in oil for long trouble-free operation.

3 limited slip differentials provide maximum traction with all four drive wheels under all ground conditions.

Call your Hyster dealer for full details.

Hyster is a registered trademark of Hyster Company.

Rolex watches

ou know their names as you know our own. You know their faces om a thousand newspaper and agazine articles. You have seen em and heard their voices on ewsreels and on your television reen. Their actions and decisions fluence the pattern of our lives.

e cannot mention their names, show pictures of them. It would t be fitting to do so, for they clude royalty, the heads of states, eat service commanders. But we vite you to look carefully at the xt pictures that you see of them, their wrists as well as their faces d clothes. You will notice that almost every case they wear a ist-watch. That watch will ost likely have been made by olex of Geneva.

e are proud of the service given Rolex watches to so many inent men throughout the rld. It is scarcely necessary to int out that the performance of se watches is, in the highest gree, accurate and dependable.

ROLEX

landmark in the history of Time measurement

JORGE AMADO
A moral and a dream.

himself a license as ship's captain, though he has never set foot on an oceangoing deck. At 60 he "retires" to the seaside resort of Periperi, with silver hair, splendiferous uniforms, and an inexhaustible fund of nautical whoppers ranging from heroic shipwreck to Arab dancers of more than Oriental splendor in bed. One fine day Vasco is asked to take command of a real ship. Unrattled, the sofa salt mounts the bridge, delegates all authority to the chief mate—until a moment arrives when he cannot escape command. But the very elements conspire to make him a hero and to prove a moral of sorts about the nature of man's dreams.

THE BELLS OF BICÊTRE *by Georges Simenon.* 240 pages. *Harcourt, Brace & World.* $4.95.

Best known for murder mysteries, Author Simenon here goes straight, trading in his Inspector Maigret for a new hero, Publisher René Maugras—and the similarity of names is the tip-off to the author's basically unchanging fascination with death and the tangles of men's motives. The death in question is Maugras' own, narrowly missed when he suffers a serious stroke: as the novel opens, he is coming to for the first time, unable to speak or move. Step by difficult step, he recovers; in the months of enforced idleness he ponders his career and his friends, his business associates and his alcoholic wife. As he ponders, he understands. Or does he? At novel's end he resumes control of his publishing empire, with one arm paralyzed but otherwise strangely unchanged. The book is skillful, meticulous, fascinating—but did Simenon really get his man?

TOMORROW WILL BE MONDAY *by Katinka Loeser.* 215 pages. *Atheneum.* $4.50.

Thirteen short stories set in suburbia, in which the wife of Comic Novelist Peter De Vries lays sobering claim to the

YVES DEBRAINE

GEORGES SIMENON
A fixation on death.

MARTHA HOLMES

KATINKA LOESER
Death stalks the good life.

terrain of the heart where the knowledge of death stalks the good life. Several grandmothers are dying—two at home, one at last shunted off to a convalescent home. A middle-aged mother dies in an auto accident. A ten-year-old girl is about to die of leukemia. Two family cats are killed and mourned. Grim fare, tearjerkers even, but told with a sensitivity which at its best reaches beyond style to become something close to a stoic philosophy of life. The author knows and can sometimes convey some odd, obvious but ageless facts of death: there are no new ways of facing it; grief is less an emotion than a physical presence; the conspiracy of the living to forget death is called life, and that goes on.

A PLACE OF STONE *by Jim Hunter.* 244 pages. *Pantheon.* $3.95.

An otherwise sound British critic has predicted that Jim Hunter, 24, "may well prove to be one of the great contemporary writers." Talent aside, the prediction is a plain impossibility: though Hunter has published three novels in the last four years, he is clearly not contemporary. His characters, spouting great gobbets of *Weltschmerz* in the grand Victorian manner, stride moors and seashores that are the welfare-state descendants of scenery loved by Hardy and the Brontës. Principal characters are an English painter, his wife, their two grown children, frozen in various attitudes of love, hate and sheer disdain—until the wife develops cancer. The book then examines the shifting feelings of the three members of the family as they watch the fourth member die. There is room for tragedy in such a theme, but in Hunter's hands, death itself can seem mannered and quaint.

YOU MEET THE NICEST PEOPLE ON A HONDA

Maybe it's the incredibly low price.

Or the fact it doesn't gulp gas. Just sips it—90 kilometers to the liter.

Or the way the masterful 4-stroke 50cc OHV motor carries you along at 65 km/h without a murmur. More like gliding than riding.

Or it could be the ease of 3-speed transmission, automatic clutch, and the extra safety of Honda's dual cam-type brakes on both wheels. The optional push-button starter makes you feel right at home, too.

But most likely it's the fun. Evidently nothing catches on like the fun of owning a Honda. You see so many around these days. And the nicest people riding them. Why don't you join in?

TIME LISTINGS

TELEVISION

Wednesday, May 20

SUSPENSE (CBS, 8:30-9 p.m.).* Gary Merrill as a Florida game warden tracks down and captures two murderers with his bare hands—and nature lore.

Thursday, May 21

BIG BROTHER IS LISTENING (ABC, 10:30-11 p.m.). A special on the invasion of privacy an ordinary citizen may be subjected to, with commentary by Supreme Court Justice William O. Douglas, Writer Vance Packard (*The Naked Society*) and others.

Friday, May 22

THE GREAT DIVIDE: CIVIL RIGHTS AND THE BILL (ABC, 7:30-8:30 p.m.). A special featuring interviews with Bobby Kennedy, Alabama Governor George C. Wallace, Senators Kuchel, Stennis and Dirksen, representatives of the N.A.A.C.P., CORE, the National Urban League, etc.

Saturday, May 23

ABC's WIDE WORLD OF SPORTS (ABC, 5-6:30 p.m.). The Grand Prix of Monaco with Prince Rainier and Princess Grace handing out awards, plus National Lumberjack championships from Wisconsin.

Sunday, May 24

DIRECTIONS '64 (ABC, 2-2:30 p.m.). A comedy in which six actors play 26 different roles.

SUNDAY (NBC, 4:30-5:30 p.m.). A special program devoted entirely to the remodeled and about-to-reopen Museum of Modern Art, narrated by Aline Saarinen and featuring films of interviews with Marc Chagall, Alexander Calder, Henry Moore, Joan Miró, Alberto Giacometti and Stuart Davis in their homes or studios.

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). Eyewitness reports on the battle for the Anzio beachhead in World War II. Repeat.

Monday, May 25

HOLLYWOOD AND THE STARS (NBC, 9:30-10 p.m.). Films and stars of the '30s.

EMMY AWARDS (NBC, 10-11 p.m.). E. G. Marshall will host the New York segments, broadcast live from the World's Fair; Joey Bishop will hold up the Hollywood end, from the Palladium.

THEATER

On Broadway

HAMLET. Although Richard Burton as Hamlet and Hume Cronyn as Polonius burnish all the richness of language, wit and humor of the play, this revival, and specifically Burton's Hamlet, lacks the burning passion, the mind-tossed anguish, the self-divided will that Hamlet must have to be a true prince of tragedy.

HIGH SPIRITS. As a spirit brought back to haunt her husband by means of a slapstick séance conducted by mad Bea Lillie, impish Tammy Grimes is about as ghostly grey as a rainbow.

FUNNY GIRL shines in the refracted light of the most brilliant new star to rise over Broadway in years, Barbra Streisand.

ANY WEDNESDAY. Without even the help of her closetful of balloons, Sandy Dennis ascends from playmate to helpmate in two acts.

DYLAN. Alec Guinness probes the special hell in which Dylan Thomas found himself. His performance is moody, taut with rage and sometimes bright with humor.

HELLO, DOLLY! Part of this musical's nostalgic appeal lies in its evocative Oliver Smith backdrops of little old New York, part lies in its hissable boss-villain (David Burns) whom Dolly finds kissable. Most of it lies in the skirt-swishing charm of Carol Channing as Dolly.

BAREFOOT IN THE PARK. Playwright Neil Simon's deft quips punctuate this early-marital farce with enough humor to spare for a zany subplot involving a mother-in-law and a continental charmer (he thinks).

Off Broadway

DUTCHMAN, by LeRoi Jones. In a New York subway car, a white girl who is a twitchy, neurotic bundle of well-informed clichés and sterile sexual aggressions, lures, taunts, degrades and destroys a Negro in a Brooks Brothers shirt, but not before he tells her, with profane and explicit brutality, how much Negroes hate whites. Though his one-acter repeats the pattern of Albee's *The Zoo Story*, Jones captures the contemporary mood of violence with raw and nerve-tingling fury.

THE BLOOD KNOT. Two half-brothers, one light and one dark, act out in miniature the torment of being a racial outcast in present-day South Africa. Playwright Atholl Fugard writes with a tenderness, poignance and understanding that crosses all color lines.

THE TROJAN WOMEN, winner of a special citation from the New York Drama Critics' Circle, is a powerful, tormenting image of humans bearing the unbearable.

RECORDS

Jazz

DIZZY GILLESPIE & THE DOUBLE SIX OF PARIS (Philips) soar from high spot to high spot, from *Oo-Shoo-Be-Doo-Be* to *Ow*. Dizzy does blithe acrobatics with his trumpet, then stands aside for the legendary expatriates Bud Powell and Kenny Clark to shine briefly on piano and drums. In the meanwhile, the Double Six, a sextet of jazz singers, chime in like an instrumental combo, and Mimi Perrin, who has an extraordinarily agile voice, even takes on a couple of solos meant for Charlie Parker's horn.

GEORGE RUSSELL SEXTET: THE OUTER VIEW (Riverside). These six do surgery on only five songs and have *You Are My Sunshine* stretched out on the operating table for twelve minutes. The theme, of course, is only a starter for Don Ellis' questing trumpet, Paul Plummer's poetic tenor sax and Composer-Arranger Russell's contemplative piano. They cut the melody into ribbons that swirl together in unlikely harmonies, but there is a cool logic and distant beauty all the same.

THELONIOUS MONK: BIG BAND AND QUARTET IN CONCERT (Columbia). Seven of the pieces Thelonious played at his Philharmonic Hall debut last winter (TIME cover, Feb. 28). The band arrangements by Composer Hall Overton add more than variety; they provide a new and striking dimension for Monk's high-styled melodies. Monk and his men—particularly Phil Woods on alto sax and Charlie Rouse on tenor—rose to the challenge of the big audience and played to make memo... The recording catches the excitement...

and motives, set down without sentimentality or bravura.

WAITING FOR THE END, by Leslie Fiedler. In one of the most infuriatingly quotable books of the year, the angry professor finds signs of the apocalypse in homosexuality, pseudo-Zen, youth cults, U.S. Presidents, and most of all in current fiction. The only glimmer of hope Fiedler can find is the excellent state of U.S. poetry; he might have added criticism, of which he is one of the brightest younger lights.

OLD ACQUAINTANCE, by David Stacton. A light, worldly novel that tells of old friendship and young love on the Riviera, as it might have been told by Bemelmans with added monologues by Oscar Wilde.

A MOVEABLE FEAST, by Ernest Hemingway. Looking back 30 years later at Paris and himself on the threshold of fame, Hemingway re-explored—and perhaps reinvented—his friendships with established writers (Pound, Stein, Ford, Joyce), particularly his ambiguous relation to the already successful young Scott Fitzgerald.

PEDRO MARTINEZ, by Oscar Lewis. Anthropologist Lewis follows his brilliant tape-recorded pastiche, *The Children of Sanchez*, with the story of an old Mexican peasant whose passion and native eloquence were spent on aborted uprisings and hopeless land-reform politics.

THE SPIRE, by William Golding. In this medieval parable a saintly, obsessed canon orders a huge stone spire to be built atop his fragile cathedral, only to realize at last that his monument was not to God's glory.

KEEPERS OF THE HOUSE, by Shirley Ann Grau. Though miscegenation is the theme of this deceptively artless novel, it has no pejorative connotations for a large Louisiana clan until the heroine's racist husband makes a violent entry into politics.

EPISODE—REPORT ON THE ACCIDENT INSIDE MY SKULL, by Eric Hodgins. The author of *Mr. Blandings Builds His Dream House* tells what it was like to rebuild his life after a "cerebrovascular accident" (in layman's terms, a stroke) left him paralyzed four years ago. Hodgins wrote this book with ballpoint pens (he can no longer use a typewriter), but it has Mr. Blandings' old wit and wordcraft.

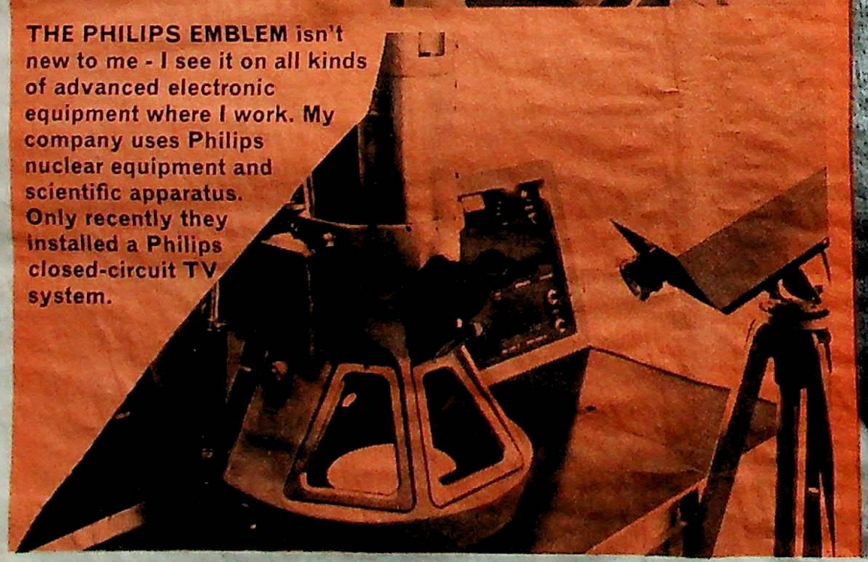
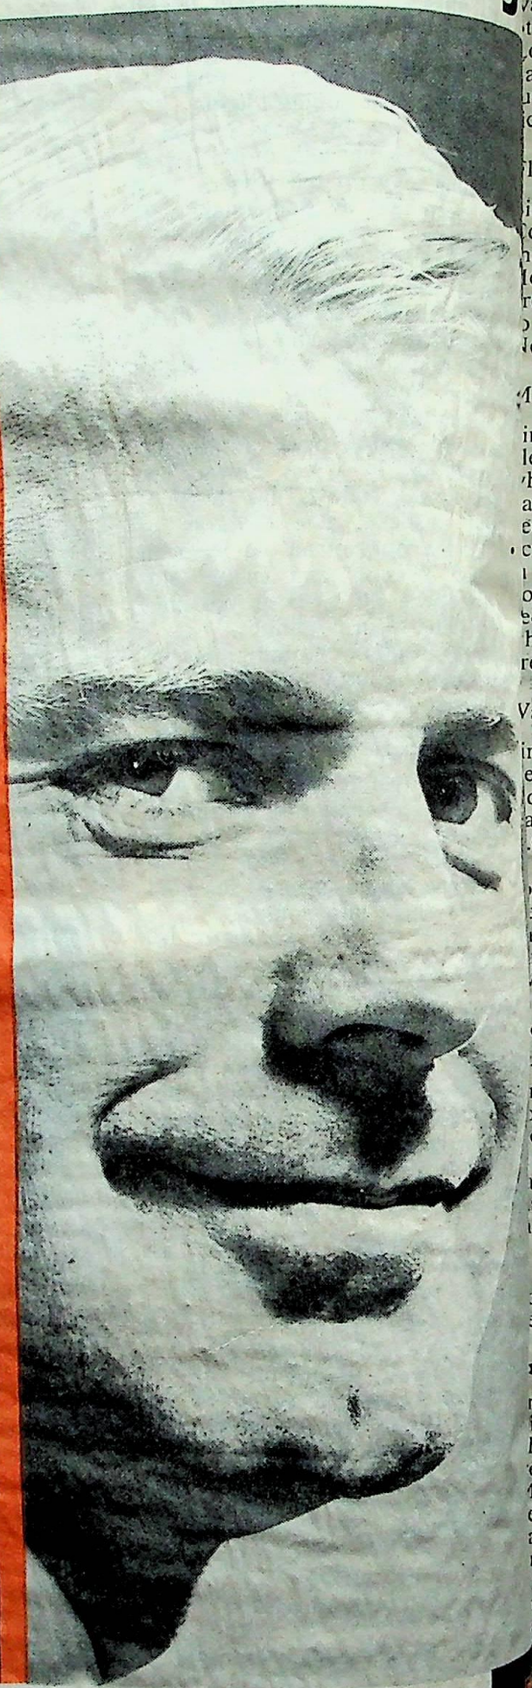
For me the name spells Quality

MY WIFE GAVE ME A PHILISHAVE last Christmas (lucky me!). I'd heard it was a good shaver - now I know from personal experience that it's excellent: efficient, reliable, really good value.

TO RETURN THE FAVOUR, I decided to give her a surprise with a Philips lightweight iron. Was she delighted! Says ironing takes her less time. Lot less effort too. Result: less strain, less drudgery on ironing day.



THE PHILIPS EMBLEM isn't new to me - I see it on all kinds of advanced electronic equipment where I work. My company uses Philips nuclear equipment and scientific apparatus. Only recently they installed a Philips closed-circuit TV system.



trust in PHILIPS is world-wide

With nearly 250,000 employees, Philips is one of the world's leading electronic industries. There are national organizations in 55, agents in 115 markets

LIGHT, SOUND, RADIO, TELEVISION, DOMESTIC APPLIANCES, GRAMOPHONE RECORDS, TELECOMMUNICATIONS, CHE
AND PHARMACEUTICAL PRODUCTS, MEDICAL, INDUSTRIAL AND SCIENTIFIC APPARATUS AND ELECTRONIC COMPON

LETTERS

"The Man Who . . ."

ir: The Republican hope lies in Gold-vater as a candidate offering something ther than an echo. Many misguided Lodge supporters should recall his lacka-laisical performance in 1960, when, with ust a little more effort, the Republican icket would have been elected.

LEO TOCH

Flushing, N.Y.

ir: The delegates to the Republican Convention would do well to remember hat those of us writing the name of Henry Cabot Lodge on primary ballots re the same people who will be asked o vote for a Republican President in November.

MRS. E. F. STOCKMANN

Malvern, Pa.

ir: While Mr. Goldwater has been leading for a prehistoric party platform, while Mr. Rockefeller has been playing artisan politics, while Mr. Nixon has een pushing Pepsi-Cola, and while Mr. cranton has been patiently standing pat Pennsylvania, Lodge has been busy oing the job that must be done. He has een practicing Americanism in Saigon hile others have been content merely to reach it in the suburbs.

JOHN R. ROBERTS JR.

Washington, D.C.

ir: The Republican Party delegates may ell indulge themselves by nominating oldwater. However, may they be fore-arned that in November, when the .O.P. goes down to defeat with 25% less of the popular vote, history will ote the ironic course of a political party, entified initially with the abolition of avery, disappearing because a current ader denies the importance of national vil rights legislation.

HENRY G. MAGENDANTZ, M.D.

eveland

: You have stated that the Republi-n mock convention held at Brooklyn ollege nominated Barry Goldwater. As delegate to the convention I would like inform you that, though Senator Gold-ter led in the first-ballot strength, Am-ssador Lodge clinched the nomination the second ballot.

JEFFREY DOUGLAS FRIEDLANDER
Executive Secretary
oung Republican Club of Hunter College
ew York City

ally, Don't Dally

r: The time has come (the Walrus id) for TIME to realize that there are her schools in Massachusetts besides the estige schools. In your People Section May 15], you stated that Harvard was e first to riot. We regret to inform you at you have been misled. There was riot staged a week before the Sycamore tburst. This was called by some the orst riot that the state of Massachusetts s ever witnessed. The boys from Bab-n rallied; Harvard dallied.

SUSAN AUER
CONSTANCE HESS
PATRICIA PROUTY
he Manor Junior College
ellesley, Mass.

X-Free Religion

: I find myself in complete agreement h Atheist Madalyn Murray [May 15]. Organized religion is probably the greatest con game ever perpetrated upon the human race. Churches and synagogues will some day be regarded as monuments to the ignorance and fears of those who attended.

JOHN J. SODOFSKY

Woburn, Mass.

Sir: America is God's country. If Mrs. Murray doesn't like it, why doesn't she get the hell out of it? But who would have her? Only a God-loving country like ours that gives her kind of people liberty.

DONNA PANGRLE

Glen Ellyn, Ill.

Sir: Although it is obviously not her intention, Mrs. Murray has already done more for the cause of God, the Christian church and religion in America than the combined efforts of all churchmen since she declared war on religion.

Religion is often served best by those who imagine themselves to be in opposition to God when in reality they are being used by the very God they reject as instruments of purification and restoration.

(THE REV.) DON CREAGER
Trinity Reformed Church
Mercersburg, Pa.

Sir: The courageous and valiant attorney in your picture with the Murray family is Leonard Kerpelman of Baltimore. He is an orthodox and conservative member of the Jewish community who is devoted to the concept of separation of church and state—as any American should be.

MADALYN MURRAY

Baltimore

The Governor's General

Sir: May I join you in your tribute to an outstanding soldier and great American, Lieut. General William C. Westmoreland [May 8]. Having served for more than two years as "Westy's" executive officer with the 34th Field Artillery, 9th Infantry Division, both at Fort Bragg and in North Africa and Sicily, I can testify to the fact that he is a leader who brings to our Viet Nam campaign soldiering that inspires the men who serve with him, and a wisdom in war which in my opinion is unsurpassed. In World War II, his officers and men called him "Superman." It was a title that he earned by his deeds and capacity for deeds.

OTTO KERNER
Governor of Illinois

Springfield

Samaritan Shortage

Sir: Your analysis of the situations involving Kitty Genovese and Olga Romero [May 15] may be quite accurate—that we have lost the sense of community (and all that this implies in terms of courtesy, thoughtfulness and responsibility) in the bigness and bureaucracy of big-city life. But I can't help wondering if the missing ingredient in both cases was leadership. Certainly, in the rape case, if only one leader-type had been present in the crowd that gathered, he or she should have been able to galvanize some of the bystanders into action.

ANNE M. FALLON

New York City

Sir: Where in the hell are the good Samaritans who are supposed to inhabit our good land? Our people seem to have adopted an Oriental attitude when it comes to aiding their fellow man. This viewpoint is well known to men who served in the Orient and watched victims of accidents dying in the streets because an assister could become financially involved. It is time for the whole American public to get indignant about the criminal element that even invades our homes. Otherwise, we will end as a country without guts or Samaritans.

JACK A. MILLER

Cherry Point, N.C.

Loyal Subjects

Sir: Though your story [May 8] may be correct as regards the facts, you distort the picture of our Queen by all kinds of epithets to her discredit, even raking up old, unrelated stories. But you overlook or do not cope with her greatness of heart, with which she has endeared herself to her subjects, particularly to the maimed and unhappy.

E. POSTHUMUS

Epe, The Netherlands

Fräulein Furor

Sir: We are glad that we have at least a *Fräuleinwunder* [May 8]. Let's be hopeful that a *Männerwunder* will occur too. Damn, if only there wasn't our beer.

DR. HANS SCHNEIDER

Tübingen, West Germany

Sir: Last summer I was fortunate enough to be in West Germany. I found myself constantly distracted by the *Fräuleinwunder*. Since returning, I have been accused of "seeing things" or losing my perspective. Needless to say, I was glad to see your article.

JOHN MILLER

Gambier, Ohio

DO YOU JUDGE ENGINES ON STRENGTH OR HP RATING?

BUY STRENGTH—as built into the rugged 7.25-hp cast iron Wisconsin—and you can't go *wrong*. The vital parts (shown) are as strong as those used in a big crawler-tractor engine. They are micro-finished for top efficiency, to minimize wear and upkeep in severe year-around applications.

The precision-built S-7D springs to full power like a cat, and maintains close-governed speeds under changing loads. Rugged load-lugging power at slow speeds enables it to breeze through the toughest jobs without stalling. Its *Stellite* exhaust valve and insert plus valve rotator last up to five times longer than ordinary valves.

These and other *heavy*-duty features make the S-7D the most rugged 7.25-hp engine made. Specify it for your power equipment. Use the handy coupon to get Bulletin S-300.

Sir: Your photos of half-dressed, obscene women merely demonstrate the compromise and downright degradation of your magazine. You are willing to satisfy the common thirst for lust.

(MRS.) LAURIE FLINT

Los Angeles

Sir: Let me call your attention to what Madame de Staël said of German women 150 years ago: "German women have a charm all their own—a touching voice, fair hair, a dazzling complexion. They seek to please by their sensibility and to interest by their imagination. They are not frank, yet neither are they false. Even when it occurs to them to be gay, they still maintain a tinge of that sentimentality that is so honored in their country."

MORROE BERGER
Professor of Sociology

Princeton University
Princeton, N.J.

Sir: You do not seem to be aware of the fact that the days of the *Anschluss* ended with World War II, since you refer to Romy Schneider, Nadja Tiller and Senta Berger as "talented Teutons." The three attractive movie stars were all born in Austria and still carry Austrian passports.

KURT HAMPE
Director

Austrian Information Service
New York City

Relevant Methodists

Sir: It is not often that the so-called "secular" press is able to capture the mood and condition of a church body with the accuracy and feeling with which your writer handled the story on the Methodists [May 8]. It is honest, penetrating, accurate, and will stand as a real *challenge* to us all.

(THE REV.) ROBERT QUICK
Waynesville Methodist Church
Waynesville, Ohio

Sir: From this side of the world, the Methodist compromise on the race issue in the U.S. sounds like "a noisy gong or a clanging cymbal." The ecclesiastical machine has been oiled for another four years, but the church has missed its chance to advance the Kingdom of God significantly.

GERALD H. ANDERSON
Union Theological Seminary
Manila, Philippines

Sir: The Methodist pastor who said, "Try and fill posts of leadership in any church with nondrinkers and still get capable people, you just can't do it," must be unaware of the leaders of the Mormon Church throughout the world!

WILLIS T. EICKE

San Mateo, Calif.

Sir: With fidelity, your splendid panorama of Methodism shows us as we are: a yeasty combination of progressive and conservative, crusader and compromiser, pietist and reformer, critical and complacent, ecumenist and sectarian, liturgist and free-wheeler, yet one in our desire to be relevant and redemptive.

ALBERT EDWARD DAY
Founder
The Disciplined Order of Christ
Falls Church, Va.

Sir: I love our church, and your article made me prouder than ever! You did a good job of explaining our flaws and weaknesses; and I would be willing to bet that every Methodist familiar with the inner workings of the church laughed head off, just as I did, when he "It spends endless hours tinkering w ecclesiastical machinery." How very that is, and while it sometimes make want to give up Methodism, it is the thing that makes us willing to strive John Wesley's (and Jacobus Arm Christian perfection.

MRS. K. S. PETERS

Doraville, Ga.

Rooting for Scrappers

Sir: As a loyal Celtics rooter for past 16 years, I resent your implicati "dirty" play as a method of Celtics and a reason for their victory [May remind you that pro basketball is non-contact sport. The Celtics hustle scrapped like true champions and re to let down despite the fact that they overwhelming favorites. The Celtics supreme again, as they are the best in every respect.

MICHAEL L. ALTM

Framingham, Mass.

Ear for Sessions

Sir: Although "most audiences" rarely seem eager to hear the wor Roger Sessions performed [May 8], contrary was true in Aspen, Colo. summer. Sessions, a composer dence for the famed Aspen Music F val, conducted his music in concer several occasions and received a warm and enthusiastic reception. Pe your poignant article may supply color to his "pallid acclaim" for listeners.

CAROL ANN JACOBS

Aspen Institute for Humanistic Studi
Aspen, Colo.

Yo-Ho-Ho—Oops!

Sir: As a former passenger aboard Burke's windjammer, the *Polynesia*, fascinated by your article about cruises [May 15]. However, the mas cruise I took on board the *Po* was more dramatic and stranger fiction.

It wasn't "a passenger who we serk and jumped over the rail" captain of the accompanying *Cutty Sark*, who went overboard dead of night and was never hea again! In the excitement, the eng on a spear gun, which could not tracted from his knee, so he was in a helicopter to a hospital in After that, the 21-year-old first tomatically became captain, and the crew promptly quit because Captain Bligh attitude.

MARY ANN McG

Beverly Hills, Calif.

Basic Issue

Sir: The battle in the Magnolia District [May 8] was a basic issue whether the teachers (public serv the board of trustees (the elected sentatives of the people) control district. All other issues were rea ondary. However, I stated that *and* Unitarians filed a protest aga distribution of monthly patriotic m that I sent home to the children. not, as you quote me, describe any an "atheistic Unitarian." I did not to teach religion—I only attemp show the effect of religion upon t tributions of our American heritage.

A letter from the PUBLISHER

Bernhard M. Auer

"It goes without saying that a lot can happen in the two months before the Republican Convention."
—TIME, May 8

Covering Nelson Rockefeller from handshake to handshake in Oregon last week, Correspondent Nick Thimmesch realized that quite a lot was happening. Nick has been following Rockefeller ever since the New York Governor set out on the campaign for the 1964 Presidential nomination, and he knows how the candidate performs and what reaction follows.* And so, at midweek, he cast a sidewise glance at the polls that unanimously predicted a victory for Henry Cabot Lodge, and sent the editors in New York a wire: "There is a strong flow toward Battling Nelson."

Soon after the Oregon result was clear, the editors decided to postpone the nonpolitical cover that was coming off the press and switch to Nelson Rockefeller. Working largely from the reporting of Thimmesch and San Francisco Correspondent Roger Stone, who covered the general side of the Oregon campaign, Writers David Lee and Ronald Kriss put together the cover story for Senior Editor Champ Clark. In the process, all of them found renewed confidence in an old principle: political polls may stir up a lot of publicity, but they are no substitute for knowing, thinking journalists.

•

Correspondent George de Carvalho is beginning to rank as an expert on exotic rivers. Five years ago, as our Rio de Janeiro bureau chief, he suggested and did the reporting for the color story on the Amazon (Nov. 23, 1959). Not long after he became Beirut bureau chief in 1962, he began to visualize color pages of the Nile. Last summer he sold his idea to the editors; the results, thousands of miles, words and transparencies later, are the eight pages of color pictures and a timely story.

From the correspondent's suggestion to the printed pages, the project came under the major care of two senior editors (Henry Grunwald and Cranston Jones), two associate editors (Peter Bird Martin and Charles P. Jackson), two contributing editors (Robert Jones and Arnold Drapkin), two editorial researchers (Deborah Hall and Rosemary Frank), one map maker (Robert Chapin) and one photographer—Laurence Lowry. While all those idea-and-word people had their moments, Photographer Lowry probably had the most excitement.

He found the Egyptians leary about letting him take aerial photographs of bridges, and the Russian technicians at the Aswan dam unwilling to speak to him. But he made his way through the Red tape, and won the cooperation of the Arabs. He took the opening picture in the color pages—a view of the Aswan cofferdam—with an F-8 Fairchild camera from a DC-3 owned by a United Arab Republic airline. With the door removed from the plane, Lowry stood in the open, a rope lashed around his waist and anchored to the tie-down rings. He took the picture on the last color page—a gold and green view of Giza—from a helicopter flown by a U.A.R. Air Force crew, firing away with his F-8 from a sitting position in the doorway with his feet on the landing gear. This was more or less routine for Lowry, an expert in aerial photography, but he felt a bit queasy when he was shooting the interior of one of the dam tunnels. "Things kept falling from the ceiling," he said. "I think the workmen there are either very courageous or very fatalistic."

* By now he is so familiar with Rockefeller's speeches that he uses a simple set of abbreviations to note the subjects covered: FUNVAL—fundamental values; MOAT—mainstream of American thought; FISTEG—fiscal integrity; GOVECLOP—government closest to the people; EQUOP—equal opportunity; BOMFOG—brotherhood of man under Fatherhood of God.

THE U.S.

REPUBLICANS

Lessons from the Lone Ranger

(See Cover)

Battling Nelson did it! Battered, bloodied, beaten, taunted, hooted and laughed at during bitter, frustrating months, Republican Nelson Rockefeller never gave up, never stopped swinging. And last week he flattened five rivals in Oregon's presidential primary. The count: Rockefeller 92,142, Henry Cabot Lodge Jr. 77,334, Barry Goldwater 49,197, Richard Nixon 47,078, Margaret Chase Smith 8,142, William Scranton 4,456.

Rocky's smashing upset may not appreciably have changed his chances for this year's Republican nomination. By any reasonable rating, he would still stand behind Goldwater, Nixon, and perhaps Scranton.

But his Oregon triumph was far from meaningless. It gave him increased momentum in his desperate effort to overhaul his only opponent, Goldwater, in California's June 2 primary. It showed once again that if the Republicans nominate Goldwater they will be picking a proven poor vote getter. It all but stayed Lodge. The big argument in Lodge's favor was that he was unbeatable with rank-and-file Republicans. Well, he wasn't, not by a long shot. Rockefeller's win also fractured the notion that Nixon can get the nomination simply by making a few phone calls.

The Reason Why. Less specifically, but perhaps more importantly, Rockefeller's victory infused drama and excitement into what had become a dull, dreary Republican race. It showed that there is still plenty of life in the Grand Old Party. To those Republicans who think there is no chance of beating Democrat Lyndon Johnson this year, Rocky demonstrated that "where there's life, there's hope" is more an axiom than maxim. Above all, Rockefeller's Oregon win increased what has been called the "scatteration" of strength in the Republican presidential picture. And in so doing, it greatly increased the possibility that the so-called Republican kingmakers—the amalgam of corporation executives, party professionals and publishers—who have so far been mere spectators at ringside, may yet find it necessary to get in and referee the bout.

Oregon's outcome was obvious from the moment the first votes were counted. Just three minutes after the polls closed, NBC-TV declared Rocky the winner. From there on, it was mostly a matter of pollsters and pundits trying to figure out how they had gone so wrong. One commentator, referring to the supposed political effects of Rocky's divorce and remarriage, lamely concluded that the results might be related to the fact that Oregon's divorce rate is among the highest in the nation.

But there was little excuse for such devious reasoning. For once, a political post-mortem could produce a clear, simple explanation. The reason Rocky won was that of the six contestants in Oregon he alone was *there*—working, fighting, pleading his case, and showing Oregon that he really cared about the state, its primary and its 18 delegates. And where were the other Republican runners?

Where They Were. Henry Cabot Lodge, the odds-on favorite in Oregon, was still in Saigon, presiding over U.S. efforts to win the war there, consulting with visiting Defense Secretary Robert McNamara and General Maxwell Taylor, taking time for a dip in the pool at the Saigon Sports Club, and staying as silent as any Buddhist idol about his political plans.

Pennsylvania's Scranton was making a series of speeches in the East and tending the shop in Harrisburg, still insisting that he will not become a presidential candidate except in answer to a sincere draft. But just in case anyone doubted that he had the stamina and agility it takes, he said he'd been taking the R.C.A.F. conditioning exercises, and demonstrated some high-level nip-ups for a photographer. At week's end he was off to New York with his family for a tour of the World's Fair.

Nixon was in New York, watching and waiting. In last week's Nebraska primary, where Goldwater's name was the only one on the ballot, Nixon polled a tidy 31.4% write-in vote. Nixon boosters got a psychological lift out of that, but Goldwater drew 49.5% of the vote and five of the six state delegates elected. Later, Nixon called his campaign forces in Oregon to find out how things were going, then took off on a weekend vacation.

Goldwater had himself a bigger week—but it wasn't in Oregon. Barnum & Bailey had just closed out of Manhattan's Madison Square Garden when Barry moved in. A brass band blared away, multicolored balloons cascaded down from the rafters, and 100 "Goldwater Girls" pranced along the aisles, handing

Just in case anyone doubted he had it.

out literature to 18,000 partisans as they filed to their seats. When Barry appeared in the glare of spotlights, looking tanned and rested after a four-day golfing holiday in West Virginia, the roof went up. During his 45-minute speech, his fans interrupted him no fewer than 104 times to whistle, stomp and cheer. What Goldwater gave them was standard stuff, but he delivered it with more verve and polish than usual.

He warned that the Democratic Administration was hell-bent on turning the individual states into "50 pigeonholes in a new Washington bureau," promised to work for a balanced budget instead of "digging us deeper into the red," poked fun at Defense Secretary McNamara's frequent inspection trips to South Viet Nam (five so far) by calling him "Yo-Yo McNamara." On civil rights, Goldwater compared the Democratic Administration to "a cheerleader for a frightful game of violence, destruction and disobedience," drew enthusiastic applause when he cried: "You can't pass a law that will make me like you or you like me. This is a problem of the heart and the mind, not the problem of the lawyer, the problem of the Senator, the Congressman or the President." All but unnoticed amid the cheering was the fact that Goldwater offered no solution at all to the U.S.'s civil rights dilemma and apparently had no substantive ideas on the subject.

Next night Goldwater appeared on a half-hour, nationwide taped television program. Seeking to project the image of a responsible, reasonable candidate, he repeated his oft-heard plea to Washington to "mind its own business while we, as individuals, get on with minding our jobs and our businesses." At week's end Barry flew off to California for a round of rallies, including a $10-a-head "Cruise with Goldwater" to Catalina Island, 24 miles from Los Angeles.

Sounding the Theme. That left Rocky in Oregon, the only candidate to set foot inside the state since Goldwater scratched it from his list five weeks ago because he figured he couldn't win. Thundering into the state for a final dervish week, Rocky in four days visited nine cities, made 24 speeches, whirled from airport receptions to luncheons to impromptu speeches on rain-swept sidewalks. Constantly Rocky improvised on his slogan: "The only man who cared enough to come to Oregon."

After grueling days of campaigning the week before, Rocky flew home to spend a fleeting weekend with Wife Happy, who is expecting their first child in a matter of days. But barely 37 hours later, he clambered back aboard his private F-27 prop jet, crawled wearily into an improvised bed as the plane swept westward. At 7:25 a.m. the Fairchild touched down at an airport near Portland. A rejuvenated Rocky emerged, smiling and waving to a crowd of 100 as a band tootled *The Sprinter* and *The Warrior*.

Minutes later Rocky was on the road, his infectious grin spreading from ear to ear. His big right hand, callused as a ditchdigger's from a million or more handshakes, reached here, there and everywhere to pump outstretched Oregonian paws. Rockefeller's big backslap and his hearty "What a thrill" greeting may have worn out their appeal to some New Yorkers, but they were a fresh political commodity in Oregon.

Rocky took up his familiar stance, thumped away at the Johnson Administration, denounced Goldwater's views and the "radicals" who would follow him. And everywhere he reminded his listeners of the contenders who had stayed away. Speaking in front of the faded Masonic Lodge Building in Hillsboro, he took his cue from a microphone that suddenly squealed. "That," cracked Rocky with never a blink, "is more than we hear from the other candidates in this primary." Chatting with voters in a Volkswagen showroom in Beaverton, he said: "There are six of us in this race. Some are just more visible than others."

Mirage or Oasis? The approach helped win the support of a clutch of Oregon's daily newspapers. The powerful Portland Oregonian stayed steadily with Lodge. But the rival tabloid Portland Reporter editorialized: "Is Lodge superior to Rockefeller? That's a good question, but it can't be answered except by another question: Is a mirage superior to an oasis?"

At an Elks Club luncheon meeting in Beaverton, Rocky took out after the Administration, charging that President Johnson had violated the people's "right to know" by withholding information about the struggle in Viet Nam.* But he got his biggest cheers when he turned to deviling his absent rival. Ticking off the issues from Cuba to civil rights, he cried, "I think the people of Oregon have a right to know where all of the six Republicans on the Oregon primary ballot stand on the vital issues. My objective in campaigning throughout this state has been to bring these issues before the people of Oregon. I shall continue to do so right up to the eve of this Friday's primary election."

Rocky was striking pay dirt, knew it and mined it assiduously. It was at the Raleigh Hills shopping center in Beaverton, as beaming young matrons pushed their perambulators over to listen, that Rocky lumped it all into a catch phrase that stuck, labeled his campaign and marked it for victory. Said he: "I guess I'm the Lone Ranger, the only one left in this campaign."

Remember His Name. Indeed the Lone Ranger himself, the man the outlaws just couldn't kill, might have envied Rocky his endurance and his. Sheer physical stamina kept him going. His voice cracked and hoarsened, but he kept talking. At one point his determination might have led to disaster. Eager to keep a speaking date at a high school in Newport, he took his plane into a dangerous fogbound landing. The pilot of a following DC-3 jet plane took one look at the soup ahead and more prudently turned back.

The pace never slackened. At a military luncheon at Coos Bay, a band of outrageously costumed pirates decreed that Rocky's forefinger be pricked and his name signed in blood. Good sport Rockefeller submitted. He bought ice cream sandwiches in a dime store for a trail of youngsters who followed him. To questions about his divorce and remarriage he replied: "I think that in life more people have problems in their own lives than others realize. And I think we have to have the courage to do that, face those problems honestly inside ourselves." In a speech at the University of Portland, he asked, "What do the silent advocate? Where do the

* Toward week's end Rockefeller flew to Washington to accept President Johnson's invitation for a briefing on foreign policy. After a two-hour confidential session at the State Department, Rocky spent ten minutes with the President. But he remained unimpressed. Asked if he still thought Americans were getting the full story of the war in Viet Nam, he replied: "That's a fair statement."

Digitized by Arya Samaj Foundation Chennai and eGangotri

stand?" He clambered to the top of a truck on a rain-swept street to tell a knot of curious bystanders: "If you vote Friday, remember my name. It's Nelson Rockefeller. Thanks, folks." His tiny audience stood huddled and shivering. But Rocky's warmth and determination were coming through.

"Caught in a Tide." At 5:45 on the night of the Oregon voting, Cabot Lodge's campaign managers huddled privately in their downtown Portland headquarters, confidently put the finishing touches to a victory statement. Less than three hours later, Massachusetts Importer Paul Grindle picked his way through a scramble of TV cables to deliver instead a statement of concession for the ambassador. Said he: "Governor Rockefeller put on a tremendous drive here and displayed tremendous guts, and I suspect that the voters of Oregon have joined in our admiration of a man who fights like this."

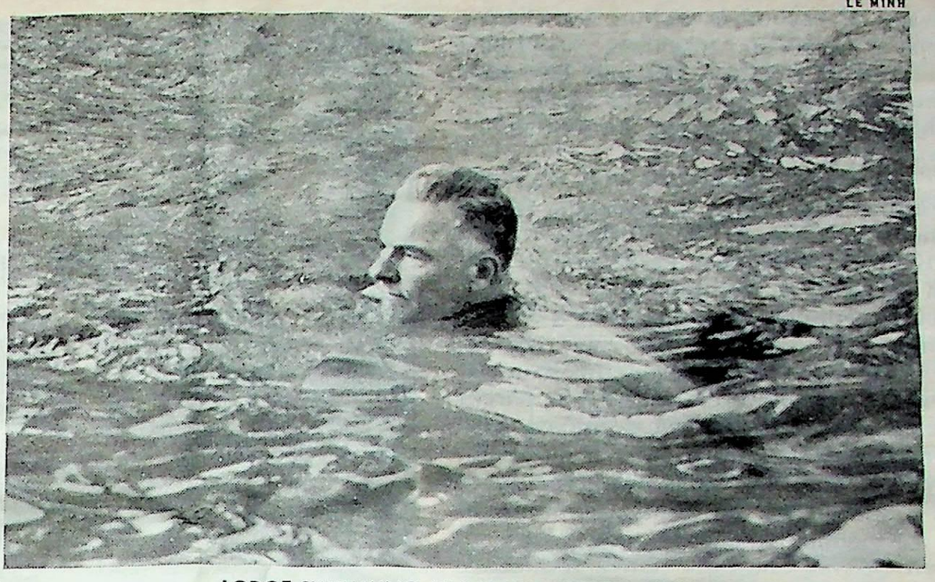
The Lodge people retired to lick their wounds, sighing that "now *we* know what it is like to be caught in a tide." Boston Attorney David Goldberg, who had helped engineer Lodge's March victory in New Hampshire, took another look at the returns and muttered: "Poor Lou." He meant big-time Pollster Lou Harris, who ordinarily works for Democrats but had taken a big dabble in trying to predict Oregon's Republican vote. His election-eve guess of 34% to the winner and 28% to the runner-up was close—he just had the names in the wrong order. As it turned out, it was Rockefeller 33%, Lodge 27%.

Like a Locker Room. Rocky himself had already flown home to his estate in Pocantico Hills, N.Y. There he got the news—as did millions of other Americans—sitting up late to watch television with his wife. "We retired with CBS at midnight," said Rocky.

AP

GOLDWATERS AT MADISON SQUARE GARDEN
Noisy as a three-ring circus.

LE MINH



LODGE SWIMMING AT SAIGON SPORTS CLUB
Silent as a Buddhist idol.

Next morning the Governor's Manhattan headquarters was a joyous shambles—like the locker room of the New York Mets after a pennant-clinching ball game. An 11 a.m. press conference was delayed while Rocky and his staff prepared a victory statement, a task that apparently they had not believed they would be called upon to perform. At 12:20 p.m. the Governor emerged, threaded his way through the crush of people to the platform. There he read: "I am deeply grateful to the Republicans of Oregon for their vote of confidence."

But even as he read, Rocky's mind was leaping ahead from his Oregon success to the coming contest in California. In fact, he had already set the tone for that one. On a flying campaign side trip into California at midweek, Rocky chatted over a ham and pancakes breakfast about his plans for the final two weeks of the race. "I've got him by myself now," said Rocky of his two-man confrontation with Goldwater. "I will attack his extremist stands. It's going to get rough."

High Stakes. It could get very rough indeed, for the stakes are high. "If Goldwater wins here," says California G.O.P. Chairman Caspar Weinberger, who has taken no sides, "he practically has the Republican nomination. And if he loses, he won't get it."

All that stands in Goldwater's way in the California primary is Rockefeller. As in Oregon, the polls show Rocky behind; the Field poll last week called it 43% for Goldwater, 27% for Rockefeller. But Rocky just doesn't believe in polls that show him losing.

Since some 70% of California's Republicans are considered "mainstream" moderates, or liberals, with little sympathy for Goldwater's conservative views, Rockefeller figures his best bet is "to get that 70% stirred up." To do that, he and California's Senator Thomas Kuchel have drawn up a list of 25 programs—such as aid to education and civil rights legislation—endorsed by the G.O.P. in its 1960 presidential platform and subsequently supported by a majority of Senate Republicans in 23 out of 25 votes. They noted that Minority Leader Everett Dirksen supported the platform in 18 of the 22 votes in which he participated, and that Iowa's Bourke Hickenlooper, chairman of the Senate G.O.P. policy committee, supported it 17 out of 25 times. But Goldwater stood by it only twice in 25 votes. Says Rocky: "If Dirksen and Hickenlooper are conservatives, then Goldwater is a reactionary."

Second Thought. Coming down to the wire, Rocky plans to spend nine more days on the Golden State stump to Goldwater's five, concentrating on Barry's Southern California strongholds. Rockefeller also hopes for a big voter turnout to dilute the strength of Goldwater's diehard supporters, who are expected to cast ballots come fire or flood. To this end, he has hired the crack Spencer-Roberts public relations firm, not only to produce propaganda and crowds throughout the campaign but also to dig out every available Republican voter on June 2.

Even with a huge turnout, though, Rocky's best chance of overtaking Barry's lead might well be in a genuine "stop-Goldwater" coalition. On the eve of the Oregon election, Lodge's campaign managers were planning to help their own man by appealing to Lodge-leaning moderates to support Rockefeller. But after Lodge's defeat at Rocky's hands, they were no longer so sure. "I just don't know," mused Paul Grindle. "We're going to have to do lots of thinking."

Whatever the Lodgemen decide, Rockefeller could tuck at least one item of unexpected aid away in his California campaign kit. In the wake of the Oregon returns, Otis Chandler's powerful Los Angeles Times announced that it would throw its support to Rockefeller.

"The Jolly Boys." Just before Oregon, a Midwestern Republican summed up the G.O.P. presidential situation this

way: "Everybody's waiting for California. A Goldwater loss there would have a tremendous effect. The jolly boys back East would go to work in a rush. But there's nothing they can do now except wait for a break."

The "jolly boys" are the supposed Eastern Republican kingmakers. And if there is going to be a break, Oregon just might have been its beginning. Until Oregon, the kingmakers, with very few exceptions, were not doing a blessed thing.

For good reason. Despite his pallor at the polls, Goldwater has such apparent delegate strength that he seemed a near cinch for the nomination. Then again, Lyndon Johnson looks like even more of a shoo-in for November, so many of the kingmakers decided they might as well sit this one out. "On a ten-to-one shot, what's the use of jumping off the building?" asked one important G.O.P. moneyman.

Many a G.O.P. potentate agreed that it would be ridiculous to risk wrecking the party in a bruising battle with Barry for a nomination that looked more and more like a booby prize. Besides, a lot of the kingmakers think that President Johnson, all things being relative, has done a good job. In the '30s and '40s, Republican leaders were passionately convinced that they had to "save the country" from Franklin Roosevelt, but nobody talks about saving the country from Lyndon, except perhaps the A.S.P.C.A. "It's surprising," said a Republican leader, "how few enemies Johnson has."

In their spare moments, of course, the kingmakers looked over the field for an able, available alternative to Goldwater. But they didn't find much, and that discouraged them. "You don't have any kingmakers," said General Lucius Clay, "unless you have someone to make a king out of." The most likely possibility seemed to be Scranton. And among those who cast hopeful glances in his direction were Leonard Hall, a former G.O.P. National Chairman and one of the party's most astute politicians; New York Herald Tribune Publisher John Hay Whitney; and Trib President Walter Thayer, a big Nixon fund raiser in 1960. But Scranton so far has refused to be crowned.

ROCKY & HAPPY
Home for a fleeting weekend.

At Last, to Work? But Oregon changed a lot of things. The vote there could hardly help shaking prospective convention delegates who lean toward Goldwater but are not absolutely pledged to him. If Goldwater loses to Rocky in California, his strength could melt rapidly down to 200-plus diehard delegates who will stay with him until the last or, if he withdraws, vote pretty much the way he tells them. Last weekend, even while expressing confidence for his future and downplaying the importance of Oregon, Goldwater himself indicated that his own second choice would be Nixon: "Nixon has surprising strength around the country. Remember, a Republican candidate wouldn't even get out of bed without the South. Rockefeller and Lodge would be pure death in the South, but Nixon and I would have strength there."

There is no assurance that Nixon would make it even then, and there is an increasing possibility that Republicans will head for their July convention in San Francisco in a state of complete stalemate. Unless, of course, the party's top movers and shakers finally get to work.

On the Course. The man who could best coalesce an impressive array of wealth, brains and political capital behind a particular candidate is Dwight Eisenhower. "He's the real kingmaker if he wants to be," says New York's Sidney Weinberg, a nominal Democrat whose fund-raising feats for Ike and Nixon have made him a backstage power in the G.O.P. But for the past five months Ike has been soaking up California sunshine at his $175,000 Palm Desert home, got his biggest kick out of breaking 80 in golf a couple weeks ago (he fired a 40 going out, 39 coming back). A steady stream of G.O.P. bigwigs came calling, but he steadfastly refused to get involved in the campaign. Though he occasionally talked of reassembling his old cabinet to back a candidate, he entertained what one Republican leader called the "visionary hope" that the candidate would be his brother Milton.

Last week, when Ike returned to Pennsylvania aboard his private railroad man car, he talked as though his golf clubs were still on the golf course, telling reporters: "Whoever is nominated, I am going to support. I should not be in the position of trying to dictate to the Republican Party. I, by no means, believe it is proper for me to say, 'This is the man,' and expect all the Republicans, just like a herd of sheep, to run that way."

Oregon and its potential results may change his mind. In any event, the weekend after the California primary, Ike is due in Cleveland to address a Governors' conference, will have a chance to talk to many of the G.O.P. Governors (who, incidentally, lean 2 to 3 against Goldwater) and a slew of other party powers about the situation.

A Different Way of Thinking. The dilemma for any G.O.P. candidate in 1964 is much like one that William McKinley faced during the 1892 G.O.P. convention, when the delegates came close to nominating him against himself but finally settled on Benjamin Harrison. After the balloting, Kingmaker Mark Hanna burst into McKinley's hotel room, visibly upset, and thundered, "My God, William, that was a damned close squeak. You almost got renominated. This is the year we're going to *lose*!" Hanna turned out to be right. Democrat Grover Cleveland trounced Harrison, but four years later McKinley came back to win it all.

Yet Nelson Rockefeller doesn't think like that—and in Oregon he demonstrated that perhaps it is a prevailing way of thinking.

THE PRESIDENCY

This Old House . . .

We must give to all Americans, those on the farms and those in the cities, a chance to drink from the cup of plenty. I just came from visiting a home that has used the food stamp plan, that lives off an old-age pension that tries to feed a grandmother, seven children, a mother and father—a family of ten—off nine acres of tobacco and ten acres of cotton on an advance of $20 a week with a charge of 10% interest.

—President Johnson in Rocky Mount, N.C., May 7, 1964

The President, once a poor boy himself, really feels deeply about poverty. But he is also striding high with it as a political issue, and last week he got tripped up.

A couple of Republican Congressmen, Nebraska's David Martin and Kentucky's Gene Snyder, journeyed South and returned with a tale of dire poverty in Lyndon's own backyard—or, more precisely, Lady Bird's. In Alabama's Autauga County, Lady Bird owns about 3,000 acres of land that she inherited from her family. Much of the land, once cotton-producing, has been turned to timber, but four Negro

Among Lady Bird's tenants, said artin and Snyder, were Charles Cut-, 75, and his wife Willie. They pay dy Bird $5 a month for a four-room use and an old barn on four acres, d have a cash income from public lfare of $150 a month. "We have ed here for 50 years," said Mrs. Cut-. "We like it. I want to stay here til the good Lord takes me away. But do wish that Mrs. Johnson would fix roof. This old house leaks bad."

Making It Possible. While newsmen cked to Autauga County to see for mselves, Lady Bird's press secretary, zabeth Carpenter, hastily explained Johnson side of the story. It seemed t Lady Bird actually wanted to turn all of her land to timber, but expressly instructed her overseer to permit the old tenants on the land to stay as long as they liked. "Most of the families are very elderly and have no place to go," said Mrs. Carpenter. "They want to stay there. She is really making it possible for them to live out their days at $5 a month, and she sends them boxes of clothes."

Sure enough, Farmer Cutler showed newsmen three tailor-made suits that Lyndon had sent him. "They makes me feel just like I'm a Senator myself," he chuckled.

As to whether the President's anti-poverty program is likely to affect them, Mrs. Cutler allowed as how she was not familiar with the specifics, but that if Lyndon Johnson runs it, "it's sure gonna be a fine thing." And maybe, before the good Lord takes her, that roof will get fixed.

AP

LADY BIRD'S TENANT CUTLER & WIFE
Tailor-made suits are just fine, but what about the roof?

Multiple Exposure

Waiting in the Garden for the President last week were officials from the National Forensic League who were resolved to make the President an honorary member. This was eminently fitting, for if Lyndon Johnson isn't the best forensicist around, he will do until a better one comes along.

For the Forensic officials, he had a little story. "I think the greatest disappointment that I ever experienced was not in being defeated in a political campaign, but in losing a state championship of Texas the first year that I coached debating. I always attributed the loss to the fact that I drew the wrong side of the subject instead of the right side. We had a subject: Resolved, that the jury system should be abolished. My team drew the affirmative, but the people weren't ready to abolish the jury system, although it was wavering for a while when my speakers were attacking it. When they brought in the votes, the first vote was affirmative, and that pleased me. The next one was negative, the next vote was affirmative, the next one was negative, and there was a great deal of suspense there for a moment. The next vote was negative—and I got sick at my stomach."

The Open Road. The President also delivered a rousing speech to a meeting of the Alliance for Progress ambassadors (*see* THE HEMISPHERE), and buttonholed a group of businessmen on the subject of civil rights and equal employment. For the businessmen he had a joke, although its relevance was not quite clear. "I heard the story last night of a woman who telephoned her bank," he said. "She wanted to arrange for the disposal of a $1,000 bond. The clerk asked her, 'Madam, is the bond for redemption or conversion?' There was a long pause, and the woman said, 'Well, am I talking to the First National Bank or the First Baptist Church?' "

To a visiting contingent of farm editors, the President had words of encouragement for the farming community, made it a point to slip in a reminder that the farmers have one of their kind in the White House. "I never forget," he recalled, "the road of opportunity. I have walked from my father's tenant farmhouse, where I was born 56 years ago, to the White House, where I am today. I want to keep that road open for children today, whether they live on hard-rock farms along the Pedernales River, or whether they grow up on hard, concrete sidewalks." Whereupon he invited the editors on a tour of his private quarters, exhibiting his green pajamas and dressing robe laid

THE PRESIDENCY

This Old House . . .

We must give to all Americans, those on the farms and those in the cities, a chance to drink from the cup of plenty. I just came from visiting a home that has used the food stamp plan, that lives off an old-age pension that tries to feed a grandmother, seven children, a mother and father—a family of ten—off nine acres of tobacco and ten acres of cotton on an advance of $20 a week with a charge of 10% interest.

—President Johnson in Rocky Mount, N.C., May 7, 1964

The President, once a poor boy himself, really feels deeply about poverty. But he is also striding high with it as a political issue, and last week he got tripped up.

A couple of Republican Congressmen, Nebraska's David Martin and Kentucky's Gene Snyder, journeyed South and returned with a tale of dire poverty in Lyndon's own backyard—or, more precisely, Lady Bird's. In Alabama's Autauga County, Lady Bird owns about 3,000 acres of land that she inherited from her family. Much of the land, once cotton-producing, has been turned to timber, but four Negro tenant families still live on some of the property, occupying rundown houses that do more than Lyndon Johnson's words to dramatize poverty.

If They Cared? "We were shocked at the squalor we found," reported the Congressmen when they returned with a telling set of photographs. The tenants are "living in deplorable poverty with little evidence of concern by their millionaire landlords." Said Snyder: "We found tenants living in three- and four-room shacks with cracks in the flooring, leaking roofs, broken woodburning cook stoves, some at least 50 years old, and no toilet facilities." Said Martin: "If I owned property like that, I'd feel it a moral obligation to make it comfortable and adequate. At least so the roof doesn't leak every time it rains, so the water doesn't fall on the bed." Added Snyder: "We saw nothing here that could not easily be corrected by the Johnsons themselves, without a nickel of federal funds or a single federal program—if, of course, they really cared."

Among Lady Bird's tenants, said Martin and Snyder, were Charles Cutler, 75, and his wife Willie. They pay Lady Bird $5 a month for a four-room house and an old barn on four acres, and have a cash income from public welfare of $150 a month. "We have lived here for 50 years," said Mrs. Cutler. "We like it. I want to stay here until the good Lord takes me away. But I do wish that Mrs. Johnson would fix the roof. This old house leaks bad."

Making It Possible. While newsmen flocked to Autauga County to see for themselves, Lady Bird's press secretary, Elizabeth Carpenter, hastily explained the Johnson side of the story. It seemed that Lady Bird actually wanted to turn all of her land to timber, but expressly instructed her overseer to permit the old tenants on the land to stay as long as they liked. "Most of the families are very elderly and have no place to go," said Mrs. Carpenter. "They want to stay there. She is really making it possible for them to live out their days at $5 a month, and she sends them boxes of clothes."

Sure enough, Farmer Cutler showed newsmen three tailor-made suits that Lyndon had sent him. "They makes me feel just like I'm a Senator myself," he chuckled.

As to whether the President's anti-poverty program is likely to affect them, Mrs. Cutler allowed as how she was not familiar with the specifics, but that if Lyndon Johnson runs it, "it's sure gonna be a fine thing." And maybe, before the good Lord takes her, that roof will get fixed.

AP

LADY BIRD'S TENANT CUTLER & WIFE

Tailor-made suits are just fine, but what about the roof?

Multiple Exposure

Waiting in the Garden for the President last week were officials from the National Forensic League who were resolved to make the President an honorary member. This was eminently fitting, for if Lyndon Johnson isn't the best forensicist around, he will do until a better one comes along.

For the Forensic officials, he had a little story. "I think the greatest disappointment that I ever experienced was not in being defeated in a political campaign, but in losing a state championship of Texas the first year that I coached debating. I always attributed the loss to the fact that I drew the wrong side of the subject instead of the right side. We had a subject: Resolved, that the jury system should be abolished. My team drew the affirmative, but the people weren't ready to abolish the jury system, although it was wavering for a while when my speakers were attacking it. When they brought in the votes, the first vote was affirmative, and that pleased me. The next one was negative, the next vote was affirmative, the next one was negative, and there was a great deal of suspense there for a moment. The next vote was negative—and I got sick at my stomach."

The Open Road. The President also delivered a rousing speech to a meeting of the Alliance for Progress ambassadors (*see* THE HEMISPHERE), and buttonholed a group of businessmen on the subject of civil rights and equal employment. For the businessmen he had a joke, although its relevance was not quite clear. "I heard the story last night of a woman who telephoned her bank," he said. "She wanted to arrange for the disposal of a $1,000 bond. The clerk asked her, 'Madam, is the bond for redemption or conversion?' There was a long pause, and the woman said, 'Well, am I talking to the First National Bank or the First Baptist Church?' "

To a visiting contingent of farm editors, the President had words of encouragement for the farming community, made it a point to slip in a reminder that the farmers have one of their kind in the White House. "I never forget," he recalled, "the road of opportunity. I have walked from my father's tenant farmhouse, where I was born 56 years ago, to the White House, where I am today. I want to keep that road open for children today, whether they live on hard-rock farms along the Pedernales River, or whether they grow up on hard, concrete sidewalks." Whereupon he invited the editors on a tour of his private quarters, exhibiting his green pajamas and dressing robe laid

out on his bed, and Lady Bird's own bed, without a spread on it. All the while, he rambled on, mostly about beef prices. "I've got a good many more registered bulls than I can sell," he complained. "I hate to be feeding them all year."

Free Advice. And then he was out in the Garden again to present the William Randolph Hearst Foundation's annual intercollegiate journalism awards to some budding newsmen.

"I was a college editor once," said Lyndon. "But as you can see, I did not do as well as you have done, so I did the next best thing and went into politics. William Allen White once said that the newspaper is the embodiment of democracy. I guess this explains why newspapermen are so free in their advice about how to run the country. Someone said the other day that I was seeing the press so much that they were worried about my overexposure. I am not sure whose overexposure they meant—mine or the press's. I enjoy seeing the press. I learn much from reporters. In the White House press corps alone, there are at least half a dozen experts already on animal husbandry. It was Wendell Phillips who said that we live under a government of men and morning newspapers. Mr. Phillips apparently lived before there were afternoon newspapers." And—he might have added—before the Administration of Lyndon Johnson, who knows how to get his name in the papers all day long.

THE CONGRESS

The Guardian

Millions remember him mostly from the televised sessions of Democratic National Conventions. He was the hunched-over little hobgoblin who always seemed to be whispering parliamentary advice into the ear of Permanent Chairman Sam Rayburn. He had a big splotchy nose, squinty eyes and a mouth that always made it appear as though he had just eaten a peck of green persimmons. He wore black shoes, black socks, a black suit and a black tie. He was grumpy as all get-out, and he seemed to take a perverse pride in being unpopular.

Yet when he died last week at 85, more than 40 colleagues and President Johnson flew out to his funeral in Elsberry, Mo. Clarence Cannon had been 40 years in the U.S. House of Representatives, was its foremost parliamentarian, and had performed a considerable public service as an Appropriations Committee chairman who spent the taxpayers' money as charily as if it were his own.

The Bloody Ninth. Cannon's career began in 1911 when he gave up his law practice in Troy, Mo., and went to Washington as confidential secretary to House Speaker Champ Clark. With Clark's encouragement, he became a specialist in parliamentary procedure,

WALTER BENNETT

MISSOURI'S CANNON
He wrote the bible.

was made the House Parliamentarian, later wrote the House parliamentary bibles *Cannon's Procedure* and *Cannon's Precedents.*

In 1920, Clark, who represented Missouri's "Bloody Ninth" district, was defeated in the Harding landslide. In 1922, Cannon ran for the seat and won. He was re-elected 20 times, and on the day following his last election in 1962, he filed for his 22nd term. In all those years, he stood free of all political commitments by stubbornly refusing to accept campaign contributions of any size or sort.

Targets. In 1941, Cannon became chairman of the Appropriations Committee, and in that capacity he saw himself as the guardian of the nation's wallet. "We've got to keep people from taking more and more money out of the U.S. Treasury," he stormed. "Every day they devise a thousand new ways to do it." To maintain tight control, he made himself a member of every one of his dozen or so subcommittees, so

TEXAS' MAHON
He carries a black coin purse.

that he could attend their meetings vote when the occasion arose. H from Presidents to restore money were often ignored; once Cannon liberately refused to take a teleph call from President Kennedy, wanted to cajole him into releasi money bill.

Cannon simply figured that a bu had never been made that could be cut. To prove it, he spent long m wearing a black eyeshade, seated hind a gallimaufry of reports, b and papers, studying and slicing especially delighted in heckling the itary. In an annual spring ritual would arise with flailing arms to gate the Pentagon. Starting with P of Macedon's tactics, he would the history of warfare through H V down to the first and second W Wars. Military men, he protested, not susceptible to change—espec changes that might save money, had a deuce of a time getting ther give up the cavalry," he cried. "Jate ma liked to ride those horses."

For all his thriftiness, Cannon co be generous when it came to de with his own pet programs for p projects and farm subsidies. Whe opponent called him two-faced, C exploded. "My God!" he roared, had another face, don't you think use it?"

"I'm easily the most unpopular in the Congress," said Clarence non, and occasionally he found i cessary to live up to that billing his fists. In 1933, he and Miss Democratic Representative Romjue tangled and had to be apart. Nineteen years ago, Canno New York Republican John Tabe a scuffle; Taber got a cut lip. Six later, he had a fight with Cali Republican John Phillips. And o occasion there was a big set-to Tennessee's Democratic Senator neth McKellar, who nearly gavele non on the skull, while Cannon after the Senator with a cane.

New Man. Although his colle did not like Cannon, they will miss him; he was by way of b House institution, and he was lov dedicated. Succeeding him as ch of the Appropriations Committee considerably less controversial Texas' rangy, easygoing Dem Congressman George H. Maho who was first elected to the H 1934. Methodist lay leader, teacher and farmer, Mahon has a specialty of military appropri At Mahon's accession to the priations chair, there was an automatic assumption that he cooperate with the spending pro of his old friend and fellow Texan don Johnson. But that is not nece so: in fact, Mahon is almost as as Cannon, still carries an old-fash black change purse from which luctantly pulls out nickels and for his personal spending.

Ev's Law

Last week the civil rights filibuster became the longest in Senate history,* and Minnesota Democrat Hubert Humphrey, the bill's floor manager, was mad. "The whole procedure is disgusting," he cried. "All that is being accomplished here is a display of adult delinquency. Any intransigent minority can run the Senate if a majority stands around with jelly for a spine."

Humphrey put the blame not on bill-stalling Southerners, whose "obstructionist tactics were to be expected," but on Senators who profess to support civil rights but are opposed to shutting off the Southerners by cloture. Humphrey demanded that "the Senate start to act like a Senate, and that Senators start to earn their wages, and that Senators abide by the Constitution, which says that a majority shall constitute a quorum to do business."

Even mild Mike Mansfield, the Senate majority leader, was running out of patience. "We are witnessing a travesty on the legislative process," he snapped. "The majority is being told what it can and cannot do." The anger stemmed from what the bill's supporters considered a broken pledge by the Southern leader, Georgia Democrat Richard Russell. They claimed he had promised to permit votes on more amendments this week. But after a Southern caucus, Russell declared there would be none. In retaliation, Senate leaders announced that the Senate's working hours would be stretched to midnight. "That doesn't scare us," scoffed Russell. "We're ready for it."

An Agreement. And all this while, Republican leader Everett Dirksen was calmly and even quietly tidying up a carefully wrapped package of some 40 amendments. He presented them in conferences with Attorney General Robert Kennedy, Justice Department lawyers and Humphrey. Dirksen emerged from one all-day session in his office to announce: "We have a good agreement." Said Kennedy: "This bill is perfectly satisfactory to me." Added Humphrey: "We have done nothing to injure the objectives of this bill."

Many of Dirksen's amendments are technical, serve to tighten sloppy wording in the House-passed bill. But some are substantive, aimed at limiting the speed and frequency with which the Attorney General could move into local cases of discrimination. For example, in states that have agencies for handling bias complaints under public accommodations laws, the Federal Government would have to give the state agency at least 30 days to act before initiating federal action. In both public accommodations and fair employment, the Government would have to show that a pattern of discrimination existed before it could move in, but in no case could the Attorney General institute suit on behalf of an individual. To prosecute an employer, the Federal Government would have to prove that his refusal to hire a Negro was "willful"—often a tough matter to pin down in court.

25 Votes. Dirksen plans to discuss his package with Republican Senators this week. Mansfield and Humphrey, also, will present it at a meeting of Democrats. In practical terms, all that really matters is the Republican reaction, since some 25 of their votes are needed to shut off the filibuster. If Dirksen can persuade them to go along, there will be a new civil rights law—and it will to a significant degree be Ev Dirksen's law.

HENRY GROSSMAN

CANDIDATE HADDAD & WIFE
In Chinatown, perhaps a chance.

NEW YORK

A Jew in Sheik's Clothing?

In New York City, politicians were asking this question: Can a bright, young, energetic, ambitious Jew get elected to Congress from a heavily Jewish district if he has an Arab name?

Some question! But it was one that last week confronted Democratic Candidate William Haddad. At 35, Haddad has been around. He was a merchant marine officer during World War II, an aide to Senator Estes Kefauver, a prize-winning investigative newspaper reporter, an assistant to Bobby Kennedy during the 1960 presidential campaign, and a top administrator in the Peace Corps. Further enhancing his political credentials among Democrats is the fact that he is married to Franklin Roosevelt's granddaughter Kate. Her parents, California's Democratic Congressman James Roosevelt and Betsey Cushing Roosevelt, were divorced when Kate was four; Betsey later married New York Herald Tribune Publisher John Hay Whitney, who legally adopted Kate.

Such Talk Can Ruin. All this would seem to make Bill Haddad a likely Democratic reform candidate in the June 2 primary against Congressman Leonard Farbstein, 61, a Tammany type who is seeking a fifth term in Manhattan's meandering 19th Congressional District. But, of all things, Haddad did not count on getting hurt by the district's Jewish vote.

Last week he complained that Farbstein, who likes to remind his constituency that he is the only Jew on the House Foreign Affairs Committee and is an ardent supporter of Israel, was spreading rumors all over the district that Haddad is an Arab. Not only that; people were sending around anonymous notes about him ("Can you trust an ARAB to fight for the interests of Jews and for Israel?"). Even worse, said Haddad, Farbstein was going about telling folks that Haddad was born an Egyptian, that he got married in the Protestant Episcopal Church and thus was a *meshumad* (an apostate from Judaism). In the 19th District, where 50% of the voters are Jews, such talk can ruin a politician.

All for Ethnics. Haddad, naturally, was outraged over the whispering campaign. He tried to catch up with the rumors by pointing out that his mother is a Russian-born Jew who keeps a kosher home, and that his father had the misfortune of having been born in Cairo to Egyptian Jews. He protested to the Fair Campaign Practices Committee, issued statements, got Jimmy Roosevelt to make a public statement on his behalf, and met with Yiddish-language newspaper editors in an attempt to convince them that he is just as Jewish as Farbstein.

Though he knows that he is a goner without the Jewish vote, he decried the necessity of having to defend his Jewish credentials. Said he: "If I have to be Jewish to win this campaign, it's not worth winning. I don't want the voters to elect me to Congress because I am a Jew. I hope they won't reject me because I am married to a Protestant. And I don't want the Farbstein organization to brand me an Arab because my father was born an Egyptian Jew."

But unless Haddad can steer the campaign back to worthier issues, he probably does not stand a Chinaman's chance of winning—except perhaps in Chinatown, which is also part of the 19th District. In Manhattan neighborhoods, many foreign-born voters judge a candidate's ethnic background above everything else, care little or nothing about other considerations. As one woman on the Lower East Side said last week when she was asked if ethnic considerations should play any role in a candidate's campaign: "Ethnic-shmethnic, so long as he's Jewish."

* The Senate first began discussing civil rights on March 9, by week's end had worked 69 calendar days without considering any other major legislation. The longest previous filibuster was a 65-day talkathon in 1846 on the Oregon bill, by which the U.S. resolved to end its agreement with Great Britain providing for joint occupancy of the Oregon Territory.

DEMOCRATS

Uninvited Guest

"I don't want to bring on trouble," purred Alabama's segregationist Governor George Wallace. "I'm a guest in Maryland." But he wasn't a guest to Maryland's *Democratic* Senator Daniel Brewster.

Running against Wallace as Lyndon Johnson's proxy in this week's Maryland presidential primary, Brewster called Wallace a "trespasser," a "stumblebum," and "a dangerous joke." And as for bringing on trouble Wallace's name might as well have been Joe Btfsplk.

Scheduled to *speak at Cambridge* (pop. 12,500), the Eastern Shore scene of *bloody race riots last summer*, Wallace was apprehensive. But when he was *assured that* besides his own small army of bodyguards, 50 state troopers and 400 Maryland National Guardsmen would be *on hand to* protect him, Wallace decided to keep the engagement.

At Cambridge's volunteer firemen's arena, he harangued a smaller-than-expected crowd of 1,200. "If you're tired of the trend *in this* nation today," he said, "you have an opportunity to do something about it on May 19. We shocked the liberals to their eyeteeth in Wisconsin and Indiana, and we've got a *chance* to make their eyeteeth drop out here." The crowd cheered.

The Other Side. Across town, 300 Cambridge Negroes were meeting at the Negro Elks Hall. For two hours they were exhorted by their local leader, gaunt, hot-eyed Mrs. Gloria Richardson, and a handful of outside speakers. But it remained for Lawrence Cundiff, 25, a worker for the Student Nonviolent Coordinating Committee, to really set them off.

"This is war!" cried Cundiff. "Wallace is nothing but an Alabama rednecks *without* an ounce of common *sense.*" *Denouncing* Wallace's rally, *which was going on* just four blocks away, Cundiff urged: "Why don't we see if some of us can't get in there?" Out into the warm night poured the Negroes, with Gloria Richardson in the lead.

At Race Street, Cambridge's black-white dividing line, a row of Guardsmen, bayonets fixed on their empty rifles, blocked the marchers' way. "Stop this and take them back!" Brigadier General George Gelston, commander of the Guard unit, yelled through a bullhorn to Gloria Richardson. The Wallace meeting, he told them, "is a complete flop. Don't ruin your chances by going over there. It's only half full." A bottle arced out of the darkness and smashed on Gelston's Jeep. Rocks were thrown at the Guardsmen, striking some. At length, Gloria persuaded the grumbling Negroes to retreat.

FRANCIS MILLER—LIFE

GLORIA RICHARDSON (IN WHITE BLOUSE) & CAMBRIDGE MARCHERS
Across Race Street and into the gas.

"Get That Man." An hour later they were back. By now, Wallace was driving away toward Baltimore, but it made little difference to the Negroes. At Race Street they were again stopped by bayonets, and they sat down where they were. Shouted Colonel Maurice Tawes, a cousin of Maryland's Democratic Governor J. Millard Tawes: "Go back to your area or we are going to lock you up." The marchers stayed seated. "Do you want us to use tear gas on them?" Tawes demanded of Gloria Richardson. "We'll sit here quietly," she replied.

Tawes ordered the arrest of Gloria and three of her lieutenants. With that, a young Negro demanded to know why Wallace supporters had not been arrested. Angered, Tawes ordered the Guardsmen: "Get that man." The Negroes piled themselves in a human pyramid to hide the offender, and the Guardsmen rushed to dig him out. Rocks flew. Shouted Tawes: "Give 'em the gas."

A Guardsman with gas tanks strapped to his back moved up and sprayed a choking cloud over the demonstrators, while other Guardsmen hurled gas grenades. The Negroes fell back, weeping. When the gas cloud lifted, 13 marchers were arrested.

For the next three nights, Cambridge's bitter, frustrated Negroes demonstrated with bricks and bottles. Even the town's segregationist whites could wonder if a visit by George Wallace had been worth it.

Position Wanted

In the six months since his brother's death, Attorney General Robert Kennedy has been casting about for a future—and so far has found none. He has considered teaching, perhaps seeking a college presidency. But inevitably his search has centered on politics.

A few weeks ago, Pundit Walter Lippmann suggested that Kennedy run for Governor of New York in 1962. But Lippmann did not check his facts. Bobby did, and discovered that the state requires legal residence of at least five years for any gubernatorial candidate.

When One's Enough. How about turning to Massachusetts to make the first run of his life for elective office? Well, there are problems there. Democratic Governor Endicott Peabody is up this fall for a second two-year term, but it would hardly be sporting for Bobby to shove him aside. He could, of course, wait until 1964 and run for Republican Lev Saltonstall's Senate seat, but Brother Ted is already in the Senate, and Massachusetts might feel that one Senator Kennedy at a time is enough.

There was, and still is, talk that Lyndon Johnson might want Bobby Kennedy as his running mate this year. But the talk blows hot and cold—mostly cold. Johnson has not discussed the possibility with Bobby, and Bobby, who knows he was an intimate of the President, has not broached it.

Under serious consideration this week was still another possibility: running for the U.S. Senate from New York against Republican Kenneth Keating. Though Kennedy's legal voting residence is still in Massachusetts, that would not bar him from running from New York, since he would only be required to be an inhabitant of the state at the time of his election.

Launching Pad. Bobby's brother-in-law, Steve Smith, an experienced Kennedy political troubleshooter, has recently been scouting out the chances for the New York scene. The idea appeals greatly to many New York Democratic leaders; they have been desperately looking for a strong Democratic candidate to contest Keating, who has a formidable following. But there are dissonant voices as well. Upstate Democratic Congressman Samuel S.

* "No Person shall be a Senator who shall not have attained to the Age of thirty years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen." (Article I, Section 3, U.S. Constitution)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wants the nomination himself. New York City's Mayor Robert Wagner mumbled his reluctant acquiescence, but he would just as soon not deal with any threats to his party leadership, and the New York Times was plainly against it. While there is nothing illegal about a Kennedy candidacy in New York, said a Times editorial, "there is plenty that is cynical about it . . . He would merely be choosing New York as a convenient launching pad for the political ambitions of himself and others."

Notwithstanding all the flurry, Robert Kennedy as of last week still hadn't made up his mind.

DEFENSE

A Decade of Deadly Birds

The people who have been writing these things that annoy me have been talking about a 3,000-mile, high-angle rocket, shot from one continent to another, carrying an atomic bomb, and so directed as to be a precise weapon, which would land exactly on a certain target, such as a city. I say, technically I don't think anybody in the world knows how to do such a thing, and I feel confident it will not be done for a very long period of time to come. I wish the American public would leave that out of their thinking.

—Dr. Vannevar Bush, Director of the Office of Scientific Research and Development
December 1945

Even then, a few brilliant U.S. scientists and military leaders were thinking about little else but the feasibility of a nuclear-armed intercontinental ballistic missile. Yet because of the arguments—like Bush's—against it, it was not until May 1954, just ten years ago next week, that the Air Force launched a crash program to develop the Atlas ICBM.

Flock of Birds. In the span of the ensuing decade of strategic missilery, the U.S. has accomplished one of the greatest scientific, engineering and construction feats in history. It has produced and deployed a versatile flock of big birds: the pioneering Atlas, the more powerful two-stage Titan, the stopgap IRBMs Thor and Jupiter, and those truly pushbutton solid-fueled mainstays of the nuclear arsenal, the mass-produced Minuteman and the elusive, submarine-borne Polaris.

The Navy had such heroes as Vice Admirals William Raborn Jr. and Hyman Rickover in development of the Polaris system. The Army's German-born Wernher von Braun pushed Jupiter before turning to space research. All of the other projects were Air Force—and no one in blue has the slightest doubt about who whiplashed those massive projects. He is the deceptively quiet and young-looking General Bernard Schriever, 53 (TIME Cover, April 1, 1957), boss of the Air Force Systems Command. What Schriever does is develop the missiles until they are declared operational, train the missile crews, then turn everything over to the Strategic Air Command. His assignment came about because such Air Force officials as Brigadier General John W. Sessums and Research and Development Specialist Trevor Gardner had insisted that an ICBM should be built, and Princeton Atomic Scientist Dr. John von Neumann had argued that nuclear explosives could be made compact enough for missile delivery.

Evasive Action. Despite the size of Schriever's task, there was nothing grand about his facilities when he was named commander of the obscurely titled Western Development Division and sent to Inglewood, Calif., in 1954. He set up shop in three buildings of a Roman Catholic parochial school that had been abandoned because they were not modern. The staff always wore civvies, shuttled in and out of a side door, lunched at a sidewalk hot-dog stand dubbed "the officers' club." Inglewood neighbors stared and wondered. "I never had to take so much evasive action," recalls Schriever.

WALTER BENNETT

MISSILEMAN SCHRIEVER
After the gap, the go-ahead.

For Schriever, the first few years seemed to hold nothing but pressure and frustration. Unknown to the public, U.S. radar snooping from Turkey and U-2 aircraft flying over Russia confirmed the fact that the U.S.S.R. was developing both IRBMs and ICBMs. Says Schriever: "They were well ahead of us with the IRBM, at least a year ahead in their ICBM program. A missile gap did exist." After the Sputnik launching in 1957, the thrust superiority of Soviet rocketry was obvious.

Lowest Apogee. U.S. missiles, meanwhile, mainly blew up or fizzled like soggy Roman candles. The first Thor simply fell off its pad. In its second test, it rose ten inches, collapsed. "It must have had the lowest apogee of any missile ever fired," recalls Schriever ruefully. The first Atlas flight in 1957 failed. At one point in 1959, five consecutive Atlas firings were flops.

Schriever spent many hours rolled up in a blanket in a DC-7 shuttling to Washington to answer the complaints of congressional critics. But he kept insisting that Atlas would work, proved it by turning the first operational Atlas over to a Strategic Air Command crew late in 1959. Despite the anguish, those were exciting days. "Every damn firing was just like having a baby," Schriever says. "There was just as much emotional excitement for a success and just as much depression for a failure. Now shots are just good or bad. Missiles are old hat."

Even as the U.S. began to deploy Atlas, it pushed on to develop Titan, which could carry a heavier warhead. Yet U.S. intelligence painted a frightening picture of Soviet missile capability. Defense Department experts predicted that the U.S.S.R. could have some 400 long-range missiles by mid-1963, while the U.S. would have only about half that number. This was the so-called "missile gap," which became a 1960 presidential campaign issue. To help plug the anticipated gap, the U.S. deployed 1,500-mile Thor and Jupiter missiles in Europe, then gambled heavily on Polaris and Minuteman. Since their solid fuel could be stored almost indefinitely inside the missiles, they could be fired more quickly and maintained more easily than the liquid-fueled, long-countdown Atlas and early Titan. They could also be built more cheaply.

The Yo-Yo Effect. Schriever was so confident of Minuteman's feasibility that he saved a full year by ordering all three stages and all systems of a Minuteman fired as a unit on the first test—an unheard-of procedure in the normal piece-by-piece sequence of missile development. Reports an official Air Force history: "The results were sensational. All stages worked perfectly, the guidance system performed accurately, and the instrumented re-entry vehicle made a very near miss on a target some 4,000 miles downrange." Minuteman, in Schriever's view, has tipped the missile scales heavily in favor of the U.S.

Looking back, Schriever contends that the projected 1963 "missile gap" failed to develop only because the U.S.S.R. did not meet the production schedule of which it was capable. And looking ahead, Schriever worries less about what the Russians might do in missile and space weaponry than about the danger that the U.S. might fail to live up to its full capability. Declares Ben Schriever at the end of a fantastic decade: "What I am concerned over is this Yo-Yo effect in this country. At a time like this, when we are ahead, the people and Congress might draw back and not appropriate money. *This is a serious danger. We have to keep up with our technology.*"

SOUTH VIET NAM

More Men, More Aid

Only six months ago, U.S. Defense Secretary Robert McNamara was talking hopefully of pulling most U.S. troops out of Viet Nam by the end of 1965. Last week, after his fifth visit to the war front, McNamara called for stepping up American military and economic assistance to Saigon, currently pegged at 15,500 "advisers" and $500 million a year. McNamara's reversal was a reflection of how far the U.S.-supported war against the Communist Viet Cong has deteriorated of late.

Miserable Story. Casualty totals for April, during which the Viet Cong continued to roam the Mekong Delta almost at will, were the highest so far. The government suffered 610 killed, 1,630 wounded, 390 missing or captured (*v.* an officially estimated 1,700 Viet Cong dead). The toll of Americans last month was six killed, 101 wounded. According to one U.S. official, General Nguyen Khanh's "clear-and-hold" program in the delta is making "practically no indent at all," and Long An province south of Saigon is "a miserable story."

Terrorism is on the increase, not only in provincial villages, where local administrators have been beheaded by the Reds, but in Saigon. A few days before McNamara's arrival, police surprised two Viet Cong mining a bridge over which his car was to pass. Driving through the streets of the capital, McNamara was cloaked in a bulletproof jacket. It was, in a way, the most revealing aspect of his visit; never before had McNamara found it necessary to adopt such rigid measures in Saigon.

Again, the Buddhists. During a two-hour conference with McNamara, Khanh reported still another problem: lingering animosity between his country's Buddhists and Roman Catholics, which has been fanned anew by Buddhist demands that a former Catholic army officer who had served under the late President Diem be executed for ordering troops to fire on Buddhists demonstrating in Hue last May.* Last week the progovernment head of the Buddhists' political bureau, Thich Tam Chau, resigned, charging other monks with trying to stir up trouble. The resignation meant increasing influence for another leading monk, Thich Tri Quang, who enjoyed refuge last year in the U.S. embassy, but who is considered antigovernment and potentially neutralist.

Back in Washington, McNamara reported to President Johnson, congressional leaders and the National Security Council, announced to newsmen that because Viet Cong terrorism "has increased very substantially in recent weeks, it is absolutely essential that we consider ways and means through increased economic assistance and increased military support to assist the government of Viet Nam. We have agreed with them that their regular military forces and their paramilitary forces must be increased in size very substantially and very soon . . . And we consider it desirable to increase by 100% the number of Vietnamese pilots." Again, McNamara stressed that Viet Nam "is a long, hard war," warned: "It may be necessary to send over certain additional U.S. personnel."

LE MINH

McNAMARA & KHANH IN SAIGON
The guest wore bulletproof.

The Peanut Air Force

While McNamara was calling for additional U.S. muscle, something of an uproar developed over how the U.S. has been fighting the air war in South Viet Nam. News dispatches from Viet Nam reported that at least two American pilots had died when the wings of their prop-driven T-28 planes ripped off. In Washington, Chairman Carl Vinson of the House Armed Services Committee demanded an explanation from McNamara of whether the U.S. had been using obsolescent aircraft.

The Air Force has indeed operated a mixed-bag of aging airplanes in the war —most notably the T-28, originally built in 1949 as a trainer, and the B-26, a twin-engine World War II bomber originally designated the A-26. About 100 of these planes were sent in when the U.S. entered Viet Nam in earnest in 1961, chiefly because 1) owing to slow speeds and short turning radius they could be adapted to the close support missions needed in counterguerrilla warfare, and 2) they were available.

Probably the most accurate explanation of why they were there was offered last week by an Air Force colonel in Saigon: "We looked around for the first things we could lay hands on, and there was a bunch of stockpiled B-26s and T-28s, so we shipped them out to Viet Nam. After that, it was a combination of necessity to make do with what you've got and Pentagon lethargy."

Mme. Nhu Cocktails. While the Army's ubiquitous helicopters have won most of the glory, "the Peanut Air Force," as pilots wryly call it, compiled its own respectable record, plastering the Viet Cong with everything from bombs to "Mme. Nhu cocktails" (napalm mixed with charcoal). The Air Force claims that it has accounted for 35% of Viet Cong casualties.

The fact remains that the 28-year-old 26s, even though beefed-up for combat, were ill-prepared to take the beating of a drawn-out war in Viet Nam, and were kept too long. Many of the T-28s were flown 4,000 hours or more; a B-26 once returned riddled by 1,000 bullet holes, was back in the air three days later. When Viet Cong fire power increased, so did the stress on the motley fleet's wings—already beefed down with armament—as pilots pulled up more abruptly from attack dives. Last week Air Force Secretary Eugene Zuckert conceded that "structural failure may have been a contributing factor" in the crashes of three T-28s. The Air Force also announced that Viet Nam's entire squadron of B-26s was phased out, ending last month after a B-26 lost a wing last February during a strafing exhibition at Eglin Air Force Base, Fla., killing two crewmen.

Belated Beef-Up. Last week Saigon sources revealed that around 100 sturdier Douglas Skyraider dive bombers have already been shipped to Viet Nam and that 75 more would arrive by the end of the summer—to replace both the B-26s and the remaining T-28s. Though also a prop-driven World War II craft, the Skyraider has a much more powerful warplane engine, almost twice as fast as the B-26, and is armed with 20-mm. cannon. Skyraiders have distinguished themselves in Korea for their close support of the Marines. But the improvement is belated. As to the question, "Why not jets?", Air Force officers insist that slower planes are better for Viet Nam's kind of jungle war.

* Speaking in Los Angeles, a U.S. State Department official somewhat tardily questioned the Buddhists' charge that they were persecuted under Diem. Richard I. Phillips, the Department's chief press officer, suggested that the Buddhists had been victims of "favoritism in favor of the Diem family and the Catholic Vietnamese." But pinned down as to whether they suffered "persecution," Phillips replied: "I would say no." He added that "they carried on a very effective public relations program in getting their story before the American people," and noted that they had been supported by fellow Buddhists in neutralist Burma and Ceylon and in Red China.

GREAT BRITAIN

Three Out of Four for the Tories

"I think this is a pointer," said Prime Minister Sir Alec Douglas-Home triumphantly, "that we will do well in the autumn." At the very least, it was a pointer that a great many journalists and pollsters had been dead wrong about the Tories' political position. Defending four Conservative constituencies in by-elections this week, the party had been told by virtually everyone that it was in for trouble. At best, it was expected to hold the two safest of the seats, and some thought that the Tories might lose all four. Instead, Labor managed to win only one. The four battles:

▶ In Devizes, a sprawling, largely rural community in Wiltshire, Labor was heavily favored because of a recent influx of 4,000 industrial workers. It was widely admitted that if the Tories could win here, they would have a real chance in the fall. As it turned out, the Labor candidate, a Bristol schoolteacher, was defeated by Etonian Charles Morrison, 31, who talked welfare issues, visited old people's homes and was aided by no fewer than 14 relations, including his charming wife Sara ("I know you won't believe a word I say about him, but . . ."). More help came from eight Tory backbenchers calling themselves the "S O S" (for "Save Our Seat") squad.

▶ In Bury St. Edmunds, in the farm country of East Anglia, Conservative Eldon Griffiths, 38, beat out Labor's Noel Insley, another teacher, even though Insley's own determinedly optimistic poll forecast a clear-cut Labor victory. A correspondent for TIME and *Newsweek* before he became a speechwriter for the Conservatives, Griffiths was accused by Labor of feeding the Prime Minister uncharacteristic lines full of unfashionable alliterations: on one occasion, Home had referred to Harold Wilson as "this slick salesman of synthetic science." Griffiths, however, proved himself a slick and energetic salesman of Conservatism. Drawing on his experience as a pig farmer, he spoke tirelessly about practical issues (agriculture, housing, jobs), got up at dawn to help the stableboys at Newmarket exercise their horses.

▶ In Winchester, in Hampshire, a stronghold of Conservatism and site of one of Britain's best public schools, Rear Admiral Morgan Giles, 50, won as expected from Laborite Patrick Seyd, 33, a teacher at Southampton's redbrick university. Though he lost, Seyd had a good time proclaiming the injustice of the British public school system, which heavily favors the rich and socially prominent, advocated more scholarships to schools like Winchester.

▶ In Rutherglen, outside Glasgow, Labor's Brite J. Gregor Mackenzie, 36, a Glasgow city councilman, won over Iain Sproat, 25, a journalist of whom the *New Statesman* wrote: "If he was any further to the Right, he would be in the North Sea."

While the three Tory successes were impressive, the Laborites managed to narrow the Conservative 1959 margins of victory: from 7,962 to 2,459 in Bury St. Edmunds, from 3,838 to 1,670 in Devizes, and from 12,792 to 6,064 in Winchester. London's bookmakers made only a minor change in their forecast for the general election in October; they dropped the odds a point, still favoring Labor, 3-1. But the Tories felt more hopeful than they had in months. A sizable number of voters had, after all, accepted the Tory line, which essentially came down to this: things are good enough right now, and you can't be sure what Labor will do if it gets in power.

NATO

Literature

The trouble with alliances, Pericles said 2,395 years ago, is that "the common cause imperceptibly decays." NATO's common cause is not decaying —but it has vastly changed in the 15 years since NATO's founding. As the threat of Soviet aggression in Western Europe receded, the alliance became a political assembly of independent-minded states rather than a military coalition huddling under the exclusive U.S. nuclear umbrella. What NATO has yet to prove is that it can rise to broader, subtler challenges. As Dean Rusk put it: "NATO must adapt itself to a situation in which the Communist threat takes more diversified and sophisticated forms, to a situation in which the cohesive element in this alliance must depend upon something more than an imminent military threat."

Top Technician. At last week's NATO foreign ministers' conference in The Hague, the U.S. sought—with some apparent success—its allies' participation in the multilateral nuclear force, also urged their backing for the Cuba blockade, and their "psychological support" for the war in South Viet Nam. West Germany demanded, and got, a strong resolution reaffirming NATO's position that Germany must be reunited on the basis of self-determination. Greece and Turkey came to hurl acrimonious charges and countercharges about the Cyprus conflict, finally agreed to a mild compromise by which NATO's outgoing Secretary-General Dirk Stikker was asked to lend a hand in ending the dispute.

On one question the allies for once were unanimous: to succeed Stikker they picked Manlio Brosio, 66, Italy's Ambassador to France. The new NATO Secretary-General is less well known than any of his predecessors, which suggests a downgrading of NATO's top job; but Brosio is respected as a skilled diplomatic technician, is liked and trusted by Charles de Gaulle.

"Melancholy Sympathy." There was general agreement that the NATO command structure is outmoded. Example: the military standing group (the U.S., France and Britain), which supposedly coordinates strategy, is located in Washington, while most command posts are in Europe; West Germany is not a member of the standing group, though it contributes nearly 50% of the ground forces under NATO command. But no matter how well NATO might be organized on paper, what really matters is France's resistance to integrated Western military force and to overriding U.S. leadership.

This nettlesome issue was grasped by dynamic, unpredictable Paul-Henri Spaak, Belgium's Foreign Minister and onetime (1957-61) NATO Secretary-General. In the sharpest attack yet on Charles de Gaulle's policy of "independence" within the alliance, Spaak cried that those who undermined NATO should be "ashamed" of themselves. Without actually naming France—his speech was toned down at Rusk's urging—Spaak challenged the Gaullists to "spell out just what you think is wrong with NATO, and how it should be put right. Otherwise, quit rocking the boat." In a brilliant defense of Gaullist boat rocking, France's Foreign Minister Maurice Couve de Murville also put his finger on one of the endemic ailments of all alliances. When no clear, common danger threatens, he argued suavely, their members naturally concentrate on their own problems, usually with little help from their allies. During its bitter wars for Indo-China and Algeria, France got only "melancholy sympathy" from NATO—as did Britain at Suez, Belgium in the Congo, The Netherlands in New Guinea, Portugal in Angola, the U.S. in Cuba and Viet Nam. But, in the Gaullist view, "if Russia threatens, NATO exists." Couve's scathing summation of the Hague conference: "The main current issue was Cyprus. The rest was literature."

How to start benefiting from investment management with as little as $5,000

If you have saved or acquired $5,000 to $50,000, you naturally want to make your capital grow. But you may actually be *losing* ground due to inflation and taxes.

To help solve this problem, clients in 28 countries have placed their accounts under The Danforth Associates *Investment Management Plan*, a unique program originally developed by a Boston family to manage its own common stock investments.

As in any investment program, losses do and will occur. However, the plan thus far has proved especially efficient in providing continuing capital growth supervision for *individual* accounts starting with from $5,000 to $50,000.

For a complimentary copy of a 42-page report describing this tested plan and its complete 7-year "performance record," simply write Dept. C-75.

RUSSIA

Regards from an Outcast

The Soviet Union treats any of its citizens who choose to live in the West as traitors and outcasts, and to become involved in such cases is one of the riskiest things that a foreigner in Russia can do. That is precisely what happened to Peter Reddaway, a British exchange student, whose story once again dramatizes the continuing war between the Soviet government and the defectors.

Reddaway, 24, had done well at Cambridge University and at Harvard graduate school, was happily pursuing postgraduate work in Russian literature and history at Moscow University when, abruptly, he was accused by Soviet authorities of subversive activities and expelled. Reason: twice in January he had briefly visited plump, greying Valentina Lenchevsky and delivered regards from her scientist husband, now in the West. But then Oleg Lenchevsky is no ordinary scientist; he is one of the most unusual of the millions of Russians who since 1917 have left their families and their country to live in exile.

A Letter Undelivered. Lenchevsky's physician father was killed fighting on the Red side during the Russian Revolution, and Oleg was raised by his dentist mother. He emerged after World War II as a Communist Party member and one of Russia's leading experts on water purification. Leaving his seamstress wife and two teen-aged daughters in Moscow, he went to England in 1961 on a UNESCO fellowship. It took only a month for Lenchevsky to conclude that "though capitalism has more sores than dogs have fleas," people here are good. Though tortured by the knowledge that his defection would leave his wife and daughters to face reprisals, he nevertheless decided that he could not go back, applied to British authorities for asylum. At the same time he sent a proud and patriotic letter to Nikita Khrushchev in care of the Soviet embassy in London, carefully explaining his decision and begging that his family be allowed to join him in the West.

When Lenchevsky rejected the o
veiled threats of Soviet embassy
cials designed to make him go hom
was informed that his letter would
be delivered. He thereupon publish
in the London Observer. Acknowled
many merits in socialism, Lenchev
declared himself "unable any longe
continue to subscribe to the doctrin
merciless and irreconcilable class
anti-religious struggles, which form
foundation stone of Communist te
ing. For tolerance is the only salva
for humanity from mass fratricide
degeneration." Resigning formally
the party and from Soviet citizen
Lenchevsky concluded: "In Moscow
Frunzenskaya Naberezhnaya 36,

LONDON DAILY

DEFECTOR LENCHEVSKY LOLLING IN LONDON'S HYDE PARK
"People here are good."

81, live my wife and two daug
whom I educated to unconditional
port and approval of everything
by the Communist Party. I entreat
to inflict no penalty upon them, a
allow them to come to England t
cuss with me our future in a f
manner."

An Answer of Foreboding. then Lenchevsky has published other letters to Nikita Khrushch every case after waiting in v months for the originals to be d Though letters and packages s rectly to his family were retur received two letters from the signed by his daughter Masha, viously dictated by Soviet aut charged him with "a serious and urged him to return "*before* too late."

Now working in The Netherl an engineer, Lenchevsky had m Reddaway during a visit to Cam Learning that Reddaway was a go to Moscow, he asked him to news and greetings to the famil which he had been cut off fo years. Reddaway paid the pr having done what he described return to Britain last week, as th ly thing. For millions in both E West the episode was a reminde though Russian Communism h come less brutal, as witnessed fact that Valentina Lenchevsky daughters are still alive and w Russia remains a closed society.

STAM® F-34

A remarkable new way to increase rice crops, alleviate hunge and release field labor for essential industry

From virtually every rice-growing country in the world, enthusiastic reports confirm the fact that STAM F-34 is one of the greatest advances in modern rice culture.

STAM F-34 rigidly controls more than twenty-five different grasses, weeds and sedges that compete with rice for sunlight, space, water and nutrients. When weeds are eliminated by STAM F-34 these direct benefits are noted: *harvests are increased by thirty to one hundred percent over those from hand-weeded fields.* The rice is of higher quality. It is free from weed seeds which are difficult to remove. Fertilizer used to increase the rice crop is not used by weeds instead.

STAM F-34 is mixed with water and sprayed by knapsack, ground or aerial equipment to either directly planted or water planted rice. Controlling weeds chemically with STAM F-34 is simple and does not require much labor. Labor normally required for hand weeding can now be released for work in essential industry through using STAM F-34 to chemi control weeds in rice.

If labor is short or unava in your area for hand-weeding or is needed more profitably i dustry, or, if you wish to inc rice yields to feed more pe write us for more informatio how STAM F-34 helps incr rice yields while reducing and labor.

JAPAN

oodness, Beauty & Benefit— ut for Whom?

The vast auditorium of Tokyo's Ni- on University seats 10,000, but it ulged with twice that many people as cal and regional leaders of Soka akkai packed the hall to hear an an- ouncement: their religious society will nter the political field in earnest by nning 30 candidates in the next elec- on to the 467-member lower house the Diet.

Japan's political parties were as rat- ed as if the Emperor had suddenly eclaimed his forsaken divinity. Soka akkai, a society of Buddhist laymen, ready holds 15 seats in the 250- ember upper house, plus some 4,000 ats on local councils. Soka Gakkai he Value-Creation Society) is more an just another party; it is a militantly rganized, crusading sect vaguely com- ining Buddhism with left-wing reform r perhaps revolutionary politics, and s confessed ambition is to convert apan and then the world.

Fuji's Foot. The movement mixes e evangelism of Moral Rearmament ith the get-out-the-vote discipline of e Communist Party and lots of show iz. Founded in 1930, it was suppressed uring World War II and began sweep- ng the nation in 1947 under a talented rganizer and ex-schoolteacher named osei Toda. Soka Gakkai now claims 13 illion members and 100,000 converts month. While some critics question ese figures, there is no doubt that the ovement is gaining impressively. Last onth, at ceremonies featuring martial ands, a waltz-playing orchestra, an ll-girl chorus and sutra-chanting riests, Soka Gakkai formally dedicated $4,500,000 recreation-and-worship enter at the foot of Mount Fuji.

Soka Gakkai is tightly organized into quads (each composed of 20 to 30 amilies), companies (made up of six quads), districts (formed by ten com- panies) and regional chapters. In thou- sands of local meetings held through- out Japan on any night of the week, members discuss their spiritual prog- ress and prepare for their highest duty, which is *shakubuku* (literally, break and subdue), or gaining converts. Until some years ago *shakubuku* was accom- plished by relays of devotees chanting sutras round the clock in a prospective recruit's home and literally wearing him down. In other cases, members burned a family's Shinto altar, or prevented a doctor from treating a sick devotee on grounds that faith alone would cure him. Because of public protest, Soka Gakkai eased off on such tactics, but even today it stresses obedience, and members must vote for the sect's po- litical candidates as a religious duty.

Highest Values. Just what its faith and its political program consist of is not easy to discern. The society propa- gates a simplified, modernized version of doctrines taught by the 13th century Buddhist reformer, Nichiren, who maintained that happiness consisted of pursuing the highest values in life— "goodness, beauty and benefit." Grand- ly promising its followers material as well as spiritual benefits, Soka Gakkai, operating through a political affiliate called Koseiren, is competing with Ja- pan's Communists and Socialists for the support of the discontented urban poor, who have missed out on the coun- try's industrial boom. A Tokyo news- man explains, "Soka Gakkai is more appealing because religion sounds bet- ter than Communism." Soka Gakkai collects no dues, instead selects 400,- 000 families a year to provide 1,000 yen ($2.78) apiece; being allowed to contribute is considered a great honor. The sect derives even more income from a vast publishing empire that puts out a newspaper, two monthly maga- zines, a picture magazine and a chil- dren's magazine, boasting a combined circulation of 5,000,000.

Domestically, the society visualizes a powerful welfare state, attacks corrup- tion, political bosses, waste of taxpay- ers' money and favoritism for big busi- ness. In the Diet, Soka Gakkai has supported aid to small businessmen and most welfare measures. In contrast to the easygoing approach of many of their fellow representatives, Soka Gak- kai Deputies painstakingly investigate every bill, carefully compile factual data on which to base their support or opposition.

In foreign policy, the society calls for diplomatic relations with both Na- tionalist China, which Japan already recognizes, and Red China, friendly relations with South Korea, and the return of U.S.-occupied Okinawa to Japanese control. *Explains* a Soka Gak- *kai spokesman:* "We do not think it is good to be friendly to the U.S. and the Western nations to the exclusion of others."

Fixing Fences. Many Japanese are sure that there is far more to the move- ment than this sort of crusading reform spirit. They worry about Soka Gak- kai's militant organization, its occasion- al signs of fanaticism. Many hope that the movement may prove a passing phe- nomenon, but Japan's political pros are not so sure. One fact that particularly impresses them: the society's converts are mainly young adults under 30. Soka Gakkai's president, Daisaku Ikeda (no kin to Japan's Premier), is himself only 36. Before the war, Ikeda says, the Japanese did have an ideal of sorts—to conquer Asia by force. But since then, his argument goes, nothing has been advanced to take its place. Says he: "We give the young a principle, a prac- tical and sincere ideal."

Just what that ideal is, and where it might lead, is another question. Last week Premier Hayato Ikeda's Liberal- Democratic Party, as well as the So- cialists, began discussing ways to repair their political fences among the masses and counteract Soka Gakkai.

CUBA

"Something Is Moving"

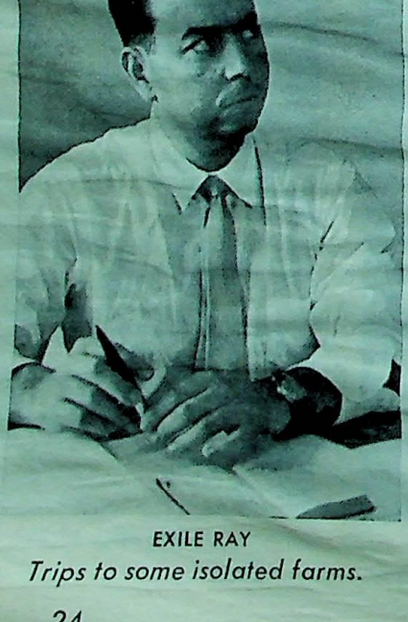
"This is Radio Free Cuba, the anti-Communist voice of Cuba broadcasting on the 40-meter band. Worker, militiaman, rebel soldier, radio ham—help topple the despot! Close ranks so that the fatherland, today bloodied by Russian imperialism, becomes the tomb of Communism in America. This is Radio Free Cuba transmitting from a point in Cuban territory."

In Cuban exile communities from Miami to Caracas, the word was out: "*Algo se mueve*"—Something is moving. First came the faint, crackling anti-Castro broadcast last week from inside Cuba. Then 24 hours later came word of the biggest raid in months on Castro's fortress. The raiders identified themselves as members of the Movement for Revolutionary Recuperation, led by Manuel Artime, who headed the abortive Bay of Pigs landing.

At 10:30 p.m., said an M.R.R. spokesman in Miami, Artime and a "strong force of commandos" had gone ashore at Puerto Pilón, 145 miles from Guantánamo on Cuba's southern coast. Linking up with a second force of guerrillas from the nearby Sierra Maestra mountains, the exiles had captured the town and held it for three hours against Castro's militia, during that time declaring it a "free territory of Cuba." They then blew up the Cabo Cruz sugar mill and disappeared. Puerto Pilón, the exiles noted with satisfaction, was only a few miles from the spot where Castro himself originally landed in 1956, and the Sierra Maestra was his sanctuary in the early stages of the revolution.

Within hours, Radio Havana was on the air railing about the attack. Castro denied that the exiles had sent in a landing party. The mill, he fumed, was bombarded from the sea "by a pirate vessel of the Rex type, which the CIA operates from bases located in Florida, Puerto Rico and Central America." Nevertheless, he admitted damage to shore installations and cried that "70,000 sacks of sugar" had been destroyed. Naturally, he blamed "a new criminal, vandalistic act by the United States Government." Two days later, Castro's internal radio reported two more landings—one by Artime on the southern coast, and the other by Underground Leader Manolo Ray somewhere in the north. But exile groups in Miami would neither confirm nor deny the new raids.

FRANK ZAGARINO



EXILE RAY

Trips to some isolated farms.

Recruits & Munitions. In Washington, the State Department blandly denied all. "These attacks," said a spokesman, "are neither supported nor condoned by the Government." Perhaps not, but Miami was alive last week with exile activity. Once again, Cubans were turning up at the old clapboard house on 23rd Street that served as a recruiting center for the Bay of Pigs operation, getting physical exams, then mysteriously dropping out of sight. Small groups of Cubans were training at isolated farms outside Miami. At Key Largo, a 28-ft. launch loaded with exile munitions caught fire, was popping while firemen were trying to douse the blaze.

No one believes that a second frontal invasion is in the offing. The exiles agree that it would amount to suicide. What does seem to be in the works is an attempt at infiltration, sabotage and guerrilla warfare. Right now, three main groups are operating:

▶ The M.R.R., headed by Artime, reportedly has the strong backing of Nicaragua's Tachito Somoza and other anti-Castroites in Central America. Artime, say exile sources, operates from camps stretching from Costa Rica north to Honduras. A U.S. hunter in the northeastern jungles of Costa Rica recently stumbled onto a camp with three large buildings and a landing strip that was in constant use by light aircraft. "Cubans," said his guide. Artime does not have the kind of support inside Cuba to operate a major underground, is gearing his efforts to sabotage teams inside Cuba and commando raids against 17 coastal targets.

▶ The *Junta Revolucionaria Cubana* (*Jure*), led by Ray, a onetime Castro leader and a popular man inside Cuba. Ray gets his moral—and reportedly considerable material—support from Venezuela's former President Rómulo Betancourt and Puerto Rico's Muñoz Marín, is said to operate training camps in both countries. He has widely publicized May 20 as his deadline for returning to Cuba to revitalize the island's anti-Castro underground. Last week Ray resigned his job as a consultant to the Puerto Rican Planning Board, and dropped out of sight. "We are not worried," he says. "Castro is the man who must worry."

▶ A coalition of Alpha 66, the Revolutionary Movement of the Pueblo, the Second National Front of Escambray and one or two smaller groups, led by Eloy Gutiérrez Menoyo, a longtime guerrilla leader who fought against Batista. Menoyo plans to infiltrate a small force into Cuba—probably into the central Escambray mountains—and start up a guerrilla network. Two weeks ago, Menoyo left Miami. The exiles say he is in Cuba.

Turn of the Screw. If the U.S. is directly involved, some U.S. involvement and support seem apparent. Washington reportedly gave Artime the go-ahead light last July. Recruiting personnel, openly collecting arms would also be impossible without at least tacit U.S. approval. And then there is the U.S. economic embargo. The British and French have for buses, trucks and locomotives. Nevertheless, Castro remains in power, cut off from free-world trade. Not to be outdone, Washington has given the other turn of the screw, whatever that last week tightened controls on U.S. exports of food and drugs to Cuba. Both had been exempted from the general U.S. trade embargo. Now shippers will need Government approval for shipments.

EXILE ARTIME

Callers at a clapboard house

. . .

Brazil last week finally took the action everyone had expected since the revolution that overthrew leftist President João Goulart. Cuban agents, with the Brazilian government, had been engaging in "offensive" propaganda incompatible with democratic and Christian principles. Such interference in the internal affairs of Brazil can no longer be tolerated." Diplomatic relations with Cuba were therefore formally and officially severed.

PANAMA

More Votes than Crowds

Going into Panama's presidential election, the candidate who drew the crowds was Arnulfo Arias, 62, the messianic ex-President and self-proclaimed champion of the masses. But when the cheering stopped last week, the man who got the votes was Marco Aurelio Robles, 58, the government candidate and cousin of President Roberto F. Chiari, who constitutionally cannot succeed himself. In a stunning upset, Robles swept most of the backland provinces and sliced into some urban strongholds where Arias was supposed to be unbeatable. The final count: Robles 134,627, Arias 123,186.

Cattle & the Canal. The son of a judge, Robles displays none of the big money usually associated with political success in Panama. Though his kinsman Chiari is one of the country's richest men, Robles himself lives with his schoolteacher wife and three children in a mortgaged, three-bedroom house in Panama City. He held a string of government jobs before Chiari appointed him Minister of Government and Justice in 1960. Panamanians quickly found him to be an honest, extremely determined administrator. When he noticed that stray cattle were causing a number of serious auto accidents and that nobody was doing anything about it, Robles ordered National Guard patrols to shoot all cattle found on highways. Influential cattlemen raised a storm but finally fenced in their herds.

On the stump during the campaign, Robles was no match for Arias and his fiery oratory. But he strongly supported the Chiari government's demands for revision of the canal treaty with the U.S. and pledged to "rescue for our country the commerce of the Canal Zone, which should have been rightfully ours since 1903." In the slums and backlands, he promised to provide unemployment compensation and some moderate reforms in housing and schools. Repeatedly, he professed independence of the country's powerful ruling elite: "I'm not an oligarch, and not responsible to them." That remains to be seen—Panamanian politics being what they are.

Up to the People. Thwarted and embittered, Arnulfo Arias immediately cried theft, claimed that the government had stolen the victory. His supporters charged that in several rural precincts, Arias ballots failed to arrive in time for anyone to vote for him. In Chiriquí province, a man wearing the uniform of Panama's National Guard reportedly scared away Indian voters with pistol shots in the air. Arias' lawyers are also investigating the voting in two provinces where government figures are said to show that Arias failed to win a single precinct.

Many Panamanians expect tense days before Robles assumes office on Oct. 1. Some angry Arias supporters

ALLAN GOULD

PRESIDENT-ELECT ROBLES
What comes after victory?

were calling for a nationwide general strike and threatening to take to the streets. Arias himself was playing it cool. "I am convinced that I won the election," said he. "But I intend to do nothing about it. I will let the people do it." At week's end a national electoral board met at the Legislative Palace to begin reviewing the returns, while National Guard troops in battle dress stood guard.

THE ALIANZA

Zippity-Do-Dah!

To the White House last week went diplomats from 21 hemisphere nations for a little chat with President Johnson about the Alliance for Progress. They departed wondering why anyone had ever doubted L.B.J.'s consuming interest in the Alianza.

In three hours of zippity-do-dah, he promised—without quite saying how—"twice as much action, twice as much accomplishment" in the next year, reported that loans ($430 million since December) were already flowing at almost twice the year-ago rate, personally signed twelve new loans worth $46 million. After the formalities, Johnson conducted his guests into the Cabinet Room for tea and another demonstration of maximum effort. When an ambassador wondered why Congress was holding up a U.S. appropriation to the World Bank's International Development Association, Johnson grabbed a phone to call White House Legislative Aide Larry O'Brien: "What's going on with the IDA bill? How many votes have we got?" Said Johnson, turning to the diplomats: "There's been a lot of talk about ideals in the Alianza. We are going to put those ideals into action."

Next day the House passed the $312 million IDA bill, and L.B.J. gave the Latinos something else to cheer about. Into Teodoro Moscoso's old job as U.S. representative to the Inter-American Committee (CIAP), which guides the Alianza, went Walt Whitman Rostow, 47, chairman of the State Department Policy Planning Council and a man with both the prestige and power to cut through the Alianza's bureaucratic underbrush. The total performance left Peru's Ambassador Celso Pastor bedazzled. "This marks the beginning of a new era," he said. Or as one Administration adviser put it: "Latin Americans are learning that corn pone can be as nourishing as crepes suzette."

VENEZUELA

Progressing on Its Own

One country was conspicuous by its absence from the *list of nations* receiving increased Alianza aid: Venezuela. With its close cooperation between government and industry (*see* WORLD BUSINESS), the oil-rich nation is in the happy position of not needing massive infusions of U.S. dollars; in the judgment of economists, it is already past the takeoff point and able to generate its own momentum for progress. The proof? While President Johnson was speaking in Washington last week, Venezuela's President Raúl Leoni went before his Congress in Caracas to announce a four-year, $850 million public spending project.

The program, supplementing Venezuela's annual $1.3 billion budget, is Leoni's way of "consolidating and widening" the economic boom that began in 1962 under Rómulo Betancourt. Leoni will use the money to develop the country's interior, stimulate more private enterprise and relieve unemployment (still running 13.7%) by creating 20,000 new jobs. Some 90% of the funds will go toward increasing Venezuela's productive capacity and developing its "basic social capital," meaning everything from electric power to new schools. The other 10% will go for public health and for shoring up debt-plagued regional and district governments, as well as other federal dependencies. Among the projects:

▶ $191 million for irrigation and flood-control development to bring 3,000,000 more acres of cropland into production by 1980, making the country self-sufficient in farm production. Last year Venezuela spent almost $60 million on food imports.

▶ $248 million for airport, dock and road construction to connect backwater towns with larger population centers.

▶ $48 million for an explosives plant and the expansion of the government's $155 million petrochemical industry.

▶ $11 million for a high-tension distribution grid that will be able to carry 220,000 kw. of power from hydroelectric projects in northern Venezuela to central and western parts of the country.

To pay for it all, Leoni is counting on $180 million from foreign credits, $88 million more from a government bond issue going mostly to private Venezuelan banks, and the rest from annual budget surpluses.

He is an old man, and could be excused for not making the effort. But for **Joseph Kennedy**, 75, effort has always been worthwhile. Last week the former Ambassador to Britain had recovered sufficiently from his 1961 stroke to walk slowly under his own power into Manhattan's Caravelle restaurant for dinner. A wooden cane helped, and so did his niece and constant companion, Ann Gargan, but the fact remained that he can walk across a room. He can also rise from a chair using just the cane, and his speech is showing improvement. Now in Hyannis Port, he has spent the last three weeks at Philadelphia's Institutes for the Achievement of Human Potential doing a carefully mapped-out regimen of exercises. In the end, though, it was a question of not giving up hope.

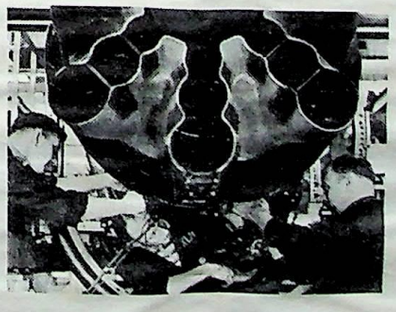
Why KLM puts "sand" in its engines

To keep them dry.
You see, those little bags are actually full of silica, a special sort of sand that acts as a kind of super blotting paper.
Moisture can damage a jet.
So whenever KLM engineers change the engine on a DC-8, they always pop in some silica before running it over to the maintenance shop.
The whole journey only takes about 5 minutes.
So why all the fuss?



KLM
ROYAL DUTCH AIRLINES

Before KLM took delivery of its first DC-8, it sent a team of maintenance engineers over to the States for 3½ years jet training. These men were taught to baby their jets.
That's why they're so particular about little details.
Some people don't care that much about such details. KLM does.
That's why so many experienced travellers believe that the dependable Dutch have made KLM the most reliable of all airlines.

THEOLOGY

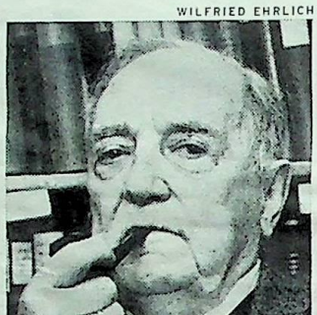
An Existential Way Of Reading the Bible

When God spoke to man centuries ago, it was far easier to believe that the sun stood still or water turned into wine. But what is science-minded man to make of the Bible? How can he extract its real meaning for today from a hard-to-swallow supernatural framework? These are not easy questions, and lately they have been getting a rather hard answer from Dr. Rudolf Bultmann's Marburg Disciples (TIME, June 21), who dominate German theology the way the Russians rule chess. They call their answer "the new hermeneutic."

Solving the problem of hermeneutic —meaning the theory of interpretation

JACK HORNER

WILFRIED EHRLICH



BULTMANN

THEOLOGIANS EBELING & FUCHS

Invented: a new hermeneutic.

—is a game that Americans can play too. In the jet age, sages from Basle and Marburg can breeze in to enlighten their U.S. colleagues at a brisk three-day seminar, and theology has become increasingly international. One proof is a new book called *The New Hermeneutic* (Harper & Row; $5), the second in a series devoted to a dialogue between Continental and American theologians on major religious issues. Edited by James M. Robinson and John B. Cobb Jr. of the Southern California School of Theology, the book contains essays on hermeneutic by Ernst Fuchs of Marburg and Gerhard Ebeling of Zurich. Their contributions are analyzed by three topflight U.S. thinkers: Amos Wilder of Harvard Divinity School, Robert Funk of Drew, and John Dillenberger of San Francisco Theological Seminary.

The Central Problem. Robinson distinguishes the new hermeneutic (without the *s*) of the Marburgers and the traditional science of hermeneutics. This now somewhat neglected branch of theology outlined the basic principles of interpreting a text, in contrast to exegesis, which was practical application of these principles. Far wider in scope, the new hermeneutic deals with the key issue of how to retranslate the Christian message for man today, "the meaning of the text in the situation of modern religion," as Robinson explains it. So conceived, hermeneutic, which derives from Hermes, messenger of the gods, becomes the central problem of theology.

The Marburg Disciples' interest in reinterpreting the scriptural message, says Robinson, stems from two landmarks in 20th century theology. One was Karl Barth's famous *Epistle to the Romans* of 1921, which rejected the rationalist, antiquarian approach of Protestant liberalism to scriptural texts and dramatically hurled at the church a modern interpretation of Paul that tried to capture the spirit instead of the letter of his message. A more immediate source is Bultmann's demand that the Bible must be demythologized—that is, stripped of its fictional heaven-above, hell-below framework, and its message restated in ideas that make sense now.

The Inner Meaning. The new hermeneutic tries to establish the principles for this task of translation. Fuchs and Ebeling agree that one basic problem is understanding how language itself not only expressed what the Biblical writers had to say, but also, by the nature of language, limited what they could say. Thus, the peculiar qualities of 1st century *koinonia* Greek, a rough-hewn language less graceful than the classical tongue of Sophocles, may have prevented St. Paul from expressing all he meant to say. Hermeneutic seeks to analyze the degree to which the Biblical writer's inner meaning was helped or hindered by the cultural instruments available to him.

But how is this inner meaning to be recovered? The hermeneutical answer is: through one's own understanding of the problems of existence. Fuchs and Ebeling believe that the Biblical books are existential documents—that is, are efforts to answer the basic que man asks of life. Armed with h understanding of the questions ra existence, the theologian can look in Scripture for the equivalent qu raised by the Biblical writer, a the answers given. Only then c theologian turn his mind to the pr of retranslating that answer in a p ing word meaningful for contem man. One key existential answer Bible is found in Jesus' procla of the kingdom of God. In translation, this is an announceme a "time of love," and Christian f faith in the victory of love over

Cultural Limitations. In his a of hermeneutic, Dillenberger that the abstract terminology emp by the Germans is too far re from the language of daily life. feels that the Marburgers some fail to see the relativity of thei position as interpreters. Far from a philosophical absolute, existen is itself a product of history and subject to the limitations of langu Theologians therefore must re that their own expression of the e tial questions may be quite as as was St. Paul's. Wilder, who brother of Playwright Thornton cizes Fuchs's emphasis on faith dience, ignoring the New Tes concern for the content of faith chatty postscript, Fuchs answer his colleagues are aware of the c limitations of existentialism; bu still believe it is the most useful point for their Biblical reinterpre

Robinson and Cobb are please their series' first volume, *The Heidegger and Theology*, has been translated into German, s that a dialogue is in process. A both books are forbidding in t terminology, the editors argue problems considered are not academic. Far from being a issue, hermeneutic grapples with thing that faces every preache to make God's word vivid for gregation—and represents a l tween the pastoral ministry an demic theology. Says Robinson new hermeneutic is designed to pastor do what he's paid to do: people about Christianity in te their own lives."

Louis and Spokane, emerged from the shadows for only a few public functions: one of them was representing Pope Paul at the dedication of Notre Dame's new $8,000,000 library. Another Curia officer, Paolo Cardinal Marella, 69, presided over the unveiling of the *Pietà* at the New York World's Fair, and brought Francis Cardinal Spellman a sentimental gift from Pope Paul: a topaz brooch once worn by Pius XII on state occasions. Marella returned home with four honorary doctorates, including one from Catholic University, which last year barred four progressive theologians from giving lectures there; conservative Marella commended the university for its loyalty to the teachings of the Holy See.

Two ranking progressive cardinals flew in from northern Europe and made some headlines. Franziskus Cardinal König of Vienna, 58, chief negotiator between the Vatican and Hungary over Josef Cardinal Mindszenty, reported that Mindszenty would leave his exile in the U.S. consulate if the Pope directly asked him to, but was determined to stay in Budapest until the government gave the church an ironclad guarantee of freedom from persecution. König also predicted a Vatican Council ruling on mixed Protestant-Catholic marriages and the formation of a senate of bishops to help the Pope govern the church after the council completes its fourth and final session next year.

Leo Josef Cardinal Suenens, 59, the debonair and witty Archbishop of Malines-Brussels and primate of Belgium, had his hardest (and finest) moment at the University of Chicago Divinity School, where he spent two days fielding questions from his Protestant hosts, including prestigious Theologian Paul Tillich. "The most difficult examination I've ever faced," he said. There and elsewhere, Suenens predicted that new medical research might call for new applications of the church's teaching on birth control. He also suggested that after the Vatican Council the church might take the first steps toward cooperation with Protestant and Orthodox bodies in areas that did not require doctrinal agreement. "We must," said Suenens, "make more of certain forms of practical collaboration, notably in the social and humanitarian field—the problems of hunger in the world, sickness and disasters, birth and housing, illiteracy and the redistribution of wealth."

JUDAISM

The Jews of Britain

Thanks to Hitler, England can now boast of having the largest Jewish community in Europe. Currently 450,000 strong, it is a proud, placid and curiously mixed branch of Judaism. Some of its members are descendants of Sephardic Jews who fled the Spanish and Portuguese Inquisitions for the safety of Cromwell's England in the 17th century. Others belong to the wealthy, literate Anglo-Jewish families, such as the banking Rothschilds, who began to leave the ghettos of Europe 100 years later and came to exert great economic and political power in Britain. Liberal in outlook, sometimes casual in religious observance, traditional Anglo-Jewry is oddly yoked with more recent immigrants from Eastern Europe—rigidly Orthodox Jews, fearful that their traditional beliefs will be corrupted by the alien world of the goyim.

Abrogating Laws. Last week British Judaism was split by its worst schism ever—over whether it should adapt to modern life or reject it for the sake of Israel's carefully nourished beliefs. Cause of the schism is the modern-minded theological outlook of Dr. Louis Jacobs, 43, a Biblical scholar who between 1954 and 1960 was rabbi of the New West End Synagogue in Bayswater, a traditional center of worship for many Anglo-Jewish families. Although he is Orthodox in practice, Jacobs has long shocked his bearded rabbinical colleagues in the Orthodox-controlled United Synagogue, Britain's largest Jewish organization, by arguing that the Torah contains human as well as divine elements. Jacobs believes that the sacred first five books of the Bible should be interpreted in the light of historical and archaeological evidence. For example, he believes that some dietary laws stem from ancient Hebrew hygienic practice rather than divine command, and therefore might be abrogated.

Jacobs' modernism might be *Chillul Hashem* (desecration of God's name) to the United Synagogue, but his views were just right for New West End, which last January asked him to return as its rabbi. Dr. Israel Brodie, the ailing Orthodox chief rabbi of the British Commonwealth, refused to approve the appointment. Eventually the United Synagogue Council, composed exclusively of laymen, voted to expel the New West End board of lay managers.

COLIN JONES—THE OBSERVER

RABBI JACOBS
Suspected: Chillul Hashem.

Standing by the Truth. To Dr. Brodie, the issue was clear-cut: British Judaism must stand by the divine inspiration and literal truth of the Torah. "An attitude to the Torah which denies the divine source and unity," he said, "is directly opposed to Orthodox Jewish teaching." A number of Jews felt that Brodie was defending not Orthodoxy but fundamentalism; when nearly half of the New West End congregation set up an independent synagogue with Jacobs as rabbi, they received membership applications and offers of help from many Jews outside of London. Last week, in the influential *Jewish Chronicle*, Jacobs answered the chief rabbi and defended the rebels' liberal approach to the Torah. "If by 'Orthodox' Dr. Brodie means fundamentalist, then indeed I am not Orthodox," he wrote. "But since when has Orthodoxy in Anglo-Jewry been equated with fundamentalism?"

NASSER & KHRUSHCHEV PUSHING INAUGURAL BUTTONS*

BLAST OPENING DIVERSION CHANNEL

After aeons of capriciousness, orders for Hapi.

EGYPT

Gods, Men & the River

The scene could have been played in Dante's *nethermost pit*. The sun—or perhaps it was the moon—whirled like a ball of molten lead above a *billowing grey dust* cloud that made any *hour seem torrid twilight. An* ear-numbing cacophony of whines, snarls, *splashes, roars and curses* engulfed the 35,000 laborers who *went* about their tasks.

Huge chunks of granite, some weighing as much as 15 tons, toppled in a steady, clattering stream into the greasy green water below the crude escarpment. Three red-painted vibrators, as tall as ten-story buildings, sent their yards-long steel fingers combing through sand that gushed from *giant* tubes. Then, suddenly, there *was* silence. High on a granite crag overlooking the scene, two men pressed two tiny buttons. A muffled explosion sent rock whirling into the sky, and as the smoke cleared the River Nile changed its course for the first time under the hand of man.

Thus last week Gamal Abdel Nasser and Nikita Khrushchev, accompanied at the console by the Presidents of Iraq and Yemen, formally completed the first stage of the Aswan Dam project. After 1,550 days of work, the laborers had finished piling up enough rock for the cofferdam to stem the river; the explosion set off by Nasser and his visitors opened up a diversion channel through which the Nile will now flow until the High Dam itself is completed. As the white-crested Nile rushed into the new channel, Soviet Foreign Minister Andrei Gromyko muttered in an unwontedly poetic mood: "It's *like* white horses." Even Khrushchev took time out from his attacks on the Western imperialists and said in awe: "This river is alive." As fireworks exploded all around, the Arab crowds shouted: "*Allah akhbar* [God is great]."

It was the greatest construction project in the history of Egypt—a nation whose ancient pyramid builders had given the art of grand construction to the world. But the Great Pyramid of *Khufu*† at Giza was dedicated to the sterile memory of a dead man. As Khrushchev said as he rubbernecked through Cairo last week: "Artistic standards are higher now." So are pragmatic goals.

Green Acres. First planned by the U.S., until John Foster Dulles withdrew American aid, the project is being built largely by Russian engineers and money. When the $1 billion dam is completed in 1970, a 300-mile-long reservoir—dubbed Lake Nasser, of —will add 2,000,000 green ac Egypt's narrow thread of 6,0 acres of arable land. In a nation third larger than Texas and quite bleaker, that is a considerable sion, even if it will not by *itself* Egypt's terrible poverty. Egypt's 27 lion inhabitants—twice as ma when Nasser was born 46 years are crammed into a mere 4% land. And the pinch gets tighter time: each year, 800,000 more tians come into the world. The d not only ease this pressure by pr one-third more cultivable land, b its hydroelectric plant will also Egypt's power output and cut costs significantly.

The High Dam will accomp this by harnessing the Nile's floo annual, June-to-October inunda silt and water that since the beg of history has brought life and tainty to Lower Egypt. Not onl the rain-fed flood vary in volum by year, producing the "seven fa and seven lean years," but at be some 9 billion gallons of fresh into the sea annually, often Egypt's cash crops of cotton an thirsty between floods.

The High Dam will contain th behind its massive wall, allow wa of Lake Nasser when needed. A ons of capriciousness, the Nile w to take orders.

Response to Challenge. Risin its twin sources in Ethiopia and E rica, the longest river in the wo gins its course 4,150 miles from Its longest leg, called the Whit pours out of Lake Victoria t Uganda's Owen Falls Dam, drop ly to the Sudan, where it snarls the tangled vegetation of the S 50,000 sq. mi. of swamp, amidst 14-ft.-papyrus thickets and con blue *ambatch* flowers the river lo its water in evaporation and d The Blue Nile dashes headlong the rain-wreathed mountains fro Tana, smoking through unna gorges and scouring tons of rich from the Ethiopian highlands. the two meet at Khartoum, the

tide of the Blue shoulders the White aside, bringing 84% of the system's total water volume into the resultant river.

From Khartoum to Aswan, the Nile runs through bleak desert. This is Nubia, the land of the Cush, of the mud-building Fung people, of temples and heat, where the Nile hurriedly bears its load of diluted loam over transverse ribs of crystalline rock, granite and diorite—the Six Cataracts. Below the Second Cataract, it skids through a 100-mile chute, the Batn el Hagar (Belly of Stones), studded with gleaming black islets. Then below Aswan it enters the Egypt of antiquity. Here the neolithic men of North Africa gathered as the grassy Saharan plains dried up into desert following the Ice Age, and here they acted out the first classic example, according to Historian Arnold Toynbee, of "response to challenge"—the challenge of the flood.

Levers & Virgins. Out of the ancient Egyptian attempts to tame the Nile floods developed the tools of civilization: a 365-day calendar to predict the coming of the flood; a crude astronomy to further refine forecasts; systems of accounting, and, ultimately, written language to handle the stores of grain needed to tide the society over the lean months between the floods; building implements like the wedge, the lever, the screw, the pulley, the inclined plane.

As the dynasties flourished and Egyptian culture inseminated Crete and Greece, great temples and pyramids rose along the Nile's banks at Giza, Karnak, Luxor, Thebes—clear up through Nubia. Each year, the flood climbed the bench marks of the Nilometers, and Egyptians thanked that most beneficent of gods, potbellied, Nile-green Hapi, the flood deity. To keep Hapi happy, the Egyptians threw bejeweled virgins into the river each year on the feast of Waffa el Nil (Aug. 22), which Nasser has vowed and pledged to preserve. Though Egypt's Arab conquerors put an end to human sacrifice 13 centuries ago in the name of Mohammed, Egyptians still throw elaborately costumed dolls into the Nile every year on the holiday. Still echoing through history are the hymns that the great Pharaoh Amenhotep IV, history's first known monotheist, composed in honor of his god:

How excellent are thy designs
O lord of eternity!
There is a Nile in the sky . . .

Work Is Pride. To stem the Nile on earth and to tame its flood, the Russian engineers directing the Aswan project settled on a two-stage construction plan. Choosing a site four miles above the already existing and inadequate Low Dam at the town of Aswan, they first cut a diversion channel through one bank of the Nile. This channel contains six long, Y-mouthed shafts cut through the rock and lined with cement to house a dozen 180,000-kw. turbines; with the aid of boosting generators, these will crank out the dam's annual 10 billion kw-h of power.

The rock removed in the cutting of the diversion channel meanwhile was dumped into the Nile proper, forming the foundation of the High Dam. Only when this 1,750-ft. cofferdam foundation was laid clear across the Nile could the diversion channel be opened. Last week's explosions accomplished this. The Nile, now held back by the cofferdam, turned slowly into the diversion channel, swooped into the six great turbine shafts (where one tardy worker was trapped and drowned), and reemerged into the Nile below the dam site. With the Nile thus diverted from the main riverbed, work can proceed on stage two—the raising of the High Dam itself to its ultimate height of 364 ft., forming a flattened, inverted V more than two miles across.

No sooner did the Russians begin work on the first stage in January 1960 than they learned that the Nile is not the Volga. Aswan's temperatures reach 135° in the summer, and the river's east bank, where they chose to cut the diversion channel, is a lunar landscape of tortured volcanic granite. The slow, heavy Russian drills jammed. As the project slipped nearly a year behind schedule because of Russian-equipment failures, Nasser ignored Moscow's objections and brought in outside help—light, rubberized Swedish drills, British-built tractors, crawlers, scrapers and dump trucks, which were soon roaring between loading tipples and dockside like Percherons among Arab donkeys.

Excavation quotas increased from 25,000 tons of rock a day to a Pharaonic 170,000 tons during last week's closing surge. Vast crews of Egyptian and Russian workers in four overlapping shifts put in 48 working hours a day, goaded by signs in Arabic that read "Work is Duty, Work is Honor, Work is Pride."

Though the Russians, despite their equipment failures, performed well under difficult conditions, the real "heroes of labor" on the Aswan job were the Egyptian fellahin. Swarming to the site in quest of the relatively high pay (up to $1.20 a day including overtime), the Egyptians often slept under tarpaulins that flapped in the blast-furnace desert wind, ate their rice and drank their syrupy tea mixed with sand. When blasting shocks crumpled a temporary dam above the diversion channel last July, and the onrushing Nile threatened 5,000 workers in the incompleted turbine shafts, thousands of fellahin swarmed in with sand and other fill, saved the whole project from disaster. An amazing spirit swept through the hot, dusty camp as D (for Diversion) Day neared. Drivers actually wept when their trucks broke down; Arab laborers swarmed in like ants when Soviet excavators halted for maintenance, toted tons of granite in baskets on their backs. More than 200 workers died in accidents.

Last Traces. The dam project already has changed the life of Upper Egypt. The once-sleepy resort of As-

stop taking snapshots
[*and start taking photographs*]

If you are really serious about photography you want more out of your photographs than mere snapshots. You want pictures that are exciting to look at *more* than once, pictures that reflect the true nature of the subject and its surroundings, colors that come alive.

No camera can take a good picture. Only the photographer can do that. A camera can, however, help you avoid mistakes, give your photographs the mark of experience. Here is how the new Minolta SR-7 does just that:

SR-7 is equipped with a powerful CdS light meter. And you'll notice it's built in (all the way in). The meter is highly sensitive, measures anything you can see, and is every bit as accurate as the hand-held meters the professionals use.

The world-famous F1.4 Rokkor lens is treated with Achromatic coating, a patented process which brings a new faithfulness to color photography.

The significance of the Minolta SR-7 is obvious when you see it, test it, compare it. Take a look. You'll see why this camera is used by serious photographers throughout the world.

Minolta
MINOLTA CAMERA CO., LTD.

TIME's job, in a world that gets more complex all the time, is to sort out the essential from the transitory, to get to the bottom of conflicting claims, to pierce through the propaganda and the puffery, to try to get the facts right and to make the conclusions sound. Hit & Miss in Minnesota

The second season of the Tyrone Guthrie Theater in Minneapolis opened with a palpable hit, Henry V, *and a palpable miss,* Saint Joan. *There are shortcomings in both. After a year of playing Minneapolis, the company has adopted a broader style, giving the Midwest audience the kind of easy laughs it seems to demand. The play choices are scarcely venturesome. On the record of the Guthrie Theater so far, the oft-expressed hope that decentralized regional theater might revitalize the enfeebled condition of the drama in the U.S. must be deferred.*

Henry V. Something resembling a thunderbolt is heard offstage. Out of nowhere, what seem like a hundred men are shouting, sweating, straining as they haul a cannon to stage center. It belches smoke. It is hidden in smoke. The whole theater is going up in smoke. A man has mounted the cannon, but it is difficult to see him, let alone hear him. He is King Henry V (George Grizzard), and what he is saying is, "God for Harry, England and St. George." What the scene is saying is—the prop's the thing.

Yet this cannon is virtually the only conversation piece that Director Tyrone Guthrie has permitted himself. His *Henry V* is the least tricked-up Shakespearean production that Guthrie has ever been associated with in the U.S. Except for cutting some lines for pace, he trusts the author and the playgoer, for a change, and the play flashes like an unsheathed sword, keen, virile, inescapably compelling. It is a patriot's poem of valor, a memorial ode written in the bright and acrid air of combat for all men who ever fought, bled and died for their country's honor.

For those who may legitimately have felt that Olivier's magnificent film would dwarf future stage productions of *Henry V*, Guthrie's production is a revelation. The scope and sweep of action that he crams into "the wooden O" are astonishing. The arena stage helps, since action initiated offstage picks up tremendous momentum by the time it hits the stage: Guthrie sends soldiers winging down the aisles like javelins.

He is a master of crowd scenes, never moving bunches of people about aimlessly or frantically. Like the great film directors, D. W. Griffith and Eisenstein, he achieves compositions of masses in motion that have esthetic force and balance. When the soldiers circle their king, they are humble spokes of fealty wheeling around the hub of majesty. Men wounded and dying are draped onstage with the comely anguish of *Pietàs* of the battlefield.

If Guthrie competes handsomely with the Olivier film, his leading actor does not. The pattern of George Grizzard's gifts and limitations comes clearer with each performance he gives. When there is a broad streak of nastiness in a character, Grizzard plays the role splendidly, but something sly, evasive and insecure in his countenance and bearing saps all conviction from his attempts to play parts like Hamlet and Henry V. His "Once more unto the breach, dear friends" and St. Crispin's Day ("we happy few") speeches are not plunges of passion but sputterings of saliva.

MINNEAPOLIS MORNING TRIBUNE

GRIZZARD ATOP CANNON IN "HENRY V"
In the acrid air of combat, an ode for all warriors.

Henry V alternates between high spirits and desolation of spirit, and Grizzard is best when the morale of the play and the troops is lowest. When one of Henry's brothers, Gloucester, speaks fearfully of the French, the king quietly says, "We are in God's hands, brother, not in theirs." Again, Grizzard is touchingly good as he comforts his tattered band on the eve of Agincourt with "a little touch of Harry in the night." On balance, however, he does not drive the play forward. He is hauled through it, rather like the cannon.

Saint Joan. Bernard Shaw has aged greatly since his death. His plays are beginning to settle like old houses. More and more cracks show in the dramatic structure. The carpeting of ideas is faded, overfamiliar and, in spots, threadbare. Even the wit is surprisingly creaky: "Oh! You are an Englishman, are you?" "Certainly not, my lord: I am a gentleman." The ghost of Shaw haunts all the rooms, but his voice sounds more garrulous than eloquent, and he speaks with pedantry rather than passion.

The play is more than ever a star vehicle, since only star fire will kindle the dramatic deadwood. As Joan, Ellen Geer puts her teeth into the part and not much else. There have been earthy peasant Joans (Siobhan McKenna) and eternal-child Joans (Julie Harris). At a guess, Director Douglas Campbell or Actress Geer conceived of the saint as tomboy. This tomboy Joan wants to conquer the English at Orléans for the sheer roughhousing fun of it. Thus, when she is captured, imprisoned and questioned by her inquisitors, it is merely as if her playmates were being taken away from her, and there is no anguishing foretaste of martyrdom.

The rest of the cast cannot fill the vacuum left by this Joan, but George Grizzard achieves a telling comic portrait of the Dauphin. He is petulant, epicene; he oozes suppressed venom. Wandering erratically about the stage like an uncooped hen, he scratches up laugh after laugh.

Time has worked a peculiar irony on playwrights like Shaw and Ibsen. Their liberal, independent-minded heroes and heroines are beginning to sound like stubborn, self-willed children who refuse to grow up to reality. At the same time, ironically, their reactionary clerics and villainous statesmen are beginning to sound like paragons of good sense. The doctrine Shaw preaches in *Saint Joan* is every woman her own woman, every man his own king and commoner, his own lawgiver and lawbreaker, his own god and creature. The very adoption of these ideas has exposed their limitations as panaceas for a better and happier world.

Shaw persisted in thinking that total freedom fosters total reason and total reason begets complete virtue. He used his pen like a sword, and plays that live by the polemical sword die that way.

MOVIES

King of the Birds

The waves that day on the beach on Kauai had muscle behind them, and the woman went under almost instantly. The man fought the current to get to her, but wound up 50 yards farther out and some 100 yards from shore. Friends heard the couple cry for help, but could not buck the waves. In the end it took four men, one surfboard, one rope and the local fire department to bring them in. The woman was in pretty good shape, but the man was unconscious and needed artificial respiration, was carted home on a stretcher and put to bed. Friends were astonished when he got up at 7 o'clock sharp the following morning and started on his day's work. But then, Frank Sinatra was not in Hawaii to drown. He was there to establish that he is not only a bang-up movie star and the top vocalist in all the world, but also to launch a new career as a film director.

Sinatra is 48 years old, and it is his first time out on a job to which he brings no technical experience. But he has always had what it takes to come out on top—wherever the game, whatever the odds.

Everyone's Freddy. "My desire to direct," he says, "became acute about five years ago." It took almost that long to find and prepare a suitable script, and *None but the Brave* seems worth the delay. A sort of World War II in miniature, the story tells of two groups of Japanese and American soldiers on a Pacific island who bicker internally and battle externally until they are driven to declare a truce. But the hard-won armistice ends in mutual and inevitable annihilation. Defined by the director as "an integrated picture," its stars are 17 Japanese actors who cannot speak English,* 18 Americans who insist that they can, and Sinatra's singing son-in-law, Tommy Sands (married to Sinatra's daughter Nancy). The old man himself steps in front of the camera to play a small part as a boozing, brawling Navy pharmacist, runs back behind it crying "Perfect! Cut!" after completing a scene.

But on the job, Sinatra is a fulltime professional who personally supervises every phase of production from the ordering of ten gallons of concentrated "blood" (needed to provide 50 gallons of gore when mixed with water) to learning the script so thoroughly that he never has to look at the screenplay. He knows every cast and crew member by name, though he calls most of the Japanese "Freddy," thinks privately "they should all be called Kim." The cast and crew are impressed. A prop man claims "He really *listens* to you." Actor Tatsuya Mihashi, "the Japanese Robert Taylor," calls him a director "who knows what secrets an actor should have." U.S. Actor Brad Dexter credits him with "tremendous radar." Uniformly, they are agreed that only the movie is an unknown quantity. Director Sinatra is visibly a pro.

No More Clyde. It seems an odd role for a fellow who was supposed to end his days as a careless carouser and muscular seducer. But then times have changed. The celebrated Rat Pack has dispersed and left its leader not much the worse for wear, and maybe just a little bit better. Even the widely publicized vocabulary that once cluttered to the smallest lingual group on the globe has changed; gone with the wind are "Dullsville," "Spooksville," and "Clyde." Sinatra's new lingo consists largely of a single all-purpose noun—"bird"—that has a thousand meanings. Sinatra loves them all, last week inquired of a friend, "Did you get any orchids in your bird over the weekend?" and said of a bumbling Hollywood producer, "He does have a way of stepping on his bird."

He has a rented $2,000-a-month beach-front house, which the owner has decorated (for $20,000) in orange. The draperies, ashtrays, towels and dishes are orange. And so are the silk pajamas Sinatra sits around in, drinking Jack Daniels whisky, which is reddish-brown but which goes well with what the rat pack calls the "national color."

* In the film, English subtitles will do it for them.

DON CRAVENS

SINATRA WITH CAMERA

WITH JAPANESE SOLDIER

Desire became acute.

WITH DAUGHTER

TELEVISION

Poor Emmy

The movies have Oscars, the theater Tonys, so in 1948 television got itself Emmys.

It might better have got itself a case of foot-and-mouth disease. For one thing, there are so many TV programs that nobody can begin to see them all. Then there are the absurd lengths to which the Academy of Television Arts and Sciences has gone to spread the joy around, with complicated categories that still leave such impossible competitions as this year's between Leonard Bernstein and Vic Damone for the Outstanding Program Achievement in the Field of Music. And to make it even sillier, the networks often pay for their employees' memberships in the academy—big heartedness that fosters the cynical notion that network loyalty is expected come ballot time.

Last week, with the awards due on May 25, CBS News Chief Fred Friendly came right out and called Emmy a tart. "Insofar as CBS News is concerned," he wrote in a memo to the staff, "we have not and shall not purchase memberships for our employees, we shall not participate in the awards ceremonies, and I recommend that we even desist from voting in this so-called competition."

President James T. Aubrey Jr. followed suit for the entire CBS network, and so did President Thomas Moore of ABC although many CBS and ABC shows are independently produced. That left NBC and Emmy going strong by default, at least until May 25. The network rose gallantly to the occasion, tongue-lashing the girl's deserters as "classic of sham and hypocrisy," "an effective publicity stunt," "Cuma about what they would do about a flock of absentee award winners," and well give the show its highest Nielsen rating yet.

The lady's last gasp may be her finest moment.

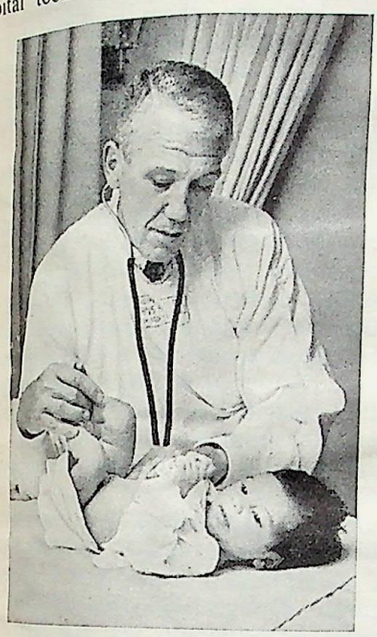
GENETICS

The Improvement of Man

"The most striking advance in the biological sciences in this century has been the cracking of the genetic code." After that ringing statement, Pediatrician Robert E. Cooke's address at the 75th anniversary celebration of Baltimore's prestigious Johns Hopkins Hospital took on a different tone: "The application of these findings to man's improvement has resulted in a negative contribution." No man could have been more anxious to see hope of positive gain in the genetic findings. Dr. Cooke, 43, has two children handicapped by mental retardation, some forms of which are now known to be linked with genetic abnormalities.



DR. COOKE & PATIENT
Immaturity is a blessing.

Dr. Cooke explained his down-to-earth conclusion simply: "The genetic message is an assembly of so many small pieces that improvement by planned rearrangement seems virtually impossible." Yet he was not altogether pessimistic. Genetics, he suggested, can play a useful role, "not as the primary modifier of men," but as one of the many branches of scientific research which together will find ways to recognize those victims of genetic misfortune who can be most helped by special care. Already, Dr. Cooke notes, it has been shown that some victims of mongolism can attain I.Q.s as high as 80.

The main feature of the Hopkins' anniversary celebration was the dedication of a new $15 million Children's Medical and Surgical Center, with Dr. Cooke as pediatrician-in-chief. Thus he added: "I speak not of the achievements of men, but of the contributions of the child to man and of higher horizons to be attained thereby."

The fact that human young are born more helpless than those of most animals, and remain dependent longer than any others, is sometimes seen as a disadvantage. Not so, said Dr. Cooke: "The greatest single advantage that the species *Homo sapiens* possesses is to be born immature and to remain immature for a long time." It is this, he declared, that creates the opportunity for the improvement of man. He suggested that it is not so important to know how much intelligence is determined by inheritance and how much it is affected by environment, as to know how each of these factors affects it. Some day, he concluded hopefully, man can learn to make "a considerable increase in his intellectual performance."

PEDIATRICS

A New Kind of Hospital

The physical plant of the Hopkins Children's Center (*see above*) is as different from that of an ordinary hospital as Dr. Robert E. Cooke and other inventive pediatricians could make it. Not surprisingly, it boasts almost as much space for researchers' laboratories as for its 270 children's beds and medical and nursing services. But the hospital is built on the premise that a sick child is not simply a small replica of a sick adult.

Permissive Faces. When an adult is sick, the Hopkins pediatricians hold, he wants to suffer in privacy. Not the child: his medical progress may be hindered by the strange and awesome structure and atmosphere of the ordinary hospital. He wants things to be like home. He wants to see other children, sick or well, and he wants to be seen. So although virtually all the new children's hospital beds are on the two-to-a-room plan, the rooms themselves are divided by glass walls above a three-foot dado. If the kids make faces at each other through the glass, that is fine with today's permissive doctors. For nursing or medical privacy, curtains are drawn to cover the glass.

Every child well enough to get out of bed takes his meals in one of the playrooms that double as dining rooms and classrooms. Unless the doctor orders otherwise, patients may indulge the common childhood taste for hot dogs and hamburgers. They are spared broccoli and beets (rated as "inedibles" by the center's dietitians) and have a wide choice of other vegetables. Hopkins dietitians have learned that children in hospitals do not go for pie, so they offer a choice of ice cream, cake, cookies, puddings and fruit.

Preemie Protection. Mothers of very sick children may sleep in, at $6.50 a night (including breakfast and lunch). For the most helpless of all immature humans, the premature baby, there is a special wing consisting of six rooms, each containing four incubators. As each room is emptied, it is completely sterilized, thus greatly reducing the risk of infection for the next occupants. (With a single, large preemie ward, which can never be emptied, this practice is impossible.) And preemies enjoy an electronic monitoring system which, the Hopkins believes, is the first of its kind in the world. Under each armpit of the preemie an electrode is taped. One records the baby's temperature, the other its heartbeat. Both signals are transmitted to a central nursing station and can be wired to sound an alarm if either measurement gets out of line.

As an overall protection to reduce the risk of infection, the entire pediatric hospital wing is not only comfortably air-conditioned, but is kept under higher pressure than the outside air. In

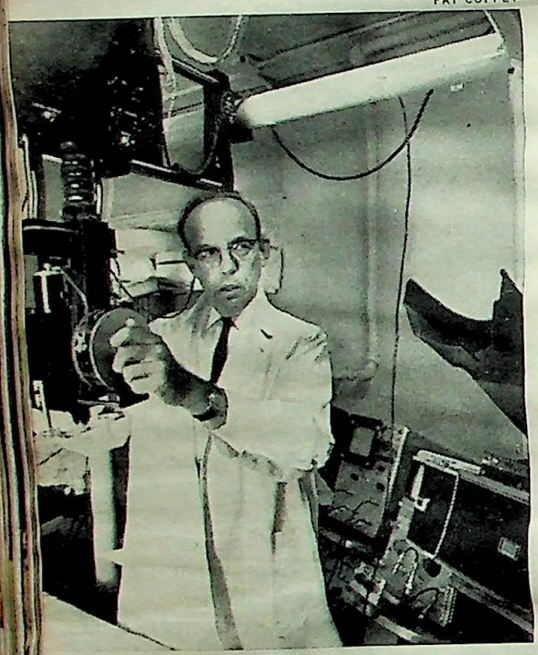
operating rooms and preemie rooms, the air pressure is still higher. Whenever a door is opened, air moves out, and no rush of incoming air can carry germs from personnel to patients.

DIAGNOSIS

Pictures By Sound

For millions of years, bats and porpoises have been using ultrasonic echoes to locate their prey. Now physicians and surgeons are learning to use the same technique to hunt for different targets. With pulses of "sound" far too high for human hearing, they are locating tumors that must be cut out, livers that must be treated for cirrhosis, babies' heads that are too big to pass through the mother's pelvic arch, even

PAT COFFEY



DR. HOLMES & ULTRASOUND SCANNER
Silent, harmless and painless.

fast-beating heart-valve leaflets that need to be repaired.

For Pregnant Women. One of the leading U.S. ultrasound diagnosticians, Dr. Joseph H. Holmes, 55, head of the kidney-disease division at the University of Colorado Medical Center in Denver, has been working since 1951 on three basic machines to perform a variety of diagnostic feats. While he grants that ultrasound is still subordinate to X ray in some respects, he is equally convinced that it can do many things that X rays cannot do.

Ultrasound's advantage comes clearest in the case of pregnant women. No one wants to subject them to X rays because of possible harm to mother and foetus. In Denver, Dr. Holmes's colleagues have measured the skull diameter of unborn babies accurately to within one-eighth of an inch in 95 of 100 cases. And there is no evidence that ultrasound, properly used, has any harmful effects even on such sensitive targets as the unborn child, the reproductive system, or the human eye.

Equally important, unlike some of the more complex X-ray methods, ultrasound diagnosis is completely painless and does not require even a local anesthetic. The simpler machines used in many procedures are portable and can be taken to the patient's bedside or to the emergency room. The cost to the hospital is about the same as for X-ray machines, from $3,500 to $15,000, depending on purpose and complexity. Cost to the patient is about the same as for X rays.

Hold That Shot. In the simplest procedures, a pulse generator sends bursts of current to a crystal, which then produces sonic energy at frequencies ranging from one million to as high as 10 million cycles per second. The pulses pass through a transducer, a combined transmitter-receiver the size of a microphone, which may be simply moistened with water and held against a patient's skull. For a pregnant woman, the transducer is held against the abdomen, which is smeared with light oil.

The crystal puts out from 200 to 400 bursts of ultrasound every second. The silent intervals give it time to pick up the echoes, which are then converted into electrical impulses and fed into an oscilloscope. More complex scanners can give the equivalent of a three-dimensional picture. On the oscilloscope screen, the ultrasound echoes make a picture that may look like Lord Cornwallis' breastworks at Yorktown. Additional circuitry can make the oscilloscope hold the picture long enough for the doctor to snap a photograph of it.

How Thick a Liver. What ultrasound registers best is the "interface" where one kind of tissue with a certain amount of resistance meets another with a different resistance. An examining physician can press on a patient's belly to feel how big his liver is, but he cannot get a clear outline of the liver, let alone tell how thick it is. With a simple twist of the dials, the ultrasound scanner will pick up first the near surface of the liver, then the back surface, and measure the distance between them, thus telling the doctor how much the liver is enlarged.

Ultrasound clearly outlines the excess fluid (ascites) in the abdomen of patients with many types of disease. Glasgow's Dr. Ian Donald has perfected his technique to the point where he can distinguish between an abdomen with ascites caused by a benign tumor, and one with ascites caused by cancer.

Brain surgeons are not uniformly enthusiastic about ultrasound and still rely heavily on X rays. But even skeptics concede that, as a first screening procedure, the new technique has the great advantage of simplicity and painlessness. It may spare many patients the heroic procedure of having air injected into the brain cavities (ventriculography). Some British neurosurgeons report better than 90% accuracy for ultrasound in determining whether a brain tumor or a hemorrhage is present, and if so, where.

dian angel appeared: Jacob Shemano, 51, president of San Francisco's Golden Gate National Bank. Jake Shemano looks more like a Hollywood Buddha than a banker; he favors green velvet shirts, smokes English Ovals like he was trying to give up Bantron, and originally became a good friend of Willie Mays, he explains, because "I am a very athletically inclined person myself." By mid-1963, he had talked Mays into depositing every cent of his $105,000 salary into the trust department of Golden Gate National, started paying off Willie's debts and was doling out a living allowance of $20,000 a year—no more, no less.

Following Orders. As far as Say-Hey is concerned, Jake Shemano is "the best friend I have in the world." Mays has learned to live on his allowance, and when he is not over at the Shemanos', he lounges happily in his $100,000 cocoa-and-white split-level pad in the fashionable Forest Hill neighborhood of San Francisco, watches TV on one of his three sets, and keeps open house for the neighborhood kids.

The only thing that makes Willie nervous now is all the chatter about his hitting. "If I'm doing good," he says, "I don't like to discuss it. I'm just doing what I've always done. Hit .400? Man, that's silly. All I want to do is hit .300, and that's hard enough these days."

For Wondrous Willie, the statisticians figure, it would be especially hard. To get back down to .300, he has to goof up his next 44 trips to the plate.

HORSE RACING

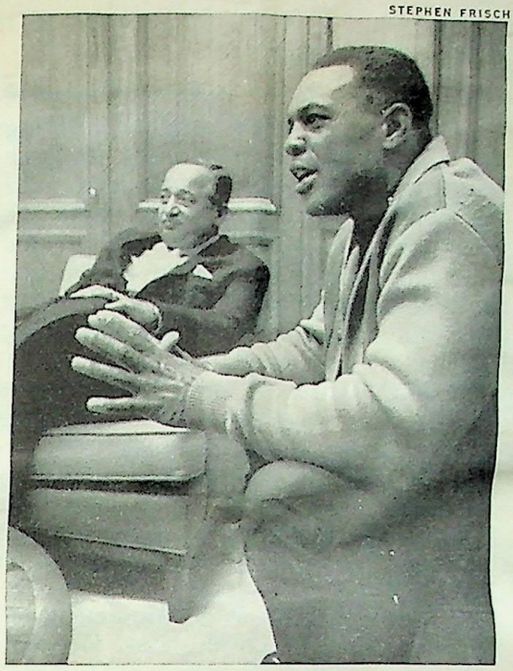
Two for the Money

Horse racing's an opium dream beyond all dreams ever spun,
Where every sad bloke in the mob should have won every race that was run.

—Grantland Rice

To hear the experts tell it, every horse in the field had a chance—except maybe Big Pete. Big Pete was a sprinter, a good one to be sure, but at the 1⅛-mile distance of the Preakness, he figured to wind up, as horsemen say, "absolutely"—meaning somewhere up the track. But The Scoundrel, Quadrangle and Roman Brother had won five races and $188,000 this year among them. And then there was Hill Rise, beaten by a neck in the Kentucky Derby, gaining with every stride. Should've won, the experts said, and a steal, even at 4-5.

What about Northern Dancer, E. P. Taylor's Canadian-bred colt that won the Derby? Lucky, they said. Too small, they said. On the day of the race, the New York Journal-American published its handicappers' selections, and only one out of twelve picked the Dancer to win. The Morning Telegraph was only slightly more encouraging: one out of eight. A well-known trainer went so far as to predict that Northern



STEPHEN FRISCH

JAKE SHEMANO & WILLIE
An angel at the Golden Gate.

Dancer "won't even be on the board when the race is over."

Trainer Horatio Luro and Jockey Bill Hartack had other ideas. At the break, Hartack gently urged Northern Dancer into third place—two lengths behind Big Pete and Quadrangle, a neck ahead of Hill Rise. "Hill Rise was the horse I had to beat," he said. "The track was very tiring, and I wasn't worried about the horses out front—I knew that they would come back to me." For nearly a mile, Northern Dancer and Hill Rise ran practically side by side. Then, on the final turn, Jockey Willie Shoemaker made his bid on Hill Rise. At the same instant, Hartack flicked the Dancer's reins. "That was it," said Hartack. "It was a battle for position—and I won the battle." Hill Rise faded abruptly. Northern Dancer drew out to win by 2¼ lengths.

The lucky little horse had done it again, $124,200 worth—running his lifetime bankroll to $519,000. Just one more victory, in next month's mile-and-a-half Belmont Stakes, and he would become the first Triple Crown winner since Citation in 1948. Northern Dancer went back to his hay bale. And Bill Hartack went straight to the shower. "The Belmont," he said, "is just another horse race."

SCOREBOARD

Who Won

▶ Harvard's crew: the Eastern Association of Rowing Colleges sprint championships, by a length, at Lake Quinsigamond, Mass. *Despite* choppy water *and a 15-knot* headwind, the unbeaten Crimson crewmen *stuck to their* shovel-like smooth-water oars, leaped into the lead at the start of the 2,000-meter race, and held on to edge Cornell, chalk up their fourth straight victory, and establish themselves as a top candidate to represent the U.S. at next autumn's Olympics in Tokyo.

▶ Britain's Graham Hill, 35: the Grand Prix of Monaco, first race counting toward the world driving championship. *Urging his* B.R.M. *into the lead* on the 53rd lap, the mustachioed Hill zipped through Monte Carlo's narrow streets at a record average of 72.6 m.p.h. to beat the U.S.'s Richie Ginther by one lap and win the 195-mile race for the second straight year. Scotland's Jimmy Clark, the 1963 Grand Prix champion, was forced to abandon his Lotus when it lost oil pressure six miles from the finish.

▶ Grambling College's sprint relay team (TIME, May 15): a clean sweep at the Los Angeles Coliseum Relays, winning the 440-yd. relay in 40.2 sec. and the 880 in 1 min. 23.8 sec. In other events, Villanova University tied the world record with a 7 min. 19 sec. clocking in the two-mile relay; California's Dallas Long easily won the shotput with a toss of 65 ft. 5½ in. (14 in. shy of his pending world record); and Arizona State's Henry Carr beat Florida A. & M.'s Bob Hayes, the "world's fastest human," in the 200-meter dash.

Commanding Painter

To some painters these days, the highest ideal is impersonality. They do not sign their works. They are not interested in painting out their mental turmoil on canvas, as were abstract expressionists. One such artist in search of anonymity is Robert Indiana, 36, who adopted that surname from his native state rather than endure the pangs of his actual *identity*.

Nonetheless, last week the young Hoosier was getting quite a name for himself. On the side of the New York State Pavilion at the World's Fair is an Indiana "mural" made up of the letters E, A and T in a crisscross, which draws an occasional visitor in search of hot dogs or pizza. It is supposed to flash on and off with hundreds of lights, but every time the fair people plug it in, it blows its own fuse. His poster for the opening of the ballet theater hangs in Lincoln Center. A show of recent work opened at Manhattan's Stable Gallery, and to top it off, somebody who obviously cared stole one of his paintings from another gallery.

ERR? Indiana is primarily known for his emblematic circles set in plane-geometry shapes like road signs. Their bright, unmixed colors are so unpainterly that his brush stroke cannot be detected, because, as he says, "impasto is visual indigestion." Usually they are ringed with inscriptions: phrases from Melville and Whitman, or commands in broken stencil type such as EAT, HUG, LOVE, DIE, or ERR. These curt verbs, he believes, represent the vocabulary of the American dream, the "optimistic, generous, and naive" philosophy of plenty that is often mistaken for all the philosophy that the U.S. lives by.

Though Pop artists shun identifying the social satire in their work, Indiana admits that he thinks "it is pretty hard to swallow the whole thing about the American dream. It started from the day the Pilgrims landed, the dream, the idea that Americans have more to eat than anyone else. But I remember going to bed without enough to eat."

YIELD? Indiana spent nine years studying art, right through a fellowship to the University of Edinburgh. Nevertheless, he believes that art should not demand head-scratching analysis. His esthetic is frankly skin-deep, but "its comprehension can be as immediate as a crucifixion." So can his emblems, during these times of integration struggles, that proclaim YIELD BROTHER. His newest work, a diptych called *A Mother Is a Mother* and *A Father Is a Father*, returns to the figure, shows a barefoot man in hat and overcoat and a disheveled, bare-breasted, scarlet-coated woman, each getting out of a Model T Ford. The figures are Indiana's parents, and the license-plate date is the year before his birth. "I have a notion that I was conceived in the back seat of a tin lizzie," Indiana explains.

Indiana's ancestors in hard-edge imagery are Charles Sheeler, Charles Demuth, and other U.S. precisionists; the lettering is akin to Stuart Davis. His waterfront studio overlooks the Brooklyn Bridge, and among his recent works are images that recall Joseph Stella's adoration of the bridge in paint. But Indiana circles them with poetry from Hart Crane, as he circles salvaged sailing-ship masts in his show with staccato words. Commanding, yes, but the weakness of his work is that the wordiness relates more to literature than painting, and the forms more to highly repetitive geometry than art.

omy down to a mere presence, where its force is greater than in a slickly limned nude. In *The Fountain*, he portrays humid decay draping blunt forms that seem relics of a distant past. There is always agony in Sutherland's garden—or at least, as his biographer, Douglas Cooper, dryly admits, "little evidence of gaiety."

Thumbs Under the Hammer

Gentle, high-minded and peaceable stands the artist at his easel, mind, heart and soul intent on creation. Shrewd, suspicious and materialistic stands the artist in the marketplace, protecting his interests with a zeal that would make a pawnbroker blush. The most meaningful U.S. marketplace is the auction room at Parke-Bernet Galleries in Manhattan; and when Parke-Bernet announced for last week an end-of-season clearance sale of modern masters that promised to set prices, the art world got alert.

The loudest fury raged around three paintings presented as works of Jackson Pollock. The Van Gogh of the abstract expressionists has sold in private dealings of his best work for more than $100,000; a price sharply below that could hurt the Pollock market. His widow, Painter Lee Krasner, who owns many Pollocks, dropped in anxiously on Parke-Bernet to see the works. She pronounced that her husband never dripped these and hurried off to the state attorney general's office to sign a restraining order to stop the sale. Parke-Bernet had no alternative but to withdraw the paintings.

That act, of course, trod hard on the toes of the consigner, a California artist named Manuel B. Tolegian. Though his own work is stolidly academic, he claims that Pollock was a high school chum, a "constant companion," and a co-worker in the 1930s. He, for one, stood behind their authenticity 100%. How could Mrs. Pollock judge the paintings, he asked, when they were done before she knew the artist? "I didn't even know Pollock had a wife until recently," added Tolegian innocently.

There were two other withdrawals. A rather Hartleyesque still life, signed M. H., was blacklisted by a New York expert who knows Marsden Hartley. Then a bumbling Franz Kline was yanked because its owner could not be reached to defend it.

Lost in the shuffle were the prices that other modern works set; most were lower than dealers hoped. A Milton Resnick abstraction brought only $550. A 1948 semiabstract De Kooning brought $9,000. Abstract expressionists won no enthusiasm. A huge Mathieu went for a paltry $5,250. Hartigan hit $3,000 but had a low of $700; Okada hit $2,000, Marca-Relli $3,000. The real surprise of the evening was a quiet, 1952 still life of ceramic ware, plain as a cupboard and less abstract than a Cézanne, by 73-year-old Giorgio Morandi. Winning bid: $9,500.

The global services of Japan Air Lines

...ow—four of JAL's fourteen transPacific jets originate in Hong Kong. No stopovers. The same plane, JAL's "Sunset Express," goes all the way.

JAL

THE PRESS

CENSORSHIP

It's Very Hard to Do, Even in South Africa

In 1951 South Africa's Nationalist Party government, then only three years in office, ordered a sweeping investigation of the press. Party leaders were annoyed by the tendency of the country's English-language papers, which predominate, to criticize nearly everything the government did. A seven-member press commission was appointed to study such unseemly journalistic behavior, and it was granted a free hand and, ultimately, $500,000 to do the job. Last week, more than 13 years later, the commission finally dropped its findings before Parliament.

Dropped was the right word. The report ran to nine thick volumes, 4,262 typewritten pages, and more than 1,000,000 words. Obviously, the commissioners had taken their assignment seriously. One of them had died during the long labor, and five had been replaced. The commission had sifted through truckloads of press dispatches, and had exhausted seven secretaries in reaching its conclusions. Those conclusions added up to an unpleasant surprise. What the commission recommended was nothing short of absolute government control over all press copy leaving South Africa.

Unscrupulously Tendentious. The report proposed registration of all foreign correspondents. It also recommended a Parliament-appointed press council with power to censor all outgoing copy and to levy unlimited—and unappealable—fines against correspondents whose stories failed to meet the government's standards of good journalism.

What those standards were the report made exhaustively clear. Every dispatch examined during the years of inquiry—billions of words in all—was meticulously measured against the commission's four hand-picked news classifications: very bad, bad, faulty and good. Hardly any got a passing score. The proportion of "scandalous lies" in correspondence that got out of the country was put at 90%.

Copy sent to the New York Times and TIME was indicted jointly as "inaccurate, frequently dishonest, overpartisan and hostile to South Africa and whites particularly the Afrikaner and the Nationalist Party." One Times Correspondent, C. S. Sulzberger, was given the distinction of being "100% very bad." Reuters, Ltd., the British wire service, was found guilty of "deliberately hiding the illiteracy and semibarbarism of the mass of the native people."

United Press International transmissions rated no higher: "Blindly [illegible] udiced, unscrupulously tendentious." Associated Press reports "had the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pearance of having been made for the purpose of conducting a campaign against South Africa and for use in journals opposed to South Africa, its government and those supporting its traditional race policy."

Verbose Irrelevance. Such overblown nonsense was greeted by jeers from the opposition bench in Parliament. But even Prime Minister Hendrik Verwoerd himself could not have been entirely pleased. He had, after all, expected something else: a hatchet job on his press critics at home. Verwoerd had not asked for a broadside against the foreign press, nor had he requested concrete proposals of any sort.

It was all extremely embarrassing, as a few bold voices noted as soon as the mocking laughter died. "For verbose irrelevance," said the Johannesburg Star, "the Press Commission's report has no equal in South Africa, and probably few equals anywhere." Observed the Rand Daily Mail, another English-language daily: "This report, read as it stands, will do more damage to South Africa's reputation overseas than 500 of the press messages which it condemns so vigorously." The only foe of *apartheid* in Parliament added what could serve handsomely as the last word. Said Mrs. Helen Suzman, member for the country's Progressive Party (TIME, April 17): "There is nothing more calculated than this report to make South Africa the laughingstock of the civilized world."

MAGAZINES

Si Elle Lit Elle Lit Elle

"My, you look chic, Jeanne," said Mme. Georges Pompidou, wife of France's Prime Minister, to the milkmaid at the Pompidous' country place. Jeanne was indeed a fetching sight: gold sandals, gay striped frock in the latest mode, gleaming pearl fingertips. "*Merci, madame,*" replied Jeanne. Then she explained how a farmer's daughter so far from Paris could keep up so surely with style changes: "I read *Elle*."

Mme. Pompidou also reads *Elle*. So does Mme. Charles de Gaulle. So do 800,000 other French women every week. The numbers justify a popular saying: "*Si elle lit elle lit Elle* (If she reads, she reads *Elle*)." And so, of course, do all the arbiters, pace setters and proprietors of Parisian *haute couture*, the people whose very names spell female elegance around the world: Chanel, Givenchy, St. Laurent, Balenciaga, Dior, Courrèges. None of them stand higher in the world of high fashion than Hélène Gordon Lazareff, 56, the tiny, self-assured, golden-haired editor of *Elle*.

Triumphant Catalogue. *Elle* does not so much reflect fashion as decree it. That sudden hemline plunge that Dior called the New Look did not descend from the salons to the boulevards until Hélène had endorsed it in the pages of her magazine. The *parfum* house of Chanel, which folded its fashion line in 1940, returned to eminence in 1956 by the same route. "Coco would even have launched herself," says Mme. Lazareff modestly, "but we first explained why it wasn't obvious how chic she was. "Everything that goes into the magazine," says Hélène Lazareff, "I must myself. I would rather go astray by something too far out than to be too conservative. I don't worry about what the *couture* thinks. I've given the *couture* much more than I've taken."

In a recent issue, *Elle* catalogued a host of *Elle*-inspired fashion notes that the trade had pirated: Dior's heavy stockings, for example, Nina Ricci's elegant T shirt, everybody's insouciant high boots. When *Elle's* ten-woman fashion crew find nothing worthy in the *boutiques*, they return with suggested Lazareff designs. Couturiers are usually happy to execute them at once, knowing that with *Elle's* imprimatur they are sure to sell.

Like French Bread. As the extension of one woman's confident taste, *Elle* has enlarged its influence steadily since 1945, when Hélène Lazareff published the first issue, on paper so coarse and yellow that it reminded her of French bread. Experience on *Harper's Bazaar* and the women's section of the New York Times while she was a World War II refugee had encouraged her to think she could do as well, if not better, at home in France. Her husband Pierre, editor of Paris' daily France-Soir, indulged the venture by giving it some cramped offices in France-Soir headquarters on the Rue Réaumur. Today *Elle* occupies all the fifth floor, part of the fourth and third.

From birth, *Elle* exhibited a driving urge to counsel the French woman in every facet of her life. That first issue was a cold one, and *Elle* advised its readers to fight the chill in slacks, a suggestion so sensible that it promptly set the postwar style. As the magazine grew, its interests expanded: vacation planning, advice on romance, cooking and sewing instruction, even history in the form of a series of famous accouchements. The contents made *Elle* as attractive to factory girls—21% of its readership—as to manufacturers' wives.

Like a Chanel Gown. Editor Lazareff runs her magazine with the grateful enthusiasm of a woman who has command like a Chanel gown. Visitors to *Elle's* offices—among them dozens regularly sent over by the French Foreign Ministry's section on cultural affairs—frequently remark that all the girls seem to be in uniform. And in a way they are. If Madame shows up one morning in a navy suit, next day navy suits will bloom all over the staff.

But by then, Hélène Lazareff is ready to have demonstrated some new enthusiasm. France's host of other fashion magazines, some 50 in all, can only emulate. They can scarcely compete with an influence so pervasive it can turn a shepherdess into a mannequin.

MAYWALD

EDITOR LAZAREFF IN HER COUNTRY HOUSE OUTSIDE PARIS

It's almost criminal the way your magazine is breaking down traditions," complained an elegant woman from Languedoc to an editor from *Elle*. "You can no longer tell the difference between my maid, my neighbor and myself."

SCHOOLS

New Curator for the Fellows

Since 1938, some 300 selected newsmen have left their beats to spend a thoughtful academic year at Harvard, taking whatever courses appealed to them. These permissive annual fellowships were made possible by a gift from Mrs. Lucius W. Nieman in memory of her husband, founder of the Milwaukee Journal. Except for the first year's class when Poet Archibald MacLeish was curator, every Nieman fellow has shared the same counselor during his days at Harvard. But last week Nieman Curator Louis M. Lyons, 66, was preparing to retire.

A taciturn, scholarly, pipe-smoking

LOUIS LYONS — WILL RAPPORT

JAMES KAVALLINES —N.Y. HERALD TRIBUNE

DWIGHT SARGENT

Bostonian who spent most of his professional years on Massachusetts papers, Lyons was a logical choice for the post. His reporting was often concerned with the campus. One of his first scoops, for the Springfield, Mass., Republican, concerned an academic scandal at Amherst College that led to the forced resignation of Amherst President Alexander Meiklejohn. And even before departing the Boston Globe, his last paper, Lyons began doubling as a public relations aide to James B. Conant, then Harvard's president.

To find a successor for Curator Lyons, Harvard President Nathan M. Pusey looked no farther than the Nieman alumni list. There, with a little help from Lyons, Pusey found Dwight E. Sargent, 47, a Nieman fellow (1950-51) who newspapered in Maine and, since 1959, has edited the New York Herald Tribune's editorial page. The transition next July should be smooth. Like Lyons, Sargent warms to journalism's scholastic overtones. Moreover, says Lyons, "he's a very comfortable person to have around." Which was just how Dwight Sargent and all the other fellows felt about Louis Lyons.

LEISURE

But How Many Readers?

Reading is an arcane art. Nobody but a man, his conscience and possibly his wife can ever know whether he has opened the books that line his shelves. But publishers are interested in sales, not consumption, and any market researcher can tell them who buys what, when and where. The latest survey of book-buying habits, printed in *Publishers' Weekly* and based on interviews in New York, Washington and San Francisco, confirms some old publishing assumptions and springs a few mild surprises. Among the findings:

▶ The most inveterate book buyers, by age, belong to the 18-to-34 age group, known in market-research jargon as "the age of acquisition"; roughly half of them bought at least one book in the past month.

▶ 40% of the total population questioned bought one or more books in the past month, and men bought as many as women.

▶ Hardback and paperback sales were evenly divided.

▶ An erudite 9% of the population (representing upper income and education brackets) bought 54% of all the books sold.

RETIREMENT

Down Mexico Way

Where can a man go to get some real living out of a pension check—a place where it's a sunny 70° all year round, where a five-room house can be had for $40 a month and a live-in maid for $16, where the family food bill may be measured in pennies per day, with beer at 8¢ a bottle and gin at 98¢ a quart? The answer to this daydreaming question is not nowhere; it's Mexico.

More and more retired U.S. citizens are discovering a bargain *dolce vita* across the Rio Grande. And the Mexican government is doing its best to help the process of discovery. This month speakers from the National Council of Tourism, headed by ex-president Miguel Alemán, are campaigning throughout North America to build up Mexico's *industria de los viejitos*—the oldster industry—which the council estimates would be worth $400 million a year if Mexico could attract only 1% of the annual retirees in the U.S. and Canada.

Mexico's imported gringos include all kinds. At the peak there are the sleek fat cats of Cuernavaca and Acapulco, reading their air-mailed New York Times in their white-walled gardens and practicing kitchen-Spanish on the servants, who have servants of their own. At the other end of the scale, and potentially more important to both Mexico and the U.S., are Americans with as little as $150 a month, who have worked out a comfortable design for living in such modest places as Chapala and Ajijic.

Paseos & Tortillas. In these two pretty towns on 48-mile-long Lake Chapala, 30 miles south of Guadalajara, some 900 retired men and women from the U.S. are living with—not away from—the Mexicans. The wife of a retired mining engineer may not invite the wife of a Mexican fisherman for tea, but she lives two doors away, she haggles in the same market for the same kind of food, and when they meet on the street, Doña Margarita greets Doña Margaret as a neighbor.

The Americans of Chapala and Ajijic have adopted many Mexican ways as their own. They look forward to the Thursday and Saturday *paseo* of boys and girls circling the town plaza in opposite directions to look each other over and flirt their way into marriage. They are careful to cover their mouths against the night air "to avoid catching cold," and not to gush over a Mexican baby, out of respect for the Indians' belief that this will give the child the evil eye. They say "This is your home" when guests enter their houses, and they serve frijoles instead of potatoes and *tortillas* instead of white bread.

On their part, the Mexicans of Chapala have gained far more than the $200,000 their American neighbors spend there each month and the employment they give to maids and houseboys, gardeners and mechanics. The Americans have helped build a hospital and two schools. Their wants have nudged local markets into a wider range of merchandise.

Happiness with Highballs. Some of the retirees of the area are Korean war veterans living on pensions that are too low to give them the official status of "immigrant retired." This is a category instituted two years ago by the Mexican government, granting to those of 55 and over who have incomes of at least $240 a month for a man (and $80 for his wife and every child of 15 or over) the privilege of entering Mexico duty-free with their own household furniture and a car, of living in the country without the usual and re-entry required every six months for those on tourist visas. After five years' residence, they may become permanent residents of Mexico, with permission to take jobs, and most of the privileges of citizenship except voting.

More affluent retirees are Laurence and Helen Hartmus, both 60, who have lived in Ajijic for ten years, where they bought a four-bedroom house with all modern conveniences plus a swimming pool, garden, garage and workshop for $16,000. Mining Engineer George Mitchell, 64, and his wife Pauline live on some $500 a month, but they find that they spend only about $300 of it, living in a comfortable house and employing two housemaids and a gardener. "We retired here because the climate is the best in the world and living

so cheap that you can almost laugh," says Mitchell.

Even for the country club set. Dues at the Chapala Country Club are $5.60 a month for two, caddie fees 35¢ for 18 holes, and back at the 19th afterward, a rum highball comes to 16¢.

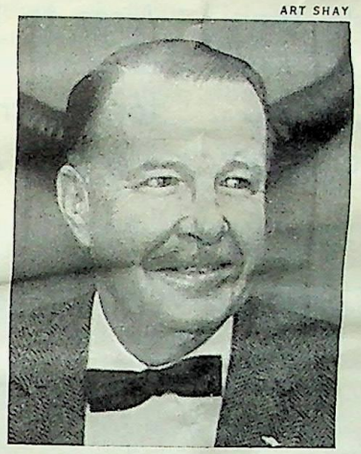
THE CITY

News in Zoos

There seems to be something both pleasing and prestigious in having wild animals where you want them. The bachelor Prince Rainier of Monaco made a lasting impression on Movie Actress Grace Kelly by showing her around his private zoo, and he had plenty of royal precedent. Some 3,000 years ago, Egypt's Empress Hatasu sent out a whole fleet in search of new animals to stock her private menagerie; Emperor Wen, the first of China's Chou dynasty (12th century B.C.), had a collection of animals he called "the Garden of Intelligence"; Roman Emperor Octavius Augustus had no fewer than 420 tigers, 260 lions and 600 assorted other specimens from Africa.

Wild animals are mostly a municipal matter today, but they are more popular than ever. Of the 30 largest cities in the U.S. only two do not have at least one zoo (Minneapolis and Newark). Recently Los Angeles announced plans for a new $6,600,000 zoo designed by Architect Charles Luckman. Indianapolis has just opened a twelve-acre, $800,000 children's zoo as a mere preliminary to a 38-acre main zoo to be added within the next four years.

The Indianapolis children's zoo contains a Japanese garden, with pagoda, pool and bridge, in which a collection of Japanese wildlife run free; a miniature train tours the grounds behind a replica of an 1863 locomotive; a walk-in whale has an aquarium in his stomach; there is an underwater glass panel for viewing submarine life and an underground panel to watch burrowing animals at work. Also "elephant-rama" houses a baby elephant named Tumthong, bought with the nickels and dimes of 100,000 Indianapolis and Marion County schoolchildren. And of course there is a chicken hatchery—a staple of children's zoos because they are not only educational for the small fry but also supply live food for a grownups' zoo's snakes.



ART SHAY

ARCHITECT EVERLY
Behind the moat.

Paddling Through Animals. Dreamer-up of all this zoological ingenuity is North America's No. 1 architect to the animal world, Robert Everly, 58, of Winnetka, Ill. Everly got into zoo designing ten years ago as a byproduct of planning recreation areas, and has traveled all over the world studying old zoos and planning new ones.

Most zoos, says Everly, suffer from lack of long-range planning, plus ignorance on the part of architects, who have a tendency to treat the buildings as monuments, making them too big, impossible to heat, and badly ventilated. Then, too, the modern conception of a zoo's function is quite different from what it was 50 years ago, when the main idea was to display curious creatures. Today the emphasis is on presenting a representative selection of the world's animals in surroundings that simulate their native environments.

Carrying out the principle pioneered by Hamburg's Hagenbeck Zoo, Everly and most modern zoomakers do away with bars and cages as far as possible, separate animals from people by relatively invisible barriers, such as moats —a technique that Chicago's Brookfield zoo and the excellent St. Louis zoo pioneered in the U.S. The most advanced arrangement, to be followed in Los Angeles' new zoo, is to group animals geographically. In Everly's Angrignon Park Zoo in Montreal, he plans an "African Veld" with antelope, eland, ostrich, rhinoceros, hippopotamus; "South American pampas" with tapir, llama, deer; and an "Asian Plain" (antelope, sheep, deer and birds). A navigable river will flow through the zoo's center so that visitors can paddle by and watch the wildlife grazing on the shore.

Everly plots the movements of the humans as carefully in the modern zoo as those of the animals. In the zoo he is building in Omaha, for instance, visitors start at the top of a gentle slope and walk downhill all the way—sometimes above the animals, sometimes on the same level—to meet their buses at the foot.

Up-to-date zoos separate outsiders and inmates with glass—sometimes electrified to discourage assault—which also serves to protect the animals from human germs and the lethal things people are so fond of offering animals to eat. Glass, though, is not for lions. "Enclose a lion in a glass cage and you'll drive him crazy," says Everly.

Saving the Species. Zoos are going in for more showmanship, such as the red-light rooms, in which nocturnal animals are tricked by the red lights into thinking day is night, therefore moving around for the audience instead of snoozing the visiting hours away. They are also expanding. San Diego, which already has the largest animal collection in the world, is planning to add six acres, and Zoo Designer Everly currently has enlargement programs under way at Denver, Columbus, Boston and Johannesburg.

"Zoos are more important, as well as more popular than they used to be," says Everly, "because of the number of species that are disappearing from the earth. It's estimated that one species of animal has disappeared every year for the past 50 years.* With the great game preserves of Africa being cut into, the only place to protect all kinds of species is in our zoos."

* Among them: Barbary lion, Rufous gazelle, Florida wolf, Carolina parakeet and Henshaw's grizzly.

THE ECONOMY

More Output = More Jobs

Automation entered the language during a conference of Ford Motor Co. engineers in 1946—and it has been influencing society ever since. On the one hand, it has made possible the vast growth and technological advances of the U.S. economy in recent years; on the other, it has been a source of worry and perplexity to millions of people. One of the big worries of labor leaders and economists has been that automation gains might enable a strong economic advance—like the present one—to surge forward without creating any new jobs. Last week that worry was at least partially dispelled by two new statistics operating in tandem.

In the sharpest gain in almost a year, U.S. industrial production in April rose a full point, to 129.2% of the 1957-59 base; in all of last year's final six months, it had risen only four-tenths of a point, and this year it had been rising by only half a point or less each month. That was good news, but the Labor Department had some new figures that made it even better. While production was surging ahead, nearly 500,000 new, nonfarm jobs were created in April, far more than is normally expected for the month. The new figures reduced unemployment among adult male workers to 3.8%, the lowest figure in more than six years.

Rising output and job levels are getting a big boost from the nation's two most basic industries: steel and autos. Steel's output last week rose to the highest level in eleven months, and the industry is clearly headed for a record production year. Steel's well-being, of course, stems chiefly from the buoyant state of the auto industry, whose daily sales so far in May are running 1.5% ahead of last year's near-record rate. Ford is pacing the pack, has sold 20,454 Mustangs in the four weeks since the sports car's introduction. The other automakers also notice that their best-selling models are those that were either all new or sharply restyled for 1964. That gives them good reason to hope that the completely restyled 1965 models will keep the auto industry moving forward in high sales gear.

WALL STREET

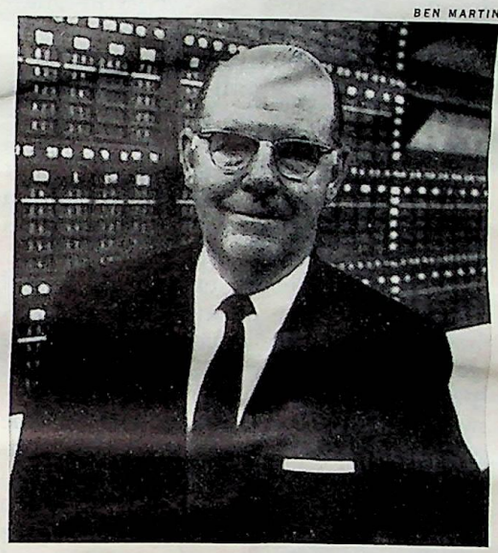
A Sweet Deal

It was a little like Macy's acquiring Gimbel's. That great department store of U.S. finance, Manhattan's Merrill Lynch, Pierce, Fenner & Smith, last week took over the leading dealer in the highly sophisticated and eminently profitable market for Government securities, Wall Street's C. J. Devine & Co. The world's largest brokerage house thus got a solid hold on the only important part of the finance business in which it had not been represented. Says one Merrill Lynch vice president: "We knew nothing about the Government bond business."

Fortunes from Fractions. The men who do know the business turn handsome profits—and sometimes incur huge losses—by dealing in tiny fractions. Fluctuations in prices are as small as one sixty-fourth of 1%, but that can add up to quite a sum in a market in which the U.S. Treasury every Monday auctions off about $3 billion worth of short-term bills to refinance the nation's debt. These bills go to the highest bidding bond dealers, who then sell them for whatever price they can get from banks, corporations and speculators.

Companies buy Government securi-

BEN MARTIN



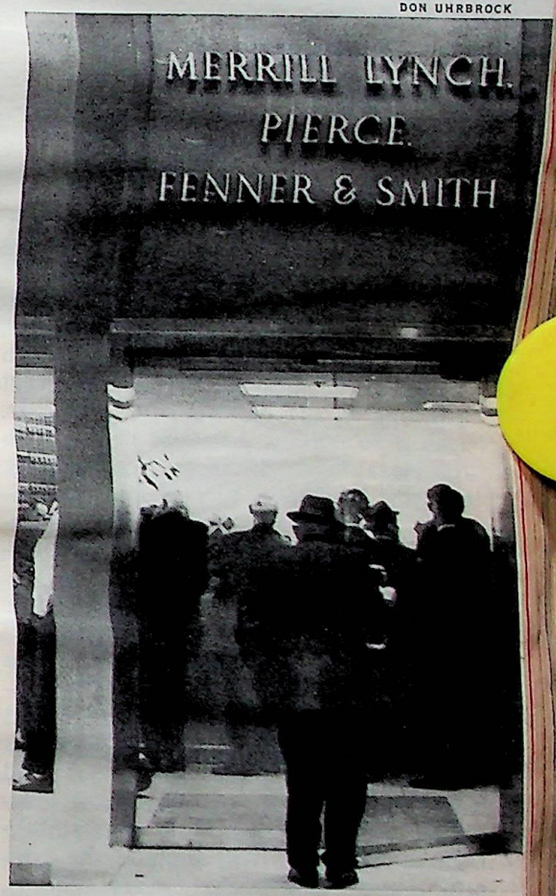
CHAIRMAN McCARTHY
Ending a well-kept secret.

ties in order to put their money to work and nail down safe interest rates; people buy them either to collect the interest or to speculate on the fluctuating prices of bonds, which move around in a range just above or below par value. Another attraction is that low margin requirements permit an investor to buy $100,000 worth of Government securities by putting down as little as $5,000 cash; if the bond's value rises just one-half point, he earns $500. Bond dealers are made or broken by their ability to predict instinctively how much "retail buyers" will be willing to pay. The fractional prices change rapidly, pushed up and down by such factors as bank interest rates, stock dividend rates, rumors of increased Government borrowing, the state of U.S. business and the bond market's elusive "mood."

Few dealers had sharper instincts or better knowledge of the market's subtle ripples than Christopher J. Devine, a New Jersey fireman's son who founded his own firm at 28. Working with a fierce intensity that seldom permitted relaxation, Chris Devine opened nine offices around the country, built a staff of more than 200, traded as much as $750 million worth of securities a day. After he died a year ago, two-thirds of the firm's capital of $18 million went to his estate. C. J. Devine's 14 remaining partners were left with only $6,000,000 —hardly enough to organize muscular syndicates for bidding on multibillion-dollar bond issues. The partners went shopping for greater resources.

Access to Power. Wall Street's grapevine brought word of their search to the tenth-floor corner office of Merrill

DON UHRBROCK



MERRILL LYNCH OFFICE IN NEW YORK

Lynch's chairman, Michael W. McCarthy. He and Merrill Lynch's directors made a unique proposal to Devine's partners: Why not buy up a large chunk of Merrill Lynch's undistributed stock and join the company? After a fortnight of secret negotiations, the two houses agreed on Wall Street's biggest deal this year. Thirteen of the Devine partners anted up $8,000,000 and were taken into Merrill Lynch as a division.

A sweeter deal could scarcely be imagined. The Devine partners got access to the power of Merrill Lynch, whose assets top $1 billion; in addition, all 13 of the men became vice presidents of the brokerage giant (raising its total to 114). As for Merrill Lynch, it acquired the savvy, contacts and good will of a major company without putting up so much as a penny.

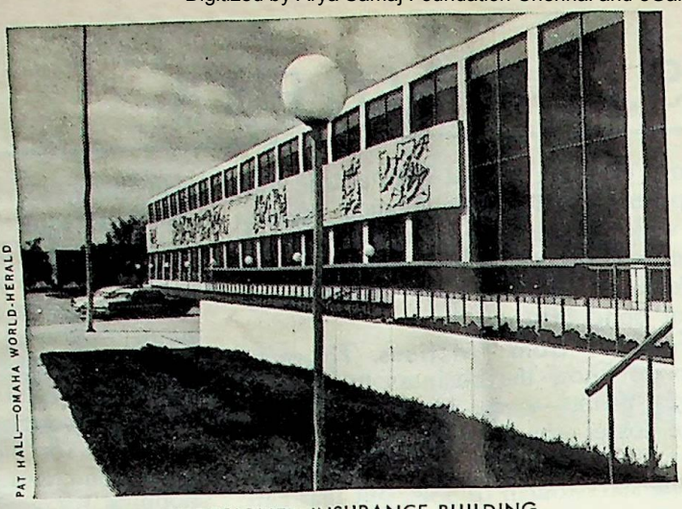
DALY IN OFFICE



PAT HALL—OMAHA WORLD-HERALD

DALY-DESIGNED INSURANCE BUILDING
Profit in comprehensive architecture.

BUILDING

From Omaha to Brazil

Even by going standards in executive suites, the sweeping, 56-ft.-long room in Omaha is something special. It has marble floors, *Hawaiian* wood panels, *French stained* glass, Japanese carvings, Indian temple bells, a lavatory with walls of kangaroo hide and an abstract painting in the elevator. Leo Daly Jr. uses it to impress potential clients with the versatility of his firm, Leo A. Daly Co., the Midwest's biggest and the nation's third largest firm of engineer-architects. "My specialty," says Daly, 46, "is in not specializing."

Daly's firm has just landed a prestige contract to supervise a huge construction project in Latin America. The company was picked by the State Department's Agency for International Development to plan and engineer a $27 million program of school and medical construction in northeast Brazil. The project will fan out over 1,500,000 sq. mi., and will include the construction of 6,500 elementary schools, 332 health centers, 22 teacher-training centers, 21 normal schools and 47 audio-visual centers, plus the renovation of about 4,000 existing classrooms. Daly will send a staff of 50 to supervise the project, but Brazilian contractors will do the construction work. Daly's aim: to create a name and a new market for his work in Latin America, where he sees both "infinite possibilities and all sorts of problems waiting to be solved."

Beyond the Church. Daly's father founded the firm 50 years ago to specialize in church architecture, but under Leo Jr. it has moved far afield since World War II. About half of its work is designing such military projects as blastproof silos for Titan missiles, *DEW-line* facilities in the Arctic and the big SAC underground command post near Omaha. Daly also designed Boeing's big computer center in Seattle and a $4,700,000 physics lab at Argonne National Laboratory in Lemont, Ill. Daly's 300-man staff is now working on 60 projects worth more than $200 million, including a dormitory, research building and student center at Jesuit-run Creighton University in Omaha that will be part of a $45 million master plan Daly created.

Unlike many architects, who accent the creative, Daly likes to stress architecture's business side. He has developed a well-honed staff that seeks out technically difficult jobs that are often avoided by competitors. Daly favors boxy, square buildings, has been criticized for not being experimental and exciting. By way of answer he recalls how in college he once designed some gaudy neckties for a Baltimore company. "I still wonder how the poor men who bought them lived with them," he says. "Of course, that's what my competitors say about my work now."

Personal Touch. Daly belongs to about 60 Omaha civic and charitable organizations, enjoys occasional travel abroad with his wife and two sons. Otherwise, he is either in his office or traveling around to the company's five U.S. branches, where the firm offers "comprehensive architecture" by specialists who not only design a building but also select its site, choose all furnishings and suggest financing. To compensate for growing bigness and to keep the personal touch, Daly divides his experts into teams, assigning a 20- or 30-man team under a "captain" to work on a project much as a small architectural firm would. His company last year opened a New Orleans office, hoping to use it to expand into Latin America. Daly now considers that move one of his best investments.

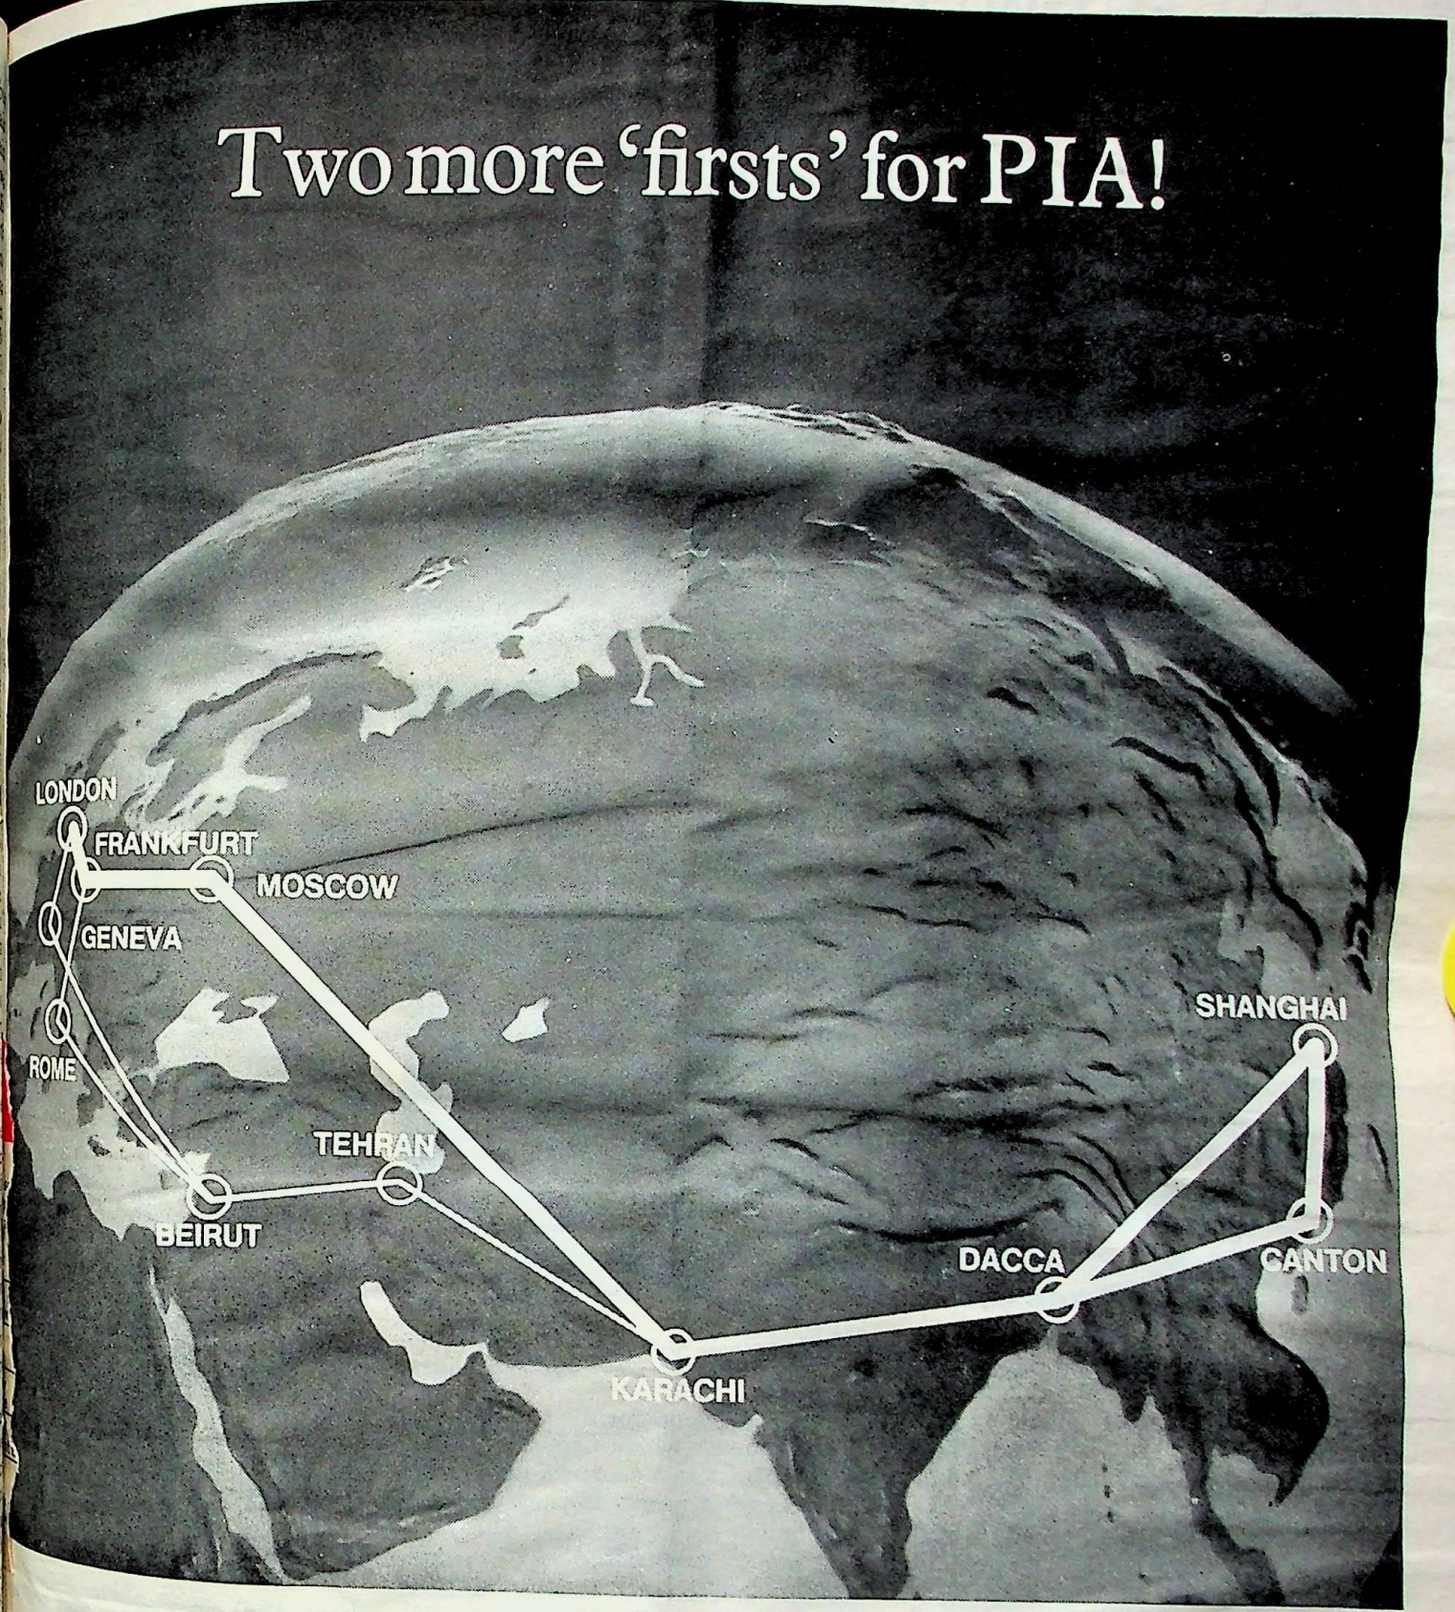
Two more 'firsts' for PIA!



FIRST THROUGH MOSCOW AND ONWARDS

FIRST INTO CHINA WITH BOEING FAN JETS

LONDON, FRANKFURT, MOSCOW, GENEVA, ROME, BEIRUT, TEHRAN, KARACHI, DACCA, CANTON, SHANGHAI

Now five flights every week by PIA Boeing 720B fan jets between London and Karachi! The fifth flight—a completely new service through Moscow, and an airline-industry 'first' for PIA! For PIA is the only international airline to fly to Moscow and onwards. And now, too, another 'first' for PIA! PIA introduce the first jet service to Canton and Shanghai—thus pioneering a direct air-link between Europe and China! Add this to PIA's 88% punctuality average last year and you can understand why travellers say PIA are great people to fly with.

Great people to fly with

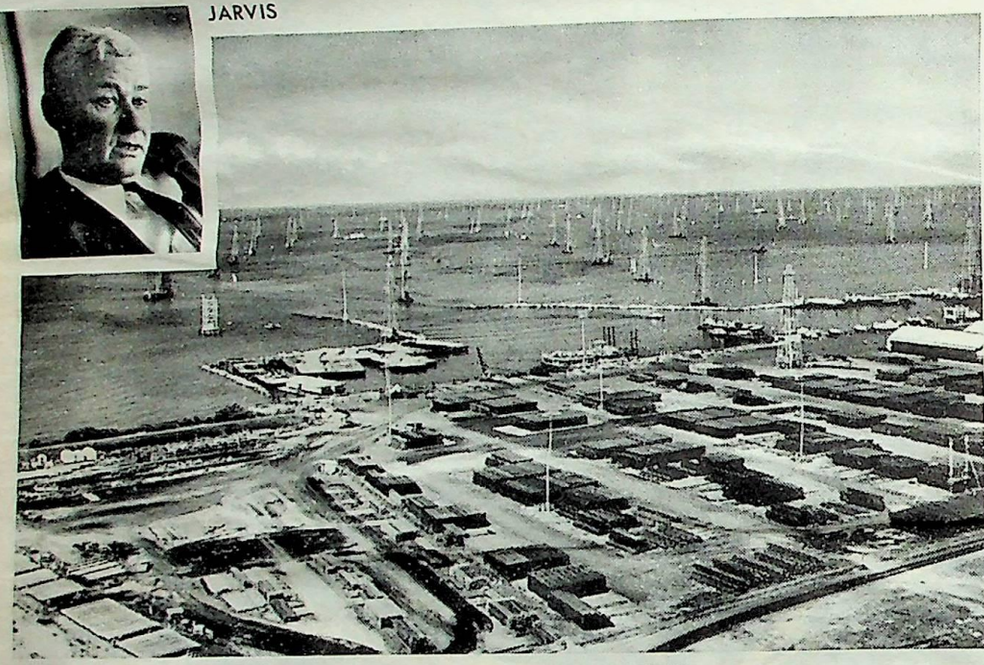
VENEZUELA

Corporate Citizen No. 1

Venezuela's huge, U.S.-owned Creole Petroleum Corp. has developed a skill that few other companies in the world need to worry about. Continuously harassed by Communist sabotage, Creole has become so quick and adept at repairing its dynamited pipelines that the terrorists actually get defeatist about blowing them up. That skill, plus a line of Venezuelan government guardsmen stationed all along the pipelines, has kept Creole—which is 95% controlled by Standard Oil of New Jersey—operating as Venezuela's biggest business. It pumps 40% of the country's oil, provides 25% of the government's income, employs more than 11,000 Venezuelans, and pays out $125 million yearly in benefits and wages. The company's sales last year rose to $1,097,799,700 and its earnings to $254 million—after a record $475 million in taxes and royalties to Venezuela.

JARVIS



CREOLE OIL RIGS ON LAKE MARACAIBO

Tearing down fences and making friends.

Anti-Yankee Feelings. This picture of business-government cooperation was not painted without problems. The two Standard Oil subsidiaries that began drilling in Venezuela in the early 1920s, and later Creole (which was set up in its present form by their merger in 1943), were often ripe targets for anti-Yankee feelings. In the early days, only Americans held top posts, employees lived in fenced-in company compounds, and Creole often engaged in shouting contests with the government. But under low-keyed President Harry Jarvis, 55, a 17-year Creole veteran who took over in 1961, the company has tried winningly "to be a good corporate citizen."

Jarvis, who speaks excellent Spanish, pushed company efforts to break up the compounds and help the workers buy homes in regular communities. He has also expanded the operations of the company's Creole Foundation, which helps build schools and train teachers in Venezuela, and established the Creole Investment Corp. to provide seed capital for deserving small businesses. In three years, C.I.C. has invested $5,300,000 in 22 small companies, ranging from a mushroom farm to a sugar refinery, has helped create 1,500 new jobs. Said Jarvis at the company's annual meeting in Manhattan last week: "The investment company has found that the managerial experience it can provide is perhaps of greater importance than the capital itself."

Jarvis is also the moving force behind the new "Dividend for the Community" program, under which Creole and other big companies in Venezuela donate 2% to 5% of their profits for new hospitals and similar social projects. The company has so emphasized its "Venezuelanizing" policy that it now employs only half as many foreigners (total: 674) as it did in 1950, is continually moving Venezuelans into higher posts. Creole has done so much for Venezuela that President Raúl Leoni assured the oil companies in his inaugural address in March that they would continue "to enjoy their granted rights," and Venezuela's elder statesman, Rómulo Betancourt, is convinced that the country is getting more out of its oil by leaving it in private hands.

Mideast Advantage. The world's fourth largest oil producing company (after Kuwait Oil Co., Aramco and the Iranian consortium), Creole still faces serious problems. Because of high labor and production costs and the fact that it pays 70% of gross profits to the government *v.* a 50-50 split in the dle East, its crude sells for $2.80 rel *v.* $1.82. It is thus with some ure that Jarvis watches the agge Organization of Petroleum Exp Countries (OPEC) and shrewd n rulers whipsaw the Mideast oil panies for higher royalties. An in in Mideast oil prices could only str en the world market position of zuela's good corporate citizen.

BRITAIN

Shaking the Old Boy Networ

British business has often cla companies more by the social st the men at the top than by size, or prospects. Eton and the Guar faultless qualifications, and so is onetcy or hereditary peerage. Some ons believe that directors constit gigantic Old Boy network. Last the British business world was s by a major corporate change t lustrates a trend in British bus disestablishmentarianism that i grading the Old Boys in favor managers and directors whose qualifications are ambition, skill flair for hard work.

In a top management reshuff making Leyland Motor Corp. e the board of its principal manuf subsidiary, Leyland Motors Ltd filled the new posts with three men (average age: 39) who ha through the company's ranks. public-school boy among them more surprising, Leyland made t appointments to the board of another important group subs and picked a 33-year-old and year-old from the ranks for th The shifts reflect the philosop Managing Director Donald Stok a onetime salesman who took o year and has made Leyland a tra in professional management.

Sharing the Peers. Relentless petition for worldwide markets erything from paints to paddles ing British companies turn awa the Old Boy tradition. There is turn away from. STATUTES

Inciting to Suicide

"Jump! Jump!" screamed onlookers as a troubled youth threatened to leap from a twelfth-story hotel ledge in Albany, N.Y. "Jump! Jump!" cried another mob last week as a jobless man got set to dive off Manhattan's Brooklyn Bridge. Both would-be suicides were eventually talked down to safety, but not before hundreds of witnesses gaily exchanged bets on their fate while yowling such taunts as "What's the matter, ya yellow?"

Quite apart from their moral and spiritual indifference, people who make suicide a spectator sport may be charged with a serious crime. The police, who busied themselves with trying to move the mobs back, were apparently unaware of it, but New York State has two highly relevant laws. Section 2304 of the state penal law says: "A person who willfully, in any manner, advises, encourages, abets or assists another person in taking the latter's life, is guilty of manslaughter in the first degree." Section 2305 adds that such incitement is a felony even if the would-be suicide survives.

To nail a violator of these laws requires proof of willfulness. And those who cry "Jump!" might try to plead that it was all a joke. "But this is a serious business," warns a top New York prosecutor, "and the laws are there to be used."

LAWYERS

The Bar Behind Bars

Any person haled into court, who is too poor to hire a lawyer, cannot be assured a fair trial unless counsel is provided for him.

—*Gideon* v. *Wainwright*

With that landmark opinion, the U.S. Supreme Court last year forced all state criminal courts to appoint lawyers for all indigent defendants charged with more than petty crimes. Since 60% of criminal defendants are indigent, hundreds of U.S. lawyers are in for heavy duty. And since the rule may apparently be applied retroactively, as a New York federal court recently ruled, hundreds of convicts are now appealing for new trials—getting their legal counsel from that grand old penal institution, the self-taught jailhouse lawyer.

Holding a Thin Line. *Gideon* has already freed (after a new trial with a lawyer) Clarence Earl Gideon, the Florida prisoner who started it all with his now famous *in forma pauperis* petition to the Supreme Court. More than 1,000 other Florida convicts have been released, 600 have won new trials, and hundreds of others are polishing up "Gideon Petitions." Spurring them on is Prisoner 62601, Theodore N. Turner, 39, Florida's most accomplished jail-

FLOROS

STANDARD OIL'S STOTT & PAPPAS
New strength for a fragile economy.

toward its goal when King Constantine laid the cornerstone of a $190 million industrial complex near Salonika that will be the biggest single foreign investment ever made in Greece.

The new complex, christened the Salonika Industrial Development Plan, was conceived by Boston Financier Thomas A. Pappas, 64, and includes projects by three U.S. companies. Esso Pappas, a partnership between Pappas and Jersey Standard, has started work on Greece's second oil refinery. "Within 19 months," promised Jersey Executive Vice President William R. Stott, "this bare earth will be covered by a refinery producing 50,000 barrels a day of petroleum." Esso is also building a 200,000-tons-a-year ammonia plant, Republic Steel is expected to operate an $85 million steel mill, and the Ethyl Corp. will run a petrochemical plant. Altogether, the complex will provide 2,000 new jobs.

Pappas, who has become chairman-general manager of Esso Pappas, is a Greek-American bearing gifts to his motherland. Born Antonios Papadopoulos, he was taken to Boston as a child, eventually shortened his name because "it was easier for my American friends." He and Brother John expanded their father's modest grocery and imported-foods business into a profitable range of activities that now include imported liquors, real estate and shipping. They have also financed a Greek light-bulb factory and building-products plant. On frequent trips back to supervise, Tom Pappas noted the improving Greek economy, began serious planning for the industrial complex that he first considered building 25 years ago. He persuaded the U.S. corporations to participate, got bank loans in the U.S. and Athens to supplement his personal investment in the project. "I have achieved my lifetime dream," he said last week, while the King of Greece troweled mortar.

...at has caused much of British business ...lag behind the rest of the industrial- ...d world. Such is the outspoken con- ...rn in Britain today about how busi- ...ss is run that it is taking on the scope ...a national debate. Said the Times of ...ndon: "The need for a managerial ...volution is widely evident, but the ...y seems to have been drowned by de- ...ding murmurs of contentment from ...o many board rooms."

The New Managers. One shot in the ...volution was fired a few months ago ...hen a London merchant bank openly ...dvertised in the Financial Times for a ...ew managing director—a departure so ...adical that one banker felt obliged to ...xplain: "Normally, one wouldn't ad- ...vertise a real job, you see, because if a ...hap didn't know a job was going he ...houldn't be the right sort of chap, ...ould he?" house lawyer, who solemnly states that "Our thin line of civilized living and culture is based on due process of law. If due process is violated, we defeat none but ourselves."

Forger Turner, who used to be Clarence Gideon's neighbor at Florida's Raiford state prison, has been the brains (IQ 140) behind more than 100 would-be Gideonites. A onetime insurance claims adjuster, Turner picks up clients through the prison grapevine, studies their court records, and has often drawn up petitions, hand-printed by a dozen other convicts. Turner's legal skills have already forced public defenders to handle all Gideon Petitions, made court clerks abolish the usual $25 filing fee. At times he writes like a judge: "This breathes of the appellate court's wrath at their lower court brethren." At times he hectors uncooperative court clerks: "You are not the court. You are not God. You are just Charley Limpus." Always he seems more hep on relevant new decisions than many judges. "He's a brilliant man," says Orange County Public Defender W. D. Frederick Jr. "His grasp of case law is phenomenal."

Turner's record is marred by one embarrassing failure: he has yet to spring himself—a problem that afflicts even the best jailhouse lawyers. San Quentin's Caryl Chessman, for instance, studied 10,000 legal works, took 1,000,000 words of notes, ground out more than 100 assorted writs, appeals and petitions, for stays of his own execution—and still the state put him to death in the gas chamber.

However they may fail themselves, though, incarcerated counselors are busier than ever aiding other inmates. Texas' Huntsville Prison now has a "writ room," where prisoners can polish up petitions like collegians in the library. Kansas State Penitentiary offers a big law library, partly the gift of beneficent lawyers. At Washington's State Penitentiary in Walla Walla, a special "law wing" provides typewriters as well as texts. Some prisoners are getting so legalistic, complains a Tennessee state prosecutor, that "it's getting a damned sight harder to keep them in than to put them in."

Sue the Judge. The great hazard in prison legal practice is the very goal it seeks: a new trial, since it may well result in a stiffer sentence than before. At Colorado State Penitentiary, for example, a convicted forger serving a two-to-six-year sentence recently won a new hearing, got slammed with a new rap of 40 months to eight years. Despite such danger, though, there is often a sense of beat-the-system accomplishment; one Colorado lifer has goaded a slow-moving judge by suing to enjoin his salary. Colorado petitions now move remarkably faster.

In New York, jailhouse lawyers can often be found among the four-time losers whose multiple offenses drew mandatory life sentences. Many such prisoners are Negroes who once served time in Southern jails. A petitioner in this situation may void an out-of-state conviction if a New York court finds that his constitutional rights were violated. And by thus wiping one offense from the books, a lifer may halve his sentence or even walk out free.

Bleary Blackstone. What flaws many top jailhouse lawyers is a chronic inability to handle the freedom they win. In a single year, one Carl Smith got his convictions for burglary and bank robbery reversed by the supreme courts of Maine and Massachusetts. Now he is back in a federal pen for another bank robbery. For years at Missouri State Penitentiary for Men, a brilliant prisoner named Clyde Meeks counseled other cons so ably that judges valued him as a friend of the court. Once free

CONVICT COUNSELOR TURNER
See here, Charley Limpus.

himself, Meeks wound up in jail in Iowa on a forgery charge.

All over California, awed lawyers still ponder the 150-arrest career of Emery T. Newbern, "the Blackstone of the drunk tank." Bottle-worn but razor-sharp, Newbern once saw a judge lock his courtroom doors to keep him and other drunks from staggering out, immediately argued successfully that he was being deprived of his constitutional right to a public trial. Newbern beat another drunk charge on the ground that police (unwittingly) deprived him of his right to a doctor's examination. In 1960, he scored his greatest coup: overturning California's 1872 "common drunk" law—a phrase so vague as well as pejorative, he said, that it violated his right to know the charge against him. The state supreme court agreed. Uncommon Drunk Newbern might have made a crack lawyer as quite a few lawyers told him, but liberty was too much for Newbern. He lurched in front of a car in Florida and died at 41.

KAMEHAMEHA CAMPUS
From cottages to colleges.

mended a broadened school curriculum that would allow graduates to go either to college or directly to work.

80% to College. In the fall of 1962 Bushong took over as the $40,000-a-year president of the Kam Schools to carry out the switch. He made trade-school courses optional, turned over other vocational subjects to public technical schools, with Kam picking up the tab. He established new academic departments in language, science, math, English and social studies. As a result, this fall 80% of the graduates will go on to college, compared with 7% in 1950, 47% in 1959.

From the faculty of 165, he cut away deadwood, hired bright mainlanders, introduced a merit system of raises that could bring a teacher with a doctorate $11,078 a year. Over a three-year period Bushong insists that teachers spend one summer in a campus workshop and one summer taking college credit courses before getting the third summer off.

Problems of Wealth. The school picks students on the basis of home visits and academic achievement, rejecting about half. The torrent of money that flows into Kam pays all board and room and most teaching costs, although students still must pay up to $137 in tuition. Wealth clearly relieves Bushong of the most serious problem headmasters face, but the terms of his riches create other headaches. The princess' will, for example, specifies that Kam teachers must be Protestants (although the student body is 30% Roman Catholic, 15% Mormon, and the rest Protestant or unaffiliated), but a new state

JOHN TITCHEN

PRESIDENT BUSHONG

fair employment practices law bars such restrictions.

Race also creates an issue. Bushong, the trustees and Hawaiians in general are willing to go along with the Hawaiian-blood clause for student admission, partly because such students seem worthy beneficiaries of the princess' wealth and partly because intermarriage has given a big portion of Hawaiians some native blood (almost four-fifths of last year's Kam graduates had non-Hawaiian surnames). Yet such discrimination runs against civil rights principles and may have to be changed.

It also forces Bushong to send his two daughters to another school. He is satisfied with the education they are getting—but it is a measure of his confidence in Kam's fast advance and "virtually unlimited potential" that he says, "I'd rather have them here."

PUBLIC SCHOOLS

Common-Sense Compromise

If endowed by Providence with the right to perform one solitary, spectacular miracle, most school boards in Northern U.S. cities would use it to solve the deadlocked problems of *de facto* segregation. The Gary, Ind., board, for example, concluded that it would not take any responsibility for desegregating its schools, and made its decision stick in the courts; the U.S. Supreme Court a fortnight ago turned down a chance to hear the case. Chicago, Boston and Philadelphia are bogged down for reasons that range from white backlash to school-board inertia. New York City's Board of Education hesitantly advanced and then ignominiously cut back a proposal for big-scale pairing of mostly white and mostly Negro schools, which implied bussing many children back and forth.

Groping for another way out, the New York City board asked help from State Education Commissioner James E. Allen Jr., who turned to a committee* that seemed to have no better chance of finding a solution than the board itself. Instead, last week, after a two-month study, the committee made proposals that struck almost everyone with their common-sense compromise, originality and insistence on excellence. Essence of the plan was a drastic revamping of the existing school system, dividing a child's twelve years of basic education into three four-year segments.

▶ Primary schools would be neighborhood schools and thus segregated to the degree that the surrounding housing is segregated. But they would be better schools in ways that would particularly help culturally deficient slum children. Ungraded classes would let youngsters proceed at their own pace, aided by team teaching "and the imaginative use of space, materials and teaching devices." And primary education should be preceded by two or even three years of nursery and kindergarten to give slum kids the basic tools of learning.

▶ Middle schools would start the integration process by drawing from districts designed to contain both white and Negro primary feeder schools, which would require some bussing.

▶ High schools offering both academic and vocational courses would be open to any student in the city and thus provide the highest possible measure of integration.

▶ Off in the future, the committee envisioned giant "educational parks" where as many as 15,000 kids from 10 to 13 would troop each day.

The committee accused the Board of Education not only of failing to "stimulate even slight progress toward desegregation" but of letting segregation get worse in recent years. Whether Allen's advisers will accomplish anything more is mostly a matter of money and time. The state plan would cost an extra $250 million a year (current school budget: $840 million), and it could easily take a decade to fulfill.

UNIVERSITIES

Moriturus Publicabo

Judged and found guilty by the hard law of "publish or perish" (TIME, April 24), Woodrow Wilson Sayre perished last week as assistant philosophy professor at Tufts University in Medford, Mass. He took his case, that eloquent classroom teaching is as worthy a trait in a professor as scholarship proved by publication, to a committee of his faculty peers—who concluded that "it is not at all evident" that Professor Sayre's teaching "outshines that of his colleagues." The school then dropped his contract. Sayre got several job offers almost at once—but thinks he will first settle down and get his 1957 Ph.D. thesis into hard covers.

* John H. Fischer, president of Columbia University's Teachers College; Kenneth Clark, City College psychology professor and Negro leader; Rabbi Judah Cahn of the Metropolitan Synagogue.

JULIAN WASSER

COCKPIT, CANARD & AIRSCOOPS

Speed can be dangerous.

AERONAUTICS

The Supersonic Cobra

The Air Force officers who christened their controversial new research plane the Valkyrie were probably confused. Valkyries were the screaming maidens of Nordic mythology who selected the warriors who were to fall in battle, and conducted them to Valhalla. But when the long-delayed XB-70A was finally rolled out of its hangar at North American Aviation last week, no one else knew what to call it either. Some said it looked like a hooded cobra; to others it was a praying mantis, a flying anteater, a banana split towing an orange crate. To Brigadier General Fred J. Ascani, Air Force chief of the project, the shining white monster was a beautiful flying bird. "It looks like it's doing Mach 3 just sitting on the ground," he said fondly.

Strange Design. According to present Defense Department plans, the XB-70A will never be used as a bomber, and only two prototypes will be built. But from its graceful curving nose to its folding wingtips the plane is radically new; into its strange, almost frightening design, $1.3 billion of engineering and scientific imagination have already been poured. Heavier and longer than any other airplane, it is designed to cruise at three times the speed of sound (roughly 2,000 m.p.h.) for an "intercontinental" distance. The engineering innovations that were tried in its construction may well affect every high-speed airplane built in the foreseeable future.

One of the aerodynamic advances was the use of "compression lift." Every supersonic airplane generates shock waves in the air around it, and at three times the speed of sound those waves are extremely powerful. The engines and air intakes of the XB-70A are placed under its delta wing, and their bulk encourages a shock wave to form just where the upward force of its compressed air can be caught and used as free lift. Speedboats do something similar when they climb out of the water and plane along on their bottoms.

Compression lift will be a help, but the Valkyrie needs much more of a boost. It could not hope to succeed without unprecedented strength combined with lightness and heat resistance. At 70,000 ft., where it will fly, the temperature is far below zero, but at Mach 3, air friction will heat parts of the structure to 650° F., which is well above the softening point of aluminum and magnesium. To avoid such dangers, some parts of the ship were made of titanium, that new miracle metal, lavishly used in the delta-wing A-11. But more than half of the XB-70A's structural weight is "stainless steel honeycomb sandwich." This sophisticated material, which is comparable to the light cellular wing bones of large birds, is made by brazing thin steel skins to hexagonal steel cells. It is extremely light, but almost as strong as if it were made of solid metal.

The steel sandwich is also an excellent insulator, keeping the searing heat outside from reaching the plane's vulnerable innards. The rear fuselage, though, is heated from inside by the engines and from outside by the racing air. In flight it will reach 1,000° F., so it is made of high-strength tool steel, which does not lose its strength even when white-hot.

Folding Tips. Like all delta-wing planes, the XB-70A tends to get nose-heavy at high speeds when the wing's center of lift shifts toward the stern. To counteract this tendency, two small wings called canards are set like large trim tabs, just aft of the cabin. But even the canards are not enough; as Mach 3 approaches, the tips of the delta wing will be folded downward. This will shift the center of lift forward and add directional stability. It also adds a hazardous complication to the plane's construction.

The 550,000-lb. XB-70A will be shoved along by six General Electric YJ-93 engines, each with 30,000 lbs. of thrust. The engines' turbine blades are air-cooled to keep them from melting, and the afterburners, which are used continuously at high speed, run [illegible] hot. The two boxlike air intakes, [illegible] one feeding three engines, are [illegible] long and high enough for a man [illegible] walk erect in their gaping maws. [illegible] are rigged with movable walls, [illegible] and bypass doors to keep the engines [illegible] air at the right pressure and temperature. The engines are grouped close [illegible] the centerline of the plane so that if [illegible] of them fails, the loss of thrust will [illegible] cause a dangerous yaw.

The hydraulic system that works [illegible] giant control surfaces uses up 2[illegible] h.p., more than the output of [illegible] engines of a wartime B-25 bomber. [illegible] built conventionally, it would have [illegible] far too heavy; for the XB-70A, [illegible] pressure was raised to 4,000 lbs. per [illegible] sq. in. in unusually thin tubing. [illegible] changes save weight, but they also [illegible] crease the hazards of a system that [illegible] already proved a notorious source [illegible] aircraft trouble.

Protective Fuel. The fierce heat [illegible] will surround the XB-70A in flight [illegible] an overriding problem for its designers. [illegible] Almost every part had to be heat [illegible] resistant. The tires, for example, [illegible] made by B.F. Goodrich out of material [illegible] that stands twice the temperature that [illegible] melts ordinary airplane tires. To fight [illegible] the heat that will fight its way to [illegible] the crew, North American's engineers [illegible] decided to make the fuel carry it off. [illegible] While the XB-70A is cruising at Mach [illegible] 3, its fuel will circulate, cooling the [illegible] interior, absorbing enough heat in a [illegible] minute to evaporate four gallons of [illegible] water. Inside, if nothing goes wrong, the [illegible] air-conditioning unit will be able to [illegible] keep the cabin comfortable.

All through the plane are detectors [illegible] cause cold shudders as well as [illegible] tion. Titanium and stainless steel [illegible] are "sculptured" chemically, sometimes [illegible] to a thinness of .007 in. to save [illegible] of weight. Electric motors run [illegible]

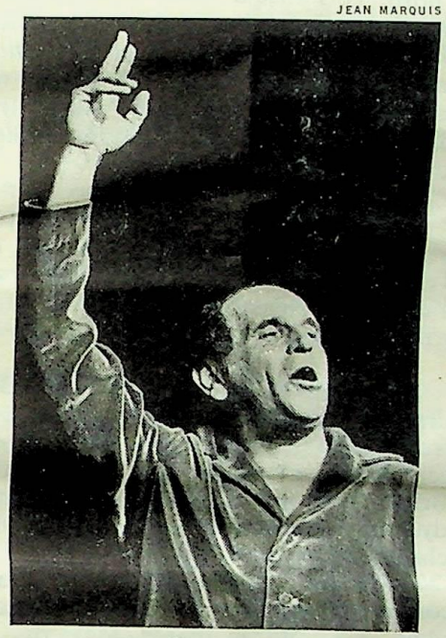
SINGERS

Malady of Paris

His collected songs add up to a painful diagnosis of the chill of modern life, and in France that makes Léo Ferré a kind of poet laureate. He hates, among other things, the church, most governments, radio, television and the Académie Française, and he hates them with the droll expertise Frenchmen instinctively admire. In a country that nourishes the cult of the dinner-table anarchist, Ferré is almost a government in exile.

Ever since he began singing in the *caves* around St. Germain-des-Prés in the late '40s, Ferré has been the reign-

JEAN MARQUIS



FERRÉ PERFORMING
Between optimism and disgust.

ing voice of the "Defenders of French Song," a tight little school of contemporary troubadour-poets. He despises literary snobbery, and the lyrics of his 200 songs pulse with the rough and jeering argot of Parisian streets. Legionnaires listened to his records in the crumbling days of French Indo-China. They can still be heard in Hanoi, as well as in New York, Dakar or any place where hypochondriacs have no intention of curing themselves of that bittersweet nostalgia known as the *Maladie de Paris*. But his verses are also published in the prestigious *Poètes d'Aujourd'hui* series alongside Rimbaud, Baudelaire and Valéry, and his music is among the best now being written for French song.

Tough Ideas. Ferré has such melodic facility that his songs can drift from one mode to another without the slightest misstep: a melody will slip into passages that suggest *fado* or flamenco or Orthodox church music, then emerge again for a major-key resolution. Ferré has written some lovely love songs, but most of his ideas are tough, and he does not mince words—as in *Monsieur Tout-Blanc*, his pre-*Deputy* attack on the Pope:

Simon Pure,
If one fine morning you leave this world feet first
For your castle in Paradise (perhaps it will be pretty)
Pray for me.
I don't have the time.
I'll still be living in Aubervilliers
With both my arms embracing misery.

Operation Madeleine. Ferré's songs evoke a complex feeling. Their mood is an absorbing compromise between optimism and disgust, and they have an ironic strength that makes their message as clear as a scream in the street. Though Ferré is a natural-born plaintiff, his songs never argue that life is absurd. "Despair," he says, "is a way of hiding things from one's self." Life is not pointless, just outrageously wrong.

Ferré became established as his own best interpreter only after he met his wife Madeleine in 1950. For years he had been down and out in Paris, playing and singing for $2 a night and composing on the side. "Operation Madeleine," as he calls the metamorphosis he undertook after his marriage, promptly rescued his career. He took off his glasses, got his teeth capped, cut his hair—and immediately found a whole new audience. Now at 47, he owns an island in Brittany, a house in the south of France, an apartment in Paris and an American car; his audience, he says, includes "everybody but the jerks—who are numerous."

Such new affluence confuses Ferré's old admirers, who still like to think of him as a flaming anarchist. But Ferré sees no point in living to please "*les professionels de la misèrabilité*." His comfortable life in the country suits him perfectly, and it has done nothing to dilute the grave discontent that ignites his music. "This is a world where muzzles aren't made for dogs," he says. "One is supposed to be mediocre. It's the only chance of not bothering other people. But I'm a lucky villain, and I'm willing to tell even the truest of lies to defend my opinions."

COMPOSERS

Return to Richard

In the last four years of his life, Richard Strauss seldom heard his works performed by his own countrymen. The post World War II silent treatment was his penalty for having meekly allowed himself to be paraded as the artistic spirit of the Third Reich. But Strauss's death in 1949 seemed a signal for a West German revival of his music. Audiences eagerly returned to his masterworks. And this year, the 100th anniversary of his birth, the revival has become almost deafening.

The Berlin Opera is presenting six

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

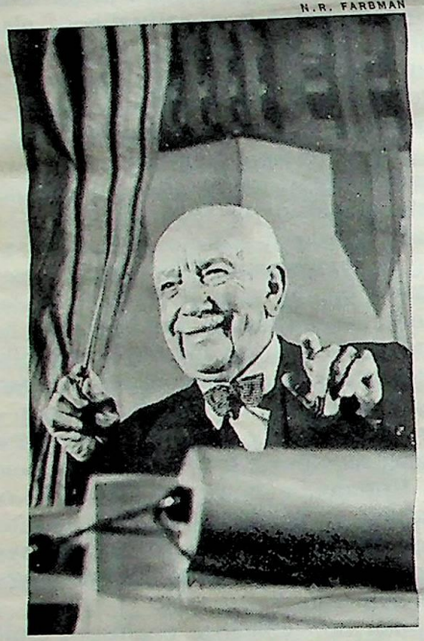
Strauss productions, from *Der Rosenkavalier* to *Die Frau ohne Schatten* and *Capriccio*. In Munich, where coins are being struck for "Strauss Year," the Opera's Strauss festival had productions of all but four of his 15 operas, and the *Nationaltheater's* summer festival will present the sweep of his music in 100 concerts. The *Luftwaffenmusikkorps* band will play his military marches in honor of his birthday (June 11). Bavarian radio will broadcast seven operas, and the Munich Music Conservatory is not only presenting a blizzard of lectures but—going the whole way—is changing its name to the Richard Strauss Conservatory.

Forgive & Forget. Much of Strauss's music has been firmly placed in the classic repertoire since the '20s, and outside Germany he had little need of a

N.R. FARBMAN



STRAUSS CONDUCTING (1947)
After silence, the deluge.

resurrection. World War I brought a ten-year lapse in the performance of Strauss in England, but World War II caused no lull in England or America. The Strauss of the Third Reich had been an old man, and after he was cleared by the denazification courts, it seemed only just to forgive and forget. Last year, in 175 orchestral performances of his works, Strauss became one of the most frequently played composers in the U.S.

The main argument over Strauss has always dwelt on the dramatic and realistic effects of his music. Wagnerians usually love it but followers of Schumann and Brahms are likely to find it crude and vulgar—"pleasure gas," a Viennese critic once called it. His mammoth tone poems—*Till Eulenspiegel, Ein Heldenleben* and *Also sprach Zarathustra*—show him to be a peerless master of orchestral effect and a wizardly painter of tone color. But Strauss was the last man in a 400-year-old tradition of tonality, and it was his misfortune to work alongside the atonalists without sharing any of their discoveries. Halfway into the present century, he was widely dismissed as a souvenir of the last.

Metaphysically Close. The revival of Strauss's music is a vivid demonstration that his claim on modern audiences is genuine. His songs are colorful and metaphysically close to the spirit of their texts. His operas are both sensuous and profound. His orchestral works are harmonically infallible. The music he at 80 is clearly the work of the who at 24 wrote *Don Juan*: the of 60 years is united by an ama steady vocabulary. But Strauss for the end the most revealing e sions of his artistic philosophy. H been judged a walking anachron felt free to speak his mind.

MILESTONES

Born. To Diana Trask, 23, carrot-topped Australian singer who came up from Down Under to sing along with Mitch, and Thomas Ewen, 36, Aussie auto salesman: their second child, second son; in Melbourne.

Born. To Patricia Neal, 38, Academy Award-winning cinemactress for her portrait of the housekeeper in *Hud*, and Roald Dahl, 47, British author of deftly ghoulish short stories: their third child, second daughter; in Oxford, England. Name: Ophelia.

Born. To Ed Begley, 63, cinemactor who played a swamp-grass politician in Tennessee Williams' *Sweet Bird of Youth*, and Helen Jordan, 38, his third wife: a daughter; in Dublin.

Divorced. By Kenneth Tynan, 37, drama critic for the London Observer from 1954 to 1963, now on the receiving end as literary manager for the British National Theater: Elaine Dundy, 36, Long Island-born novelist who chronicles American girls abroad (*The Old Man and Me*); on grounds of incompatibility; after 13 years of marriage, one child; in Juarez, Mexico.

Died. Carol Haney, 39, snub-nosed, pixiefied dancer-comedienne who burst into fame in the 1954 musical *Pajama Game* as Gladys, the offbeat secretary who had (clang, clang) "Ss-s-s-steam Heat," but, after being hospitalized for diabetes and exhaustion in 1957, simmered down to become one of Broadway's most popular choreographers, arranging dances for *Flower Drum Song* and *Funny Girl;* of pneumonia, complicated by diabetes; in Manhattan.

Died. Vic Morabito, 45, owner of the National Football League's San Francisco 49ers, who, with his brother Tony, founded the team in 1946, took over direction after Tony dropped dead of a stroke between halves of a game with the Chicago Bears in 1957; of a stroke; in San Francisco.

Died. Vernon Carl Walston, 58, founder (in 1932) and president of Wall Street's Walston & Co., one of the nation's top ten stockbrokers; by his own hand (20-gauge shotgun); in Manhattan. A moody, drivingly ambitious onetime fruit vendor, Walston started the firm in San Francisco under the aegis of Bank of America F A. P. Giannini, moved to New Y 1958, where he built up to ass $151 million, with 90 offices from olulu to Switzerland. His one and pleasure was going on African from which he returned to decor office with water-buffalo heads, eros hides, an elephant's foot—a arsenal of small arms.

Died. Diana Wynyard, 58, British cinemactress of the 193 remembered by U.S. audiences courageous wife in the 1933 Ac Award-winning movie version o Coward's *Cavalcade*, by Britons f roles at the Old Vic, where l she played a brilliantly sensua trude to Peter O'Toole's Hamle kidney ailment; in London.

Died. Hamilton Basso, 59, jour novelist, a gentlemanly scholar New Orleans who exiled himse Connecticut in 1944, but kept tr go home again with leisurely re tions of the South's social distinc ancestor worship and tribal cu (from lynching to channel bass fi most successfully in his 1954 bes *The View from Pompey's He* cancer; in New Haven, Conn.

Died. Mollie Minsky, 69, wid Abraham Minsky, eldest of th brothers of burlesque, a mother who defended the family trade ("It broadens the viewpoint"). heart attack; in Manhattan.

Died. Clarence Cannon, 85, ri's gnarled, irascible, untiring, ious bantam Democratic Congr parliamentarian and parsimoni of the Appropriations Committ heart ailment; in Washington (U.S.).

Died. Max Dreyfus, 90, mus lisher, since 1935 president of hattan's Chappell & Co., a Germ migrant (class of '88) who first shop in Tin Pan Alley in 1901. he hired Jerome Kern as a song ger, George Gershwin as a 35-accompanist, until both rewarded by writing hits that sold millio enabled Dreyfus to sign up jus every major Broadway compose Romberg to Loewe; of a h tack; in Brewster, N.Y.

MacLaine Goes for Broke

What a Way to Go! is five or six big, splashy movies rolled into none. Written by Betty Comden and Adolph Green, a pair of permanently shoestruck Broadway librettists, it sets out to satirize the very things it seems head over heels in love with: moom pitchers and the cult of "success—money—success." Shirley MacLaine plays a freckle-faced Ohio gamine whose pastel American Dream is marred by the Midas touch. She wants only "a simple life with one man to love." But the men she marries have a way of getting rich quick, leaving her in widow's weeds with Rolls-Royces, private airplanes, pink mansions, cash and securities. After four husbands and legacies piling up

SY FRIEDMAN

SHIRLEY MACLAINE IN "WHAT A WAY"
Marred by the Midas touch.

$211 million, she goes to see Psychiatrist Robert Cummings.

The story unfolds in flashbacks. Having refused to wed Dean Martin because he is a tycoon, Shirley marries Dick Van Dyke, a philosophical hardware merchant who has exactly what he wants—nothing. "Our life together was just like an old silent movie," says Shirley. Which cues in some grainy black-and-white footage—a slapstick romp with speeded-up action. The idyl comes to a stop when Van Dyke throws away his Thoreau and proceeds to make money. "A little hard work never killed anybody," he insists. Soon he drops dead, leaving Shirley sadder but richer, and free for Husband No. 2.

Former Paul Newman, a no-account actor who builds his bank balance up to seven figures by inventing a masterpiece of machine. One day the machine turns on its master and beats him into an abject blob. Husband No. 3 is Robert Preston. Already wealthy, he liquidates his assets and goes native down on the farm, only to meet disaster trying to milk a bull. Next comes Gene Kelly ("Our life was like a gay 1930s musical") who hoofs his way to fame, fortune and a grim finale.

By this time, Shirley's psychiatrist wants to try for the jackpot. "I'm honored that you'd risk your life for me," she purrs. She has no sooner declined his proposal than the cleaning man arrives and—hey, guess who? Dean Martin, down on his luck and full of last-reel surprises.

For all its talent and occasional forward thrust, *What a Way to Go!* never really gets anywhere. The reasons why are neatly capsuled in Shirley's cine-fantasy with Mitchum, described as "one of those Hollywood movies all about love and what'll-she-wear-next?" This gag sequence, credited as A Lush Budget Production, offers four minutes' worth of opulent sets and a whole spring collection of Edith Head's most improbable costumes. But *What a Way* itself is so extravagantly overdrawn that the audience well may wonder where parody leaves off and plot begins. To furbish a frail spoof with all that Hollywood upholstery seems a bit like crossing a mountain stream aboard the *Queen Mary*—and why bother? Shirley MacLaine is a girl who can go for miles just paddling her own canoe.

Morse Makes the Scene

Honeymoon Hotel. Comedian Robert Morse looks like Arthur Godfrey Jr. and makes more faces than a rubber totem pole. He scored big on Broadway in *How to Succeed in Business Without Really Trying*, and then somebody apparently told him how to succeed in pictures without really trying: never put the part before the Morse. Up to a point the formula works. But what the heck. Being a success in this picture is like being head flea on a dead dog.

The story, which transpires at a Caribbean resort amid plastic palmettos and other touches of tropical realism, can best be described as follows: zzzzzzz. The players are equally interesting. Nancy Kwan, who claims to be a genuine Eurasian, looks like an American chorine with Scotch-taped eyelids. Jill St. John, who considers herself a comedienne, puts up a good front. Robert Goulet, whose talent is for singing, doesn't sing. And Keenan Wynn, who has probably been in worse pictures, looks as if he can't remember when.

Only Morse seems to feel an obligation to act. Since his lines are unspeakable, he mumbles them inaudibly and distracts the customers by giggling, wriggling, itching, twitching, wearing a wig, dancing a jig, and crossing his eyes till he practically looks out of his ears. People who did not see him on Broadway will probably think he is just a somewhat shorter, somewhat quieter Jerry Lewis. People who did will wonder what makes him tic, and wistfully murmur: *"Autre temps, autre* Morse."

Hope Pops for Peace

A Global Affair. As an obscure U.N. employee who has been nursing a closetful of computers, Bob Hope blinks in dismay at his new assignment: the care and feeding of a blonde baby girl, abandoned in the U.N. lobby. "You've got the wrong man," burbles Bob. "I didn't even go to the Christmas party." Nevertheless he takes the tyke home to his bachelor flat, powders her with confectioners' sugar, fastens her diapers with Scotch tape, and warms her milk in an empty fifth. Meanwhile, back at U Thant's East River headquarters, an international incident begins to boil. Seems all 111 member nations want to claim the foundling for their very own and are eager to give it the best of all possible homelands.

From that none too Hopeful beginning, the comedy wheezes toward a

Not at the Christmas party.

tired finish, with gags that might have been written by a UNESCO pamphleteer. Sometimes the movie simply stops to preach. "This baby feels hunger and cold and loneliness, just like you and me," says Bob. "I can't see anything funny about this situation." And there's the rub. Or the rash. To help Hope out in the pinches, a group of seductresses billed as The Global Girls troops through: Yvonne De Carlo as a Spanish floozy whose secret weapon is flamenco; Lilo Pulver as a brusque, weepy vodkaholic making a case for the U.S.S.R.; Miiko Taka as an ah-so Geisha who offers back rubs and hot saki; and Elga Andersen as a French *fille de joie* who waives her diplomatic immunity in pajama tops. True love is the Belgian lass (Michele Mercier), a high-minded guide from the Low Countries. Obviously, the movie makes a negligible contribution to world amity and understanding, despite such gimmicks as a walk-on role by U.N. Ambassador Adlai Stevenson. Stooped, sage and sober, the ambassador looks like a man who knows the U.N. will survive even this sad *Affair*.

It Only Seems Like Fun

THE WEEKENDERS by Max Gunther. 237 pages. Lippincott. $4.95.

Dark suspicions arise that the current oversupply of books proving that Everything Is Hollow (or: A Searching Look at the Cardboard Values of Our Aspirin Society) is part of a plot by the sunshine merchants. When everyone is sufficiently depressed, publishers of inspirational texts will find a renewed market for books disproving hollowness on the ground that Everything Is Stuffed with Meaning. Meanwhile, in the hollow or waning-moon part of the cycle, we have research, shows mastery of an important technique of the searching-look book—the compounding of statistics from air and egg white. What counts as an "activity"? Brushing your teeth? Mowing the lawn with a toy gasoline tractor? If five members of one of Dr. Wylie's families watch *Gunsmoke*, does the researcher chalk up five activities? This is an important element in the art of making the world sound hollow when it is thumped. Another is the unvarying assumption that no one ever does anything because he likes it. If he goes skiing, it is to show off his wounds; if he gives a party, it is to prove something to his friends; if he goes bunburying with his

ENDPAPER FOR "THE WEEKENDERS" BY SUSAN PERL

Happiness should be serious.

had *The Waste Makers, The Pyramid Climbers, The Brain Pickers, The Naked Society*, and that inevitable-but-yet-unwritten examination of the lunch habits of advertising men, *Breath in the Afternoon*. Now, with no moon in sight, the co-author of *The Split-Level Trap* has written *The Weekenders*.

Reason Why. Weekenders, it turns out, are people who work five days a week, with two days off for getting into sociologically fascinating trouble. That is, weekenders are almost everyone not in jail. Most weekenders, Author Gunther reports, embrace the Fun Mystique. The weekender's "self-esteem depends on his success in having, or at least demonstrating, fun. The weekender likes to be thought of as an extrovert who lives in a loud fast whirl of activities. Anything less is felt to be almost if not quite pathological . . . Dr. James A. Wylie of Boston University has studied family recreation and found that the typical family has 20 or 30 different activities to keep it busy on weekends. Some have as many as 70."

Here Author Gunther, with borrowed secretary, it is to improve his self-image, not because he likes the bells on her toes.

Troweled Guilt. Naturally a citizen cannot escape being proved a fraud by spending his weekends working instead of fun having. The business man who keeps Saturday office hours does not do it to catch up on his work, nor to impress his boss; he is hiding from failure as a fun haver. The weekend gardener trowels guilt into the soil; the Sunday painter paints his soul off-white.

Since there is almost no human activity that cannot be accomplished, attempted, contemplated, or escaped from on a weekend, Gunther has a lot to cover. Or to look at it another way, he has endless opportunities to quote from other Hollow Worlders whose subjects are more specialized. His book is, in fact, an anthology of the maxims of Russell Lynes, David Riesman, Helen Gurley Brown, Vance Packard, Betty Friedan and William H. Whyte Jr.

But Gunther is a published magazine writer ("When to Worry About an Office Romance"—*Good Housekeeping*, March 1961) and does not really need help. Writing of weekend sin (over... but still deplorable), he refuses to... ic, observing that "it is not the... stretch of workless time itself that... often causes sin but the attitudes of... ple toward the weekend and the... and dreams they bring to it fr... work week."

Here the reader suspects that... ther's book itself may be the tr... between the Hollow World book... the Stuffed with Meaning kind. In a... ming up that is almost a *haiku*, it... vates the spirit: "The weekend is... big red apple. Some would eat... fast and get indigestion. But it is... lovely apple."

The Most Perfect Man

the end of every day, a report on conduct of the Princes and their ployment from hour to hour."

Albert died in 1861, a month after arning that his son, then 20, was hav- g a fling with an actress ("You *must* ot. you *dare* not be lost," he wrote to dward). A year later "Bertie" was arried to Denmark's Alexandra, "the ost beautiful Princess in Europe," and hortly thereafter Queen Victoria in her idow's weeds withdrew into almost otal seclusion. Bertie was left with an come of roughly $550,000 a year, no utors, and a great deal of free time.

Seasons by Decree. Bertie had to ait another 40 years before he be- ame King. But as heir apparent, he et the style of English society for near- half a century, determining who hould be included and who excluded nd where one should go when. The ocial year, as decreed by Bertie, con- isted of two months (January and Feb- uary) of shooting at Sandringham, two onths (March and April) on the rench Riviera, followed by three onths in London for "the Season." No entleman was seen in London after he end of July, when the Prince of Vales went to Cowes for the yachting, llowed by a month or so in a German a, where he tried to reduce his im- ense bulk by dieting and taking the aters. Around October he went to bergeldie for a month of grouse ooting, and he finished up the year ck at Sandringham, where he spent own and the Princess's birthdays. found the intrusion of political af- rs intensely annoying. "Another Gen- l Election will be a very serious atter," he wrote in 1886 to Lord Car- gton, "and a most untoward event the middle of the London Season!"

Juggled Beds. That was the public rtie. Privately, he liked to sneak out h cronies like Lord Hardwicke (who rfected" the top hat) and Lord Dup- (who invented the dinner jacket) chase fire engines or more often, es. He was known on sight to the cers of half the cabarets of Paris, o used to greet him by shouting llo, Wales!" His taste in women was well known to society, in fact, that he descended on a country house ually without his wife but with a ue of 12 to 16 attendants), a wise ess juggled bedrooms so that the would be within convenient h of his current favorite. At his nation in Westminster Abbey after death of Victoria in 1901, he or- the construction of a special box ularly referred to as "the King's Box") for his past and present esses. And what impressed him about the coronation ceremony, ich all the crowned heads of Eu- had been invited, was the glimpse aught of the "white arms" of the esses "arching over their heads" as put on their coronets.

As Edward VII, Bertie changed his of living not a whit, giving Britain

EDWARD VII'S WEDDING (SEATED: MOTHER)
The fruit was wormy.

the most colorful court it had seen since Charles II. If he skirted scandal, it was because no man alive better understood British upper-class tribal customs. When, during a divorce proceeding, the testimony of Lady Charles Mordaunt was read in court confessing that she had committed adultery with Bertie when he was Prince of Wales "often, and in open day," it proved embarrassing but not fatal, because Bertie had played his part honorably—visiting Her Ladyship secretly and in a hired brougham in mid-afternoon and never behaving in a manner to embarrass Lord Charles when they were fellow guests on a country weekend.

Easy Scrapping. Biographer Magnus, who had access to several collections of unpublished papers, is most convincing when he is discussing the intricacies of Edwardian social life. He is on less firm ground when he tries to demonstrate that Bertie helped shape his country's foreign policy in the first decade of the century. After the death of Victoria, who never trusted her son with Foreign Office dispatches, Bertie became an ardent practitioner of personal diplomacy, paying "unofficial" visits to the capitals of Europe, where he practiced his charm on rulers, most of whom were his relatives. Magnus credits him with at least an assist in the *rapprochement* with Russia and the entente with France that British diplomacy achieved before World War I.

What he could never achieve was a *rapprochement* with 20th century England. He was profoundly shocked shortly before his death in 1910 to hear Lloyd George, as Chancellor of the Exchequer, quip that "a fully equipped Duke costs as much to keep up as two dreadnoughts" and was less easy to scrap. It was, Edward confided to a secretary, the most insidiously socialistic remark he had ever heard from a Minister of the King.

Unexpected Prizewinner

PURITAN VILLAGE *by Sumner Chilton Powell.* 215 pages. *Wesleyan.* $15.

The award of the Pulitzer Prize for history this month startled many historians and most publishers simply because the winning book and its author were almost unknown. In fact, Sumner Chilton Powell's *Puritan Village* had almost gone unpublished: scholarly presses, including Harvard, had turned it down as "too specialized" before it was accepted by Wesleyan in Connecticut. With its $15 price tag, many bookstores had not bothered to stock it; hardly more than 1,000 copies had been sold; immediately after the Pulitzer announcement the book was almost unobtainable.

Conflicting Traditions. The book that beat out such possibilities as Oscar Handlin's panoramic *The Americans* or William and Bruce Catton's *Two Roads to Sumter* is a meticulous and remarkably detailed account of the early government and social organization of the town of Sudbury, Mass., founded by Puritan settlers in 1638. Generations of orators have sweepingly proclaimed the early towns of New England "a unique experiment in self-government," while many historians have tacitly assumed that the early settlers brought with them a broadly homogeneous body of English law and administrative methods. Historian Powell's achievement is to show just how unique the self-government of early Sudbury really was.

Not one but at least three quite distinct English traditions lay behind the Puritan settlers, Powell found. Men like Peter Noyes, a prosperous yeoman and the fourth largest landholder when he left the manor of Weyhill in southern England, brought with them centuries-old customs of open-field, cooperative farming and local government. Men like Edmund Brown, Cambridge graduate and Nonconformist minister, sprang from bustling, self-governing English boroughs and brought with them city ways and institutions. A strong minority of early Sudbury settlers like John Parmenter and Thomas Cakebread the miller were used to independently run, competitive, closed-field farming as then practiced in the east of England.

Deciphering the Records. To trace the interactions of these traditions took Powell six years. Of the 16 men who were early Sudbury's leaders, he succeeded in tracking 13 to their original homes in England, and has re-created their lives in convincing detail. In total, he located the origins of 79% of Sudbury's first landowners. He spent two summers in England finding and photostating—if necessary with a portable copier, wired to his car battery—

the relevant 17th century church records, legal notes, manor rolls and accounts. Deciphering the Latin shorthand and illegible handwriting of the period took hundreds of hours more.

From the welter of facts, with the passion of a born antiquarian and the insights of a self-made sociologist, Powell has reconstructed the intense pulling and hauling of an early American community that was, "in a real sense, a little commonwealth," able to create "as much of an ideal state as its leaders could conceive and find agreement on." Such fine-grained history is certainly more for the scholar than for most general readers. Yet Powell's style is clear, if sometimes too sugary, and the people and events can be absorbing.

A Time for Pride

CRISIS IN BLACK AND WHITE by *Charles E. Silberman*. 370 pages. *Random House*. $5.95.

Many of the books now pouring off the presses on the race issue hesitate, falter, flounder and peter out in mawkish sentimentality or pious preaching. This book by Charles Silberman, a FORTUNE magazine editor, marches in no-nonsense fashion to a number of hard truths that are not meant to comfort or console. It is impossible, writes Silberman, "to tell the truth about race relations without offending and angering men of both colors." Some Silberman points:

▶ White Americans have degraded the Negro. Slaves were treated more shabbily in the U.S. than almost anywhere else on earth at any time in history. Their pride was systematically knocked out of them; families were broken up so often that a pattern was set, and even today they continue to break up with alarming casualness. In central Harlem, only half the children under 18 live with both parents.

▶ Negroes need to recover their self-respect. Though sit-ins have not accomplished much materially, they have given Negroes cause for pride: whites have had to bargain with them as equals. Similarly, by stressing Negro superiority —racist though that message is—the Black Muslims have had astonishing success straightening out the lives of lower-class Negroes, curing them of drug addiction, alcoholism and self-hate.

▶ White Americans must go out of their way to give Negroes a helping hand; merely allowing them long-withheld civil rights is not enough. They must provide public education for Negro children at an earlier age—at three or four. By the time the children are five or six, an overcrowded, oppressive home life has stifled their impulse to learn and made them much less alert than comparable white children. Corporations must set job quotas for Negroes, give them on-the-job training, even put up with impaired efficiency until the Negroes are trained.

▶ The "most impressive experiment affecting Negroes anywhere in the U... says Silberman, took place in Chi... Woodlawn slum. Despairing over... decline of their neighborhood... clergymen called in Saul D. Al... whose profession is creating large... grass-roots organizations in U.S. ... Alinsky welded together such an... tive group that it was able to org... a boycott of white merchants who... charged the neighborhood. It t... slumlords to clean up their prop... it put the heat on city hall to relie... overcrowding in the ghetto schools.

Alinsky is Silberman's chief ... the man who has shown Negroes ... way to make themselves most effe... Critics charge that Alinsky is a ... tator, and Alinsky proudly agrees ... uses nearly any method for maki... thorities miserable—rent strikes, ... onstrations, marches on city hall. ... stated intent is to "rub raw the sore...

Making the product fit the clime

You might not think anything as standardized as rolling stock would vary from one region to another. Yet climatic, topographic and other local conditions often dictate basic changes in the equipment. The 350 self-propelling diesel cars Hitachi supplied to the Egyptian Railways are a good example. Besides the hot, dry climate, sand turned out to be one of the worst natural enemies. Special sand-proofing equipment had to be designed and installed to protect the engine and coaches. And because the unstable sand road-bed and uneven rails put unusual stresses on the bogie trucks, extra-strong frames had to be designed. The result: performance so satisfactory that the Egyptian government ordered 100 more cars just like them for Cairo's commuter system.

In the case of 30 diesel-electric locomotives supplied to Thailand or the latest type of AC locomotives for India, different local conditions created different sets of problems. In every case, Hitachi's ability to adapt its products "to fit the clime" provided the key to a solution.

Rolling stock is not the only field where Hitachi has shown its capability. Hitachi manufactures some 10,000 individual products—ranging from heavy electrical, industrial, and transportation equipment to precision electronic instruments and scientific apparatus. If you're interested in any of our product lines, we'll be happy to forward you complete information. Or if you'd like to know more about our latest activities, we'd be delighted to send you our popular, informative quarterly, Age of Tomorrow, or our comprehensive technical bimonthly, the Hitachi Review.

TIME LISTINGS

TELEVISION

Wednesday, May 27

TOWN MEETING OF THE WORLD (CBS, 7:30-8:30 p.m.).* Former Vice President Richard M. Nixon, Senator J. William Fulbright, British Labor Party Leader Harold Wilson, and Maurice Schumann, chairman of France's Foreign Affairs Committee, will be linked via Telstar II for a live discussion of U.S. foreign policy, based on Senator Fulbright's recent denunciation of the assumptions behind U.S. policy.

Thursday, May 28

GENTLEMEN: START YOUR ENGINES (NBC, 7:30-8:30 p.m.). History of the Indianapolis 500-mile Speedway Race. Color.

KRAFT SUSPENSE THEATER (NBC, 10-11 p.m.). Julie Harris stars as a homely schoolteacher wooed by a handsome fisherman who is determined to get hold of a ring she purchased in a curio shop. Color.

Friday, May 29

BOB HOPE PRESENTS THE CHRYSLER THEATER (NBC, 8:30-9:30 p.m.). Efrem Zimbalist Jr. stars in an adaptation of Carson McCullers' *The Sojourner*, the story of a restless wanderer.

Saturday, May 30

ABC'S WIDE WORLD OF SPORTS (ABC, 5-6:30 p.m.). National A.A.U. Gymnastics championships from Kings Point, L.I.

SATURDAY NIGHT AT THE MOVIES (NBC, 9 p.m.-conclusion). Sidney Poitier, Rock Hudson and Dana Wynter in *Something of Value*.

Sunday, May 31

THE CAMPAIGN AND THE CANDIDATES (NBC, 7-7:30 p.m.). Preview of the California primary elections.

Monday, June 1

MONDAY NIGHT AT THE MOVIES (NBC, 7:30-9:30 p.m.). Gene Kelly, Debbie Reynolds, Donald O'Connor and Cyd Charisse in M-G-M's 1952 spoof of Hollywood moviemaking, *Singin' in the Rain*.

EAST SIDE, WEST SIDE (CBS, 10-11 p.m.). Theodore Bikel guest-stars as the father of a 20-year-old mentally retarded boy accused of having molested a young girl. Repeat.

Tuesday, June 2

ONCE UPON A MATTRESS (CBS, 9:30-11 p.m.). Carol Burnett re-creates the role of Princess Winifred, which first brought her to fame.

THEATER

On Broadway

HAMLET. Although Richard Burton as Hamlet and Hume Cronyn as Polonius burnish all the richness of language, wit and humor of the play, this revival, and specifically Burton's Hamlet, lacks the burning passion, the mind-tossed anguish, the self-divided will that Hamlet must have to be a true prince of tragedy.

FUNNY GIRL shines in the refracted light of the most brilliant new star to rise over Broadway in years, Barbra Streisand.

HIGH SPIRITS. As a spirit brought back to haunt her husband by means of a slapstick *séance conducted* by mad Bea Lillie, impish Tammy Grimes is about as ghostly grey as a rainbow.

ANY WEDNESDAY. Without even the help of her closetful of balloons, Sandy Dennis ascends from playmate to helpmate in two acts.

DYLAN. Alec Guinness probes the special hell in which Dylan Thomas found himself. His performance is moody, taut with rage and sometimes bright with humor.

HELLO, DOLLY! Part of this musical's nostalgic appeal lies in its evocative Oliver Smith backdrops of little old New York, part lies in its hissable boss-villain (David Burns), whom Dolly finds kissable. Most of it lies in the skirt-swishing charm of Carol Channing as Dolly.

BAREFOOT IN THE PARK. Playwright Neil Simon's deft quips punctuate this early-marital farce with humor to spare for a zany subplot involving a mother-in-law and a Continental charmer (he thinks).

Off Broadway

DUTCHMAN, by LeRoi Jones. In a New York subway car, a white girl who is a twitchy, neurotic bundle of well-informed clichés and sterile sexual aggressions, lures, taunts, degrades and destroys a Negro in a Brooks Brothers shirt, but not before he tells her, with profane and explicit brutality, how much Negroes hate whites.

THE BLOOD KNOT. Two half brothers, one light and one dark, act out in miniature the torment of being a racial outcast in present-day South Africa. Playwright Atholl Fugard writes with a tenderness, poignance and understanding that crosses all color lines.

THE TROJAN WOMEN, winner of a special citation from the New York Drama Critics' Circle, is a powerful, tormenting image of humans bearing the unbearable.

RECORDS

Opera

I PURITANI (3 LPs; London) is the last and loveliest of Bellini's operas, a story about the Roundheads and the Stuarts in the days of Cromwell incongruously drenched in Italian melody and sunlit harmony. Only singers skilled in *bel canto*, such as Joan Sutherland and Maria Callas, dare try it. In the new recording, Sutherland is the demented Elvira, and when she sings *Vien, dilètto* in a deluge of perfectly matched and sparkling runs and trills, she embellishes even the embellishments. Maria Callas (on Angel's earlier version of *I Puritani*) has no such quicksilver in her voice, but in many poetic passages, exquisitely shaded and phrased, she is the better proof of Bellini's proposition: "The object of opera should be to weep in song."

GREAT SOPRANOS OF OUR TIME (Angel). Sutherland and Callas again, and out to draw blood. Callas plays Verdi's Lady Macbeth, chilling in the sleepwalking scene, and Sutherland is Donna Anna, crying vengeance on Don Giovanni at the top of her voice. The other reigning sopranos in this international exposition are Sweden's Birgit Nilsson singing Beethoven, France's Régine Crespin singing Wagner, Germany's Elisabeth Schwarzkopf singing Mozart, and Spain's Victoria de los Angeles singing Verdi and Gounod.

JUSSI BJOERLING sings operatic duets with Robert Merrill and scenes (from *Il Trovatore, Rigoletto*) with Zinka Milanov and

less, were brought into production by cobalt to the soil. Science has helped production to grow 63% in 20 years.

Ingenuity and hard work have earned a life for New Zealanders. They have a week, liberal holidays, model social services, full employment. And a car for four persons (New Zealand, 1,000 has 57,000 miles of roads).

OIL ON THE FARM

than half the country's oil require- in fact, go in gasoline to run the motor and fuel for the highly mechanised industry (New Zealand has a tractor to). With the recent opening of the first at Whangarei (in April 1964), New started processing 90% of her oil including well over a million tons of and nearly half a million tons of fuel dustry.

ration has also revealed substantial of natural gas (producing 60 million a day, equivalent to a little over ons of fuel oil a year). This could be a variety of purposes, but is particularly r the generation of electricity.

ther there are six schemes, to come ce between 1968 and 1972, which will ew power from water and geo-thermal The use of natural gas has also been ed. One scheme, the Manapouri Project, may be linked with an aluminium industry.

SEARCH FOR NEW MARKETS

9 But meanwhile 95% of the value of New Zealand's exports still comes from the sheep and the cow. The more immediate problem is not so much to change this situation as to find new markets.

10 In the last decade, New Zealand has steered 17% of her traditional trade into continental Europe, America and the Far East. She has won 80% of the US imported lamb market (most of it shipped in glossily packaged cuts, complete with recipes). While keeping her old friendships, New Zealand is responding to the prospects of new, wide horizons.

SHELL AND WORLD OIL

SHELL

To keep pace with her development, in agriculture and industry, New Zealand will need cheap and dependable oil. So will the rest of the world. Oil is one of the fastest growing sources of energy, and demand is expected to double within 15 years.

Meeting this demand has to be an international operation because no other commodity is moved in such tremendous volumes across so many frontiers, broken into so many products, planned so far ahead. It needs a complex, world-wide organisation—the kind Shell has built up over the years.

FACTS AND FIGURES

For Shell, getting oil to the markets means operating over 11½ million tons of tanker shipping, and 32,000 miles of pipelines over the great land routes. Establishing marketing companies in over 100 countries. Doing business in nearly every major language. And encouraging 6,000 research men to find new and useful products — new fuels, plastics, resins, fertilisers and insecticides.

YOU CAN BE SURE OF SHELL

Shell is dependable because it is in the whole oil cycle. It looks for oil, finds it, raises it, transports it, breaks it down into products, and gets them to market as regularly as a metronome. In doing so, it averages about 1¼ US cents profit per gallon on its sales.

Shell is useful. It gets the right product to the right place at the right time. **It serves consuming countries by finding dependable energy, producing countries by finding dependable markets. Year after year.**

Prince Gloria 6 and Prince Skyline 1500, Winners of Japan's Second Grand Pr Car Race Meeting Sponsored by The Japan Automobile Federation

300,000 excited racing fans watched, at the Suzuka Circuit on May 2 and 3, 1964, Prince Gloria 6 and Prince Skyline 1500 run away from Foreign and Japanese made cars. Prince collected 14 out of the 18 medals, defeating all of its class competitors.

These races proved that Prince engineering, road testing, road holding, acceleration and braking are tops in automobile research and proven in toughest track competition. Prince research eng ering showed that all advances from laboratory track are the reasons for Prince's domination the Grand Prix Car Races. There is no challeng Prince's supremacy on the Race Course or the Busi Avenue.

others (RCA Victor). Like Caruso, whose popularity he nearly attained, the Swedish tenor died before 50, but unlike Caruso he was able to leave a treasury of well-engineered recordings of Italian opera. These excerpts date from 1950 to 1956, and show his voice getting slightly heavier and darker while retaining its refinement and radiance.

THE CRUCIBLE. (2 LPs; Composers Recordings Inc.). Based on Arthur Miller's play exposing some of the all too human motives behind the Puritan witch hunts, this 1962 Pulitzer prizewinner is the most successful to date of the operas subsidized by the Ford Foundation. Robert Ward's music is conservative by Schoenbergian standards, but dramatic, with syncopated, dissonant hymns and minor-keyed, folk-like tunes suggesting the poisoned New England atmosphere. Most of the New York City Opera singers who premiered the work record it here with fine *esprit de corps*, led by Conductor Emerson Buckley.

BORIS GODUNOV (Angel). Highlights from Moussorgsky's masterpiece sung by the black-voiced Bulgarian basso, Boris Christoff. His characterization of Godunov is justly renowned. "Always I die new deaths. Always I change," says Christoff. Here he dies a brooding, pitiful sinner, and in the Clock Scene, the terror of his guilt creeps into his voice as quietly as a spreading stain.

CINEMA

THE ORGANIZER. Director Mario (*Big Deal on Madonna Street*) Monicelli's vivid, moving, timelessly beautiful portrait of 19th century Italy comes into sharp focus in Marcello Mastroianni, demonstrating his remarkable versatility as a socialist Savonarola who leads Turin textile workers in a strike that fails.

FROM RUSSIA WITH LOVE. Istanbul provides an exotic backdrop for the harem-scare-'em adventures of James Bond, alias 007, alias Sean Connery. A sly spoof of Ian Fleming's fiction.

THE GRAND OLYMPICS. Made in Italy, this color sportstacular dazzlingly synthesizes the glory that was Rome's during the summer Olympiad of 1960.

THE NIGHT WATCH. This perceptive French thriller follows five jailbirds along an underground escape route and unearths a sister tale of dishonor among men.

BECKET. Richard Burton is England's 12th century Archbishop of Canterbury, Peter O'Toole is King Henry II—both bring grandeur to a stunning, cerebral spectacle based on the drama by Jean Anouilh.

THE SERVANT. As a conniving "gentleman's gentleman" who masters his master, Dirk Bogarde puts a fine polish on Director Joseph Losey's study of class distinction in Britain.

THE WORLD OF HENRY ORIENT spins hilariously when Concert Pianist Peter Sellers finds his private life ruined by ramptious Teen-Agers Tippy Walker and Merrie Spaeth.

DR. STRANGELOVE, OR: HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB. Stanley Kubrick's black comedy about nuclear war features fine performances by Sterling Hayden, George C. Scott and the multifarious Peter Sellers.

YESTERDAY, TODAY AND TOMORROW. Disporting themselves *con brio*, Sophia Loren and Marcello Mastroianni make memorable fun of three zesty folk tales directed by Vittorio De Sica.

THE SILENCE. A litany on selfishness, loneliness and death, starkly told and austerely photographed, with a cast of non-normal characters directed with brooding penetration by Ingmar Bergman.

TOM JONES. Lusty lads pursue busty maids through "Best" Director Tony Richardson's wonderfully wicked assault on Fielding's 18th century classic. Winner of four 1963 Oscars.

BOOKS

Best Reading

CRISIS IN BLACK AND WHITE, by Charles E. Silberman. The author believes that the best, in fact the only, way to achieve equality and integration is by massive, militant drives in housing, schools and jobs. A thoughtful study of the Negro revolution at a crucial stage.

KING EDWARD THE SEVENTH, by Philip Magnus. It was "Prince Bertie's" misfortune that he had to wait 40 years of his adult life before he could take over from his mother, Queen Victoria, but he filled the years by becoming monarch of his own kingdom of society's scandal and fashion.

A MOVEABLE FEAST, by Ernest Hemingway. Toward the end of his life, the novelist wrote these memoirs of the '20's in Paris when he was young and poor. The result is a poetic word picture of Paris, a loving one of his first wife, and waspish anecdotes of Joyce, Ford Madox Ford, and especially the Fitzgeralds, who are treated unkindly.

PEDRO MARTINEZ, by Oscar Lewis. With his tape recorder spinning, the author of *The Children of Sanchez* gets down the biography of another Mexican: a peasant farmer who engaged in one ill-fated political reform after another.

THE SPIRE, by William Golding. In this medieval parable, an obsessed canon orders a huge stone spire to be built atop his fragile cathedral, only to realize at last that his monument was not to God's glory but his own.

EPISODE—REPORT ON THE ACCIDENT INSIDE MY SKULL, by Eric Hodgins. The author of *Mr. Blandings Builds His Dream House* recounts his partial recovery from a "cerebrovascular accident" (in layman's terms, a stroke). His wit and skill with words are totally unimpaired.

LETTERS

Duels in the West

Sir: Everyone seems surprised that Rockefeller won in Oregon [May 22]. But the Lodge workers could not even pronounce the name of the state! Rocky and his campaigners cared enough to say "Oregon" correctly, not "Ore*gone*."

KAY SPIESS

Hollywood

Sir: Oregonians were obviously misled by the meaning of Rockefeller's slogan, "He Cared Enough to Come." It was not Oregon he cared about, but his all-consuming desire to be President. This desire has left New York without a Governor for months at a time. Many Republicans will never forgive him and the so-called Eastern bloc for their smear campaign against Senator Goldwater.

CARROLL P. GRIFFITH JR.

New York City

Sir: Some say that Goldwater should be given the nomination if only to prove to the party—once and for all—that superconservatives can't win an election. But what a risk! In view of Johnson's wild self-confidence in his personal survival rate in fast cars and in crowds of potential assassins, I'll vote for a real presidential alternative in our primary: Rockefeller.

TOM WALKER

Los Angeles

Sir: We saw a display of Senator Goldwater's famous temper in Kansas City recently. The offending parties were not "fresh jerks," but serious Americans seeking to meet the man of so much supposed presidential timber. How can we trust him with the hot line when something might come up on one of his dour days?

DONALD A. JOHNSTON

Shawnee Mission, Kans.

Sir: If Senator Goldwater becomes President, a courageous, morally upright patriot will assume the office. No one can guarantee there will be no war, but with Goldwater we can be sure there will be no surrender.

MARVIN E. ROE

Ellsworth, Iowa

Sir: I think you should know that our total Oregon expenditure for Lodge was $52,975.63. It should also be realized that the unpaid balance (as of May 18, 1964) is $7,000, as contrasted to a $23,000 deficit in New Hampshire. Considering the fact that Ambassador Lodge ran second in Oregon against a very active candidate, Rockefeller, who had tremendous financial support (a probable $350,000), I do not think Ambassador Lodge did poorly. It is our opinion that a very good man won the Oregon primary.

ALAN GREEN JR.
State Finance Chairman
Oregon Draft Lodge Committee

Portland, Ore.

Sir: So Oregon Cave Men and Woodpeckers [May 8] don't carry too many votes, eh!

DONN KUMMER

Albany, Ore.

Trying To Be Meaningful

Sir: Your statement that Governor Connally faces no meaningful Republican opposition [May 15] is in error.

JACK CRICHTON
Republican Candidate for
Governor of Texas

Dallas

Massachusetts Morality

Sir: Instead of the Indian that appears on our Massachusetts state seal, it would be more appropriate to have a state official with his amply greased hand outstretched. The title of your article, "Corruption Is Commonplace" [May 15], would be a good substitute for our state motto. Nothing is more fitting.

CHARLES M. LAPIENE

Springfield, Mass.

Sir: It is very apparent that the state politicians of Massachusetts are very sincere and honest in their efforts to serve the commonwealth—first, before they go to jail; second, while in jail; and third, after they get out of jail.

MARK J. MOORE

Boston

Sir: I do not suggest that we go so far as the Romans did when they stabbed Caesar, or as far as the English when they beheaded Charles I, or the French when they stormed the Bastille, or the Russians when they assassinated their czars. But I am sure that our ancestors who dressed themselves as Indians and threw the contents of British ships into Boston Harbor must be looking down upon us with scorn.

ALEXANDER N. MACLEOD III

Boston

Old Folks There Are Not Forgotten

Sir: I believe TIME clipped Lady Bird's feathers unduly. Though I'm a young 34 and live somewhat outside the pockets of poverty, I'd gladly change places with Cutlers at a rent of $5 per month [May 22]. I'd breed beagles on the acreage.

WILLIAM H. THOMPS[illegible]

New York City

Sir: You quoted Mrs. Cutler as [illegible] "But I do wish Mrs. Johnson would [illegible] roof. The old house leaks bad." In this statement lurks the key to poverty, social squalor in the U.S., among white and Negro groups. The Cutlers after rent, $145 per month clear in [illegible] funds. Why the hell didn't they [illegible] themselves?

JOE LA ROC[illegible]

North East, Pa.

The People Called Methodists

Sir: A word of appreciation for the [illegible] sitive and piquant article dealing with [illegible] people called Methodists [May 8].

LLOYD C. WI[illegible]
Bishop, New York Ar[illegible]
The Methodist Church
New York City

Capitol Game

Sir: There is a new game going [illegible] Washington. The way you play is [illegible] 100 people and choose up sides. One [illegible] tries to win by voting. The opposition [illegible] to stop the vote, and the best way [illegible] can do this is to filibuster. It's [illegible] game: it's called Stop the World I [illegible] 20 Million People To Get Off.

JOHN C. FRI[illegible]

Arlington, Va.

Helpful Discrimination

Sir: Aloha and thank you for "Lega[illegible] a Princess" [May 22]. It concludes [illegible] the thought that our native Kamehe[illegible] Schools run against civil rights prin[illegible] because only Hawaiian and part-Haw[illegible] children attend. Is this idea really [illegible] palling? Our native Hawaiian people [illegible] welcomed with aloha all races and [illegible] to our islands. But the cost to us ha[illegible] heavy. From an original populat[illegible] 500,000 in 1778, our people have [illegible] 114,000 left. The tragic marks of [illegible] present suffering are to be seen in [illegible] statistics of our social welfare and [illegible] health agencies, our prisons and re[illegible] tories. We lead all the races in these [illegible] gories, but trail all others with the [illegible] median income in the islands we [illegible] owned. Our princess left her estate [illegible] redeem her people. I cannot believe [illegible] our beloved nation would intentionally [illegible] prive a materially and culturally weal[illegible] native people of the last remaining [illegible] ments of their redemption.

(THE REV.) ABRAHAM K. AK[illegible]

Honolulu

Local Heroics

Sir: In a small Seattle coffee shop, [illegible] to break up a fight between two [illegible] close quarters which threatened the [illegible] of many women. Aside from one [illegible] guy's friends, nobody else helped—[illegible] too exciting, you see (and I think [illegible] the real reason). Even the waitress [illegible] charge of the place soundly berates [illegible] for "interfering" and for asking [illegible] driver to call the police. If they had [illegible] outside in an alley by themselves, I'd [illegible] just watched too.

VICTOR LYGDMAN

Seattle

Bing's Musical Chair

Sir: Lady Bird Johnson's fall at the [illegible] ropolitan Opera [May 15] reminds [illegible] an account of Queen Victoria's [illegible]

richlorocarbanilide and you'll never regret it

richlorocarbanilide stops bacteria.

nd starts the sales of soaps contain-
g it.

ll it TCC for short (or whatever
u want when it's in your product).
l you need to know is that it pro-
des extra protection against skin
cteria when blended into soap and
p products, and that it stays on the skin to provide long-lasting protection. It gives bar soaps, detergents and soaps for animals a sales advantage that's hard to beat.

Just a pinch of TCC in your product will inhibit Staphylococcus-type organisms.

In daily use, TCC products deposit their protective, anti-bacterial layer with such mildness that no one coul guess a bacteriostat was present.

("Bacteriostat" is a big word fo germ stopper.)

Ask for a sample and test it in you laboratory. When you put it in you products, people may start callin you "Doctor".

Napoleon III and the Empress Eugénie in Paris in 1855. According to Historian Raymond Mortimer: "At the opera the contrast was conspicuous between Victoria's figure and that of the willowy Empress. The Parisians noticed, however, that when they sat down after the national anthems, the parvenu Eugénie looked around to see that her chair was rightly placed, and the Queen did not: born royal, she knew that it would be." Mrs. Johnson did exactly the right thing. Shame on Mr. Bing!

ALICE L. EVERITT

New York City

Ancient River

Sir: Bravo, bravo, bravo to Laurence Lowry for his sensational photographic essay, "A Mighty New Dam To Tame the Nile" [May 22]. His uncanny eye has captured and distilled a moment when past, present and future collide. Seldom is so much said with such eloquence.

DONALD RAMSEY

Los Angeles

Sir: TIME's photos of the Nile Valley and the Nubian monuments were awe-inspiring. It should be added as a footnote to your story that the $12 million that President Kennedy had hoped the U.S. could contribute to the $35 million needed to save the splendid temples of Abu Simbel was recently denied by Representative John Rooney and his House appropriations subcommittee. This project would not have cost the U.S. taxpayer one penny. The $12 million was to have come from the many millions of dollars in American credit already in Egypt as counterpart funds that can be spent only in that country.

BARBARA SWITALSKI

Chicago

Fast Reaction

Sir: Your story on the thought-provoking suggestion by Judge Burger that citizen review boards be set up to scrutinize cases where police officers may illegally obtain evidence [May 15] was fair and objective. Speaking for the professional association of police executives, I can assure you that this will continue to receive our conscientious attention.

Incidentally, you might like to know that in line with your suggestion in a previous issue [May 8] that a simplified national telephone number be developed to obtain emergency police service more quickly, our communications committee will shortly undertake an exploration of the merits and feasibility of this very worthwhile thought.

QUINN TAMM
Executive Director
International Association of Chiefs of Police, Inc.
Washington, D.C.

Sir: When the Supreme Court, after weeks of study, rules five to four that a split-second decision made by a policeman while arresting a felon amounted to an unreasonable search and seizure, we, the police, will have to accept the fact that the policeman's action was an "error." If, as you assert, the policeman was "ignorant of the doctrine [May 15]," then it would appear he has company among the minority of the Supreme Court. For many years we have been trying to persuade the courts, the legislatures and the people that law-abiding citizens should have some rights too. We are pleased to note that Judge Burger, along with other jurists, is likewise becoming concerned about the constitutional rights of society as well as those of individuals.

R. S. SEAR
Chief of Police
Arcadia, Calif.

Mrs. Murray's Atheism

Sir: Atheists have the unwelcome distinction of being the only group in America that is officially persecuted on religious grounds [May 15]. Until 1961, atheists could be barred from holding public office. The House version of the civil rights bill cynically authorized an employer to "refuse to hire and employ" an atheist. Even Presidents of the U.S. have found it politically expedient to imply a link between atheists and the enemies of the country. But during the last census 1 million Americans declared no formal religious allegiance. If Madalyn Murray's actions are extreme, they are a reaction to the injustices that the atheist suffers.

DR. ALEX HERSHEY

Washington, D.C.

Sir: Catholic citizens who use parochial schools pay public school taxes. Jewish citizens accept the fact that their business will not proceed as usual on Christmas and Easter, Republicans abide by the election of a Democratic executive (or vice versa), pacifists pay taxes to be used for military defense, and nondrivers pay taxes which are used for highway construction. Each of us, I am sure, contributes to or accepts in some way some national policy with which he does not agree. Mrs. Murray must recognize this *sine qua non* of existence in a democratic society.

JAY ARNOLD

Kingston, N.Y.

Timeless Martyrdom?

Sir: I must disagree with your statement that Shaw's play *Saint Joan* has "little bare" ideas [May 22]. How could anyone one sit through the trial scene and not realize that the Inquisition excommunicated her because she would not follow her conscience to its dictates? If this is not an attempt at brainwashing, I don't know what is. And if brainwashing isn't relevant to the 20th century, I don't know what could be.

PATRICIA K. SANTELMANN

Bloomington, Minn.

Sir: In one short season in Minneapolis thirty-five professional actors are assured of work and experience. An excited community, 1,200 miles from the center of the theater world, is personally involved in the survival of the Minnesota Theater Company. You can't lower our sights by implying that the productions offer anything but the kind of easy laughs the Midwest audience demands!

MRS. CONNIE GOLDMAN

Minneapolis

Subtle King

Sir: It hardly does to call Nepal's King Mahendra a "consummate wheeler-dealer" [May 15], with all that this implies, when he has been eminently successful in an impressive bid to close a gap of centuries in the shortest time possible by obtaining technical and capital aid from outside sources. In accepting aid from several sources rather than from just one or two, the King shows that he is aware that responsible leadership requires that the political element in bilateral aid be clearly recognized.

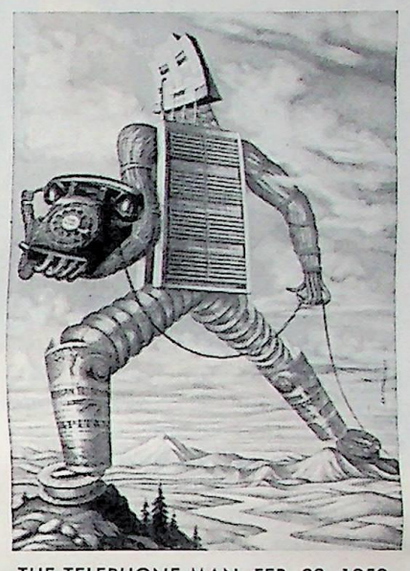
A letter from the PUBLISHER

Bernhard M. Auer

WRITER MARSHALL LOEB looked up from the stack of research prepared for him by Correspondent Bob Ball and Researcher Jean Pascoe, considered his deadline for this week's cover story and mused about time and TIME. What if he had one of those new pushbutton telephones? The buttons save five seconds a call compared with that old-fashioned dial. At the rate of, say, 24 seven-digit calls, he could save two minutes a day, ten minutes in a five-day week, and, allowing for four weeks' vacation, that would add up to an important eight hours a year!

Whether this bit of strategic calculation will ultimately get Loeb a pushbutton phone remains to be seen, but it is clear that he is not the first TIME writer to muse about what the telephone might do in the future. "Use of automatic [dial] telephones increased 50% during 1925," reported TIME, March 15, 1926. "The automatic seems the only relief for telephone congestion in the great cities." And another writer joined the Bell men in peering a long way ahead in the May 18, 1931, issue: "Telephonic television is still the most satisfactory means of transmitting the image. In the U.S. there is one telephone-television circuit in regular operation. One end of it is in the American Telephone & Telegraph Co.'s offices at No. 195 Broadway, the other in the Bell Telephone Laboratories. A.T. & T. is experimenting because it feels that sometime a practical use for television may crop up. Only uses conceived so far: for separated sweethearts, for identifying criminals, for the convenience of bank depositors who want to cash checks away from home."

Some people may argue that no practical use for television ever cropped up, but these bits of history emphasize how fast and how much communications have advanced. The pace was fast enough when TIME, Feb. 23, 1959, reported in a cover story on the great strides being made



THE TELEPHONE MAN, FEB. 23, 1959

by "The Telephone Man," but it is even faster now. Looking to the near future, Artist Robert Vickrey chose for the cover background a section of the new "Trimline" phone that has dialing, listening and speaking elements all in one piece, a wiring pattern in an A.T. & T. experimental office, part of a dialer card for the new automatic dialing phone and the soon-to-be-familiar pushbuttons.

The cover story, edited by Edward L. Jamieson (who, incidentally, wrote the 1959 cover story), deals of course with where the world's biggest company came from and where it is, but, perhaps most important, with what might be ahead. Assessing what new developments of the present mean in terms of the future is becoming a more and more important part of the journalist's task as the pace of change increases. Whether it is a story like Modern Living's report on how new communities are being developed around the family airplane, or Medicine's story of how a dramatic new use of the plastic bag will help save lives, or where Chairman Frederick Kappel is leading the world's biggest company—TIME aims to keep looking ahead of change.

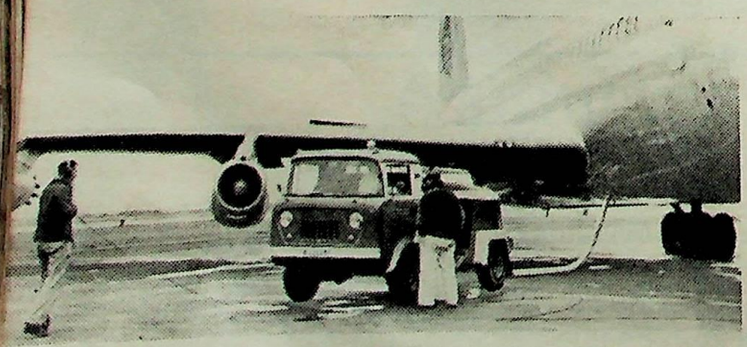
PICTURE OF A MAN ABOUT TO START AN AIRLINE

oupling up an air-hose may em an odd way of starting aircraft. But then, strangely ough, the modern jetliner's appetite for air begins *before* the start. Its turbine starters must be fed warm air continuously, at a constant pressure and free from impurities. Given this, four jet engines can be started in sixty seconds.

This, however, is only part of the problem. Another is to do it simply, at a low cost per start. Surprisingly, the answer began to take shape long before the advent of the commercial jet, with a Swedish invention—the rotary screw compressor—developed for large production plants. It was only a short, if technically skilled, step for Atlas Copco to adapt this design for mobile service as the Air Partner.

Today, at major airports such as Paris, Rotterdam, Dusseldorf New York, the Air Partner more than show how compress air technology has kept pace jet-age aviation. It is an exa of the kind of experience Atlas Copco brings you industry, mines and constru sites the world over.



Air Partner jet starting unit is regarded as an essential part of ground service ities by principal world airlines such as BOAC, KLM, SAS, TCA and others.

THE U.S.

FOREIGN RELATIONS

Unpleasant Options

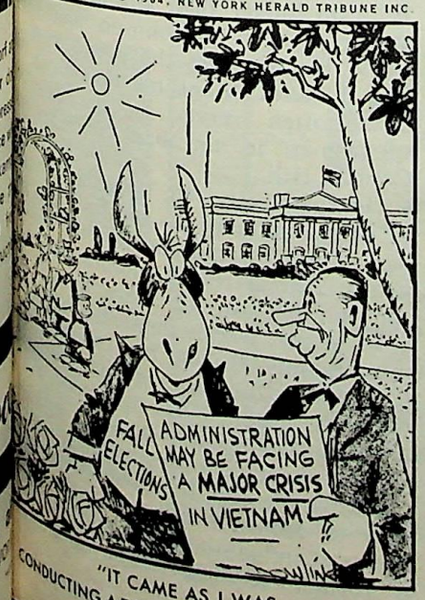
All of a sudden Southeast Asia—the whole area, not just Viet Nam—was back at the top of everybody's crisis list.

In Laos, Communist Pathet Lao troops had driven U.S.-endorsed neutralist forces off the strategic Plain of Jars and threatened to carry clear to the Thai border. In Cambodia, while Prince Sihanouk was howling about U.S. and South Vietnamese border violations, Communist Viet Cong guerrillas were enjoying sanctuary and transit rights to facilitate their war against the U.S.-backed government in Saigon. And in South Viet Nam, in the war into which the U.S. has poured both blood and billions, the struggle against the Reds was steadily deteriorating.

The Words. Only a few weeks ago, Southeast Asia evoked only bland smiles from most U.S. officials. Reason: President Johnson, for understandable political reasons, had decided to continue old policies, to let things slide—without a crash landing—until after November. Things slid, all right—almost to the bottom of the slide.

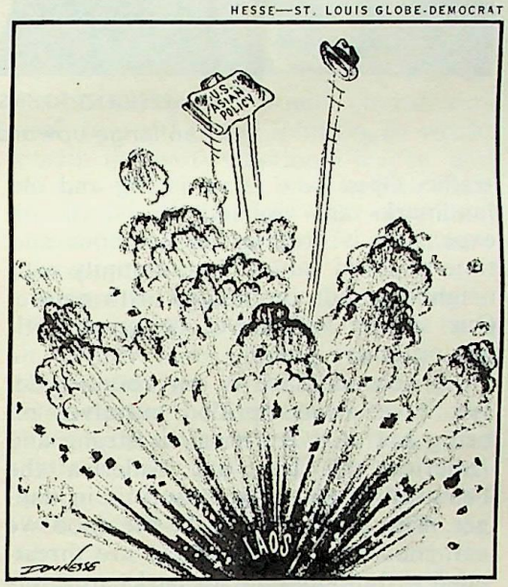
Realization of this fact brought some tough, sometimes eloquent, talk from the U.S. Secretary of State Dean Rusk last week warned that the U.S. intends to stand fast and that the conflict in Laos and South Viet Nam might expand, "if the Communists persist in their course of aggression." With particular emphasis, he added: "This is the signal which must be read with the greatest care in other capitals, and especially in Hanoi and Peking." He also called in Soviet Ambassador Anatoly Dobrynin and sternly admonished him to give his boss the same message.

DOWLING—© 1964, NEW YORK HERALD TRIBUNE INC.



"IT CAME AS I WAS CONDUCTING A TOUR OF THE ROSE GARDENS!"

HESSE—ST. LOUIS GLOBE-DEMOCRAT



Similarly, United Nations Ambassador Adlai Stevenson, summoned home from a trip to Europe, warned the Security Council that the U.S. would remain in South Viet Nam as long as North Viet Nam, "with comradely assistance from the regime in Peking," continues to wage war there. "The U.S.," said Adlai, "cannot stand by while Southeast Asia is overrun by armed aggressors. If anyone has the illusion that my government will abandon the people of Viet Nam, or that we shall weary of the burden of support that we are rendering these people, it will be only due to ignorance of the strength and conviction of the American people."

But for all their forcefulness, neither Rusk nor Stevenson did much more than reiterate what U.S. policy has been all along—and there was mounting doubt about the efficacy of that policy. "We are rethinking the whole mess," said a State Department official.

The Crux. One alternative, already suggested by such people as France's Charles de Gaulle, is to neutralize all of Southeast Asia. But U.S. officials would have to do an awful lot of rethinking before they bought that one, for Laos is proof positive of just how badly neutralization can flop. Another possibility is to expand the war to North Viet Nam with bombing raids and guerrilla attacks. That, too, has its pitfalls, for the upshot could be massive Red Chinese intervention, and another Korea. Still a third option is to keep muddling, as the U.S. has been doing. But that policy has so far failed, and there is no prospect that it will suddenly start paying off.

The crux of the matter is Viet Nam, and U.S. policymakers see precious few glimmers of hope that the situation there will improve. Perhaps the grimmest fact, from the U.S. point of view, is this: Whatever the shortcomings of Ngo Dinh Diem's regime, his ouster and murder have not accomplished the reforms they were supposed to. South Viet Nam's present leader, General Khanh, is trying hard enough to take hold, and in fact, Washington fears that if he were eliminated by a coup or a killer, there would be nobody left to maintain even the semblance of an anti-Communist government. But Washington is beginning to realize that most of the complaints made against Diem can be made against Khanh: he has not rallied the people, he is out of touch with the countryside, he is a poor administrator, his finances are chaotic—and lately, the same old crowd that hounded Diem has even accused Buddhist Khanh of being beastly to Buddhists.

That leaves Lyndon Johnson with some mighty unpleasant options to choose from—particularly in an election year.

The American Civilization

It is not often that a U.S. President has tried to articulate the meaning and the goals of an American civilization that is distinct from its European roots and is more than a mere piece in the mosaic of world order. That, however, is what President Johnson accomplished last week. In a speech before 80,000 at the University of Michigan stadium at Ann Arbor—where he was given an honorary Doctor of Civil Law degree—the President eloquently invited his fellow citizens to join in the pursuit of a "Great Society" uniquely American both in spirit and promise. Excerpts:

"For a century we labored to settle and subdue a continent. For half a century we called upon unbounded invention and untiring industry to create an order of plenty for all our people. The challenge of the next half-century is whether we have the wisdom to use that wealth to enrich and elevate our national life—and to advance the quality of American civilization.

"Your imagination, your initiative, your indignation will determine whether we build a society where progress is the servant of our needs, or a society where old values and new visions are buried under unbridled growth. For in your time, we have the opportunity to move not only toward the rich society and the powerful society but upward to the *Great Society.*

"The Great Society rests on abundance and liberty for all. It demands an end to poverty and racial injustice —to which we are totally committed in our time. But that is just the beginning."

Quality, Not Quantity. "The Great Society is a place where every child can find knowledge to enrich his mind and enlarge his talents. It is a place where leisure is a welcome chance to build and reflect, not a feared cause of boredom and restlessness. It is a place where the city of man serves not only the needs of the body and the demands of commerce but the desire for beauty and the hunger for community. It is a place where man can renew contact with nature. It is a place which honors creation for its own sake and for what it adds to the understanding of the race. It is a place where men are more concerned with the quality of their goals than the quantity of their goods.

"But most of all, the Great Society is not a safe harbor, a resting place, a final objective, a finished work. It is a challenge constantly renewed, beckoning us toward a destiny where the meaning of our lives matches the marvelous products of our labor.

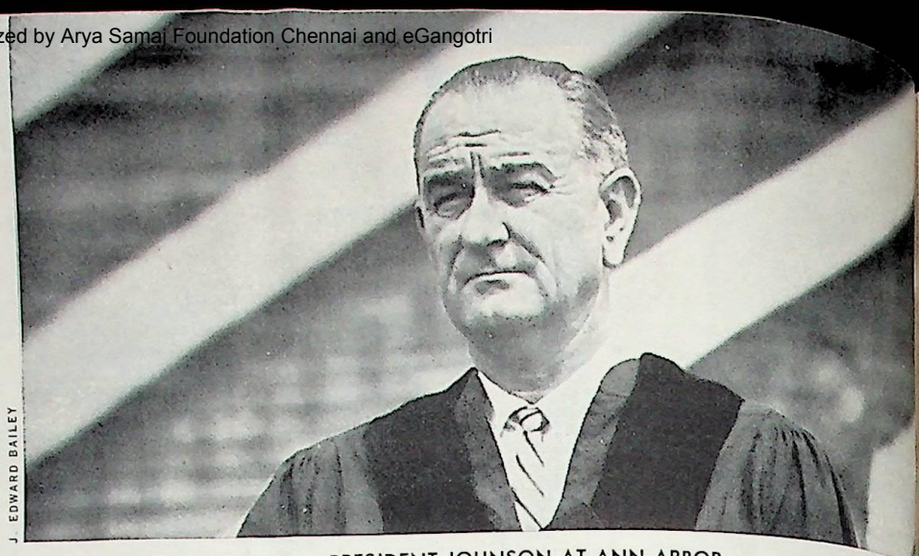
"In the next 40 years we must rebuild the entire urban United States. It is harder and harder to live the good life in American cities. There is the decay of the centers and the despoiling of the suburbs. There is not enough housing for our people or transportation for our traffic. Open land is vanishing and old landmarks are violated. Worst of all, expansion is eroding the precious and time-honored values of community with neighbors and communion with nature. Our society will never be great until our cities are great.

"A second place is our countryside. We have always prided ourselves on being not only America the strong and America the free but America the beautiful. Today that beauty is in danger. The water we drink, the food we eat, the very air we breathe are threatened with pollution. Our parks are overcrowded and our seashore overburdened. Green fields and dense forests are disappearing. A few years ago we were concerned about the Ugly American;* today we must act to prevent an Ugly America. For once our natural splendor is destroyed, it can never be recaptured. Once man can no longer walk with beauty or wonder at nature, his spirit will wither and his sustenance be wasted."

In the Classrooms. "A third place is in the classrooms. Our society will not be great until every young mind is set free to scan the farthest reaches of thought and imagination. In many places classrooms are overcrowded and curricula are outdated. Most of our qualified teachers are underpaid, and many of our paid teachers are unqualified. We must give every child a place to sit and a teacher to learn from. Poverty must not be a bar to learning, and learning must offer an escape from poverty.

"Those who came to this land sought to build more than a new country. They sought a new world. I have come here to your campus to say that you can make their vision our reality. Let us from this moment begin our work so that in the future men will look back and say: 'It was then, after a long and weary way, that man turned the exploits of his genius to the enrichment of his life.' "

* The President perpetuated a popular misconception. The hero of the 1958 novel is physically ugly but is the only "good" American among a host of inept blunderers working abroad for the Government.



J. EDWARD BAILEY

PRESIDENT JOHNSON AT ANN ARBOR
A challenge upward to the Great Society.

The New Team

A whirlwind President may be f
but who provides the whirls that cre
the wind? At the present time th
names are Moyers, Valenti, Jenkins
Reedy. Three of them are from Te
and all have known and served Ly
Johnson for a number of years—
right now they are very busy.

▶ Bill Moyers, 29, a scholarly j
nalism graduate whom Johnson c
"my Baptist preacher" (he was n
a preacher but was ordained to te
in Baptist schools), has become the
tellectual commander of the John
troops. He assigns the speeches, wr
some himself, checks them for t
and accuracy. He plans Johnson's tr
such as his recent poverty tours, se
out advance men, coordinates it
with the President's desires.

▶ Jack Valenti, 42, an energetic
mer Houston adman, serves the
sonal side of the President, arra
his appointments, works out his d
schedule, frets about his public im
dogs Johnson wherever he goes. Va
ti, says Johnson, "is the only man
knows everything that goes on in
White House."

▶ Walter Jenkins, 46, a soft-spo
fellow from Jolly, Texas, has kn
Johnson longer than any of the oth
and has been a Johnson aide s
1939. He manages the presidential
fice, handles Johnson's nonofficial
fairs, often serves as his perso
spokesman in the back corridors
Capitol Hill.

▶ George Reedy, 46, takes his posi
as press secretary so seriously that
has slimmed from some 265 lbs.
nearly 200 in recent months. A Jo
son intimate for 13 years, he was
aide about whom newsmen had
most doubts. But he has emerged
capable performer who can pro
in-depth briefings. He was partic
effective during the complex rail
labor-management negotiations.

Below the top four, whose relatio
ship to Johnson is particularly c
the most influential member of the s
is former Kennedy Aide McGeo

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Bundy, a specialist in foreign affairs and national security. Bundy almost quit after Kennedy's death, is less of a freewheeler than he was under Kennedy, but now seems completely comfortable with L.B.J.

So far, two topflight speech writers have emerged in the Johnson stable: Kennedy's former Latin American specialist, Richard Goodwin, 32, and Horace Busby, 40, a University of Texas graduate and longtime Johnson friend. Goodwin cranks out major texts in far less time than Kennedy's Ted Sorensen did, and Johnson insists that he does it with just as much style. Busby is a quiet, discreet intellectual. Warns one experienced Washington hand: "Watch Buz. He's a comer."

Riding Herd. Two recent additions to Johnson's staff also are being eyed closely by the others, since their roles are not yet clear. Douglass Cater, 40, former national affairs editor of *The Reporter* magazine, is expected to provide long-range thinking on foreign policy, will work with Bundy—although by no means at Bundy's request. Princeton History Professor Eric Goldman, 48, although not a fulltime aide, is an idea man who is supposed to draw upon the nation's intellectual talents.

As his own personal secretary, Johnson has brought in Mrs. Juanita Roberts, an attractive and efficient former WAC, who is still a lieutenant colonel in the Army Reserve.

The Johnson team regards the President with a mixture of awe, terror and intense devotion. L.B.J. rides herd on them and needs their loyalty. As such, the operation is very different from the way it was under Kennedy, but so far it has worked with fabulous results.

POLITICS

The Myth America Contest

Every political year gives rise to political myths, and 1964 is no exception. Of the two most prevalent so far, one works against Barry Goldwater, the other for him.

Myth No. 1 is that "Goldwater's nomination would set the Republican Party back 20 years."

The New York Times, which fervently believes this one, gave Barry a break of sorts last week when it cut the period by which Goldwater's nomination would set the party back to a mere decade. The notion behind the myth is that although Goldwater would almost certainly lose to Lyndon Johnson, he would remain the party's national leader, and his fervent followers, who believe their brand of Republicanism is the only kind, would take over the G.O.P. machinery for years to come.

Recent history points to the flaw in the theory. As it happens, losers have an awfully hard time controlling anything thereafter. Alf Landon certainly didn't control the Republican Party after 1936. Neither did Wendell Willkie after 1940, or Dick Nixon after 1960. Tom Dewey did maintain his control between 1944 and 1948, but he did it with the help of a superb political machine. Goldwater has no such machine, and the chances that he could control the G.O.P. after defeat seem negligible.

Myth No. 2 holds that "Goldwater should be nominated so as to provide, once and for all, a clear-cut choice between a conservative and a liberal."

Perhaps the voters should be given that choice some day. But Goldwater *v.* Lyndon Johnson certainly won't do it. Goldwater is the beneficiary of whatever conservative trend has been running in the country, but he is far from being an articulate spokesman of a well-reasoned conservative philosophy, and the practicalities of the campaign have forced him constantly toward the middle. At the same time, who says Lyndon Johnson is a liberal? Certainly not the U.S. businessmen who so enthuse over his performance as President. And not the traditional labor and ethnic libera'ls, who are suspicious of him but have nowhere else to go at the moment. Of course, Lyndon owes his present position to the very fact that he was picked to be the Democratic vice-presidential nominee in 1960 as a nonliberal counterbalance to Jack Kennedy.

Still, it is all but certain that thousands of Americans this year will let their opinions and their votes be shaped by one or another of these myths.

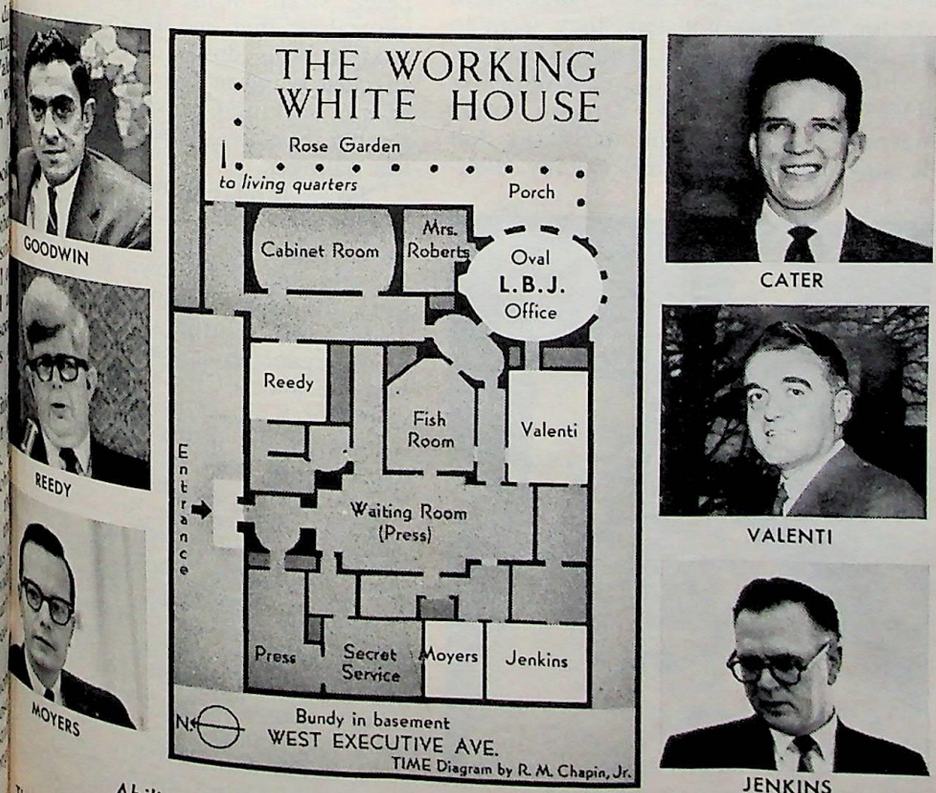
From Behind in the Stretch

Remember Silky Sullivan? A big, chestnut, three-year-old colt in 1958, he had a breathtaking way of staying 25 or 30 lengths behind and then, in the stretch, thundering up on the leaders while thousands roared, "Here comes Silky Sullivan." He didn't always make it, of course, but that made little difference in California, where they love a come-from-behind stretch runner.

That's the way it is coming into the stretch for California's June 2 Republican presidential primary. In their two-man race, Arizona's Barry Goldwater still seems ahead, but New York's Nelson Rockefeller, like Silky Sullivan, is roaring up on the outside.

Added to the Agenda. Fresh from his Oregon upset, Rocky was running as though there were no tomorrow. His chartered bus rolled over California freeways at speeds of 65 to 75 m.p.h., taking him from speech to luncheon to reception. His crowds were large and enthusiastic; he could have yelled "Fresh fish!" and received cheers. About 7,000 people lined up for three blocks outside a reception at the Disneyland Hotel to wait their turn for a quick Rockefeller handshake. At a senior citizens' center in Stockton, he charmed the oldsters when he stirred his coffee with the stems of his spectacles, danced with half a dozen of the women. His schedule grew by the hour as he insisted on adding to his already overcrowded itinerary. One day's schedule, for example, listed six stops when it was issued early in the morning; within a few hours it had been revised to 18.

Wherever he went, Rocky attacked the Johnson Administration's confusing array of "120 foreign policies," and called for "hot pursuit" of Viet Cong guerrillas into North Viet Nam and Laos. But it was another message that Rocky really wanted to get across: "Like Abraham Lincoln and Dwight Eisenhower," he said time and again, he represented "the mainstream of Ameri-



Ability mixed with awe, terror and intense devotion.

ROCKEFELLER IN SAN FRANCISCO
Out in the mainstream.

can thought"—while Barry was way off to the right.

Kidding Themselves. For his part, Goldwater left California early last week. On his way to Washington he stopped off at tiny Fredonia, Ariz. (pop. 643), which he calls his "lucky town" and where he has spoken every year since 1950. To Rocky's charge that he stands apart from the American "mainstream," Barry snorted: "I'm up to my neck in it." Goldwater himself still appears confident, but his followers are increasingly worried. Says his campaign coordinator, Denison Kitchel: "We've got a real battle on our hands. We're kidding ourselves if we think we don't." To help out, the Goldwater forces enlisted the aid of 23 U.S. Congressmen from 18 states to barnstorm California on Barry's behalf this week. And under urging, Goldwater reluctantly announced that he would spend all this week in the state, instead of the three days he originally had planned.

Heavy Spending. For his come-from-behind effort against Goldwater, Rocky has the benefit of a well-paid reasonably smooth-working, professional organization headed by Spencer-Roberts, a crack California public relations outfit. The Rockefeller people were planning to pour upwards of $1,000,000 into the last days of the campaign for radio and television time, direct mailing and the like. Rockefeller also is sending scores of workers into Negro areas from San Francisco to Los Angeles in an attempt to get out the presumably anti-Goldwater Negro vote.

Goldwater, too, is spending up to $1,000,000 in the closing days of the campaign. But he has a couple of advantages over Rocky. For one thing, he is much better known in California. Since 1958, Goldwater backers point out, he has made at least 500 speeches there on his own behalf and for other Republican candidates. His organization is less professional than Rocky's, but more zealous. In San Diego County, for example, 26 separate Goldwater volunteer headquarters are at work; Los Angeles County numbers no fewer than 42 headquarters. By election eve, Goldwater workers vow that they will have reached every registered Republican in the state with at least one mailing, a phone call and a visit from a Goldwater precinct worker.

On Rockefeller's side is the momentum he achieved in his Oregon primary win, plus the fact that supporters of Henry Cabot Lodge have come out for him. Lodge is popular in California, but just how many of his admirers will vote for Rocky remains open to question; Pollster Sam Lubell last week figured that about three out of five of them will follow the Lodge leaders' suggestion. As for the other pollsters, they seem to be in a tailspin. Just before Oregon, California's Field Poll gave Goldwater 43% to Rocky's 27%; Oregon surely narrowed that gap, and the Field Poll is now conducting a new survey. Poll-

GOLDWATER IN LOS ANGELES

lead over Salinger. But Pierre is still in there pitching. He bounces out of bed at dawn each day for a dozen or more appearances—about twice as many as Cranston. He draws bigger crowds than Cranston, but California politicians have long since learned that crowd size doesn't mean much in their state. Invariably, Salinger's campaign pitch includes recollections of the days of glory with Jack Kennedy, of his own meeting in Moscow with "Chairman Khrushchev," of how he and a few other New Frontier notables spent seven days and seven nights "looking down the nuclear barrel" at Castro. He insists that he knows more people in Washington than Cranston, and as a Senator could get past more doors. Replies Cranston: "It is one thing to get in the door. It is another thing to know what to do when you're inside."

More on That Non-Candidate

Pennsylvania's Governor William Scranton is the only Republican who has succeeded in convincing anyone that he really is a presidential non-candidate. Yet last week in Washington, he convinced a few more people that he surely should be in the running.

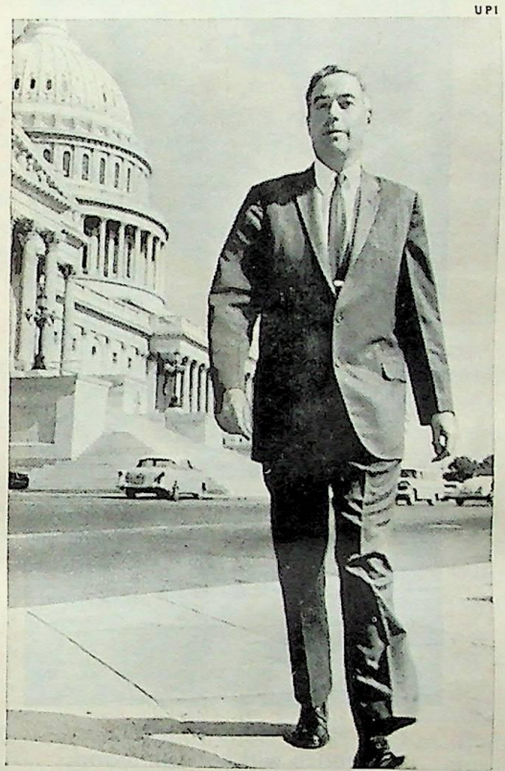
Before attending a State Department briefing on foreign affairs, Scranton appeared before a special House committee studying President Johnson's program to eradicate poverty in the Appalachian states. Scranton was all for the idea, but he thought that some severe flaws in the Johnson program ought to be corrected.

Patches of Misery. Said Scranton to the Congressmen: "Twenty-three hundred years ago, Plato described poverty as the 'parent of meanness and viciousness,' and he urged that society declare war on it. 'It would be strange indeed,' he wrote, in a state even 'tolerably ordered,' if the poverty-stricken were to be 'utterly neglected' or allowed to fall into 'utter destitution.' Long centuries later, our great nation still has that this year it has become fashionable to call pockets of poverty. Our society is shamed and weakened by their existence, whether they be patches of outright human misery or whether they be areas where prosperity is a fragile thing because there simply aren't enough jobs to go around."

So saying, Scranton detailed his objections to the bill. He argued for revisions permitting the states much greater power in planning and implementing the anti-poverty program, greater curbs on the role of federal authority, annual appropriations for funds to be made by the Congress instead of "back-door" financing, and more specific remedies to clear up the hazards of health and economy of Appalachia's coal regions.

When he finished, committee members nearly fell over themselves in praise. "Governor," said Tennessee's Democratic Congressman Clifford Davis, the chairman, "this committee has never had a finer presentation. You have given me a weekend of homework." Pennsylvania Democrat Frank Clark said that Scranton was "the best witness we ever had." Minnesota Democrat John Blatnik congratulated him for his "obviously very thoughtful and carefully worked out" presentation. New Jersey Republican James Auchincloss confessed that he had been "thoroughly confused about the whole program" until Scranton came along and "cut away the cobwebs."

Praise & Hope. Illinois Democrat John Kluczynski was carried away too, and in heaping his thanks onto the pile, took note of Scranton's presidential situation. "I know you're doing a marvelous job as Governor of the Commonwealth of Pennsylvania," Kluczynski gushed, praising with a faint damn, "and I hope you continue to do so for the rest of your term."



UPI

PENNSYLVANIA'S SCRANTON
More than Platonic.

Through the laughter, Bill Scranton —whose term as Governor expires in 1967—replied: "That's my hope also."

More About the Backlash

"Look at that! Look at that!" cried Alabama's Democratic Governor George Wallace. Eyes fixed on a TV set, fist beating on the arm of his chair, he was watching early returns from the Maryland presidential primary at his Towson, Md., campaign headquarters. The cause of Wallace's excitement was that, for the moment, he was leading Maryland's Democratic Senator Daniel Brewster, a stand-in for Lyndon Johnson. But as the votes piled up, Brewster pulled ahead, finally won 265,713 to 214,029.

Even so, Wallace had taken 42.7% of the record primary vote, and he talked triumphantly. "They called me a bigot, a liar, a racist, an agitator, a trespasser," he said. "They pictured my supporters with Ku Klux hoods. They called in ten Senators to beat us down, and yet a majority of the white people in Maryland gave me their support. I'm elated. That's far more than I ever expected."

In a wistful voice, Wallace added: "Just leading awhile, why that's something. If it hadn't been for the nigger-bloc vote, we'd have won it all." As it was, Wallace threw an awful fright into Maryland and national Democratic leaders, who are really beginning to watch that so-called civil rights "backlash" in the North.

Counting the Votes. There were reasons besides the backlash for Wallace's near miss. For one thing, Brewster is closely identified with the unexciting administration of Democratic Governor Millard Tawes, which this year took a long step down the road from popularity by increasing the state income tax by a full one-third. For another, Brewster himself, a much-decorated World War II marine, is a wealthy, gentleman-jockey type and a political lightweight who at first took Wallace's challenge much too lightly, then panicked and began taking it much too seriously.

It was impossible to tell just how much of Wallace's vote derived from such factors. But at the same time, there was certainly a civil rights backlash, and the voting pattern throughout the state proved it.

Along Maryland's rural, racially troubled Eastern Shore, Wallace carried all nine counties with more than three-fourths of the vote. In Dorchester County (Cambridge), the scene of recent Negro riots, Wallace beat Brewster by better than four to one. He also carried two of Baltimore's six districts. In each, blue-collar workers fear Negro incursions in neighborhoods and jobs. The heavily Catholic First District, where Negroes have already moved in alongside Greeks, Italians and Poles, gave Wallace 11,000 votes to Brewster's 8,000. In the Sixth District, now the home of many transplanted Southerners who came to Baltimore to find jobs in its big industrial complex, Wallace outdrew Brewster 10,000 to 9,000. In all, Wallace carried 16 of Maryland's 23 counties.

Brewster ended up taking the state's three westernmost counties, where the Negro population is small and civil rights are no problem. He also scored heavily in the well-to-do bedroom suburbs that skirt Washington. But his winning margin came from Baltimore's Jewish and Negro areas. The city's Fifth District, home of 80% of Baltimore's 90,000 Jews, gave Brewster 39,000 votes, Wallace 9,000. The lopsided results were much the same in black Baltimore. In 17 Negro precincts, Wal-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lace got not a single ballot. Eighty-seven Negro boxes gave the Alabamian fewer than six votes per precinct against a total of 18,765 for Brewster.

The Militancy Issue. Wallace had based his campaign for Maryland's 48 Democratic Convention delegates on a strong pitch against the civil rights bill now pending before the U.S. Senate. But there was evidence that his vote came less in protest against the bill, in and of itself, than against Negro militancy and excesses.

Thus in another race, Joseph D. Tydings, a stepson of Maryland's late Democratic Senator Millard E. Tydings and a liberal who was outspoken in his advocacy of the civil rights bill, won the Democratic senatorial nomination over State Comptroller Louis Goldstein, the choice of the Tawes organization, by a 123,000-vote margin. Democratic voters also renominated all five of their party's congressional incumbents—and all had voted for the civil rights bill. On the G.O.P. side, Senator J. Glenn Beall, who also supports the bill, easily won renomination over Challenger James Gleason, who doesn't.

THE CONGRESS

Close to Kingship

Not since the floor days of Lyndon Johnson and, for a brief while, the fitful reign of Oklahoma's late Democratic Senator Robert Kerr, has the U.S. Senate had anything close to a king. But now moving toward that position is a most unlikely person: Illinois' Everett McKinley Dirksen, 68, a politician of many ups and downs and backs and forths, whose only present power lever is that of leader of an underwhelming minority of 33 Republicans.

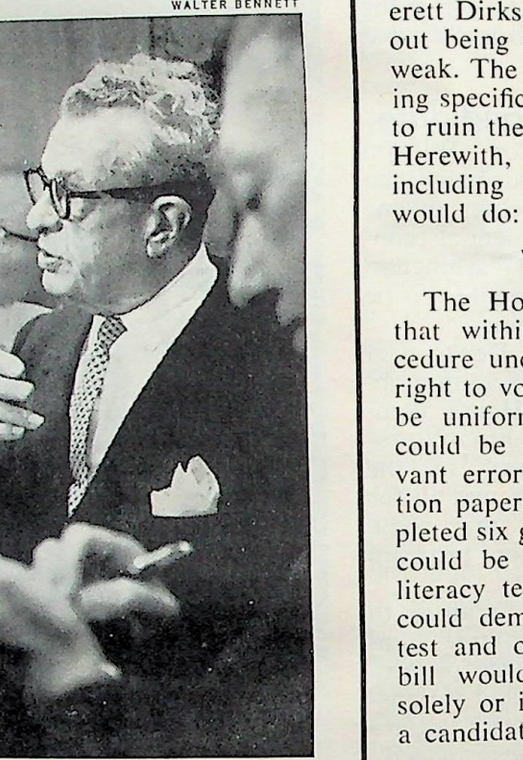
The first secret of Dirksen's success is the fact that the lopsided Senate Democratic majority is split every which way, while Old Ev can influence, if he cannot command, almost all his Republicans. Because of this, Dirksen can often provide the votes that a Democratic Administration needs for its programs—particularly when a two-thirds Senate majority is required, as on treaties or for cloture. And that is the second reason for Dirksen's success: when such Republican votes are needed, he is always willing to cooperate with the Administration—but never without the Democrats paying a certain political price.

A prime example came last year in President Kennedy's nuclear test ban treaty. When it was first proposed, Dirksen expressed "grave doubts" about it and its effect on the U.S.'s atomic strength. But the Administration, wanting as nearly unanimous approval as possible, needed all the Republican votes it could get. One fine day, Dirksen went to the White House for a chat with Kennedy. He argued that with a few "assurances" from the President, he could still his own doubts and those of most of the Republican holdouts. Kennedy eagerly agreed, the assurances were given, Dirksen cooperated, and the treaty was ratified, without amendment, 80-19.

The Key That Opens the Lock. An even better case in point is this year's civil rights bill. Without a large number of Republican votes, the Democratic Party cannot even begin to hope to impose cloture and thereby shut off the filibuster by some of the Senate's most powerful and entrenched leaders. Dirksen is the key to those Republican votes. And he was willing to open the lock—on his own terms. He insisted on some 50 amendments (*see box*) in the civil rights bill already passed by the House.

For a while, the Johnson Administration insisted that it wanted its original bill to go through the Senate completely intact, proposal by proposal, comma by comma, and would brook no change. But Old Ev knew better—no changes, he said, and there would not be enough Republican votes to pass the salt. The Administration, being eminently realistic, eventually gave in, and in a series of meetings between Dirksen, the Democratic Senate leadership, Attorney General Kennedy and Justice Department lawyers accepted almost all of Dirksen's ideas for changing the bill.

WALTER BENNETT



DIRKSEN & REPORTERS
Influence without command.

It was then up to Dirksen to sell the package to his fellow Republicans. Last week, in three conferences, he came very close to doing just that; it might take until the early part of June before a handful of still-doubtful Republicans decide that the segregationist Democrats have used up their hallowed right of "unlimited debate," but the time will surely come.

A Little Sermon. Beyond that, Dirksen at long last wore his own civil rights heart on his sleeve. Never before had

WHAT THE CIVIL RIGHTS BI WOULD DO

DOES anyone really know wh civil rights bill now propos has been kicked around for an a long while. First sent to the Co by President Kennedy last June, partly changed by the House of R sentatives and sent on to the Se February. It has languished i chamber of winds during the l filibuster in history, still faces s tive amendment under a bipa agreement achieved by Republica erett Dirksen. Civil rights groups, out being specific, claim that it weak. The bill's opponents, witho ing specific, insist that it is so str to ruin the framework of the Re Herewith, what the civil right including the Dirksen amend would do:

VOTING RIGHTS

The House-passed measure re that within a given county the cedure under which residents see right to vote in a federal election be uniform for all persons. N could be disqualified for some vant error or omission in his a tion papers. Any person who has pleted six grades in an accredited could be presumed literate. W literacy test is required, the ap could demand a certified copy test and of the answers he gave bill would cover any election solely or in part" to elect or nom a candidate for federal office.

PUBLIC ACCOMMODATIO

The House bill bans discrimi in hotels, motels, inns, restaurants terias, lunch counters, soda fou theaters, concert halls, sports and gas stations. It exempts clubs and rooming houses with than five rentable rooms in bu occupied by the owner.

If a person were denied acc such a public place, his remedy be to file a civil suit asking a court to order the proprietors to such discrimination. Also the A General could file such a suit on of the U.S. Where state or loca ban such discrimination, the A General would have to give s local officials "reasonable time" before filing suit. The Attorney could, if he wished, use the of local agencies to seek a vo solution. But if he decided the delay would "adversely affect" terests of the U.S." or that re state officials would "prove ineffe he could so notify the court ceed with the suit.

TIME, MAY

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dirksen would alter this procedure sharply. If there were a local public-accommodations law, an individual could not file a federal suit until 30 days after he had notified local officials of his complaint. The federal court could delay the suit until local officials completed their action. If there were no local law, he could file federal suit immediately. The court then would have the power to ask a newly created Community Relations Service to investigate and to seek voluntary compliance with the law for up to 180 days. These negotiations would be secret. If they failed, the suit would proceed.

Under the Dirksen amendments, the Attorney General could not institute such suits for individuals. He could ask the court, however, to permit him to "intervene" in such cases. If granted, that would mean that federal attorneys would help to argue the case. But if the Attorney General could demonstrate a community pattern of denying free access to public accommodations, he could file a federal suit, set forth his facts, seek a court order against specific proprietors whom he considered part of the pattern.

PUBLICLY OWNED

Any individual denied equal access to a publicly owned facility, such as a park, swimming pool, hospital or library—but not a school—could file a complaint with the Attorney General. If the Attorney General decreed the individual unable to afford his own suit or in fear of physical or economic harm, the Attorney General could institute a civil suit to force state or local officials to desegregate such a facility.

PUBLIC EDUCATION

The House bill would allow the U.S. Commissioner of Education to help local public school officials draw up plans for desegregation, finance and plan training courses in colleges to instruct school officials and teachers in how to deal with desegregation problems. The commission could supply federal grants to school boards to train teachers and hire consultants on such problems. The Attorney General could institute a suit when tax-supported college students or parents of schoolchildren filed a complaint that they were being denied admission to a school or college because of race, religion or national origin.

Dirksen would amend this section so that it would not empower federal courts to order the transportation of pupils to correct a racial imbalance—as in "bussing."

CIVIL RIGHTS COMMISSION

The bill would extend the life of the Civil Rights Commission until February 1968. Both the House bill and Dirksen amendments would provide new protection for persons appearing before the commission, and would require that commission proceedings in executive session could be made public only by vote of the commission.

FEDERAL ASSISTANCE

Each federal department or agency that provides financial assistance "to any program or activity" would be required to make rules, subject to presidential approval, banning discrimination in such programs. They would cut off such assistance if discrimination persisted. Before such action, however, voluntary compliance with the rules would have to be sought and the contemplated action reported to an appropriate committee of the House and Senate. A decision to curtail funds could be appealed in the courts.

A Dirksen amendment would specifically limit the curtailment of funds to those recipients of assistance actually found to be discriminating. For example, an entire state could not be shut out of all federal programs if only a particular city discriminated in a federal housing project.

EMPLOYMENT

The bill would make it illegal for any employer with more than 100 employees to discharge or refuse to hire any person because of race, religion, sex or national origin. Labor unions could not deny membership or apprentice training on such grounds. Neither could employment agencies refuse to refer applicants. Colleges run by religious organizations in which religion might be a valid employment requirement would be exempt.

The bill would create an Equal Employment Opportunity Commission that could assist local groups in eliminating job discrimination, make technical studies on the subject, offer conciliation service when requested by employers. Either an individual or a member of the commission could file a complaint of job discrimination, and the commission would investigate the charge and notify the persons or organizations against whom the charge was brought. If two of the five commissioners found that the charge was valid, and the efforts at getting voluntary compliance failed, the commission could file a federal civil suit. If the court found that an unlawful practice was committed, it could take whatever action it deemed appropriate, including requiring an employer to hire specific persons with back pay for the period in which the employment was denied.

Many of Dirksen's amendments apply to this section. He would extend coverage to federal employment and union hiring halls and exempt Indian reservations and cases involving national security. He would eliminate the commission's right to file suits. Instead, it would investigate and could recommend that the Attorney General intervene in suits.

Under the Dirksen procedure, the commission would investigate a complaint in secret and, in those states or cities that have a Fair Employment Practices law, notify the local authorities, who would have 90 days to remedy the practice. If they failed, the commission would have 90 days to seek voluntary compliance. If that too failed—or there was no local law—it would notify the person who filed the claim, and that person could then file a federal civil suit. The court could, if it wished, delay the suit for another 90 days to let local officials or the federal commission try again to resolve the matter. The court could also authorize the Attorney General to intervene in the suit. But the Attorney General could not initiate a suit himself unless he could show that a pattern of job discrimination existed in the community. Dirksen would require the plaintiff to prove that the violation had been "intentional."

COMMUNITY RELATIONS SERVICE

The bill would create a Community Relations Service in the Commerce Department to assist communities and individuals in resolving problems of discrimination. The Service could offer its assistance whenever "peaceful relations among the citizens of the community involved are threatened." It would be required to seek the cooperation of local authorities and to keep its activities confidential.

ENFORCEMENT

The purpose of the bill is to provide citizens with a practical means of exercising their constitutional rights, and it would be enforceable only through civil suits in federal courts. The complainant would state his grievance and ask the court to issue an injunction, restraining or other order against those persons he contended were denying him his rights. In many cases, the court could assume the complainant's legal costs. No one could be jailed or fined under the act unless he violated such an order from a court. To expedite the suits, the bill would permit the Attorney General (and in some cases defendants) to request a three-judge panel to hear the arguments. Their decision then could be appealed by either side directly to the U.S. Supreme Court.

The House-passed bill retains the 1957 Civil Rights Act procedure, under which the judge determines whether the accused shall have a jury trial. If a jury trial were granted, a guilty verdict could result in a maximum jail term of six months and a $1,000 fine. If the case were decided by a judge, without a jury, the maximum sentence would be 45 days and $300. Under a Dirksen-Mansfield amendment, this jail term would be reduced to 30 days. Any contempt conviction could be appealed.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

he talked about the moral basis for the bill. Now he did, calling in reporters for a news conference and delivering unto them a "little sermon." He said he was quoting the words Victor Hugo penned in his diary on the night he died: "Stronger than any army is an idea whose time has come."* Said Dirksen: "Civil rights—here is an idea whose time has come. It is inescapable, and we've got to deal with it." Everything in his own perspective of the world, Dirksen continued, told him that a new role for the Negro in America was as obvious as the child labor law or women's suffrage had been in their time. Added he, gesturing toward the Senate chamber: "No one on that floor is going to stop this. It is going to happen." And with his help, it probably will.

PHILANTHROPY

Building a Library

Jackie was constantly on the phone. Rose Kennedy was in North Carolina, where, with Teddy, Evangelist Billy Graham and Governor Terry Sanford, she appeared at a fund-raising rally. The North Carolina "quota" for the $10 million John F. Kennedy Memorial Library on the banks of Boston's sleepy Charles River had been set at $200,000, and this rally alone produced pledges of more than that amount.

In-Law Steve Smith, the Kennedy family's political and financial troubleshooter in New York, was soliciting in Manhattan.

Senator Teddy Kennedy, after taking leave of North Carolina, flew to Paris to thank the French government for a $100,000 donation, then began a ten-day tour of European cities. In Italy, he met with businessmen. In Germany, he would talk with members of a fund-raising committee in Munich, explain the project to students in Hamburg and labor leaders in Frankfurt. Then on to Brussels and Zurich. There was even a stop at the Vatican to explain to the Pope about the library.

The man overseeing the entire fund-raising effort is Attorney General Robert Kennedy, who was scheduled to appear this week at the Manhattan opening of an exhibit of J.F.K. memorabilia, including the late President's rocking chair, and to urge more contributions. Well in advance, he had told his staff that he would accept no radio or television engagements that did not have to do with the library.

To All Employees. In Washington, New Frontier chieftains were busy spreading the word. Interior Secretary Stewart Udall, who had made a *faux pas* early in the Kennedy Administration when his name appeared on a Democratic fund-raising note to oil and gas industry executives, now sent a memo to all "Heads of Bureaus and Offices" in his far-flung department. The solicitation was part of a "Government-wide campaign," said Udall, adding: "I am sure we are all eager to contribute our share toward this building in his honor. . . . As in other campaigns, your chairman should submit a weekly performance report in writing to N. O. Wood, director of management operations. Detailed instructions will be forthcoming."

Deputy Attorney General Nicholas Katzenbach sent a memo to Justice Department employees: "A program has been organized for all of us who wish to contribute to do so. Special rosters have been prepared for contributors to sign so that their participation can be made part of the library's archives. This effort is completely voluntary." Similar messages went out from Commerce Secretary Luther Hodges and Agriculture Secretary Orville Freeman.

AP

ROSE KENNEDY & GOVERNOR SANFORD*
The quotas were coming in.

There is a fairly extensive history of presidential-library fund-raising efforts. Friends of Franklin D. Roosevelt got off a memo to Agriculture Department employees suggesting that they contribute to the Hyde Park Library, then did some fast backpedaling when the press caught wind of it. Harry Truman's campaigners solicited top businessmen, pointing out that all contributions were, of course, tax-deductible. Henry Cabot Lodge Jr. and Adlai Stevenson took to nationwide television to ask donations for Dwight Eisenhower's library in Abilene, Kans.

Those Who Give. But there has never been anything to compare with the Kennedy library movement. Under Bobby's direction, committees have been set up in more than 40 states—chaired by such men as Governor John Reynolds in Wisconsin, Governor Philip Hoff in Vermont, former Governor Dennis Roberts in Rhode Island, and Continental Air Lines President Robert Six in California. Eugene Black, former president of the World Bank and chairman of the library's board of trustees, has sent a letter to every foreign embassy, from Afghanistan to Yemen, suggesting how their countries might contribute, if they are of a mind to do so.

A committee that includes Big Blue IBM Chairman Thomas Watson and former Defense Secretary Robert Lovett is in charge of soliciting from the corporations. Among the field of gatherers: Ford Motor Co. Chairman Henry Ford II,* Standard Oil (New Jersey) Chairman M. J. Rathbone, and U.S. Steel Chairman Roger Blough.

Among individuals, contributions include $209,000 from Treasury Secretary Douglas Dillon, $250,000 from André Meyer, senior partner in Wall Street's brokerage firm of Lazard Frères, and amounts ranging down to 1¢ change from 55,000 others. The A.F.L.-C.I.O. has pledged $2,000,000. From abroad, gifts have come in from the governments of Venezuela ($100,000), Liberia ($25,000), and Puerto Rico ($100,000). The list of business donors includes IBM ($350,000), Continental Air Lines ($100,000), and Fiat Motor Co. of Italy ($50,000, and an additional $50,000 from Fiat Vice President Giovanni Agnelli).

The plans for the Kennedy library have already gone far beyond the sort of quiet, scholarly haven that Jack Kennedy envisioned in his lifetime. To the project, Harvard in 1963 granted 35 acres of its Charles River-bank property. Now there are plans to make the library an institution in the style of a contemporary political science, with big-name, not-necessarily-Harvard director. Some 200 tape-recorded interviews have been conducted with the great and the near great to create an "oral history" of the Kennedy years. So far, about the only holdout is former British Prime Minister Harold Macmillan, who explains that he is preparing his memoirs and hopes "to write about his relations with President Kennedy with more feeling than he could into a recording."

Some Harvard officials are beginning to fret about the giant scale of the plans, but it may not be necessary. For there already is talk among the fund-raising enthusiasts about giving up the Harvard donated site and purchasing a much bigger property.

* *No diary of Hugo (1802-85) has been found; Dirksen quoted a popular version of Hugo's "On résiste à l'invasion des armées; on ne résiste pas à l'invasion des idées," from his Historie d'un Crime.*

* Behind them: Teddy Kennedy, Billy Graham.

* Ford was also putting his shoulder to the wheel for Lyndon Johnson. In an interview with the Detroit Free Press, Ford said he would support Johnson in November even if a Republican candidate, even though he had never before voted for a Democratic President. Said Ford of Johnson: "I think he's a

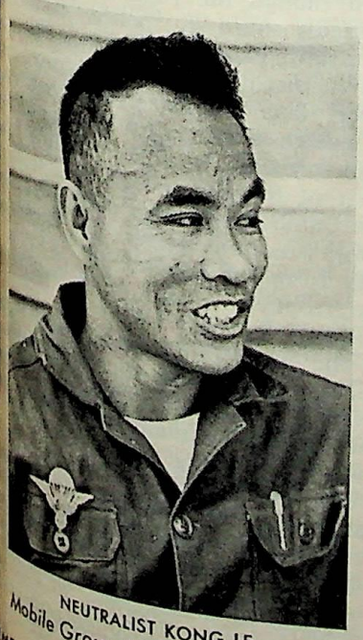
LAOS

Springtime on the Plain

For three years now, Laos has marked the advance of spring by nearly falling into the hands of the Communists. Last week was no exception. Heavy fighting suddenly erupted on the Plain of Jars, and, as usual, the Communist Pathet Lao severely punished the neutralist army commanded by plucky little General Kong Le. Once again, it seemed like the end of whatever remained of Laotian neutrality, supposedly guaranteed by the Geneva agreement, which in 1962 had been solemnly signed by 14 nations, including Soviet Russia. And, once again, the Laotian government of neutralist Prince Souvanna Phouma seemed on the verge of toppling.

Actually, Souvanna's regime topples more often than it governs. It last fell last month when two rightist generals staged a bloodless coup in Vientiane. After considerable palaver and eager intercession by the U.S., Russian and British ambassadors, Souvanna agreed to resume his premiership, backed by the rightists and his own neutralist battalions. The men of the Communist Pathet Lao, who hold the central and northern portions of the country, remained outside the government and were nourished by lengthy truck convoys lurching down dusty Route 7 from the North Viet Nam frontier.

Slashed Necklaces. There, several rightist battalions, known as Mobile Group 13, moved into position on the steep hillsides above Route 7. They halted convoys with land mines and shelled the trucks with bazooka fire. The Communist Pathet Lao, who have controlled a large part of the Plain of Jars since last year, decided to fight their way through. Moving behind a mortar barrage, the Pathet Lao swept through the mountain villages of the anti-Communist Meo tribesmen and closed in on the rightist roadblocks, driving before them hundreds of hapless Meo refugees. Meo men and women carry their wealth with them in the form of silver necklaces; as the Pathet Lao shot them down, soldiers would whip out knives and slash free the silver necklaces from the dead and dying Meos.

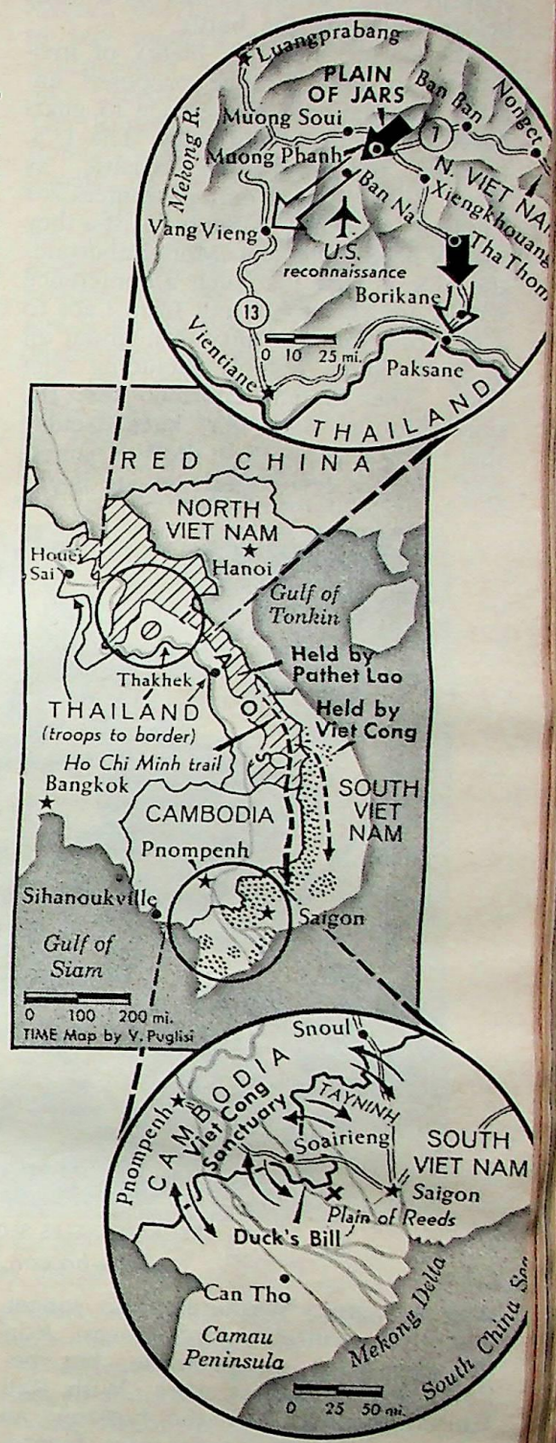


NEUTRALIST KONG LE
Mobile Group 13, where are you?

Neutralist General Kong Le launched a counterattack against the Pathet Lao but was unable to dislodge them from the hills above Mobile Group 13's escape route. With the help of several defecting neutralist battalions, the Reds smashed their way through Kong Le's headquarters at Muong Phanh, and turned to head for the Mekong River. A courageous but often inept commander, Kong Le fell back with his battered troops to Ban Na, on the southwestern edge of the plain. He managed to salvage ten tanks, but lost nine armored cars and four antiaircraft guns. All week long, small parties of neutralist troops made their way back through the hills to rejoin their commander. They reported that the Pathet Lao were aided by up to five battalions of North Vietnamese regulars. Kong Le announced: "From now on, I will support all who are against Communism." The fact that Kong Le and his men were still fighting at all seemed remarkable to U.S. observers, since they have sometimes gone for as long as a year without pay.

Pointed Cameras. Prince Souvanna sent a telegram to his half brother, Prince Souphanouvong, leader of the Pathet Lao, warning him that the Communists "must accept full responsibility for these violations of the Geneva accord." U.S. Ambassador Leonard Unger said, "This is worse than the piecemeal nibbling process that the Communists have been engaged in for the past ten years—it is a substantial bite." The first U.S. reaction was odd and somewhat embarrassing: Washington asked Britain and France, which maintain diplomatic relations with Peking, to try to persuade Red China to halt the Communist attacks in Laos. It was a clear indication that it is Red China, and no longer the Soviet Union, which controls Red moves in the area, but predictably the U.S. plea got nowhere.

Next there was talk of sending U.S. Marines to Thailand (which itself moved troops to the Laotian border) as a sobering threat to the Reds. This had worked once before when President Kennedy tried it in 1962, but that gesture had little permanent effect because the U.S. pulled the troops out again after six weeks. Washington still considered repeating the Marine maneuver and possibly leaving the force in



Thailand more or less permanently this time. But for the present the only tangible U.S. reaction came in the form of jets that whooshed low over the Plain of Jars; they aimed only cameras at the Red positions, but the U.S. was obviously trying to make the point that if it really wanted to get tough, it could just as easily aim bombs. The U.S. has reportedly been flying such reconnaissance missions on and off for two years. The beleaguered Meo refugees cheered as they saw the planes, and Pathet Lao gunners blazed away, scoring a few hits but more misses.

Invitation to Talk. Possibly because of the warning overflight, or because of the need to regroup—or simply because Laos is Laos—the Red advance toward the Mekong slowed to a halt. Just like last year and the year before, the Communists had grabbed more ground in Laos and inflicted more defeats on their opponents. Now they

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

were probably willing to talk for a while before resuming the battle.

There were certainly plenty of invitations to talk. France proposed another international conference to guarantee the neutrality of Laos. The U.S. rejected the suggestion because, as Dean Rusk pointed out, guarantees for Laotian neutrality already exist—they simply need to be kept. More important, the U.S. is sure that such a conference would quickly branch out from Laos to a proposal for neutrality throughout all of Indo-China, notably including Viet Nam. The French consider this the only solution, since they have decided that the U.S. cannot win the Vietnamese war. Quite a few Americans are beginning to agree. Washington no longer objects to neutrality in Southeast Asia (or elsewhere) on principle, but believes that it cannot work. With Red China looming over the horizon, an attempt to neutralize the area regardless of international guarantees might simply turn the entire region into one big Laos. As government propaganda in Saigon posters puts it: "Red Plan—First Neutralize, Then Communize."

AP

U.S. SERGEANT HELPS SECURE VIET CONG GUERRILLA
But who can hustle the East?

SOUTH VIET NAM

And Now the Rains

It is not good for the Christian health,
To hustle the Asian brown;
For the Christian riles, and the Asian smiles,
And he weareth the Christian down.
And the end of the fight is a tombstone white,
With the name of the late deceased;
And the epitaph drear: "A fool lies here,
Who tried to hustle the East."

This version of a poem by Rudyard Kipling is much quoted in Viet Nam by Americans who are desperately trying to hustle Premier Nguyen Khanh's regime into stepped-up action against the ever more aggressive Red guerrillas. The latest factor that hampers U.S. efforts is that old Asian stand-by, the rainy season, which is now beginning over South Viet Nam's Mekong Delta. As usual, while the mud and discomfort would seem to be the same for both sides, they favor the enemy.

Creeping Crickets. Twice a day, usually in early afternoon and again at dusk, the warm monsoon rains patter down. The paddies of the delta are already flooded ankle-deep. Plodding patiently across them, in a tableau ancient as the land itself, peasants in conical hats and mud-caked pants thrust pale green rice shoots into the fertile soil beneath the water. And in the humid dusk, countless crickets sing out—or get themselves captured by small boys who sell them to gambling elders for cricket fights.

The Viet Cong guerrillas are almost as much at home in this setting as the crickets, while the government soldiers—many of them city boys, most of them encumbered with heavier equipment and moving in much larger units—are increasingly bogged down in unfamiliar terrain. In recent months U.S. advisers have pondered ways of improving mobility during the rainy season. One new tactic: a buildup in small boats to transport troops across paddyfields. But hustling the East in the rainy season promises to be even more frustrating than usual, though last week five government battalions were ambitiously attempting to flush the Reds from a stronghold in the northern mountains.

The Khanh regime is eagerly awaiting Washington's latest boost—an additional $125 million in economic and military aid recommended fortnight ago by U.S. Defense Secretary Robert McNamara. Of the total, $70 million will go toward bailing out the war-bankrupted Vietnamese economy, $55 million toward raising the pay of soldiers and civilian government employees engaged directly in Khanh's badly lagging "pacification" campaign.

Mounting Mayhem. U.S. ... alone cannot strengthen the Vietna... will to fight—or counteract the ri... deliberate Red policy to break that ... through terror. before the U.N. Security Council last week that his country has been the victim of aggression.

The U.S.'s Adlai Stevenson denied that Americans had anything to do with the latest incidents, retorted that the Communists have used Cambodian territory "as a passageway, source of supply, and sanctuary from counterattack." He proposed some sort of U.N. supervision of the border, which would bring the U.N. into Indo-China for the first time in such a capacity. South Viet Nam's General Nguyen Khanh expressed approval, but it remained to be seen whether Sihanouk would go along.

AUSTRALIA

Poor Military Posture

"Our state of preparedness is inadequate, our defense expenditure unworthy of a wealthy people that has accepted onerous treaty obligations, and the administration of defense at the top levels of government is weak and too loosely coordinated." So said a group of Australian experts in a recent military study. In a modest way, Australia is trying to do something about it.

A detachment of army engineers last week embarked for Borneo to build landing strips as part of a plan to help Malaysia in its "confrontation" with hostile Indonesia. Australia also agreed to a U.S. request for more aid to South Viet Nam, and the government plans to increase its mission in Saigon, which now consists of only 30 army instructors. But Australia, a SEATO member and often hopefully regarded as the West's anchor in the South Pacific, is still woefully unable to back up its brave intentions.

New Mirages. Australia's air force is obsolete, its navy a memory, its 23,000-man army smaller than Cambodia's. The country has no draft, spends less than 3% of its gross national product on defense *v.* nearly 7% in Britain and more than 9% in the U.S. There is so much dissatisfaction in the services about low pay* that the government last year had to forbid further resignations by officers. Only 1,765 recruits were obtained in the last nine months, which, after wastage, resulted in a net gain of only 816 men.

Since Prime Minister Robert Gordon Menzies and his Liberal Party were reelected last November, he has raised the defense budget by $124.5 million to a total of nearly $586 million. Australia's seven squadrons of obsolete Canberra bombers and F-86 fighters will be replaced with French Mirage 111-0 fighters. Menzies has also placed orders for three U.S. guided-missile destroyers and four British Oberon-class submarines to bolster Australia's tiny fleet, consisting of a single aircraft carrier (damaged in collision last Feb. 10), three destroyers and a half-dozen frigates and mine sweepers.

Uneasy Possession. What especially stymies recruiting is the flourishing state of Australia's economy, and the labor-hungry industries are certain to oppose any attempt to bring back the draft, which was abandoned in 1959 as "wasteful." Yet Menzies hopes to boost the army by 5,000 men at year's end, and has asked Parliament for an extra $35 million to win new recruits. Even so, this would leave it vastly inferior in numbers and even in equipment to the 350,000-man force kept by the Indonesians, with whom Australia shares uneasy possession of New Guinea.

Said External Affairs Minister Hasluck last week: "One encounters sometimes the rather simple belief that we can be a neighbor of Southern Asia by picking out the nicely behaved nations whom we can ask to tea Sunday afternoons. We cannot work out relationships with neighbors our own size and our own outlook, and forget that at the end of the road lives China."

Even though Aussie soldiers are among the highest-paid in the world. An Australian private earns $4.27 per day compared with $2.86 per day for a U.S. private.

AP

AUSTRALIAN TROOPS ON MANEUVERS
But whom can they ask to tea?

COMMUNISTS

The Flag Follows Trade

When George Marshall made the historic offer in 1947 to extend massive U.S. aid to help rebuild the shattered economies of friend and foe alike, the prostrate Soviet-occupied states of Eastern Europe responded with enthusiasm. But before their delegations could pack their scuffed suitcases and head West, Moscow thundered its veto of Communist participation in the Marshall Plan. Last week, in Conference Room 1105A of the State Department, a Rumanian delegation was finally able to accept, if not the 17-year-old offer, at least a latter-day, more commercial version.

Urbane and businesslike, Deputy Premier Gheorghe Gaston-Marin negotiated with Under Secretary of State Averell Harriman for massive credits* to buy modern petrochemical plants, which would expand the industrial complex already in operation near Ploesti. The Rumanians also urged increased contacts with the U.S. in academic, diplomatic, technical and cultural fields.

To improve the climate of the talks, the Bucharest regime reportedly released a few of the estimated 10,000 political prisoners still in Rumanian jails and leaked stories of anti-Russian demonstrations in Rumania. The Rumanians, who have long challenged Moscow's economic domination of the Eastern bloc, made it quite clear last week that they felt they could get away with all this because Moscow is currently too preoccupied with Red China to give them much trouble.

The Russians seemed indeed preoccupied. In addition to Nikita Khrushchev, wooing Arabs in Egypt, Mikhail Suslov journeyed to Paris to persuade the French that Russians are better friends than their new-found Chinese pals, while peripatetic Supersalesman Anastas Mikoyan scurried about Japan, inspecting plants and talking glibly of buying Japanese ships, pulp mills and industrial plants for the production of fertilizer and plastics on long-term credits.

Many Japanese were interested, but paradoxically, not the 100,000-member Communist Party, whose pro-Peking leaders prefer to talk trade with the Chinese. To make their position clear, Japan's 57-man Central Committee last week voted overwhelmingly to expel two leading party members for taking Russia's side in the schism.

* Last year, Washington extended $46 million in aid and credits to the Poles to help finance their $151 million trade with the U.S. No aid or credits went to the other satellites, whose trade with the U.S. is minuscule: Czechoslovakia $20 million, Hungary $18 million, East Germany $9.6 million, Rumania $2.4 million, Bulgaria $1.2 million.

FRANCE

The Decline of Maurice

France's Communist Party used to be the biggest, proudest bearer of the Red banner in Western Europe. Today party membership is 240,000, down from nearly 1,000,000 after World War II. Only 41 Communists sit in the National Assembly where 150 Red deputies raised their voices in 1956. More or less oblivious to these figures, 776 chanting, clapping delegates to the 17th Party Congress in Paris' Latin Quarter heard Party Boss Maurice Thorez describe changes in the party advertised as "revolutionary." They turned out to be hardly that. To provide a little more "democracy" in convention proceedings, secret balloting was introduced, and 30 new Central Committee members were elected to replace oldtimers. Potentially the most important change: Thorez himself resigned after 34 years as secretary-general.

Down in Front. But at 64, "*cher Maurice*" was not really retiring; in good corporate style, he simply moved upstairs. Assuming the newly created post of president, he made room for a man only five years his junior, Assistant Secretary-General Waldeck Rochet, a onetime shepherd boy who became the party's expert on agricultural affairs and has always been a loyal party wheelhorse. Plainly, Thorez will continue to make party policy. It was quite a demonstration of the power to hang on, considering that he still shows the effects of the paralytic stroke he suffered 14 years ago—he remained seated as he delivered his closing speech in Paris last week. In almost any other line of business, given the state of his health and the relative failure of his enterprise, he would have been out of a job.

Of course, it is tough to be a successful Communist under Charles de Gaulle, who has a way of stealing the Reds' issues: he is suitably anti-American, in his own way pushes the cause of the underdeveloped and unaligned nations, and above all rules a country that is bursting with prosperity. Besides, Thorez is having his ideological troubles. Once intensely loyal to Stalin, Thorez long resented Khrushchev's attacks on his old mentor, then finally made his peace with Nikita, and today is among his strongest supporters in the split with Red China. But he runs his party in the unbending Stalinist spirit, disillusioning many intellectuals and particularly the young.

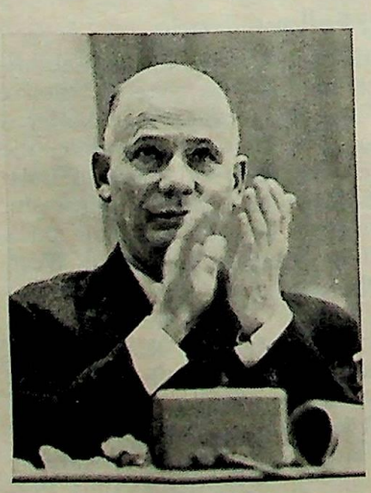
Thorez is haunted by the example of the Italian party, which has actually grown under the leadership of Palmiro Togliatti (present membership: 1,700,000). Togliatti has been far more flexible than the hidebound Thorez, has encouraged more freedom of expression and more young blood in his party. While not pro-Peking, Togliatti has not rushed to line up with Khrushchev in his fight against the Chinese—simply to show his independence from Moscow.

Search for Support. This has drawn many French and other Western European comrades toward Togliatti's way of doing things, has precipitated a significant split between the French and Italian parties. Always sensitive to Maurice's concerns, his formidable wife Jeannette Vermeersch, a party veteran of 35 years, rose at last week's Paris Congress to denounce the pro-Italian faction.

But Thorez has not lost all his leverage. After all, his party still commanded 3,800,000 French votes in the last election. The French Socialists, abjuring the support of France's middle and right wings, may have to combine with the Communists if they are to have any chance of seizing power from De Gaulle in the 1965 election. The Socialists' presidential candidate, Gaston Defferre, is not making any compromises to win Communist support, but Thorez invited all Socialists to join *cher Maurice v. le grand Charles.*

REPORTERS ASSOCIÉS

THOREZ WITH JEANNETTE



WALDECK ROCHET

Quite a way of hanging on.

ESPIONAGE

The Moscow Bughouse

Most old structures have bugs, but these were different. Tipped off by a Red defector, security men in the new year-old U.S. Embassy in Moscow broke into the walls of several rooms and found more than 40 microphones planted 8 in. to 10 in. inside the walls. The bugs* were estimated to be twelve years old, going back to the Stalin era, but still eminently operational. Lamented one U.S. official: "Here we've been using the most up-to-date methods to pick up the most sophisticated bugs, and what happens? They had us. It amounts to an old system of crystal sets buried in the walls."

Listening Bowl. It was not the first discovery of bugs in U.S. embassies behind the Iron Curtain, but one of the few that the U.S. chose to make public. All knowledgeable foreigners in Moscow take it for granted that embassies and hotels are bugged, and U.S. diplomats go through an exhaustive briefing before reporting for Russian duty, including a tour of the State Department's "Chamber of Horrors" which contains a vast display of bugs found behind the Iron Curtain. U.S. Embassy officials in Moscow hold their really important talks in a specially constructed, supposedly bug-free "tank," while strolling out in the open.

Even that is not completely safe, because laser beams can pick up a conversation 100 yds. away. With miniaturized transistorized equipment, even trees and flower beds have on occasion been bugged, along with practically everything else—bedsprings, toilet bowls, buckles. Americans believe that the microphones in their living quarters are turned on only when they receive important visitors, but they cannot be sure. Says one diplomat: "A man and his wife can't even have an argument unless they are willing to let the Russians in on it."

Needled Agent. The Russian spy machine requires battalions of clerks to transcribe, translate and file what has been overheard, as well as "evaluators" to judge its significance. A U.S. official concedes that the Moscow bugs may have picked up "potentially useful elements," but adds that "getting them sorted out and fitting them together would require a very large investment in time and effort for a potentially small return."

Western diplomats sometimes use Soviet bugs for their own purposes. They may feed them false information or get them to needle a top Russian official they would like to get rid of, either by suggesting he is on the U.S. payroll or hinting he is having an affair with a Soviet minister's wife. In fact, skeptics wondered last week why such obviously bugged bugs had remained immune

* The term derives from telegraphers' slang for the Morse code signaling key.

long to modern detection devices. Was it because the U.S. knew the mikes were there and employed them to plant phony data? And why did the U.S. choose this particular moment to announce the discovery? Was it because the Russians had already decided that the information they were getting was false?

Whatever the answer, legend has it that Sir Winston Churchill long ago offered the definitive riposte to those Russian buggers. At Yalta, warned that his room was bound to be wired, he strolled up and down, shouting at the walls: "Baboons! Baboons!"

EGYPT

Fatigued Finish

Wilted and liverish, his famed bounce almost gone, Nikita Khrushchev sweated grimly through the final week of his state visit to Egypt. He barely glanced at the Karnak temples, passed up the German-built steel mill near Cairo and even the star belly dancer at the Nile Hilton who, in deference to the Russian visitors, obeyed the usually ignored regulations by being swathed in silk from neck to ankles. Khrushchev's humorless, polemic speeches and their endless translations bored dwindling crowds in Cairo, Port Said and Alexandria. They felt that Nikita might as well have gone back home after attending to his main business—inaugurating the Aswan Dam.

Interpreting Unity. Obviously recalling Chinese Premier Chou En-lai's Cairo visit only six months ago, Khrushchev tried hard to sound every bit as revolutionary as Peking. He attacked Israel as "an agent of imperialism," supported the Arab policy on Jordan water, tore into the British and their position at Aden.

At one point he went a little too far for his hosts. When Nasser spoke of Arab unity, Nikita asked testily: "Does this mean we Russians should go home? We are not Arabs." Making a heavy-handed pitch about how Arab oil riches and Russian power together could defeat "any enemy," Khrushchev explained that unity must not be simply considered in national terms but must embrace the working classes all over the world. Some Arabs, for instance those in the oil sheikdom of Kuwait, continued Khrushchev angrily, are "lackeys of imperialism. Can you really unite with such people?" The air chilled, interpreters stammered, the Egyptian Ambassador to Moscow, Russian-speaking Murad Ghaleb, explained to Nasser that the translation had been faulty. "No, no," interrupted Nikita. "I meant what I said."

Balancing Budgets. In sum, while the dam represents a considerable success for Russia, Khrushchev fared less well with his personal and political appeals in Egypt. At week's end the sight of ripe Egyptian wheat roused him to his old antics as he toured the Liberation province land-reclamation project. He sickled and tasted some of the grain ("a bit dry"), criticized the housing facilities for peasants ("too costly"), later congratulated winners of a skeet-shooting contest. Between outings, Nikita retired to rest and continue private talks with Nasser.

Much of the talk was inevitably about money. This year Egypt must pay Moscow the first of twelve annual payments on the estimated $271 million Moscow is putting into the Aswan Dam and ancillary installations. Though eventually the project will pay for itself in new cropland and electric power, these benefits will not be fully realized for nearly a decade, during which Nasser needs even larger sums for industrial development, and already Egypt owes the Soviet bloc $800 million plus a large, secret bill for arms. Khrushchev hinted broadly that there would be further massive credits—even though some Russians complained that Moscow already had too many foreign aid commitments.

P.A. REUTER

DEFIANT YOUTH AT BRIGHTON BEACH
One way to beat boredom.

GREAT BRITAIN

The Battle of the Yobs

For the three-day Whitsun weekend, the weather was as warm and bright as the sky in a Visit Britain poster. Streaming out of London by scooter, motorbike and train, the kids swarmed into two seaside resorts, the prearranged settings for their teen-age rites of spring. There, in two days of juvenile violence without parallel in England, they left no stone unhurled to turn holiday into holocaust.

Like Sea Slugs. The battle had been shaping up since Easter, when more than 1,000 members of Britain's rival teen cults threw a wild weekend punch-up at seaside Clacton. This time, some 3,000 "Mods" and "Rockers" flocked to Margate and Brighton, the Mods (for modern) spiffed up in drainpipe trousers and pastel shirts, the Rockers encased in black leather jackets and cowboy boots. At each resort the Mods, who ride scooters and call their girls "birds," pitched camp at one end of the beach. The Rockers, who care more for their motorcycles than their birds, formed a tight rectangle at the other end. With jackets incongruously zipped up despite the sun, the pallid, scruffy youths looked like a colony of sea slugs washed in by the tide.

Tension mounted all Saturday night as guitar-thrumming youths became "blocked," their term for getting high on goofballs. Because Mods sport elaborate hairdos and often tart themselves up with eye shadow and transparent lipstick, they are sneered at by the Rockers. Margate was the Mods' big chance to assert their virility. At dawn on Sunday, armed with ripped-off legs from beach chairs, stone-hurling Mods charged their rivals, injuring two policemen who tried to intervene. As police reinforcements poured in, the battle surged to and fro along the beach, then spread into Margate's streets. Two youths were stabbed, dozens injured by brass knuckles, flying stones or milk bottles, and Rockers' studded belts; in two days, 69 were arrested.

Sawdust Caesars. Both in Margate and in Brighton, where more than 1,000 kids joined another melee and 75 were arrested, irate magistrates handed out stiff jail sentences (up to six months for assault) and fines totaling some $6,000. Stormed a magistrate: "These long-haired, mentally unstable, petty little hoodlums—these sawdust Caesars—seem to find courage, like rats, by hunting only in packs."

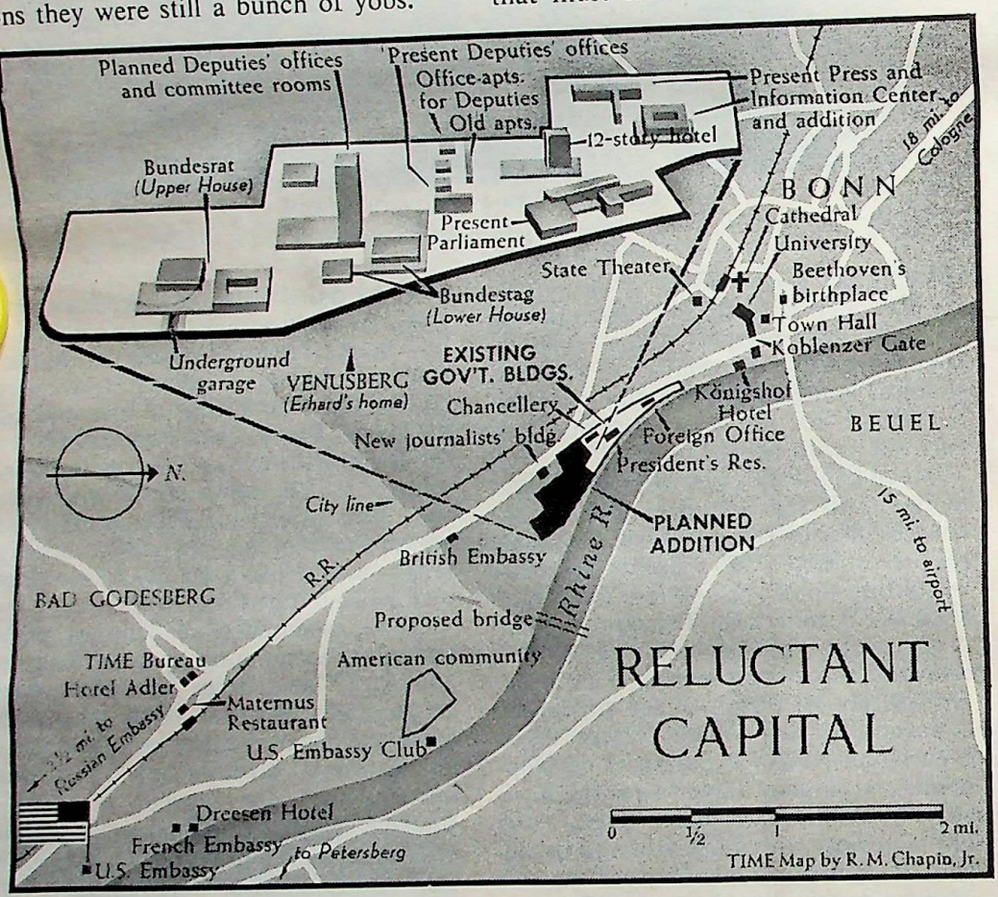
More patient sociologists who have studied them say that few members of both groups are actually "yobs" (hoods), but that they all are too easily incited by hooligans and by the op-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

portunity to show off. Mod-Rocker antagonism is honed by class resentment, for the Rockers are mostly manual workers while Mods tend to be self-consciously superior white-collar types. Many Britons see in these outbursts a symptom of deep boredom and frustration that, in different ways, is also shared by the older generation. While the youngsters enjoy unparalleled affluence, they nevertheless see drab lives ahead. As the Guardian diagnosed it, "Theirs is an ailment which can only be cured when the places in which they live and the schools in which they learn are less cramped, less frustrating and less deadly to hope."

All true, no doubt, but to most Britons they were still a bunch of yobs.



WEST GERMANY

C'est Si Bonn

Under the disapproving gaze of two stuffed giraffes, West Germany's leaders met in 1948 at Bonn's zoological museum to draft their new constitution. Far from welcoming their decision to make Bonn West Germany's "provisional" capital, most of the university town's 100,000 inhabitants vociferously protested the choice. For the *Bundesdorf*, or "federal village," as it is condescendingly called elsewhere in Germany, is a Peter Pan among cities. It never wanted to grow up into a capital, stubbornly resists every government scheme to make it function like one, and does its best to ignore the 200,000 additional citizens who have settled in Bonn itself and a score of towns and villages that cluster around it. "Bonn," says Bundestag Vice President Carlo Schmid, "is not a metropolis. It's an a-polis, a non-city."

Sheep Crossing. Previously famed mainly as Ludwig van Beethoven's birthplace, Bonn today is known to diplomats as the most inconvenient, uncomfortable capital this side of Usumbura. True, the Rhine offers a lovely, healing view to harassed government types, but Bonn is Germany's rainiest (161.8 days a year) and most densely populated city; its traffic is the heaviest, its rentals among the highest. "The city is just half the size of Chicago's Central Cemetery," says a U.S. diplomat. "And twice as dead."

Its main street, the Koblenzer Strasse, is part of the north-south highway from Cologne to Coblenz, and is perpetually jammed by 36,000 trucks and cars a day that must slow to a crawl to squeeze through the 18th century Koblenzer Gate in the middle of town. The 20,000 cars a day that travel east or west through Bonn have to cross a railroad line that bisects the city; at three level crossings the gates are closed for 360 trains a day, or an average of 20 minutes each hour. Capital traffic is also disrupted by a flock of 400 sheep that has to cross the highway, as well as the hay wagons that occasionally break down in town. In time, foreigners learn to take such quaint delays in their stride. "*C'est si* Bonn," they shrug.

Slaughtered Legion. The federal a-polis has widely unnoted theatrical and opera companies and a dozen or so mediocre nightclubs, boasts only three starrable restaurants: the elegant, century-old Adler, a favorite of government gourmets and gossips called Maternus, and La Redoute, a rococo mansion where Beethoven once performed. For members of the 88 diplomatic missions in Bonn, the main diversions consist in attending one another's parties at least 20 a week—and the Americ... Club's Wednesday night bingo ga... The Old Bonn families keep strictly ... themselves; so do the town's 13,000 ... versity students and faculty membe... New Bonners, as they call the ... Bundestag members and 12,150 fede... employees, usually go to Cologne or ... blenz for amusement. Most U.S. dipl... mats and journalists live and enter... each other in Bad Godesberg, Bon... picturesque neighbor, where the Ame... can colony is known variously as ... Ghetto, the Compound or Westches... on-Rhine.

The city's antipathy to outsiders d... back to Roman times, when a leg... garrisoned in "Bonna" was decim... by the warlike Batavi. Today local r... sentment manifests itself in Bonn's c... stant fight to keep the government fr... taking over existing buildings or p... cious real estate. Recently, with bip... tisan backing, Bundestag President E... gen Gerstenmaier disclosed plans ... a new parliamentary center on ... Rhine, consisting of a 25-story o... building for Deputies, a twelve-s... hotel and an 18-story press center, ... well as a series of bridges across ... railroad tracks. Bonn's burghers ... tested that Gerstenmaier's "Brasília" ... the stuffy Rheinische Post dubbed ... would occupy their best recreati... land. The program has been postp... for years, since the government has ... ways clung to the belief that by ... ting up permanent buildings in a "p... visional" capital it might weaken ... claim that Berlin and the rest of G... many must ultimately be reunited.

Pentabonn. As a result, governm... ministries are strung miles apar... makeshift, inadequate buildings ... range from a pre-empted hotel, wh... each office has a private bath, to a c... verted Wehrmacht barracks. Embas... are scattered from Cologne, 18 m... north of Bonn, to Rolandseck, ten m... south in the neighboring state of Rh... land Palatinate, where the Russians ... taken over an old resort hotel. TODAY IN AUSTRALIA

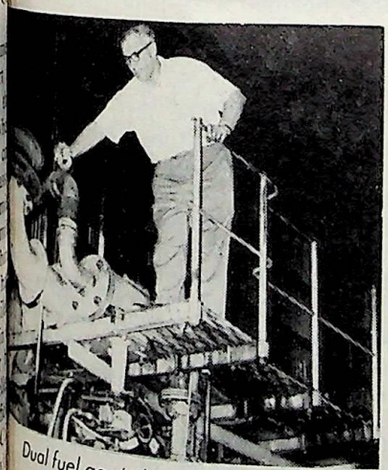
What's new in this land of rapid growth and huge potential

Set fair

In the Australian spring, an Australian's fancy will probably turn to trade fairs, judging by massive plans for September and October. Prize piece will be a British Exhibition representing more than 300 British companies. This will be followed by the annual Sydney Trade Fair which last year, with exhibits from all countries, attracted almost a million visitors. British troops will come to Sydney for the British Exhibition to put on a searchlight tattoo, staged in front of a replica of Edinburgh Castle.

Gasser

The huge reservoirs of natural gas now being discovered as a by-product of Australia's oil search could revolutionise local power industry. In several years at least two of Australia's State capitals may be serviced by natural gas pipe-



Dual fuel gas/oil engine at Roma

lines spreading hundreds of miles. So far three Australian companies have made significant natural gas discoveries — a nice consolation prize for companies that do not find oil.

Good Sports

Going to Tokyo in October will be more than 250 of Australia's top amateur athletes selected after many months of trials to compete in the 28th Olympic Games; it is Australia's biggest team ever. The greatest hopes for gold medals lie with the 46-member swimming contingent, the largest group to represent any one of the 15 sports in which Australian athletes will be competing. Thirty-six of these 30 men and 16 women are still in their teens. One of them is only 13.

Experts consider Australia has a good chance of winning 10 gold medals at Tokyo. In Rome in 1960, athletes won eight gold, eight silver and six bronze medals to place Australia fifth among the amateur sporting nations of the world. This year Australia will be seeking a gold medal in one sport for the first time—judo; appropriate for Tokyo.

Pretty basic

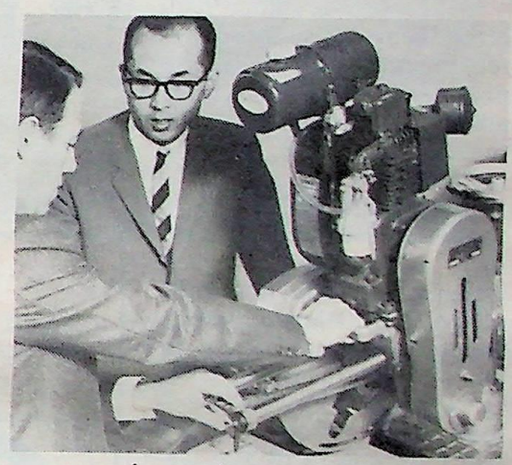
It is the big stuff that counts. So more than 60 per cent. of Australia's current investment in manufacturing industry is going into four basic industries—iron and steel, non-ferrous metals, petroleum refining and motor vehicles. That's where most of the millions of pounds of overseas investment that floods into Australia every year is going. But it's not just from big companies starting up in Australia to cater for the buoyant Australian market and nearby Asian markets. All over the world thousands of private investors searching for a safe, profitable and expanding market now look to Australia. Many of them go there and see for themselves.

Snow and sun

Of the great winter holiday seasons now open in Australia, one is of snow, one of sunshine. In the snowfields of the Australian Alps, with an area as big as those of Switzerland, the ski-ers are perfecting their runs; and along the sunny, tropical North Queensland Coast, thousands of other tourists are relaxing beside the Great Barrier Reef, 1,200 miles of it, by far the longest coral reef in the world. This year more than 150,000 overseas tourists are expected in Australia; travel experts expect more than twice as many by 1970. In the last five years the number of first-class hotels in Sydney and Melbourne has doubled as Australia speedily expands for the tourist age.

Hats to clothes hoists

The latest official news says that the export of Australian manufactured goods is still rising. Australia's main manufactured exports are metal products, iron and steel, motor vehicles, electrical equipment, machinery, petroleum products. But many other



Manufactured exports rising...

Australian products are on sale around the world, from quality felt hats to clothes hoists, from fountain pens to fashion goods. In 10 years' exporting, one Australian motor vehicle manufacturer has now sold its 50,000th car overseas. The industry did not exist 15 years ago.

How little extra

Your Travel Agent or Qantas will show you how little extra it costs to include Australia in your next round-world itinerary. Fly there and judge business opportunities in this growthland for yourself. Every few hours, Qantas 707 V-Jets—fastest in round-world service—leave from America, Europe, Asia and the Orient for Australia. Ask Qantas, too, about Qantas Air Cargo, offering fast, frequent services to all parts of the world with renowned Qantas care. Call Qantas today.

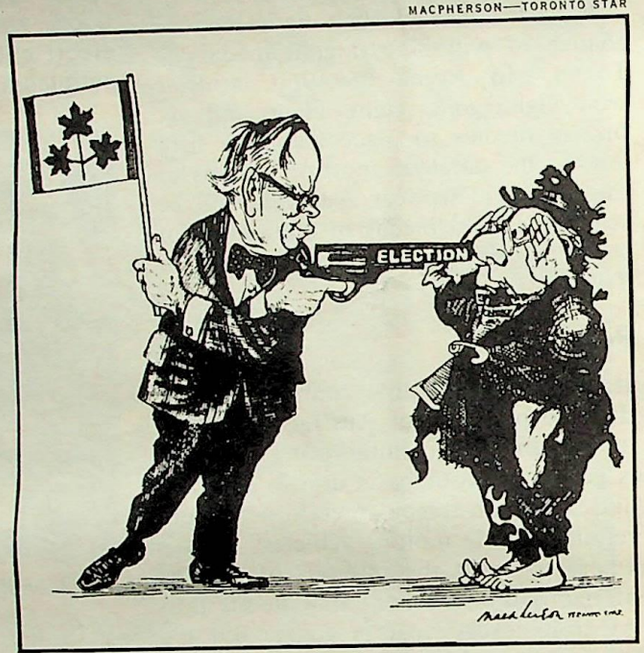
CANADA

Rallying Round a Flag

Prime Minister Lester B. ("Mike") Pearson stood before the Royal Canadian Legion in Winnipeg, discussing a subject near to his heart. During his election campaign in the spring of 1963, he had promised to give Canada a national flag of its own to take the place of Britain's Union Jack and Canada's semi-official Red Ensign, incorporating the Union Jack and the Canadian coat of arms. Now, said Pearson, he was ready with a design. As later approved by his Cabinet, the flag features three red maple leaves on a white field with a vertical blue bar on each end, symbolizing Canada's motto, "From Sea to Sea."

The reaction could hardly have been pricklier had Mike Pearson suggested a red porcupine on a bed of pine needles. The war veterans almost booed him from the hall, and throughout the land other flag-waving Canadians raised a howl. Editorial cartoonists had a field day; a flag-toting Pearson dodging the shot and shell of protest; Pearson with a flag in one hand, a gun in the other, threatening John Q. Canada. Vowed Newfoundland's Premier: "We will continue to fly the Union Jack if we are the last place in Canada to do it." In angry letters to a Winnipeg newspaper, Pearson was voted down ten to one. "Bad art, a bad flag," grumped an advertising executive in Vancouver. "It's the kind of flag someone might fly over a yacht, but not over a country," added an Edmonton publisher.

MACPHERSON—TORONTO STAR



PEARSON & PUBLIC: TWO-HANDED SALUTE

Dangerous Division. The hullabaloo reflected far more than a revolt over esthetics or the Prime Minister's notions of heraldry. As Pearson himself was only too well aware, it reflected a deep and dangerous division between Canada's English-speaking majority and its French-speaking minority centered in the province of Quebec. To English Canadians, the Union Jack is a cherished symbol of Canada's strong allegiance to the mother country. But to French Canadians—with their own language, Roman Catholic religion and cultural identity—the Union Jack is an ugly reminder of Quebec's forcible conquest by England in 1759, and what they regard as their own second-class status ever since.

French Canadians complain that "Englishmen" control Quebec's industries and natural resources, that although the country is officially bilingual the federal government operates in English only, that French Canadians are discriminated against in the civil service, and in a thousand other ways. The disaffection has been growing, until today a considerable number of French Canadians want out of Canada altogether. Separatist groups are clamoring for secession, to the point where a legislative committee is now studying what this would mean to Quebec. Then there are the extremists, who call themselves the Quebec Liberation Army, and have been planting bombs in mailboxes, dynamiting army installations and looting armories. In the matter of flags, Quebec flies its own French fleur-de-lis over provincial government buildings in preference to the Red Ensign or the Union Jack.

Saving Not Building. Since his election, Pearson has been trying hard to repair the disunity. He has given French Canadians a stronger voice in Ottawa, has appointed a Royal Commission on Biculturalism, even modified a new federal, social-security-type pension plan to guarantee Quebec's participation. He conceives of a flag that all Canadians can salute as one more plank in the program, and for good measure, he hopes to substitute *O Canada* for *God Save the Queen* as the national anthem.

To prove he means business, Pearson intends to regard the flag vote as a vote of confidence. He will probably win it: Canada's three splinter parties have pledged to support his minority Liberal government on the vote. But a flag and an anthem are only first steps in joining together divided Canada. "Our problem today," said Mike Pearson to the House of Commons recently, "is not one of nation-building. It is a problem of nation-saving—saving this nation from forces that weaken and could ultimately destroy it."

CUBA

War of Nerves

death." Added Castro's little brother Raúl, head of Cuba's armed forces: "We must be alert. We must be implacable."

Castro canceled all military leaves and placed his armed forces on full alert. Havana University was drained as students were called to arms in militia units. Night after night, radar antennas scanned the sea and sky for any suspicious movement, while patrol boats and shore patrols filled in the radar gaps. So busy were MIG fighters that one jet narrowly missed ramming into a Cuban airliner over eastern Oriente province. Castro's internal radio even issued a call for volunteer blood donors in preparation for "any emergency." Meantime, Cuba's powerful, 100,000-watt propaganda radio blared defiance to the world: "The Cuban people will flatten those who try to take over Cuba. Cubans are ready."

BOLIVIA

Progress Toward a Third Term

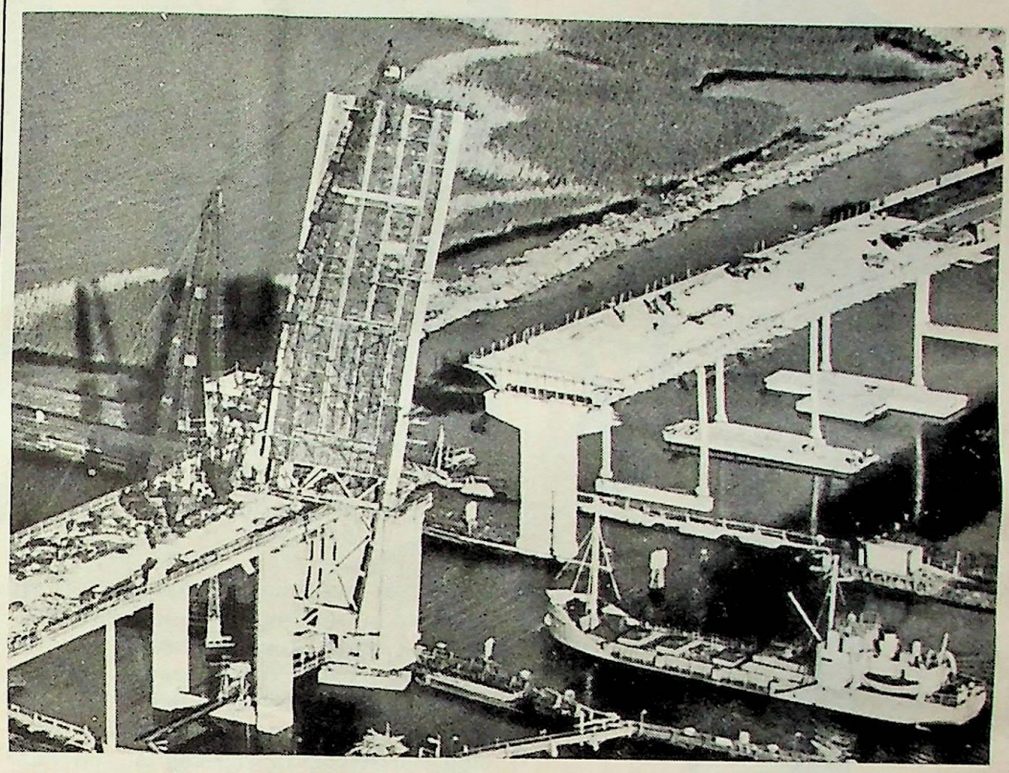
Bolivia's May 31 election was approaching, and it was time for President Víctor Paz Estenssoro, running for a third term, to demonstrate that for all practical purposes he had disarmed his most violent opposition. Climbing into his DC-3, he flew to Oruro (pop. 71,000), market center of the country's tin-mining area and for years a stronghold of rebel Vice President Juan Lechín and his Communist-dominated mining unions. For good measure Paz invited U.S. Ambassador Douglas Henderson to come along as his guest.

Neither had anything to fear. Communist agitators were conspicuous by their absence. A confetti-tossing crowd of 5,000 greeted Paz at the airport and hoisted him to its shoulders. In town, a banner-wielding throng of 7,000 jammed the narrow streets, waving and shouting, "Workers for Víctor Paz." "This is an emotional experience for me," Paz told the crowd, and went on with Henderson to snip a ribbon on an Alianza-financed road project, inspect a new water plant and attend a civic banquet. On the flight back to La Paz, the President allowed that "this has been a great day."

Flags v. Fertilizers. Bolivia is still a cruel, almost medieval land locked in Andean poverty. On the 12,000-ft.-high Altip'ano, where 75% of its 4,000,000 people live, Indian *campesinos* still consider white flags draped on their oxen a surer crop guarantee than fertilizer. Some 60% of the people speak only Indian languages, and per capita income is a pitiable $114. But under Paz Estenssoro, 56, Bolivia is gradually improving.

It is hardly a democracy in the U.S. sense. As Bolivia's first President after the 1952 revolution that toppled the country's tin-mining aristocracy, Paz reorganized a heavyhanded political police and created almost a one-party state. He also gave the country its first taste of competent government. He built new roads, commenced an ambitious

PROBLEMS we encounter



Navigable waterways are liable to be a major problem to road transport especially around big sea ports. Rarely can a fixed bridge be built with the spans high enough to clear the ships' masts and superstructures. A bascule, swing or vertical-lift type bridge is then the solution. Which to adopt depends on the subsoil conditions, the type of traffic on the bridge and the waterway, the nature of the banks, the traffic pattern and other specific factors.

To take a 17.3 m. wide road across the Göta älv near Vänersborg in Sweden our Gustavsburg bridge specialists decided on a rolling-lift type bascule bridge which spans the 50 m. channel with one leaf. The bridge which is seen in the course of erection in our picture has its tail end in the shape of a segment on which it rolls backwards to give full lateral and unlimited vertical clearance.

project of resettling *campesinos* from the Altiplano on more fertile farm areas in the eastern lowlands. After his re-election in 1960, Paz expanded his programs until today some 150,000 *campesinos* have been resettled. New cars clog the streets of the capital, La Paz, and new buildings rise above the old Spanish city.

Paz's biggest job was whipping the nationalized tin-mining industry into shape. Under Union Boss Lechín, mine employment soared from 19,000 to 29,000; by 1960 the mines were losing $10 million a year, and only aid from the U.S. kept the industry going. A year later, Paz signed an agreement with the U.S., the Inter-American Development Bank and West Germany for $38 million to modernize the mines, promising in return to lop 6,000 men from the payrolls. Lechín and his miners threatened civil war. But Paz had enough political strength to ride out the storm. By last week 2,400 miners had been laid off; others will go. Says Guillermo Bedregal, boss of the mining complex: "By the end of this year, the mines will be paying their way."

"There May Be Trouble." The animosity between Paz and Lechín has grown ever more bitter. In December, tensions exploded when the miners kidnaped four Americans as hostages for two far-leftist union leaders arrested as part of the mine cleanup. After ten days, the miners backed down; at the party convention a month later, Lechín was drummed out, and Paz was named for a third term. The raging Lechín called a rump convention and swore to run against Paz.

How much power Lechín retains is questionable. After Paz's triumphant tour of Oruro last week, Lechín decided to withdraw from the election and announced that he would boycott the voting. He then did the only thing he could think of: he challenged Paz to a duel "to prevent the spilling of innocent blood." Paz ignored the challenge, and other threats of street demonstrations, strikes and even assassination. "There may be trouble," he admits. "They may try to kill me. But I have set out the design, and we intend to carry it off."

PANAMA

U.N. Diplomat in Action

As an up-and-coming Panamanian politician, Aquilino Boyd liked to make his position witheringly clear. He led a band of hooligans in the 1959 Canal Zone riots—they tore down an American flag and urinated on it. At the height during last January's Panama crisis, he was all indignation, accusing the U.S. of "bloody aggression." Last week he was back home, being more aggressive than ever.

In the recent elections for President and the National Assembly, Boyd was among the losers, failing to retain the Deputy's seat that he had held in addition to his diplomat's job. Panama's daily La Hora ran an editorial taunting him on his poor showing, adding that even his effort to cheat his way in had flopped. When Boyd saw Escobar Calvo, editor of La Hora, while driving along a Panama City street, he leaped on his brakes, cutting off Calvo's car, hopped out, and pumped two shots into his surprised victim before his gun jammed. Then he pistol-whipped Calvo at Calvo's head until he was finally subdued by bystanders.

The wounded editor, with three holes in his left side and arm, drove himself to a hospital. U.N. Diplomat Boyd went home to lunch. Even as a lame-duck Deputy he had all sorts of immunity, and in Panama, where the *macho* approach clicks with voters, he might even have improved his political popularity.

Romblon Island, Philippines.
Problem: Communications isolation.
Solution: A nationwide telecommunications network.

For the first time in the history of the Philippines all the major islands—from northern Luzon to southern Mindanao—will be linked in a major telecommunications network. And for the first time the Philippines will have national communications that meet international standards.

ITT Philippines, Inc., will supervise and coordinate installation of the network. Its backbone will be a troposcatter system supplemented by mainline microwave links and secondary VHF feeder links. All three will provide telephone and high-speed telegraph service. Crossbar telephone switching exchanges will be installed in 27 cities and toll exchanges in four regional centers. Local personnel will be trained to operate and maintain their new equipment.

Vast skills and resources enable ITT to provide equipment that best satisfies the particular requirements of this tropical network. The fact that this equipment will come from ITT System companies in the U.S.A., Australia, Belgium, and Germany testifies to ITT's worldwide capabilities. And helps explain why ITT is the world's largest international supplier of electronic and telecommunication equipment.

For information or service, contact your ITT distributor or write: ITT Far East and Pacific, Inc., 24 Des Voeux Road, Central, Hong Kong. World Headquarters: 320 Park Avenue, New York, New York 10022.

PEOPLE

ITALYS NEWS

ANITA & MATE
Sniping at shutterbugs.

War photography may be a dying art, but on one front it is still going strong—at the Italian villa occupied by Robustious Swedish Cinemactress **Anita Ekberg**, 32, and her American actor-husband, Rik Van Nutter. Anita these days could practically play the mountainous billboard heroine of *Boccaccio '70* without any trick camera work, and, bugged by shutterbugs, she understandably responds with whatever comes to hand. Last week it was a rifle with telescopic sights, and she spent a busy few minutes sniping away at a photographer in a tree a few hundred feet from the manse. Fact is, Ekberg worries too much. If you like the motherly type, those extra pounds don't look so bad.

. . .

He originally liked Yale, but his mother made him stay at home, so he went to City College in Manhattan instead. Then Princeton came to mean a lot when its ex-president, Woodrow Wilson, called him to government duty, and now the letters and other documents chronicling the services of **Bernard M. Baruch**, 93, to nine U.S. Presidents will go to Princeton. With the Wilson collection, and papers of Old Nassau Grads **John Foster Dulles** ('08) and **James Forrestal** ('15), they will form the nucleus of a new Center for Studies in 20th Century Statecraft that eventually will also include the papers of U.N. Delegate **Adlai Stevenson** ('22).

. . .

Even with the new low withholding rates, it was a drag to raise five children on a Government salary of $21,000 a year, and so **Mortimer Caplin**, 47, finally resigned as Internal Revenue Commissioner, to return to practicing tax law in Washington.

. . .

Elizabeth Arden could have told them she was a rough customer. So could the Revson boys. But all she looked like was a fragile little old lady, so these three tough guys, dressed up in blue delivery boy's suits and wrap-around sunglasses, broke into the 26-room Park Avenue triplex of **Helena Rubinstein**, who may or may not be 92 (her age is a bigger secret than her formulas). "Open the safe or we'll kill you," snarled the head hood. "Go ahead," she sneered. "I've lived my life. You can kill me, but I'm not going to let you rob me." That kind of shook the thugs, and when she screamed they faded faster than a telltale wrinkle, without so much as laying a finger on anything in the joint.

. . .

His brother likes to zoom along in high gear, but **Sam Houston Johnson**, 50, is a more conservative Texas sort: he just gets into trouble going backwards. Last week, he backed his 1964 Pontiac out of an Austin parking lot, then banged into a passing delivery truck, wound up with "minor fender" damage, a ticket for reckless driving and a $10 fine.

. . .

The needle-nosed F-104G Super Starfighter boomed over the measured ten-mile course at 37,000 ft. above California's Edwards Air Force Base. Officials checked its speed with radar, and when blonde Aviatrix **Jacqueline Cochran**, 57, landed, she had another feather to put in her pretty cap. This time the cosmetics executive (chairman of Jacqueline Cochran, Inc.) had set the women's speed record of 1,429.2 m.p.h. at more than twice the speed of sound, easily shattering eardrums and her own 1963 record of 1,273.1 m.p.h.

. . .

It looked like a regular hegira at Accra International Airport as 5,000 frantic Ghanaians cheered, "Welcome, King of the World! Welcome, Mohammed Ali!" Actually it was only that latter-day prophet, Heavyweight Champion **Cassius Clay**, 22, who speedily made clear that he likes Moslem women and customs. "I'm going to get me

AIR FRANCE

the worldwide jet flight specialist

You know why : you've tried it... Logical after all, **Air France flies further than any other airline.** Its network is 176 000 miles long; its superb Boeing 320 B'S with a flying range of 6 200 miles, take oceans and continents in their stride - Today, it's an effortless non-stop flight from Paris over the Pole to Los Angeles, or Madrid to Rio, or Hamburg to Anchorage... with enough fuel for a long extra lap to boot - At Orly, hub of the network, a newly built industrial complex carries out meticulous overhaul and maintenance operations on all Air France jets. The Orly complex is Europe's most modern and rivals top installations on both continents - Did you know that 3 600 000 satisfied passengers flew Air France lines last year ? Satisfied to fly on one of the great international airlines and satisfied above all by Air France's kindly intelligent service.

When you fly to America, Africa or Asia, remember Air France is the airline which helps you best

REPORTING

Johnson's Image Abroad

By Old World standards, John F. Kennedy was a hard act to follow. He was all grace and incisive confidence; by his very youth he seemed to bolster European faith in that vigorous young world power across the Atlantic. And by Old World standards, Lyndon Johnson was hardly the man to replace him: he was an American politician in the most pejorative sense of the word. In the six months since Lyndon Johnson took office, how has he fared in the European press?

Marks of Greatness. Surprisingly, Britain's Fleet Street seems to have lost its newspaper heart to the new President. Whether from relief because the death of Kennedy proved a survivable U.S. tragedy, or whether British newspapers took their cues from a favorable U.S. press, they have been extravagant in their praise. Kennedy was only three weeks dead when the London Sunday Telegraph predicted that "Kennedy's name in the history books may well appear as little more than a footnote in the massive chapter on the presidency of Lyndon B. Johnson."

Headlines all over London have reflected similar approval: PRESIDENT JOHNSON'S POPULARITY BOOMS (the Guardian), PERSUASIVE—AT A FURIOUS PACE (the Financial Times), FINE START BY LYNDON JOHNSON (the Daily Herald). "The Johnson era is certain to be one piled high with difficulty," said the Times of London. "But there is a good chance that it will bear the marks of greatness too."

No Radiance. Across the English Channel, however, the Johnson image is still contesting unsuccessfully with unfamiliarity, indifference, and fond remembrances of the man he replaced. In Paris, where Johnson is dimly remembered as the Kennedy emissary who paid France a grinning visit in 1961 and distributed ballpoint pens, the press has not yet tried to take the measure of the new President. Most papers have kept a slightly mystified and slightly hostile silence, as if they did not understand the newcomer and hardly cared. "A homogeneous mixture of merits and cunning," cabled the Washington correspondent of Le Monde in a recent attempt to translate Johnson into Gallic terms. In L'Express, Editorial Cartoonist Tim was even blunter. He showed a long Johnsonian arm, labeled *Douanes* (tariffs), jabbing at the beak of Charles de Gaulle (*see cut*).

West German correspondents in Washington have found Johnson both boring and unfathomable. "He is so 100% American and so Texan," said one, "that we simply cannot understand him." Hamburg's Die Welt, a newspaper with national circulation, recently weighed Johnson on the scales of statesmanship and found him wanting: "Admittedly the new President is no radiant political figure. That role has been taken over by De Gaulle."

Still in Eclipse. In Italy, Johnson's image is still eclipsed by Kennedy's. Publications seem more interested in noting that there is an Italian in the White House—Milan's *Epoca* magazine recently ran a lengthy profile on Johnson Aide Jack Valenti—than in sizing up the White House's tallest tenant.

And where the press has tried to appraise Johnson, the treatment has generally been superficial and routine. "Johnson is not an intellectual nor a philosopher nor an innovator," said *Vita* magazine in a cover story on the President. But then *Vita* paid Johnson a grudging compliment: "He has, however, an unequaled capacity and ability to resolve, one at a time, the little problems of daily life."

"unpronounceable Polish name." The reader shares Miss Graham's relief on auditing the tape of her first radio show ("My voice was clear and beautiful"), her pleasure at being a Somebody in a world of Nobodies: "At any airport in the world, the passenger manager will usually take care of my luggage and we are put on the plane first."

Such passages echo the wonder of a little nobody whose childhood dreams seem to have come true. Born Lily Sheil in England, the daughter of a clothing manufacturer in Leeds, she came to the U.S. outfitted with a pretty face, an attractive accent, and the ambition to make $5,000 a week. The combination was readily merchandisable around the sound stages of Southern California.

The Graham byline soon spread across the continent. She had her own radio show. After war came, she was able to talk her syndicate, North American Newspaper Alliance, into sending her to England. There, as a self-styled "war" correspondent, she gathered tips from the U.S. newsmen tippling at the Savoy bar, interviewed Lord Beaverbrook ("You're sweet," she told him, to his utter astonishment), and bearded George Bernard Shaw, who almost never granted newspaper interviews. Correspondent Graham turned the trick with one phone call, a little patience and a little cheek. When Shaw's secretary at Ayot St. Lawrence told her to wait, Miss Graham refused. Shaw, who had been eavesdropping behind a door, materialized at once and escorted her on an unenlightening tour of his vegetable garden.

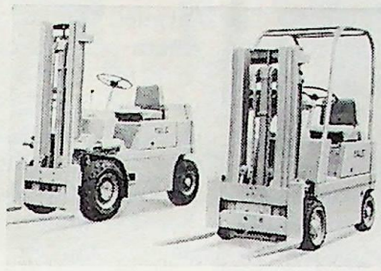
Another Ambition. Despite success in her chosen career, Sheilah Graham played her most satisfying role during the three years (1937-40) she spent in Hollywood with F. Scott Fitzgerald, then at the end of his tether. With ghostwriter Gerold Frank, Miss Graham told that story in the bestselling *Beloved Infidel* (TIME, Nov. 24, 1958). "I was never a mistress," writes Miss Graham firmly in her current book, whose very title pays tribute to the depth of that experience. "I was a woman who loved Scott Fitzgerald for better or worse until he died."

Today, Sheilah Graham has deposed Hopper and Parsons as doyenne of the Hollywood columnists. Miss Parsons is down to 69 papers, Miss Hopper to 100; Miss Graham column appears in 178. But the crown has lost much of its luster. In January, Miss Graham's column title was changed from *Hollywood Today* to *Hollywood Everywhere* in belated recognition of Hollywood's decline as the capital of filmland, or the capital of anything. Miss Graham herself stays away as much as she can. "I get bored with all the nonsense," she said the other day.

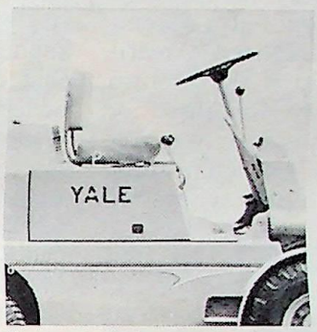
She has another ambition now. "I am working on being a charming old lady," she says in the last chapter of *The Rest of the Story*. "It is not easy. I have much to correct in my character."

It takes 2 to cut your handling time and costs

1. the right equipment



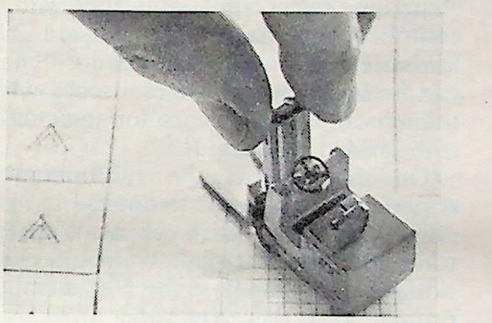
Only the Yale G51 gives you a choice of 3 transmissions.



Roomy operator's compartment; convenient controls.

Excellent accessibility to engine and transmission.

2. efficient application



What makes the Yale G51 the finest gas lift truck ever built? Performance, safety and maintenance features like those above. Plus many other proven advantages which enable the G51 to outperform and outlast other lift trucks. However, it takes more than the best equipment to cut handling time and costs to a minimum. You must have the right type of truck and know-how to make the most of it. That's where your Yale representative comes in. He's an expert on how materials can be handled most efficiently and economically. He'll check your entire handling program and help you select the truck best suited to your needs. (The G51 is available in 3,000- to 10,000-lb. models.) He'll then make sure that your truck is properly installed, and show your people how it can best be employed. By doing all this he protects your investment. He also provides complete maintenance service.

Remember, it takes a team to cut handling time and costs—a Yale truck and your Yale representative, who stays on the job after the sale.

THE SUPREME COURT

Welcome Home

Such is the Supreme Court's reluctance to overturn an Act of Congress that in 28 years it has done so only eight times—nearly always on the ground of safeguarding individual rights. Last week the court cautiously did it again by voting 5 to 3 to throw out a federal statute that strips naturalized Americans of U.S. citizenship if they return to their native country for three or more years. The ruling evidently makes equally unenforceable a companion statute that has the same effect on

AP

APPELLANT SCHNEIDER
As good as the natives.

naturalized Americans who live in any foreign country for five years.

Winner of last week's case was German-born Mrs. Angelika L. Schneider, who immigrated to the U.S. as a child in 1939, became a citizen in 1950 and graduated from Smith College in 1954. After marrying a German lawyer in 1956, Mrs. Schneider went to live in Cologne. On applying for a new U.S. passport three years later, she was turned down as no longer a U.S. citizen under Section 352 of the 1952 Immigration and Nationality Act. This ruling also split her four sons' nationalities, since two of them were born in Germany after the three-year limit. To make herself and all of her boys American, she appealed to the court.

Congress enacted the expatriation rules to avoid squabbles with other countries in behalf of naturalized Americans who "only claim citizenship when it suits their purpose." But the rules do not apply to native-born Americans, who can live abroad as long as they please, and it may well be that this disparity presumes for naturalized Americans a kind of second-class citizenship.

In his majority opinion last week, Justice William O. Douglas rejected "the impermissible assumption that naturalized citizens are less reliable and bear less allegiance to this country." Their rights and those of the native-born "are of the same dignity and are coexistent," said Douglas. "The only difference drawn by the Constitution is that only the 'natural-born' citizen is eligible to be President." In dissenting, Justice Tom C. Clark argued that Mrs. Schneider "wishes to retain her citizenship on a stand-by basis for her own benefit in the event of trouble. There is no constitutional necessity for Congress to accede to her wish." The court majority disagreed. Along with Mrs. Schneider, 50,000 other ex-Americans (mostly living in Europe) may now seek restored U.S. citizenship, if not election to the presidency.

LAWYERS

The Pathfinders

Chief Justice Earl Warren opened the meeting with a cry for help. U.S. courts must "repair the dislocations of a changing, burgeoning and increasingly complicated social order," he said. The law's delay is worse than ever. "There can be no justice in the real sense when litigants must wait years for their cases to be heard and decided."

On that theme, the 1,500-member American Law Institute opened its 41st annual meeting last week at Washington's Mayflower Hotel. Unlike conventional conventioneers, the 500 members present were there for sober work. The institute (dues: $35 a year) taps only the ablest, most dedicated judges, lawyers and law professors in the land.

High on last week's agenda was a Warren-inspired project, financed by the Ford Foundation, to ease the workload in case-clogged federal courts. A key problem: the right of litigants from different states to use federal courts in cases involving more than $10,000. Such "diversity suits" (18,990 last year) can be halved in federal courts, urged an institute preliminary report, if the old right is sensibly curbed so that many suits do not automatically escalate into federal cases. If the institute has its way, for example, a person suing in his home state will no longer be able to ask for federal jurisdiction simply because the defendant is a citizen of another state.

Clarifying & Simplifying. Arcane as they may sound to laymen, such subtleties reflect the institute's lofty goal: "To promote the clarification and simplification of the law and its better adaptation to social needs." Source of that idea was Elihu Root, then "dean of the American bar," who in 1923 founded the institute with the cooperation of such other legal eminences as Benjamin Cardozo, Learned Hand, Roscoe Pound, Harlan Fiske Stone and Harvard's Samuel Williston, author of such law-school classics as *Williston on Contracts*. [illegible] two chief defects in American [illegible] they fretted, "are its uncertainty and complexity." This led to the question: what exactly was U.S. law?

With hefty grants from the Carnegie Corporation, the institute began its monumental "restatement"—a panning search for the essential ciples of U.S. law. Codified in 2 umes, the results clarified every from *Agency* to the *Law of Tru* each field exhaustively panned by a flight academic (or "reporter"), endlessly sifted by expert "adviser the field, then refined by the insti 30-member council and finally appr by the full membership.

Business & Crime. All this took —17 for the five-volume *Restate of the Law of Property*—and while the courts ground out new sions that often outdated the wor 1951 the institute got enough money to start continuous revision a second series of restatements, is still far from finished. Despite difficulties, the present restatement so authoritative that by last month had been cited in 32,422 appellate decisions alone.

Jointly with the American Bar ciation, the institute now runs nationwide program of "continuing education" that aids lawyers th courses, pamphlets and a 16,00 scriber magazine, *The Practical yer*. The institute is completing statement of foreign-relations la mulling over others on the laws of copyright, and such land-use pro as zoning (one of U.S. law's ma fields). In recent years, the institu gone beyond restatements of com law rules in an effort to improv law through legislation—honing codes that state legislators may ta guides. Most effective so far: the Uniform Commercial Code, whic ordinates all business transaction has been enacted by 30 states Oregon to Massachusetts. Equally pressive is the 1962 Model Penal C a blend of enlightened law and be ioral science that sharply clarifies emotion-clouded problems as ins obscenity, sex offenses, and the penalty. Widely cited, copied and claimed, the code has already s criminal-law revisions in states New York to California.

"The purpose of the law is to pline and harmonize, not to reflect mentary public passions," says the code's chief reporter, Columbia Professor Herbert Wechsler, who came the institute's director last A noted critic of the Supreme C —for its reasoning rather than cisions—Wechsler faults the court being overly attentive to narrow "neutral principles" transcend He seeks ing particular cases and parties four decades, that has been the the Law Institute itself. And W obviously hopes to keep it that way.

EDUCATION

TEACHERS

Utah: Off Limits

The powerful National Education Association, spokesman for 902,000 classroom teachers, frowns on the words "strike" and "boycott"—they describe highly unprofessional behavior. But in Utah last week, 10,000 N.E.A. teachers went on a two-day "recess" while the association voted "sanctions" against the whole state, and for all Utah knew it might just as well have been struck and boycotted.

The blast was aimed at one target, Republican Governor George Dewey Clyde. The Utah Education Association, the N.E.A. affiliate that represents 98% of the state's public-school teachers, thought it had wrung a concession from Clyde last summer when he named a committee to investigate their demands for more money to run the schools. A fortnight ago, the committee recommended spending $6,000,000 on selective wage increases (average salary: $5,900), hiring new teachers, buying more books and equipment. Clyde rejected the report the day it came out. The U.E.A. at once called a strike—causing one father of four to observe: "It isn't easy to be stupider than Clyde, but the teachers managed it."

The teachers voted not to sign contracts for the 1964-65 academic year. Nevertheless, it seemed likely that they would be back at their blackboards this fall. Elections are coming up in November for a new legislature (40 teachers are candidates) and a new governor (Clyde cannot succeed himself). Rather than stay off the job, the U.E.A. will probably pressure the seven gubernatorial candidates for a commitment to educational spending, then grandly declare that the next move is up to the politicians who are elected.

PERRY NATIONS

TOUGALOO STUDENTS ON CAMPUS
To break the cycle of the poor reproducing the poor.

UNIVERSITIES

The Adopt-a-School Plan

Southern Negro colleges may be theoretically obsolete in an integrationist era, but they are a practical necessity for a long time to come. Accepting this fact, foundations have since last fall showered money on impoverished Negro colleges. Encouraged by the American Council of Education, which sees big-scale Northern university aid as the most practicable way of raising Negro college standards decisively and quickly, more than a dozen Northern schools are exchanging faculty members and students with Southern partners. California's Pomona, for example, is matched with Nashville's Fisk, Pennsylvania's Haverford and Bryn Mawr with North Carolina's Livingstone, Cornell with Virginia's Hampton Institute.

The University of Michigan and Tuskegee Institute, in a wider collaboration, are reforming Tuskegee's curriculum in biology, chemistry, engineering and veterinary medicine. Last week Rhode Island's prosperous Brown University and Mississippi's Tougaloo College announced the most ambitious "big brother" arrangement yet.

"Cancer College." The Tougaloo campus, just outside Jackson, is an old Faulknerian plantation dotted with moss-hung oaks. A rundown ante-bellum mansion serves as the administration building. It is the only integrated school in Mississippi; Jackson racists call it "Cancer College." The dean of students, Methodist Minister R. Edwin King, keeps as a souvenir a charred K.K.K. cross—"the handy field model," he jokes—that was set afire this spring on Tougaloo's campus.

The college has a faculty of 34 (half white, half Negro) and a student body of half a dozen whites and 500 Negroes. "We get some students with good potential, but they are undereducated—if they are educated at all," said Adam Beittel, the white president of Tougaloo. "What they need more than anything else is someone who can give them motivation."

Cram Courses. Foundation grants of $363,000 will pay for some basic necessities. Faculty salary ceilings will be raised from $6,500 to $8,000, to slow down a high turnover rate. The library will be expanded beyond its meager list of 33,000 titles. Brown's share of the job will be to supply what money cannot buy: higher academic standards.

Brown graduate students and professors will go to Tougaloo on one-year assignments to beef up its overloaded staff (only the English department has more than three teachers) and improve instruction in several departments taught by men without doctorates. Tougaloo, in turn, plans to send promising graduates to Providence for a fifth year of study, enabling them to go on to get advanced degrees. Jointly, Tougaloo and Brown will expand the college's curriculum, add a tutorial system.

Starting this summer, Tougaloo will conduct and Brown will supervise five-week remedial classes in English, math and geography for incoming Tougaloo freshmen. Negro high school graduates in Mississippi are usually so far behind normal U.S. standards that they spend the first year or two catching up with college-level courses. Since three-fourths of Tougaloo's graduates become teachers, the cram courses will help to break a melancholy cycle of Southern Negro education that produces poor teachers from inferior segregated schools, who teach a new generation of poor students, who in turn become the next generation of poor teachers.

Brown, with only 37 American Negroes among its student body of 4,300, expects to profit from the partnership by what it will learn firsthand about the Southern Negro. Said President Barnaby C. Keeney: "We welcome the opportunity to participate directly in what could become the most significant educational experiment of this generation."

SINGERS

Two Old Pros

At 41, Judy Garland may have gone over the rainbow for the last time.

She arrived in Australia patting her stomach to show how thin she was and vowing that her drinking days were

AP

DIETRICH IN MOSCOW
She made it mutual.

over. Sydney loved her. Then on to Melbourne and a sellout audience of 7,000 for a one-night stand at Festival Hall. They waited exactly an hour and seven minutes past curtain time for her to appear, and this was one time Judy was not worth waiting for.

Allergy in Melbourne. She stumbled onstage in her street clothes and went straight into her opening number, *When You're Smiling*. Strutting around and mugging, she invited her audience to "Let's all sing together!" but they wouldn't have any of that. "I just couldn't get out of that hotel," she said, and a voice yelled, "Have another brandy!" She didn't need one.

She got the conductor's baton away from him and began trying to conduct the 30-piece orchestra; she draped the cord of her microphone around the head of one of the violinists; she sat on a chair and seemed to be muttering to herself. She slurred through some of her songs at random. "I'm supposed to be temperamental," she explained.

The audience began to leave long before she did, but she finally stalked off, leaving the orchestra to play her signature, *Over the Rainbow*, again and again in a vain attempt to get her back.

The next day Judy's manager explained that she was suffering from an allergy that made it necessary for her to spray her throat continually, and she was whisked into an airplane for Sydney so fast that her feet barely touched the ground. There was time, though, to kiss one reporter on the mouth and answer another's question about whether she thought she would retire. "I think so," said Judy. "I would like to do a play. I would like to do a comedy."

Affinity in Moscow. Things were different in Moscow, where an even older pro wowed her sellout audience of 1,350 in a variety theater across the river from the Kremlin. Marlene Dietrich, who left her native Germany in 1930 and refused to go back after Hitler came to power, was hailed by the Russian press as a "fighter against Fascism," but she did her best to dodge politics—and it wasn't hard in a tight, transparent pink evening dress.

She delivered the old Dietrich standbys in the old throaty stage whisper that makes every man feel as though Marlene's face were buried in his neck. Even if she is now 62, the audience loved the feeling. When it was over, she made it mutual. "I must tell you that I have loved you for a long time," she told them. "The reason I love you is because you have no lukewarm emotions—you are either very sad or very happy. I am proud to say I think I have a Russian soul myself." The curtain calls lasted for 15 minutes.

CONCERTS

Doing the Noble Thing Badly

The ideal pops concert is played in a park, and its program is as light and harmless as a passing cloud—Gershwin, Sousa, Leroy Anderson. This follows the old axiom that serious music, like aged whisky, should be saved for cold winter nights.* But the music that Conductor Andre Kostelanetz chose to open the New York Philharmonic "Promenades" series last week had real substance—Shostakovich, Ravel, Alan Hov

Such enterprise might easily be taken for coming to the picnic in coat and vest, especially since the harmonic is a beginner at a game played in Boston, and a rather beginner at that. But the mood telanetz was after was something order of refined amusement. The rows of amber seats had been re from Philharmonic Hall and replac tables and chairs as closely packed a Paris café. As the orchestra pl the audience sipped champagne gazed around the hall. To such a ful atmosphere, Kostelanetz wanted to add music worth listeni

But things turned out unhappily modern dancers who interpreted New York première of Howh *Meditations of Orpheus* danced and well, but the choreography fail suggest much beyond a battle o nightgown. The gown was worn b rydice (Dancer Cora Cahan) over colored tights and, as New York News Critic Douglas Watt observe seemed Orpheus wanted it. (P.S. got it.) Excerpts from Shostako *Lady Macbeth of Mtsensk* and R *Piano Concerto in G* were deform the Philharmonic's raucous and ja performance.

The champagne was enough to i the audience's good humor, but the ics could scarcely express their di tent. "A tasteless hodgepodge," said Times. "A grab bag of cheap tri grumbled the News. Poor Kostel —he did the noble thing, but he d badly. He had tried to elevate the concert to a level beyond simple gettable amusement. With the resp he got, he no doubt wishes he had s to schmaltz. But the Philharmonic's gram for the rest of the 20-concert ries includes much that is seldom formed and deserves attention. credit for good intentions, at least longs to Kostelanetz.

* Orchestras obey this law so piously that Beethoven and Brahms are rarely played outside of the basketball season.

HOSPITALS

Life in a Life Island

Infection in hospitals runs in a vicious circle. Many a patient enters because of infection, and the doctors must try not only to cure him but to keep his germs from other patients who are particularly susceptible because their resistance is low. Achieving the necessary germ-free atmosphere, though, is far easier said than done.

Last week, at the Medical College of Virginia Hospital in Richmond, Dr. Boyd Withers Haynes Jr. had two burn patients recovering rapidly in virtually germ-free surroundings, thanks to an ingenious device. The "Life Island," as its inventor, Frank E. Matthews, an ex-Navyman, calls it, looks like a plastic bubble completely enclosing the hospital bed. It has a console of Buck Rogers gadgets at the foot. Dr. Haynes is testing two Life Islands for the U.S. Army Surgeon General's office, and there is another at the Hospital for Sick Children in Toronto.

Zipped In. After Dr. Haynes's patients had had their burns treated, the rest of their bodies was scrubbed with detergent. Their heads were shampooed and their fingernails trimmed and cleaned. To keep down bacteria that normally live inside the nose, Dr. Haynes gave them an antibiotic. Then the patients were put to bed in the pre-sterilized Life Island, and its long zipper was closed.

But they had no need to suffer claustrophobia. As soon as they were zipped in, the plastic envelope was inflated with double-filtered air, delivered under pressure. The envelope is transparent; they could see all around, and they could talk through it without raising their voices.

When a nurse wanted to give the food or medicine or a bedpan, she took it from a sterile cabinet, put it through an outer port in the cone and closed the door. Automatically, traviolet radiation was switched on kill off late-arriving bacteria. Then slipped her hands into the long gl built into the side of the plastic. W these, she could reach any part of interior. She opened the inner port the air-lock and passed the article to patient. When he had finished, whe with meal tray or bedpan, he put a plastic bag that went out through air-lock after a pause for ultraviole sterilize its exterior.

Working with her gloved h through the side, the nurse can tak patient's temperature or dress wounds. There are electrical conn tions embedded in the plastic so many tests and treatments can be g without destroying the internal steri

Lister's Dream. Protection against fection is especially important for b patients because their wounds are la and the dead tissue is a rich soil for b teria. It is no less important for tra plant patients and for many others high doses of cortisone-type dr whose resistance to infection is reduc

Some pioneering surgeons are ready putting patients into similar pla bags and performing major operati through glove ports. It should not long before many patients can hav truly sterile operation, fulfilling Jose Lister's dream of aseptic surgery, then be moved into the sterile isol for recovery—something that not Lister dared to hope for.

We park the big ones right in our own backyard

(One of the ways we work with steel)

Even 70,000 ton freighters drop anchor right at Sumitomo's Wakayama steel mill. It's one of the few mills in the world that contains its own modern port facility with a 46-foot-deep harbor. The blast furnaces are only steps away. The result: important savings in freight costs. That's half the story. Finished products, too, go free of mill-to-port transportation charges. You'll find the time, labor and expense this convenient port saves in the Sumitomo price lists. ☐ Efficiency like this is a habit at Wakayama, newest of four Sumitomo steel mills. Designed by Kaiser Engineering and supplied by United, Abbey Etna, Mannesmann, Mesta, Sack and Krupp, this ultra-modern mill turns out 2,300,000 tons of steel per year (5,000,000 projected by 1968).

☐ For superior steel competitively priced—tubes, pipe, sheets, plate, wire rods, castings, forgings and rolling stock parts—you're right with Sumitomo.

MODERN LIVING

FASHION

All Tanked Up

Once bathing suits were sturdy little numbers, more comfortable than dazzling. But it would not do to make a vogue of the practical, and fashion dismissed tank suits with alarm, cried out for prettier versions that covered less, described more. What came in one piece soon came in two, grew teenier and weenier, until last year's bikini could barely be seen by the naked eye. The logical next step: no fashion but a felony called indecent exposure.

The jet set doesn't give a fig for propriety, wouldn't swap bikinis for Fort Knox. But most buyers and designers this year reluctantly gave ground, turned around, backtracked, and ended up where the alarm began.

Well, not quite. For while the new suits run in one loose-hanging piece from the tip of the collarbone to the top of the thigh, they are sometimes as provocative as if they were made of isinglass instead of ordinary jersey and nylon knits. The most popular model has a blouson top, designed to be "loose as a fat man's undershirt," which more than fulfills its promise before nipping in just below the belly. But what the blouson obscures of the chest, it more than makes up for by leaving off the standard modest skirt, affording emphasis at the lower symphysis—an alternative for girls whose waists are going slack, and a consolation prize for men who have to look somewhere.

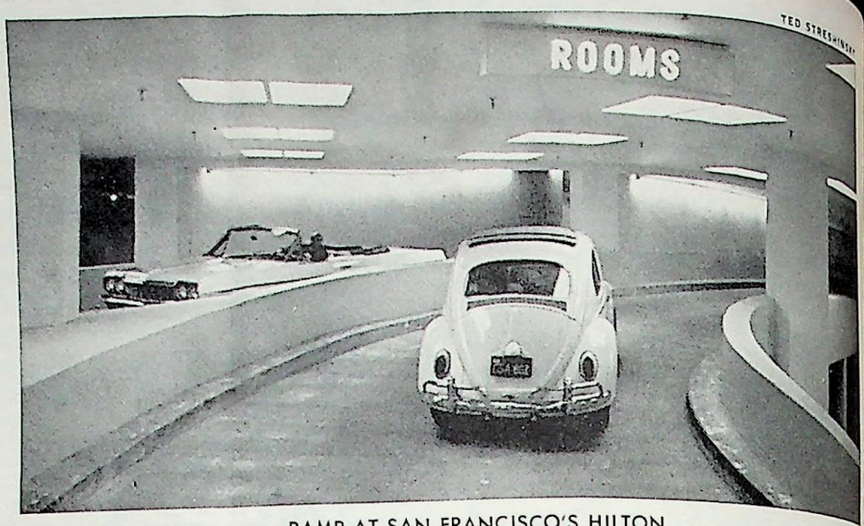
More high-style versions do even more concealing, can be even more revealing. Shaped rather like dancers' leotards, the most far-out have full-length sleeves. "Chic this year," explains *Harper's Bazaar*, which ought to know, "is the sheltered woman in the sun, long-sleeved swimsuit and long-stemmed woman."

COVERED UP

WALTER DARAN—OHRBACH'S

STRIPPED DOWN

More concealing can be more revealing.



TED STRESSING

RAMP AT SAN FRANCISCO'S HILTON

Only a step from car to bed.

Prim as the leotards start out, they are saved by their necks at the finish. For whether laced up the front or left gaping, scooped out, cut in a V, or zippered (one hasty pull affords the shy an emergency exit), most of the models offer a plunge of sorts—not just down to, but between, in a passage as perilous as the strait between Charybdis and Scylla. It may not be quite so much fun for women, but men will find the dip infinitely more invigorating than one in the sea.

TRAVEL

The Ultimate Drive-In

Like soft-shell crabs when the carapace comes off, Americans feel naked and vulnerable outside their cars, and much Yankee ingenuity has been expended to make this unnecessary. First came the carhop, with a four-course meal at the rolling down of a window, and the motel, followed by the drive-in movie and the curbside teller's cage. Last month Macy's announced plans for a department store flanked by a spiral ramp to enable customers to park within a few yards of the counter they want to visit (TIME, April 10). And last week San Francisco saw the opening of a $29 million, 1,200-room hotel where the guest can register behind the w and drive to his room.

In this newest of the world's 61 tons, guests register at the garage trance, get their room keys by p matic tube from the main lobby, zoom up the spiral ramp and start l ing for their room number when floor beneath the car matches the c of the key tab.

Designer of this San Francisco H is Architect William Tabler, 49, has unpinned some 60 major h from his drawing board—nine of t Hiltons, with three more Hiltons i works. San Francisco's antique buil codes gave him a rough time, and that the hotel is finished, there is m head shaking over the look of i gleaming checkerboard of glass marble that has been compared t white-on-white box of Ralston.

Tabler explains that the chec board design is dictated by the fact the building is braced against ea quakes not only horizontally and tically but diagonally, and the diag girders run through every other sq of the checkerboard. "This is the s hotel in the world," he says. "Whe earthquake comes, the people who h been criticizing the outside appear of the hotel are going to be a lot m complimentary than they are now."

• • •

The Australians have gone the U automotive culture one better with Motel-Hotel Shandon in Adelaide. building overlooks a drive-in mo features picture windows and bed loudspeakers for sybarites who rather catch their double bills fro bed than a back seat.

EXURBIA

One Foot in the Air

One recent sunny Saturday, V Beville, 36, assistant professor of gineering at California's Fresno S College, looked up from the breakf table and said to his wife: "Mom, us a lunch. Rusty here needs an o to pass his Cub Scout test." An hou so later Vince, Rusty, 8, Sandy, 6,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

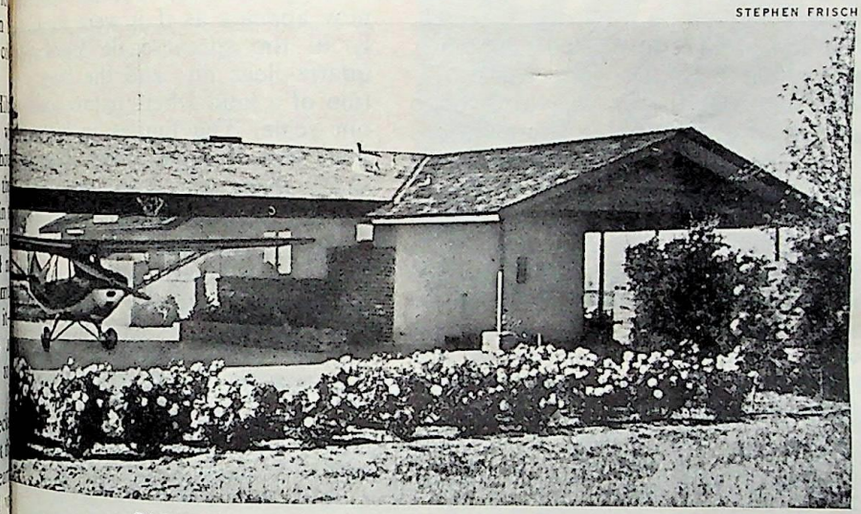
Digitized by Arya Samaj Foundation Chennai and eGangotri

Marty, 4, taxied off, while Mom waved goodbye from the front door.

They taxied not in a taxi, though, but in the Cessna 170 they keep in the backyard hangar. The neighbors find nothing odd about that. They have airplanes in their backyards too.

They all live in a new kind of community springing up in the U.S. where the village green is an air strip, the streets are at least 80 ft. wide, and the street signs are only two feet high so that the planes' wings can clear them. The Bevilles' "town" is called Sierra Sky Park—130 acres of housing development in the San Joaquin Valley seven miles north of Fresno that is the hope and faith of a onetime flight instructor and sometime real estate salesman named William V. Smilie.

Purchase of a lot ($4,200-$12,650) carries with it runway privileges for two airplanes. Smilie has also staked out space for a shopping center and a hotel. Residents of Sierra Sky Park



STEPHEN FRISCH

BACKYARD PLANEPORT AT SIERRA SKY PARK

Not everyone taxis in a taxi.

think nothing of going to lunch with friends 300 miles away. In fact, they find to cultivate far-flung friendships—it gives them an excuse to fly.

Dr. John A. Bendall, 52, a general practitioner, who started a similar land-strip community at Yucca Valley, Calif., in 1956, now has nine neighbors who own their own planes and patients scattered over hundreds of miles who fly their own planes in to see him. "It's a wonderful place—and way to live," says Real Estate Man Jules Haidizsar, who has a house on Bendall's Mesca strip. "A couple of weeks ago, all of us—in separate planes, of course—flew to Las Vegas for the weekend and had a grand time. Last summer my wife and I and three of our neighbors flew in four planes to Florida."

One Element to Another. The need for places to fly is planting the land with resorts that offer airborne tourists various versions of sporting life and change of scene. There are currently 400-odd of them—about a quarter located on a body of water—enabling landlocked air families to transfer from one element to another within minutes after touching down.

Fly-in marinas range from spartan to sybaritic. A sampling:

• BLAKELY ISLAND, a 7-sq.-mi. member of the San Juan Archipelago off the northwest corner of the state of Washington, was bought ten years ago by Pioneer Sports Flyer Floyd Johnson, who canvassed the west coast from Mexico to Canada to find an island he could turn into a flyer's private paradise. Johnson has left most of Blakely wild, has put a 2,400-ft. lighted landing strip (planted in grass) in one corner and surrounded it with lots for no more than 200 families, plus a comfortable clubhouse and one of the finest marinas on the coast. Many of Blakely's youngish colonists—well-heeled manufacturers, ranchers, contractors and lettuce kings—use their houses on the island all the year round, husbands commuting to work by air.

• SKYLINE MARINA is on another San Juan island, Fidalgo. While not so exclusive and luxurious as Blakely, it is well equipped with facilities for both boats and aircraft, and caters especially to fishing enthusiasts, who cherish its salmon and sea bass.

• HAVASU LAKE, in western Arizona, is part of a model city now abloom in the desert under the aegis of Los Angeles Saw King Robert McCulloch. McCulloch confidently expects his two-runway recreation center to be one of the principal drawing cards for the project.

• THE NORTH SHORE YACHT CLUB on the landlocked 44-mile-long Salton Sea, once a part of the Gulf of California, has 2,300 dues-paying members, and a 2,600-ft. landing strip, from which visitors may transform themselves into sea dogs and start trolling within minutes of arrival for such specialized game fish as corvina (which go to 20 lbs.) and sargo. Since Salton Sea is 234 ft. below sea level, speed enthusiasts also like to test the theory that engines run better and boats go faster because the air is denser there.

• THE OCEAN REEF CLUB, with 1,800 acres and a 3,000-ft. landing strip on Florida's Key Largo about 15 minutes' flight from Miami, is one of the many sport resorts in the east coast's southern waters that are encouraging fly-in visitors. "We're trying to get more of the rendezvous business," says Manager Robert Trier. "Like a club from Pompano that flew in recently, had breakfast with us and took off again."

GAMES

Whats-Its

Tom Swifties were barely buried and done with when the elephant gags came along. And no sooner had those grey flat footsteps faded than the whats-it jokes took over, and what's black and white and red all over turned out to be no newspaper, after all, but a bleeding nun.

Other examples:

Q. What is black and yellow and squeals when you turn it over?

A. A school bus.

Q. What is black and lives in trees and is very dangerous?

A. A crow with a submachine gun.

Q. What is purple and weighs 2,000 pounds and lives at the bottom of the sea?

A. Moby Plum.

Q. What is grey, has four legs and a trunk?

A. A mouse on vacation.

Q. What is covered with salt and has a twisted mind?

A. A thinking pretzel.

Q. What is soft, yellow and lethal?

A. Shark-infested custard.

Q. What is brown, has two humps and lives at the North Pole?

A. A lost camel.

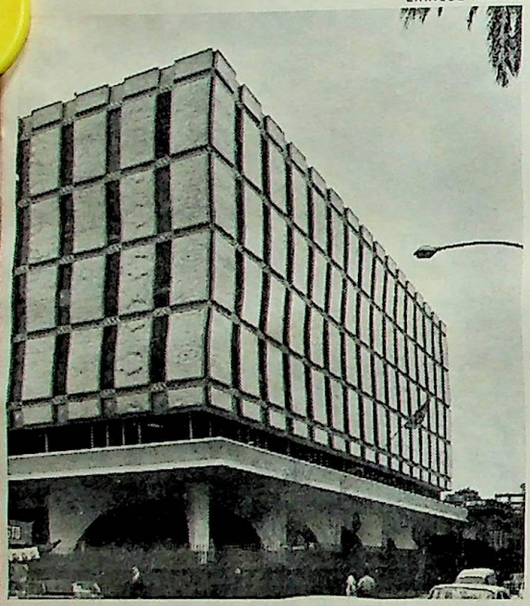
Opening Nights

During the past decade, the U.S. State Department has tried to put its best façade forward in building more than 30 new embassies and consulates. In The Hague, Marcel Breuer built a blunt, lantern-windowed structure as stolid as a Dutch door. In Athens, Walter Gropius used the same Pentelic marble that forms the Parthenon. Edward Durell Stone's grillwork adorns New Delhi like a Hindu temple. In Baghdad, José Luis Sert put up a tentlike structure fit for a caliph and cooled by channels of river water. Saarinen warmed his Oslo embassy with teak screens; Yamasaki lightened his Kobe consulate with airy Japanese panels. The openings of U.S. embassies have come to be as eagerly anticipated as big Broadway first nights. This month the State Department opens two.

In Mexico City, where the press of tourism and business requires the U.S. to maintain its second biggest embassy (after London), the new building is a functional, if spiritless, product of Texas Architects R. Max Brooks and Llewellyn Pitts. Basically it is a chunky, $5,000,000 rectangular marble box rising six stories above some elegant but unrelated granite vaultwork. Since much of Mexico City sits on what was a lake, the building must be broad-footed to avoid sinking into muddy subsoil. A Mexican engineer, Leonardo Zeevaert, designed a displacement foundation that is in effect a watertight ship, and the weight of the building that it supports exactly equals the weight of the soil removed in excavation. Mexicans call it "the floating embassy."

ENRIQUE FRANCO



U.S. EMBASSY IN MEXICO CITY

By comparison the smaller $1,000,000 Dublin embassy, designed by Connecticut Architect John M. Johansen, is exciting in design and construction. Its cylindrical shape, on a 110-ft. diameter, presents, says Johansen, a "façade that turns its back on no one." Made of concrete precast in Holland, the basic structural element is a twisted I, which, multiplied and dovetailed together, turns window frames into walls.

This vigorous façade weaves through space like the interlacing illuminations in the Irish *Book of Kells*. Set on a rusticated granite base, the moated turret echoes ancient Celtic round castles scattered across the green countryside, recalls the Martello towers built to defend Ireland's coasts during Napoleonic times. Johansen even made studies of how soot streaks the concrete so that the walls would weather with character. The embassy bespeaks an understanding of the nation it was built to befriend.

In the Right Hands

His huge, enigmatic abstract slabs of saturated oil are widely sought after, but Clyfford Still, 60, is pretty picky about who gets them. "A painting in the wrong hands," he says, "is a highly dangerous force, like an equation." He

BIOCHEMISTRY

What Darwin Didn't Know

Zoologists have long been satisfied with the evolutionary theory that holds that humans and monkeys are closely related. But the theorists always welcome additional evidence, and last week they got some striking chemical proof. Drs. B. H. Hoyer, B. J. McCarthy and E. T. Bolton of the Carnegie Institution demonstrated that the DNA (deoxyribonucleic acid) in human genetic material has many sections that are identical with monkey DNA.

The experiments that the three Carnegie men report in the magazine *Science* were both delicate and difficult. DNA molecules are made up of two very long strands connected to each other by hundreds of thousands of short submolecules, which are set in place like the rungs of a ladder. The rungs differ chemically, and the order in which they are arranged constitutes the genetic code that controls heredity. When DNA is heated in just the right way, the rungs break and the long strands separate. Though the strands are eager to recombine, they cannot do so unless their broken rungs are matched in perfect order.

The Carnegie men heated a solution of mouse DNA until its strands separated. Then they mixed it with agar that cooled to a stiff jelly, which immobilized the long strands and kept them from recombining. Next, the jelly was reduced to tiny granules, each charged with mouse DNA.

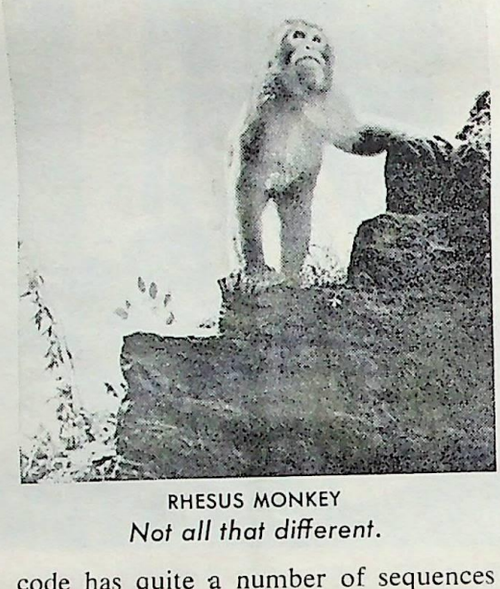
Code Segments. The scientists then prepared a solution of mouse DNA that had been made radioactive with carbon 14. They chopped the molecules into short sections, each carrying a small part of the mouse genetic code, and separated the two strands. When these were mixed with the chunks of agar, their small size permitted them to diffuse into the jelly, and whenever one of them encountered a trapped strand that had a matching sequence of genetic code, the two segments combined firmly.

By measuring the radioactivity of the recombined DNA, the scientists could estimate closely how many of the segments had found matching partners. Under the best conditions, about 25% of the chopped DNA hooked up with that in the agar. This comparatively high figure was only natural, since both samples came from the same species of animal.

Other Species. Next step was to repeat the experiment with different species. Just as predicted by evolutionary theory, mouse DNA combined nicely with that of other rodents, such as rats and hamsters. But it showed much less attraction for the DNA of monkeys and cattle. Human DNA demonstrated only moderate interest in mouse, but it combined with some from a rhesus monkey almost as strongly as if the stuff came from a human. Both mouse and human showed weak interest in DNA from salmon, and almost none in that from bacteria.

What all this means, say the Carnegie scientists, is that bacterial DNA has almost no code sections that are identical with those of higher animals. But fish are vertebrates; thus their genetic

OWEN MARTIN © COUNTRY LIFE



RHESUS MONKEY
Not all that different.

code has quite a number of sequences that have survived from the primitive fish that were the ancestors of all vertebrates. When fragments of human DNA combine with salmon DNA, they presumably find matching code sequences that control such common attributes as hemoglobin in the blood or an internal skeleton. Mice are mammals, so they have more in common with humans (warm blood, hair, a similar reproductive system); and in the world of primates monkeys are so similar to man that long stretches of their genetic codes must be identical. The all-important differences between men and monkeys, say the Carnegie scientists, are not likely to be detected by their DNA-matching method.

ASTRONOMY

What Makes the Shadows Hot

The more they improve their techniques, the more they refine their measurements, the more problems astronomers seem to discover. But the very recognition of those problems may point the way toward prediction of the weather of the universe, toward the type of forecast that will be essential for far-voyaging astronauts.

Cool Sun. When they set up their cameras in a Douglas DC-8 jetliner and flew high over Canada during last summer's eclipse, Drs. Guglielmo Righini of Italy and Armin J. Deutsch of the U.S. counted on snapping some of the clearest pictures yet of the sun's glowing corona. But up there above the dust, water vapor and other diffusions of the earth's atmosphere, the astronomers told the Florence meeting of COSPAR (Committee on Space Research), they found far more than expected. Their pictures of the sun's spectrum showed a strange line that had not been predicted by any of the calculations.

Not that the line was hard to identify; its wave length showed that it came from ionized calcium atoms that have lost one electron. But where does this calcium come from? At the sun's temperature, 3,000,000°, calcium loses nearly all its 20 electrons. The line shows the loss by emitting a distinctive kind of light. In the singly ionized state, calcium cannot exist above a comparatively frigid 20,000°.

Drs. Righini and Deutsch now believe that there must be cool spots in the corona, but they can only guess at the mechanism that makes these cool spots possible. Perhaps, they say, the corona is threaded with magnetic fields that churn it around, making it hot and unevenly heated. Whatever the final explanation, it may provide insight into solar flares, the violent storms which generate radiation that can kill a man in space.

Hot Shadows. Jupiter's temperature now seems as mysterious as the sun's. Astronomers Bruce C. Murray and Robert L. Wildey of Caltech uncovered that surprise by placing a new infrared photometer at the focus of Palomar's 200-in. telescope and taking the temperature of Jupiter's cold atmosphere. Although the photometer designed by Engineer James A. Westphal is 20 times as sensitive as earlier instruments, it registered no change as it scanned the Great Red Spot and the light and dark bands that decorate Jupiter's disk.

Then the scientists spotted another quarry: the shadow of Jupiter's satellite Ganymede, which is bigger than the earth's moon. They expected the shadow to be colder than the surrounding area, just as the moon's shadow casts coolness on the earth. To their surprise, the temperature reading rose more than 100°, from −230° F. to −117° F., as the photometer focused on the shadow. Incredulously, they repeated the experiment many times, always with the same result. The shadow of another satellite, Europa, proved to be equally warm.

The two scientists offer two explanations, both of them uncertain. Perhaps the passage of a satellite's shadow will disturb Jupiter's atmosphere in such a way, permitting warmer lower gases to rise upward and be detected from the earth. Or perhaps the interception of sunlight stops a photochemical reaction in Jupiter's high atmosphere, making it temporarily more transparent so that radiant warmth from below can escape into space.

ROMAN CATHOLICS

Praying It in English

When a Roman Catholic priest turns to address his congregation at Mass this fall, no longer will he mumble "*Dominus vobiscum*." Instead, he will pray it in English: "The Lord be with you." The historic language switch in the Mass, authorized by the Liturgical Constitution of last fall's session of the Vatican Council, is at last firmly set in the U.S. Enacted by the 245 Catholic bishops of the U.S., it has now been confirmed by the Holy See.

The revisions will put nearly half the Mass and all the sacraments, except holy orders, into English. In both low and solemn Masses, Latin will be retained for the beginning prayers at the foot of the altar and for the canon, the central prayer of the celebration. But the Epistle and Gospel and all the chants of the Mass—the introit, gradual, offertory and communion verses—will be in English, and so will a number of prayers that will be recited by priest and congregation together: the *Kyrie eleison* (Lord, have mercy on us), the Gloria, the Creed, the Sanctus at the beginning of the canon, and the Lord's Prayer. Also in English will be a new Prayer of the Faithful, in which the congregation will be asked to pray for such causes as the church, the bishops, all Christians, and (by name) the sick and dead of the parish.

The amount of English approved by the bishops was considerably more than many lay Catholics expected; the quality of the language, however, will be considerably below what Episcopalians have in their stately *Book of Common Prayer*. All Bible readings will be taken from the still-incomplete Confraternity version, a reliable but sometimes leaden-footed translation begun in 1945 by scholars of the Catholic Biblical Association of America. Other parts of the Mass will be in a version that synthesizes various translations found in Catholic missals. The Gloria, for example, begins: "Glory to God in the highest. And on earth peace to men of good will. We praise you. We bless you. We worship you. We give you thanks for your great glory."

A few conservative bishops may try to stall off the switch to English as long as possible, but most U.S. dioceses will probably make the change on the first Sunday of Advent (Nov. 29), the beginning of the ecclesiastical year. Sweeping as the revisions seem, they are only the beginning. In Rome, the Vatican Council's Liturgical Commission is at work on a major revamping of the structure of the liturgy, which will prune off many rites and prayers that were added to the original Roman Mass, provide a greater variety of scriptural readings.

AL FENN

ROMAN CATHOLICS AT MASS
In plain words: "The Lord be with you."

CHRISTIANS & JEWS

Combatting Contempt

"The worst deed of the Jewish people, the murder of the Messiah, resulted in the greatest blessings for mankind," says a widely used Roman Catholic textbook, reflecting what has been for centuries a commonplace of Christian thinking. The teaching not only fosters anti-Semitism but also is historically wrong, according to a new book called *The Teaching of Contempt* (Holt, Rinehart & Winston; $4), by the late French-Jewish Historian Jules Isaac.

Isaac turned to the critical study of anti-Semitism during World War II, when his wife and daughter were killed by the Nazis. In 1960, three years before his death, he urged his friend Pope John XXIII to express publicly the Roman Catholic Church's opposition to anti-Semitism, which the bishops of the Vatican Council plan to do at the third session this fall. In *Contempt*, Isaac closely examined three fundamental misconceptions about Judaism that found their way into Christian thinking —and argued that none of them had much basis in fact.

Shifting the Blame. Answering the charge of deicide, Isaac points out that it is illogical to blame an entire people, most of whom never heard of Jesus, for the crime of a few. Even Peter, in *The Acts of the Apostles*, says that the Jews had condemned Christ out of ignorance, not knowing him to be the Son of God. Isaac does not deny that some Jewish leaders in Jerusalem were involved in the plot against Jesus, but he argues (and quotes Christian scholars who support him) that the Gospels, written at the time when Christianity was forsaking its Jewish origins to convert the gentile, tend to shift the blame for the Crucifixion from the Romans to the Jews. Pontius Pilate, for example, appears as a weak but well-meaning governor instead of the brutal autocrat other sources make him out to be.

Historically, Isaac points out, the least justifiable of the Christian misconceptions about Judaism is that the Jews became the object of divine wrath for killing Jesus, and were dispersed into homeless exile after Jerusalem was destroyed by Roman troops in A.D. 70. The Jews began to emigrate from Palestine more than 500 years before Christ, and, far from being destroyed after Christ's death, they staged powerful uprisings against the Romans in the 2nd and 4th centuries. The very period of supposed exile was the time when Palestinian scholars united to transcribe the oral teachings of the rabbis into the first written Talmud.

What destroyed Palestinian Judaism over the course of centuries was a combination of war, rebellion and emigration. The effective end came in 1099 with the First Crusade, when Christianity's noble lords crowded the Jews into the synagogues of Jerusalem and set them aflame.

Christian theologians have often claimed that the Judaism of Jesus' time was decadent, "a world of ossified belief in the letter, of a narrow-minded caste spirit and materialistic piety," as the German Catholic Theologian Karl Adam put it. On the contrary, Isaac argues, the two centuries before Jesus' birth marked an era of great spiritual vitality, which produced both the beautiful writings of the Apocrypha and the flowering of the synagogue as a faith-renewing institution. Many of Jesus' own sayings can be traced to the teachings of the much-abused Pharisees, notably the great Rabbi Hillel (circa 110 B.C.-A.D. 10). Moreover, Isaac notes,

It's one of journalism's most thorough and far-reaching explorations. You find it every week in TIME.

the discovery of the Dead Sea Scrolls proves that Judaism can claim a monastic sect—the Essenes of Qumran—that rivals the early Christians in their ideals.

"Purifying Stream." Christianity, Isaac concludes, "does not require for her own glorification a corresponding disparagement of ancient Israel, of the people of the Old Testament, the people of Jesus and the Apostles." Fortunately, he adds, "a purifying stream exists in Christianity and grows stronger every day"—and Isaac's book appears at a time when almost every day brings new evidence that his cause is on the verge of victory.

This month, for example, saw the publication of a Catholic textbook survey by scholars at Jesuit-run St. Louis University that listed a number of derogatory references to Jews (and Protestants)—and urged textbook writers to take greater care in discussing other faiths. The Lutheran World Federation's Commission on World Mission held a consultation in Denmark declaring that anti-Semitism is "a demonic form of rebellion against the God of Abraham, Isaac and Jacob, and a rejection of Jesus the Jew, directed upon his people." And in Florence, European representatives of an international society for Christian-Jewish cooperation met to discuss their latest efforts to combat anti-Semitism. There, Catholics and Protestants attended a service of prayer at the city's Jewish temple in honor of "Jules Isaac Day."

BAPTISTS

Behind the Front

While the Presbyterians held the leadership in church integration, most of the nation's big Baptist churches have grappled with the race issue—one-by-one, rightly, the other with considerable hesitation. Last week the Southern Baptists (10,395,940 members) and their Negro Southern cousins, the American Baptists (1,559,103), held their annual conventions in separate rooms of Atlanta's City's Convention Hall, and joined with five other groups for a three-day celebration of the Baptist Jubilee.*

Traditionally opposed to racial segregation in both theory and practice, the American Baptist delegates have proved their church's strongest words yet on civil rights. Their resolution advocated withholding church funds to segregated Baptist congregations and putting fair-employment-practice clauses in all contracts for church and builders. But the Southern Baptists, about 90% of whose congregations are segregated, rejected the

Digitized by Arya Samaj Foundation Chennai and eGangotri

mild, nonbinding recommendations that would approve an open-door policy on race in churches. Instead, the delegates adopted a policy statement that left the question of church integration right where it has always been: up to the decision of individual congregations.

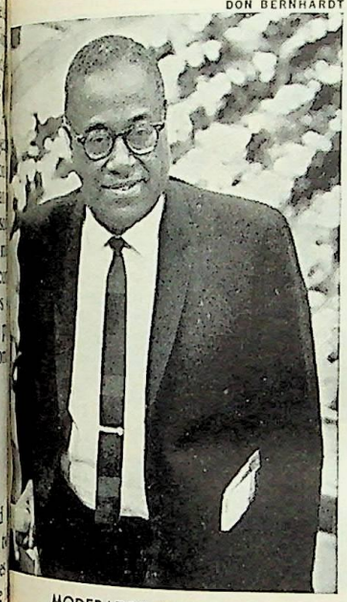
PRESBYTERIANS

In the Van

The United Presbyterians have a knack for breaking race barriers without catering to either politics or sentimentalism. Last week, at their 176th General Assembly in Oklahoma City, the Presbyterians elected a qualified and articulate church statesman as moderator of the 3,291,998-member church for a one-year term. He is the Rev. Edler Hawkins, 55, a Negro.

The Presbyterian moderator's tasks are largely ceremonial, but Edler Hawkins (his life is an endless battle

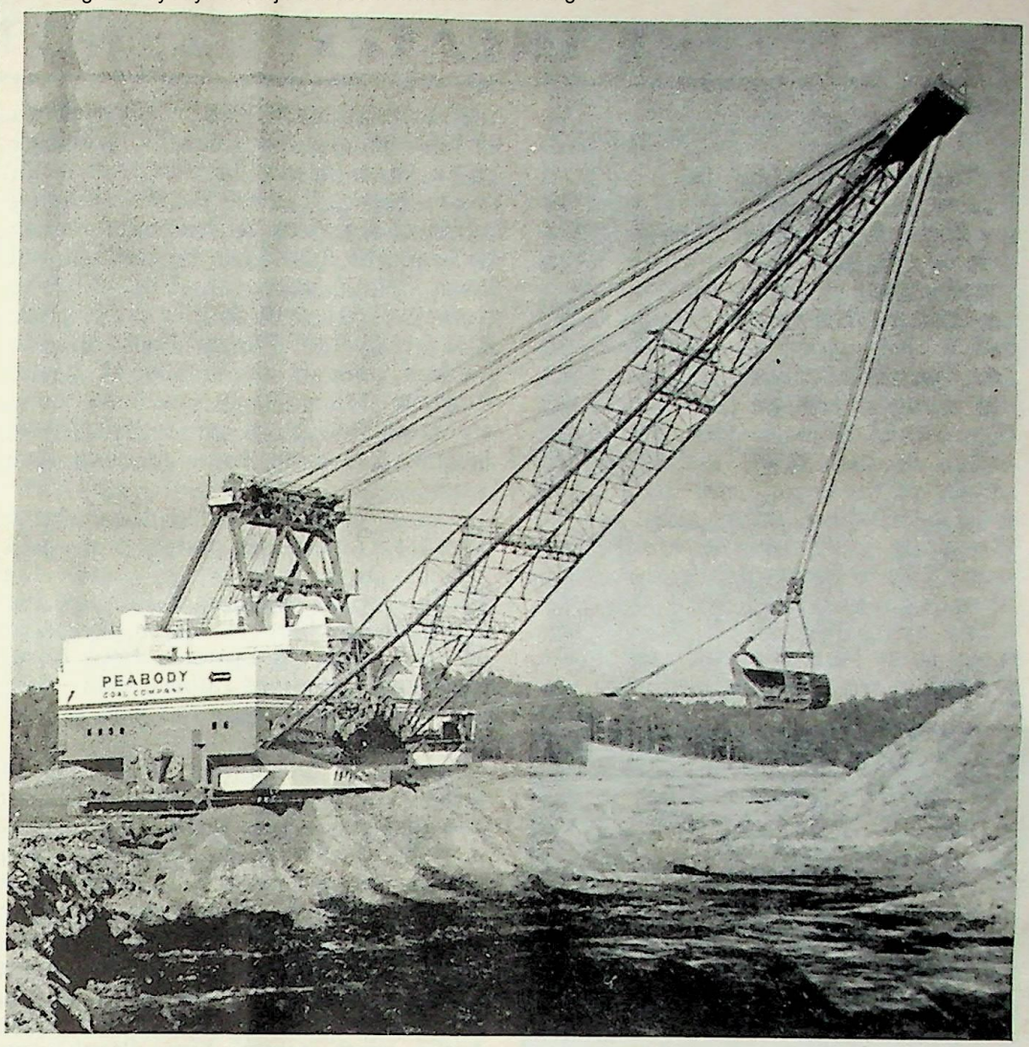
DON BERNHARDT



MODERATOR HAWKINS
The membership is 95% white.

against people who spell his name "El-") nonetheless becomes chief spokesman for a church that is 95% white in membership. A 1938 graduate of Union Theological Seminary, Hawkins has held only one ministry in his pastoral career, at St. Augustine's Church in a some-what slum-ridden section of the lower Bronx in New York City. He started the church from scratch, with a congregation of nine; today it numbers 1,000, about one-third of them Puerto Ricans. Hawkins has also served for two one-year terms as head of the New York Presbytery, governing body of the city's 90 churches.

Hawkins will undertake the customary "moderator's tour" of the nation's Presbyterian churches. But he also plans to visit Africa, the Middle East and Europe this summer, including, possibly, an important stop in Italy. "I can see the necessity of going on to Rome to visit the Pope," he said. "Pope Paul has opened up channels of communication on the road to a new unity of Christendom."



WORLD'S LARGEST WALKER MARION 8800

You are looking at a photograph of the world's largest walking dragline now operating at Peabody Coal Company's Homestead mine in Western Kentucky. ■ This 85-cubic-yard giant will increase the efficiency of the mine and will make it economically feasible to mine coal that otherwise might be left underground. It will be used for removing up to 140 feet of overburden now covering the coal seam. ■ The 12-million-pound 8800 is a machine with amazing operating speed and proportions. It will complete a working cycle of digging, swinging, dumping and swinging back in less than one minute. The boom can swing a 443,000-pound load more than 550 feet and dump it on top of a 14-story building. The machine is the world's first to be equipped with four hoist and four drag cables, adding greatly to cable life and providing better load distribution. ■ For more than 20 years, Marion has been producing the industry's broadest and most complete line of Walking Draglines. During these two decades, Marions have proved repeatedly their ability to move big yardages at lower costs on many different types of work in all parts of the world. It will pay you to get complete information on Marion "Walkers." They are manufactured in sizes from 5 to 100 cubic yards.

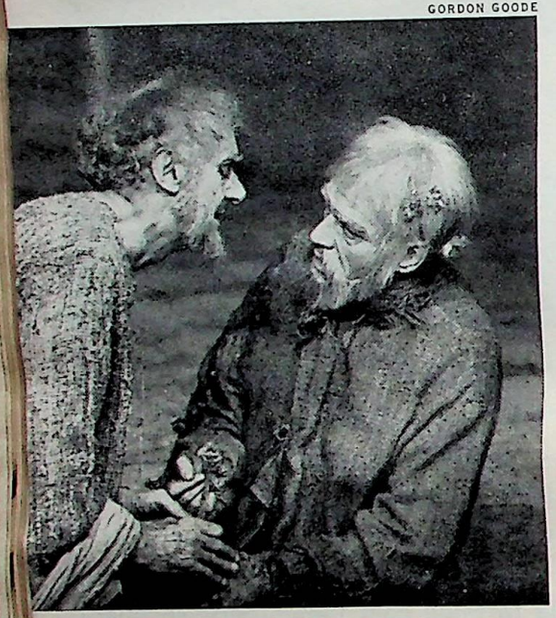
Double Will from England

King Lear. The fatal flaw that mars Paul Scofield's Lear is detachment. In the Royal Shakespeare Company's version of the play now in repertory at Lincoln Center's New York State Theater, Scofield seems to see through Lear's nature and coolly contemplate Lear's fate, instead of suffering it. But Lear, like Oedipus, cannot see himself, or there would be no tragedy. He threatens to do such things as will be "the terrors of the earth," but his cruel lot is to have those things done to him. He is stretched on the rack of the world like a pagan Job without hope of redemption.

Just as the play moves from a royal court to a bare, storm-blasted heath, so Lear is changed from the man who

GORDON GOODE



LAURIE & SCOFIELD IN "LEAR"
Looking on horror coolly.

thinks he has everything to the creature who is made to know himself as "unaccommodated man," a "poor, bare, forked animal" owning nothing. It is a double fall and a double loss. The loss of his possessions scourges Lear almost physically. But it is the loss of order in human affairs and in the cosmic scheme of things that sends his mind whirling into madness. He is crushed by what crumples under him—the order of rank and authority, the order of filial devotion, and the divine order of the universe of which these earthly orders are, hopefully, the reflecting mirror. But Shakespeare was not hopeful when he wrote *Lear*: it contains his darkest and bleakest vision of human existence. He asks his tragic hero to look on horror bare, a grotesque, absurd, uncharted realm of meaninglessness.

To ask an actor to convey the blinding desolation of this vision may be like sending a man to do a god's work. The trouble with Scofield's performance is that he relies on technique to serve as passion. He is so cold in his rages that one cannot believe in the warmth of his love, even for Cordelia. When he prays, "Let me not be mad, not mad, sweet heaven," there is no scalding terror of unreason in his voice. When he bears the dead Cordelia onstage and keens "Howl, howl, howl, howl!", she seems weightless, so hollow is his grief. And his fivefold "Never" lacks the anguished sense of the finality of death. Cordelia (Diana Rigg) is equally cool, a sort of New York career girl, brittle, lacquered, remote, more manikin than woman.

Lesser roles are better filled. Irene Worth's Goneril has poured a Borgia's venom into her veins, and Ian Richardson as the bastard Edmund has a subversive charm to match his crooked soul. Alec McCowen's Fool is refreshingly pensive rather than hopfootedly antic; he jousts as well as jests with the king.

While the costuming might be labeled G.I. nondescript, the stark grey and rust panels that serve as a set temper the throbbing Shakespearean line with a dry astringency. Director Peter Brook arrests his pace with symbolic and sometimes affecting visual still lifes, most notably the blinded Gloucester sitting motionless at the center of the empty stage while the din of an offstage battle roars behind him. Brook's intelligence has shaped a *Lear* that knows its own mind and sticks uncompromisingly to it. Unfortunately, there is a hole in its heart.

The Comedy of Errors is either a condescending insult to American taste or a lazy lapse of British taste. The rationale behind the Royal Shakespeare's choice is obvious enough: conventionally, repertory groups alternate deep-think with no-think. After chinning itself intellectually on *King Lear*, an audience is presumed to be so exhausted that it can only cope with the slack-jawed humors of *Comedy of Errors*.

The trouble is that this tyro script of Shakespeare's is more tedious than frivolous. Not even the cast can work up a very convincing case of comic hysteria over which twin, Antipholus of Ephesus or Antipholus of Syracuse, has a wife, wears a gold chain, or has entrusted a bag of 500 ducats to his manservant. Equally low-laugh are the twin Dromios, who persistently mistake the identity of their masters and also serve by merely standing around and getting repeatedly cuffed.

During most of Act I, the players stick to the script and almost sink with it. Then, in Act II, a mad-scientist conjurer Pinch (Michael Williams) appears, and with the aid of a berserk chemistry set and a few other non-Elizabethan props takes the playgoer's mind mercifully and hilariously off the plot. As a beardless Bardlet, Shakespeare pretty much stole *The Comedy of Errors* from Plautus. The only successful way to revive it now is to [illegible] it from Shakespeare, à la *The Boys from Syracuse*, now running [illegible] off Broadway.

Presidential Snipshots

The White House takes playgoers on an anecdotal tour of the private lives of U.S. Presidents and their First Ladies. It combines the shallower features of a dramatic reading and a TV documentary. To cover the presidential years from Washington through [illegible] scenes and episodes have to be [illegible] to candid-camera snipshots. While [illegible] less history is the mood, the recurring theme, insofar as there is one, is that sorrow, great loneliness and sometimes tragedy are the permanent occupants of the house on Pennsylvania Avenue.

Sadness dominates the dramatic high point of the evening. Mary Todd Lincoln (Helen Hayes) is undergoing [illegible]

HAYES AS GRANT'S WIFE
Looking on crossed eyes fond

jury trial to determine her sanity. [illegible] an obvious desire to be frank, [illegible] gins to link any strangeness in [illegible] havior to the inconsolable loss of [illegible] sons and the assassinated Abe. [illegible] the artless conviction of her accounts taking hold, a spasm of madness [illegible] ters her face in fragments as if an earthquake had jaggedly ripped open [illegible] mind's thin crust. As Lincoln, [illegible] Weaver brings timely eloquence to [illegible] pithy debate on civil rights.

Too much of *The White House* is stuffed with incidental trivia of the you-know variety: President [illegible] was known as "His Accidency"; [illegible] Grant found his wife's crossness [illegible] rather endearing; Andrew Jackson's wife ordered an inaugural veil of lace name JACKSON stitched in lace from ear to ear; Mrs. Benjamin Harrison had 2,000 azalea plants [illegible] daily. A supple cast treats this [illegible] with greater respect than it merits. *The White House* remains [illegible] tribute to the nation's highest office a gossipy raid on its prestige.

TIME, MAY [illegible]

MILESTONES

Born. To Anita Bryant, 24, record-ing star (*Until There Was You*), singing sidekick to Bob Hope in four U.S.O. Christmas tours, and Disk Jockey Rob-ert Green, 33: a daughter; in Miami.

Married. Lauritz Melchior, 74, famed Wagnerian tenor now in retire-ment; and Mary Markham, 40, his one-time secretary, now a top Hollywood booking agent; he for the third time, she for the second; at Melchior's estate near Santa Monica, Calif.

Died. Margaret Schulze Downey, 42, one of the nation's richest women, heir-ess to an estimated $150 million con-centrated mainly in Newmont Mining Co. and Magma Copper Co. (founded by Grandfather William Boyce Thomp-son), a pretty brunette who briefly filled the gossip columns in the late '40s when her divorce from polo-playing Polish Prince Hohenlohe-Ingelfingen prompt-ed him to shoot himself (he recovered), led down to marry Morton Downey, radio's dulcet-toned troubadour of the '30s, and take an active director's role in minding her business; of cancer; in Manhattan.

Died. DeLesseps ("Chep") Morri-son, 52, longtime mayor of New Or-leans (1946-61) and Kennedy's ambas-sador to the Organization of American States (1961-63), an ebullient, debo-nair politician who spearheaded a re-form movement to bring trade, industry and an honest police force to his city, but could never quite carry his mes-sage to Louisiana at large in three un-successful campaigns for Governor; in the crash of a chartered plane carrying seven others, including his seven-year-old son Randy; near Quajolota, Mexico.

Died. Austen Herbert Croom-John-son, 54, co-father of the singing com-mercial, a onetime NBC program idea man who teamed with Announcer Alan Kent in 1939 to write "Pepsi-Cola Hits the Spot," a jingle that jangled for 20 years until Pepsi decided to "be socia-ble" by dropping it; of a heart attack; in New York.

Died. Steve Owen, 66, longtime (1931-53) coach of the New York Gi-ants; onetime cowpuncher from Okla-homa's Cherokee Strip, who played a bone-bruising tackle for five years for the Giants, as coach won eight Eastern Conference titles and two world cham-pionships, retired in 1953 when the razzle-dazzle aerial game found him losing in the win column; of a cere-bral hemorrhage; in Oneida, N.Y.

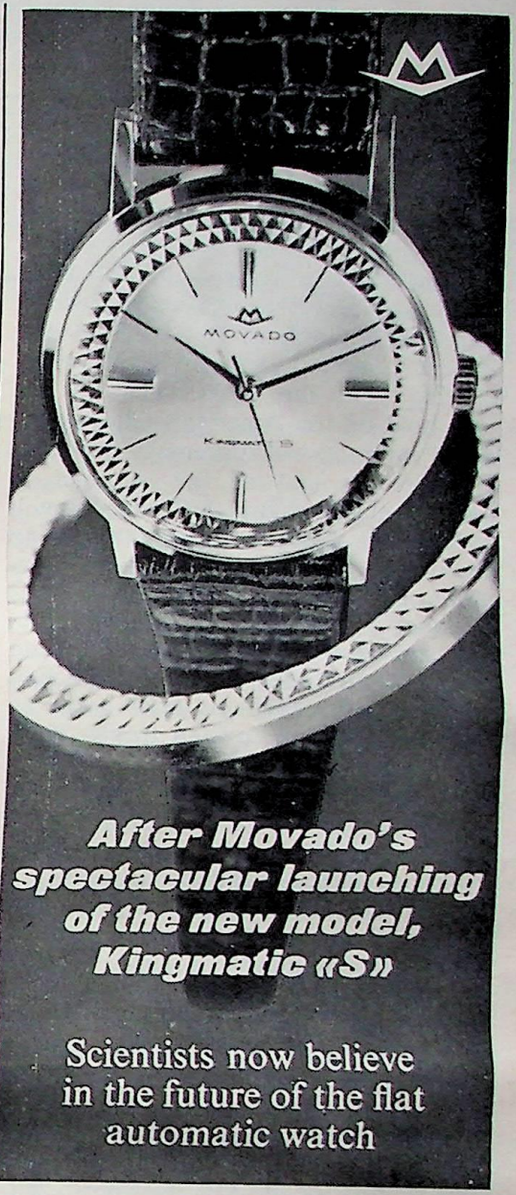
Died. Arthur Hugh Bunker, 68, re-tired chairman since 1960 of American Metal Climax, and younger brother of Ellsworth Bunker, U.S. ambassador to the OAS, a kinetic, foresighted business-man who dabbled successfully in fields as diverse as oil speculating and orchid growing (at one time he owned one of the world's largest orchid nurseries), but found his niche among rare metals, promoting new uses for radium in med-icine, new processes for extracting va-nadium (a steel strengthener) and new markets for molybdenum, a high-strength metal of the jet age; of leu-kemia; in Manhattan.

Died. Lord Brabazon of Tara, 80, pioneer British aviator and a Minister of Aircraft Production in Churchill's wartime government, a crusty curmudg-eon who in 1909 managed to take off in a fragile cloth-and-wood contraption and fly it a mile, bounced in and out of Parliament until his 1941 appointment to boss Britain's rapidly expanding air-craft industry, a job he did well until he was ousted in early 1942 for impolit-ically suggesting that England should be happy that German Nazis and Rus-sian Communists were killing each oth-er off; following a heart attack; in Chertsey, England.

Died. Dr. James Franck, 81, Ger-man-Jewish physicist, winner with Gus-tav Hertz of a 1925 Nobel Prize for the discovery of the laws governing col-lisions between electrons and atoms; of a heart attack; in Göttingen, Germany. Forced out of his professorship at the University of Göttingen in 1933, Franck later came to the University of Chicago, headed a wartime team of scientists that perfected the method for reducing ura-nium oxide to metal, a major contribu-tion to the Manhattan Project.

Died. Otto Vigelmovich Kuusinen, 83, oldest member of the Soviet Union's aging twelve-man Presidium; of cancer; in Moscow. A native Finn, Kuusinen fled to Moscow in 1921 when a Russian-model Bolshevik revolution was crushed in his own country, became secretary of the Comintern, then returned home to rule over fellow Finns as puppet president of the 68,900-sq.-mi. Karelo-Finnish Republic, carved out of the eastern portion of Finland by Russia during World War II. His shrewd bet on Khrushchev in the post-Stalin power struggles won him a return ticket to Moscow in 1956, a seat at the very top a year later, and finally that ultimate accolade of Communism, a niche for his ashes in the Kremlin wall.

Died. Leonard Florsheim, 84, Chi-cago transportation tycoon, one of the founders of the National Conference of Christians and Jews and a scion of the Florsheim shoe family who, with his friend John Hertz, founded the Yellow Cab Co., Chicago Motor Coach Co. (the hub of the Chicago Transit Au-thority's bus routes) and the Omnibus Corp., later to become the Hertz Corp.; after a long illness; in Chicago.



After Movado's spectacular launching of the new model, Kingmatic «S»

Scientists now believe in the future of the flat automatic watch

Only yesterday they believed that, to make an automatic model slimmer, the mechanism had to be miniaturized thus becoming more delicate and complicated. Today the new Movado Kingmatic «S» has convinced them of the contrary: it is flatter, slimmer yet sturdier, simpler and more accu-rate than its predecessors.

A rare combination of new solutions

During the years of research on the Kingmatic «S», the Movado engineers have registered an impressive number of patents, both Swiss and international. Combined, they reveal the many secrets of an admirable construction which, to make best use of the available space has introduced a new arrangement, for certain organs of the watch, which is both logical and highly efficient.

KINGMATIC «S»
with ball-bearing
"Fire Disk" Model (see illustr.)
A superbly styled Kingmatic «S», with super-waterproof "Sub-Sea" case.
Gold 18 K, goldcap, steel or rolled gold 40 microns steel back.
Other automatic models in the "Kingmatic" series, with or without date.

See the Movado exhibit at the New York World's Fair!

YACHTING

For Country & for Mug

Monopolies tend to dull with age, and sporting monopolies are hardly sport at all. The Yankees, for all their skills, are now New York's "second team" with the fans. But there is one ancient monopoly that only grows more exciting with the years. That is the U.S. hold on the America's Cup—symbol of international supremacy in yachting. By the end of this summer, a doughty group of British yachtsmen will have spent close to $600,000 in an attempt to remove the ungainly, Victorian cup from its accustomed place of honor in the New York Yacht Club. And an equally determined and even more affluent collection of U.S. yachtsmen will have spent at least twice as much to keep the coveted trophy right where it is.

All told, foreign sailors have traveled across the oceans to compete 18 times since 1851, when the schooner *America* started it all by trouncing a fleet of the fastest boats Britain could muster. Every challenger has returned home emptyhanded. In 1958 Britain's *Sceptre* went down to a humiliating four straight defeats by the U.S.'s *Columbia*; two years ago, Australia's *Gretel* lost 4-1 to *Weatherly* and its master tactician Bus Mosbacher. Now it is Britain's turn again, and the Royal Thames Yacht Club means to make a sterner test of it. Off Newport, R.I., this summer, two new British twelves will fight it out for the right to challenge the U.S. in the best-of-seven series. They are *Sovereign*, owned by London Financier Anthony Boyden, 36, and *Kurrewa V* (pronounced *Coo*-roo-aa),* jointly financed by British and Australian money and skippered by British Yachtsman Owen Parker, 31.

Made-in-U.S. Look. Both boats were designed by Britain's David Boyd, whose first twelve was *Sceptre*. But Boyd thinks he has learned about blue-water sailing since then. Gone are *Sceptre's* tubby lines; the new boats have a swift, made-in-U.S. look with sharp, clean bows, narrow hulls and wide sterns. They could be twins except for the keels: *Sovereign's* is V-shaped and knife sharp, while *Kurrewa's* is heavier and rounded.

The two met for the first time three weeks ago off the Isle of Wight, and have been going at it in all weather ever since. So far there is little to choose between them. In eight races, *Sovereign* has won five times, *Kurrewa* three. Old *Sceptre* was there too—as a trial horse, and a mighty worrisome one at that. One day she beat *Sovereign*, and on another day showed her stern to *Kurrewa*, leading the Times of London to grumble: "We have heard a great deal about experimenting with different sails and techniques, but the awful suspicion grows that neither *Sovereign* nor her sister, *Kurrewa*, may be as good as people hoped." But the Royal Thames sailors put it all down to green crews and believe that the new boats will be far superior to *Sceptre* after the shakedown sessions are over. Says Kenneth Poland, vice commodore of the Royal Thames: "We are already talking about where we will defend the Cup after we've won it."

Two Plus Three. That may take some doing. *Weatherly* is resting peacefully in a Connecticut boatyard, and Mosbacher is busy in Manhattan ing his oil investment business had it," he says. "Never again— I might buy a powerboat to we races." But the U.S. is hardly h for Cup defenders. Last week a ing new U.S. twelve went do ways; a second new twelve launched the week before, and veteran boats were fitting out to pete for the honor of defend "auld mug."

American Eagle, which hit the at Stamford, Conn. last week, is builder A. E. ("Bill") Luders' fir yacht and the most daring twelv designed. Other twelves have crowned decks to add strength hull; *Eagle's* is pancake flat to g crew better footing and to low center of gravity so the boat wil up straighter in strong winds. modern twelves have a reverse-transom—an ugly but useful de save weight—but Luders achie same end by tapering deck and h pointed stern.

To lessen drag, *Eagle's* ne shaped rudder is much smaller th al and is tucked farther forward most twelves. And for a jib, s carry a huge new cross-cut gen is supposed to hold its shape bett old jibs. *Eagle's* 36-man syndi headed by Pierre du Pont an York Yacht Club Commodore H. Pratt and includes the recently d Mrs. Briggs Cunningham who the same silver dollar to place *Eagle's* mast that rode under *Co* when Cunningham captained it 1958 defense. *Eagle's* skipper S. Cox, 51, an international ch in small boats, whose lack of e big-boat experience is offset by full of Cup veterans.

Constellation, the other new comes from Olin Stephens, 56, already designed two of the worl est twelves, *Vim* and *Columbia*.

* Maori word for fast swimming fish.

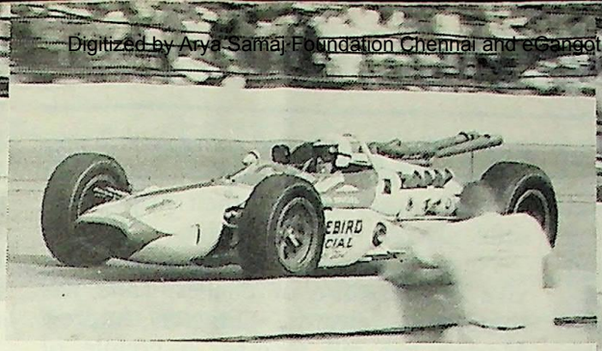
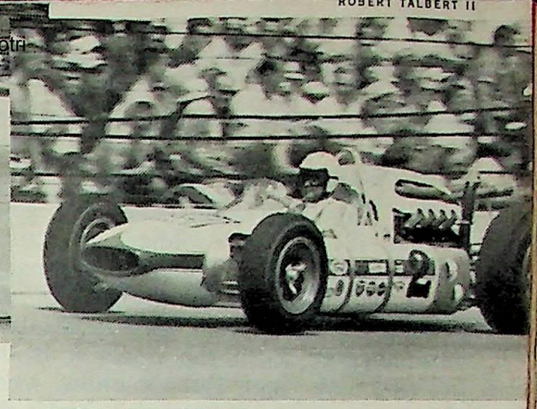
CLARK DRIVING A LOTUS-FORD
Back to settle the matter.



MARSHMAN IN A LOTUS-FORD



WARD IN A FORD-POWERED SPECIAL

AUTO RACING

Ford on the Pole

It was the biggest crowd of the year to attend a U.S. sporting event. At Indianapolis' Motor Speedway last week, 250,000 spectators jammed into the stands to watch the world's fastest racing cars blast around the 2½-mile oval. Who won the race? There was no race. The Indianapolis 500 isn't until this week, and these were merely the qualification trials. But they pitted a new breed of rear-engined racers against the reigning kings of the Brickyard, the burly front-engined Offenhausers that have won every 500 for the past 17 years. No auto buff within driving distance wanted to miss any of the fun.

Everyone remembered last year when three tiny, British-built Lotuses powered by rear-mounted Ford engines showed up to challenge the Offies. They looked like go-karts, and their drivers were sports-car types, not Indy men. But then Grand Prix Champion Jimmy Clark, 28, drove one Lotus to second place, the U.S.'s Dan Gurney put another in seventh, and a roaring argument exploded over what might have been if Parnelli Jones's leading Offy had not dumped half its oil in front of the fast-closing Clark 25 laps from the finish. Now the rear-engined boys were back to settle the matter once and for all.

Records All Around. Clark and Gurney were both on hand with new Lotus-Fords—along with seven other drivers with Ford engines behind them. Nor were these the same souped-up versions of the old family Fairlane engine that raced in 1963. For this year, Ford had a brand-new, strictly racing engine with an aluminum block, double overhead camshaft, and a fuel injection system that cranked up close to 420 h.p.

First out of the pits was Clark, his exhaust winding up in a high, thin scream. For four laps, he howled around the track, and clockers stared openmouthed at the time: an average 158.8 m.p.h. per lap, an astonishing 7.7 m.p.h. faster than the track record set by Jones last year. Then came Bobby Marshman, 27, an Indy veteran and an ex-Offy man now driving for Lotus-Ford. In practice, he had roared around the track at an incredible 160.1 m.p.h. He settled for an average 157.8 m.p.h. during the qualification trials. Next was Roger Ward, still another old Offy man who brought out his new Ford-engined car and qualified at 156.4 m.p.h.

By dint of superb driving, those two old front-engine diehards, Jones and A. J. Foyt, pushed their standard Offies into fourth and fifth starting position, but then Gurney, taking it cool, slipped into sixth position in a Lotus-Ford. The qualification runs go on until this week, when the top 33 cars are chosen to compete on Memorial Day. There is always a chance that someone with a hot engine, front or rear, will rack up an even more spectacular time. Offy itself, after a year of experimenting, has a rear-mounted engine, and 14 of the 61 entries at Indianapolis were running with Offies behind. But they seemed far slower than the Fords, and the best a rear-mounted Offy could do by week's end was 153.8 m.p.h. to qualify in 8th position.

Big Question. The trials are not the race, and Offy partisans concede nothing. They point out that the Fords, for all their speed, are new engines, and the 500 is a machinery-destroying grind. But at the start at least, it looks as if the pole, the entire three-car first row, and four out of the first six positions belonged to Ford-in-the-rear. Growled Parnelli Jones: "Those Fords are pushing us Offy boys pretty hard."

SCOREBOARD

Who Won

▶ California: the Western Intercollegiate Rowing championship on San Diego's Mission Bay, beating Washington by one-half length. Rowing against strong tides over a 2,000-meter course, the undefeated Golden Bear crew pulled away from Washington at 1,000 meters, held its margin with a strong 40 strokes per minute, became early favorites, along with Harvard, for the Olympic trials this July.

▶ Overtrick: the $50,000 International Pace at New York's Yonkers Raceway, in 3 min., 3⅗ sec., only ⅗ sec. off the world pacing record for 1½ miles. The victory squashed rumors that Overtrick had gone lame, added $25,000 to the big bay colt's lifetime earnings, which now amount to $344,902.

▶ Mickey Wright, 29: first-place money ($1,250) in the Muskogee (Okla.) Civitan Open golf tournament with a three-over-par 213, nine strokes better than second-place Marlene Hagge. The victory, fourth in six tournaments this year, brought her 1964 winnings to $7,400, almost twice as much as any other woman golf pro.

The Nature of the Beast

The Thin Red Line. The only good soldier is a crazy soldier. In James Jones's story of the ghastly campaign on Guadalcanal, this thesis was expounded with passion, and in the picture adapted from the novel it is developed with vigor. But somehow, when the stereophonic tumult and the dubbed-in shouting dies, the spectator senses that once again he has been told

KEIR DULLEA & ENEMY IN "LINE"
Uncovering the killer instinct.

the tale of the crusty sergeant and the sensitive dogface who fought each other as hard as they fought the enemy but at last became buddies in battle on the island of Twaddlebanal.

The dogface (Keir Dullea) is scared and the sergeant (Jack Warden) knows it. "You think this whole stinkin' war has just got one purpose—to knock you off," he sneers. First day ashore, the purpose is almost achieved. A Japanese sniper wings the private and then moves in for the kill. But when the private sees the bayonet he goes beast, and when he comes to his senses again the sniper has been reduced to sukiyaki. "That was close, wasn't it?" the sergeant sniggers softly in the private's ear. "And now you feel guilty because you found out you like to kill."

"You're crazy!" the private screams, and no doubt the sergeant really is crazy, but he is also right. The private does like to kill, and every time he kills he likes it more. He likes it as much as the sergeant does, and he hates the sergeant because the sergeant won't let him forget that they are tigers of the same stripe, who go mad when they smell blood. When there is blood to smell, the tigers infest the screen with danger and excitement. When there isn't, and in every third or fourth scene there isn't, they suffer an embarrassing transformation. They begin to purr like patriotic pussycats, and their stripes turn suddenly red, white and blue.

Nevertheless, for observers who survive the crossfire of clichés, *Line* has some real rewards. Director Andrew Marton has put together a couple of masterly melees. And in the character of the private he has described with horrifying clarity the nature of the beast in men and nations that perennially threatens to engender Armageddon.

One Man's Homily

The Ceremony is a long-winded melodrama that can't decide which way to blow. Produced and directed by its star, Laurence Harvey, this film about a killer's escape from prison in Tangiers deplores the death penalty, sadistic bureaucrats, and nine out of ten cops. It adores condemned criminals and close-ups. But whenever the camera can wrench itself away from Harvey's grab-bag morality and his own vulpine profile, the supporting actors prove their worth. As Harvey's brother, Robert Walker gives the kind of performance that starts fan clubs springing up, and Girl Friend Sarah Miles, an *ignis fatuus* personified, fills her slattern's role with a kitten-in-the-rain charm that only the most heartless desperado could resist.

All Thumbs, None Green

The Chalk Garden. Transplanted from stage to screen, Enid Bagnold's witty, pitiless and elliptical high comedy yields only a withered bouquet of hearts and flowers. Made by Producer Ross Hunter, who customarily trafficks in Doris Daysies, the movie is all thumbs, none of them green.

Into an elegant manse atop the white cliffs of England's south coast ventures Deborah Kerr, beautifully coiffed and dressed for a royal weekend, doing her primmest impersonation of a gentlewoman fallen upon difficult days. Indeed, no one would suspect that she is a convicted murderess but recently released from prison. So Dame Edith Evans hires Deborah to tend her garden —where nothing grows—and to keep an eye on Granddaughter Hayley Mills.

"The child is fond of screaming," Dame Edith explains, because "by some extraordinary carelessness she was violated in Hyde Park at the age of twelve." Moreover, the child hates her mother, who has recently remarried, and she keeps threatening to burn down the house. While Deborah gallantly maneuvers to reunite mother and daughter and keep the home fires from spreading, the butler (Hayley's real-life father, John Mills) arranges luncheon for a guest, an elderly judge. Of course the judge's intimates call him "Puppy." Of course he is the very man who once condemned the lovely governess to death.

"let's see what ASEA can do"

Versatility and inventiveness have come to be regarded as leading features of the specific ASEA approach to electrical problems. All over the world you may hear important discussions being finished up with the decision: "Let's see what ASEA can do!"

ASEA's achievements in power technology – the production, transmission and distribution of electric power – are of world renown. Putting electricity to use presents a sphere of activity of equal scope for the company and, here too, ASEA research and development has been of decisive importance in creating new products and facilities, making technological improvements in industrial drives and automation, electric furnaces, traction and transport.

With production facilities in 7 countries and representation in 65 countries, ASEA is a thoroughly international group of companies in every sense of the word. You will find it easy as well as worth-while to contact the ASEA organisation to "see what ASEA can do".

a creative force in the electrical field **ASEA**

Head Office Västerås, Sweden. Represented in 65 countries.

CORPORATIONS

The Bell Is Ringing

(See Cover)

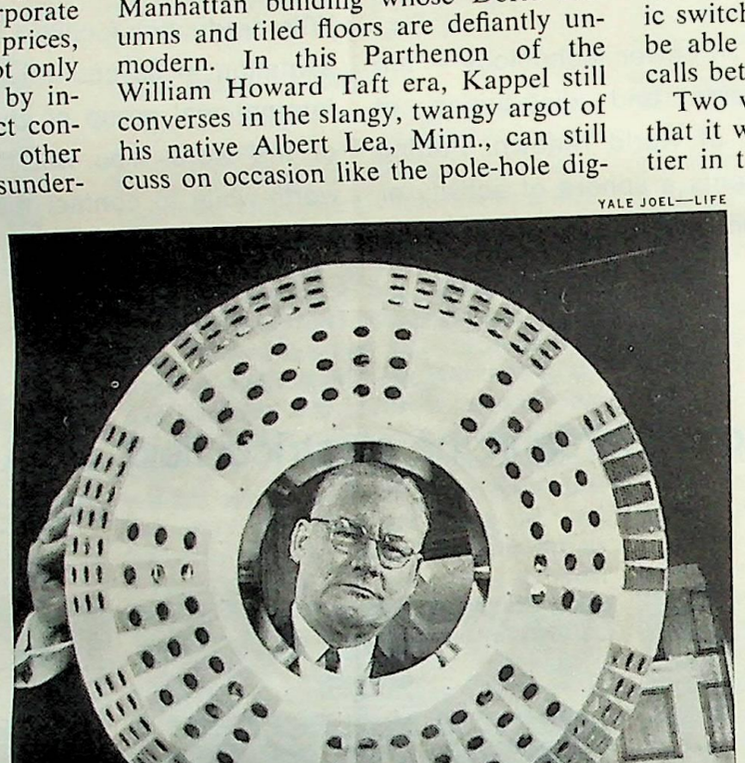
The world's biggest company is a bundle of paradoxes wrapped in a string of superlatives. It makes a product that cannot be bought and lives on a commodity that cannot be seen. In a nation that idealizes competition, it has practically none. Unlike other corporate giants, it cannot set its own prices, which are carefully regulated not only by the Federal Government but by individual states. It has more direct contact with Americans than any other company, yet it often feels misunderstood. Few companies are more conservative; none are more creative. It has grown huge by paying attention to little things—little efficiencies, little economies, little people. It is that ubiquitous firm whose business is talk and whose product is the telephone: the American Telephone & Telegraph Co.

At A.T. & T., superlatives recur with the persistence of a busy signal. An outsize and aggressive utility, the company owns, operates and services 83% of the nation's 84 million telephones—nearly half of all the phones in the world. Its assets of $28 billion top those of General Motors, General Electric and U.S. Steel put together, and since 1945 it has raised enough new capital ($26 billion) to buy up the gold reserves of the U.S., Britain and several European countries. With 733,000 workers, the company employs a labor force greater than the population of Boston; its annual wage bill of $4.7 billion exceeds the gross national product of Ireland and Israel combined. A.T. & T.'s 1963 revenues, which reached almost $10 billion, amounted to more than the combined incomes of 30 state governments and accounted for 1.7% of the gross national product.

Long Noses. By virtue of his position as head of this colossus, the chief executive of A.T. & T. is automatically the biggest businessman in the nation. For eight years that post has been held by a square-cut, thin-lipped man named Frederick Russell Kappel, who happens to be very much like the corporation he heads—a creature of power and paradox. Chairman Kappel (rhymes with apple) mixes freely among the mighty in science, politics and business. The 65 corporate chiefs who make up the prestigious U.S. Business Council, a group that advises the Government, have elected him their chairman. Lyndon Johnson often calls Kappel to discuss the state of U.S. business, is also one of A.T. & T.'s best customers.

But for all the importance and respect his position brings, Fred Kappel, at 62, remains essentially a small-town boy who retains the earthy and often unsophisticated ways of the heartland. He runs the most modern of corporations from an old-fashioned office in a lower-Manhattan building whose Doric columns and tiled floors are defiantly unmodern. In this Parthenon of the William Howard Taft era, Kappel still converses in the slangy, twangy argot of his native Albert Lea, Minn., can still cuss on occasion like the pole-hole digger he once was. One significant term that often salts his conversation is "long-nosed." Says Kappel: "It's a term I use to mean looking ahead, planning ahead. I like to think of the Bell System as a long-nosed company."

YALE JOEL—LIFE



KAPPEL & TELSTAR PART
He's got your number.

See-As-You-Talk. Today, the company that thrives on talk is creating quite a bit of talk about itself—most of it by being long-nosed. In search of new and better ways to transmit words and TV pictures (most network TV programs are transmitted over A.T. & T.'s telephone lines), A.T. & T. is reconnoitering the frontiers of technology and expanding man's inventory of knowledge. It built Telstar in its labs, and will play a major role in the new Comsat Corp., which plans to ring the earth with communications satellites within two or three years. This fall it will start laying a fourth cable to Europe beneath the ocean, and last week it completed the first telephone cable to Japan. In typically prudent fashion, the tele... company is preparing for just abo... eventuality: late this year it w... ish a $200 million underground ... across the U.S. that will be able to ... important calls even if all ... ground wires are destroyed in a n... attack. It is also developing a wi... ray of new equipment, including ... button phones, which have just ... into use in 35 cities, and a new ele... ic switching system so swift that ... be able to handle 1,000,000 tele... calls between two ticks of the cloc...

Two weeks ago A.T. & T. anno... that it will soon cross yet another ... tier in technology: it will put into ... lic operation the world's ... see-as-you-talk Picture... service. Already on v... A.T. & T.'s pancake-s... pavilion at the World's ... the Picturephone will ... service next month in ... booths in New York, C... and Washington, offer ... between those cities to ... who are willing to pa... that will range from $... $27 for three minutes. SCIENTIST WITH PICTUREPHONE
They never cease inventing.

A.T. & T. embraces in the Bell System. He also takes time out from each busy day to study stacks of mail from customers and stockholders on the theory that "it's a good way to get a feel for what people are thinking," has ordered that every letter must be answered within seven days.

Kappel is convinced that life's biggest kicks and greatest challenges come from working in the large corporation. "This 'Organization Man' thing makes me disgusted," says he. "When someone talks that to me I say he doesn't know what he's talking about. Somebody who is really running a railroad must do his job and not be afraid about making mistakes. I've made all kinds of mistakes. Somebody who never makes a mistake is sitting on his fanny not doing anything. But a man ought to be right more than half the time."

Percentage Player. Kappel has seen to it that he has been right more often than that. A barber's son who worked his way to an electrical-engineering degree at the University of Minnesota ('24), he joined A.T. & T. 40 years ago at $25-a-week. He was soon promoted from pole-hole digger to such jobs as "interference engineer" and "foreign wire relations engineer" and spotted by his superiors as a cool, unflappable fellow not given to snap decisions. Every night he took home a briefcase heavy with homework, and even when he went to the ballpark he took along other A.T. & T. people to talk operations and engineering. He steadily moved up 14 levels on the corporate escalator to a vice-presidency of A.T. & T's Northwestern Bell. He was called to New York headquarters, became president in 1954 of A.T. & T.'s manufacturing arm, Western Electric, and took over as president and chief executive of A.T. & T. in 1956. Says Kappel, who became board chairman in 1961: "I've never had anything I didn't get for myself."

Chairman Kappel now earns $271,667 a year and lives in a four-bedroom, six-telephone house in Bronxville, a New York suburb. He allows few expensive tastes to enter his well-modulated life. His wife does the cooking, except for parties. Kappel doesn't smoke, rarely drinks, and faithfully attends Bronxville's Dutch Reformed Church, whose 3,000 members make it the largest church of that denomination in the U.S. He does not openly participate in party politics ("I don't believe that I should"), but he likes to read books of a political nature. Among his recent favorites: J. Edgar Hoover's *Masters of Deceit* and Victor Lasky's *J.F.K.: the Man & the Myth*. Regularly, every two weeks, he plays with a bridge club, also enjoys an occasional shrewd game of poker. "He is a percentage player, not a chance taker," says a man who has often watched his game.

Much Like the Army. Kappel is the prototype of the A.T. & T. executive, that particular type of U.S. manager whose training and abilities make the telephone company about the best-managed firm anywhere. One former A.T. & T. vice president wrote that the company's management system "is much the same as the Army's." A.T. & T. is a pure meritocracy, run by men who started at the bottom and worked up, step by step, winning the nod of many bosses along the way. The executives at A.T. & T. combine in themselves dedication, sense of service, awareness of public responsibility, invocation of old-fashioned virtues, puritan earnestness, Rotary Club friendliness, and a touch of self-righteousness. They consider themselves a breed apart —and they are. They value continuity and gradualism in management more than most, and, though at ease in handling vast sums, run their company with a peasant's fear of debt and the thrifty conviction that every piece of installed equipment ought to be good for 40 years. Most of all, they view their job—helping the people to speak —as an almost priestly calling.

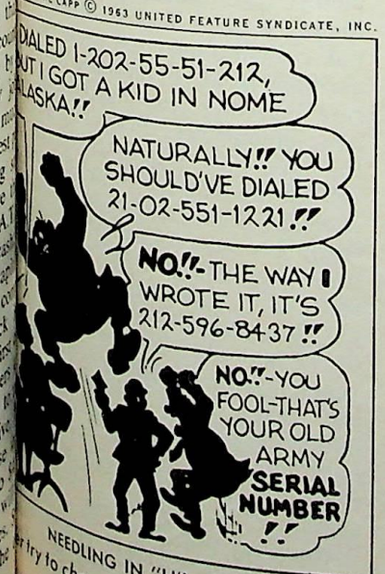
To make sure of a continued supply of such men—they are not born, but made—A.T. & T. has developed one of U.S. business's most advanced programs of management training and evaluation. Every year it deploys 300

...ssue, and thousands sent the company ...lank checks in an unprecedented show ...of confidence, asking A.T. & T. to fill in ...the cost of whatever they could buy.

More shareholders have placed their ...avings and hopes in A.T. & T. than in ...ny other corporation. It is a haven for ...,250,000 investors, many of whom are ...nnutored in the nuances of high finance ...but feel certain that the nation's largest ...mpany will prosper so long as the ...ation itself does. A.T. & T. has so many ...ockholders that 20,500 of them are ...amed Smith, and 100 die every day. ...hree-quarters of them own fewer than ...0 shares, and the biggest holder, Wall ...reet's Merrill Lynch, keeps most of ...3,600,000 shares for small-customer ...ccounts.* No wonder that Wall Street ...lls A.T. & T. "the widows' and or...ans' stock," and shareholders affec...nately refer to it as "Ma Bell."

"I've Made Mistakes." Not everyone ...ares this fondness for the telephone ...mpany, but almost everyone has an ...inion about it. To U.S. military chiefs ...a first-class defense contractor, and ...ntists consider its Bell Labs to be ...finest industrial-research establish...nt anywhere. A.T. & T. has become ...much a part of the American scene ...it is at once a source of envy ...admiration and a butt of jokes. ...Cartoonist Al Capp, whose *Li'l ...ner* delights in needling Mother Bell: ...this country, if we don't like our ...es, or even our Government, we ...change them. But have you ever ...d to change your phone company?" ...Fred Kappel does not take kindly to ...impertinent questions. He likes ...think of A.T. & T. as a warm and ...thful creature, and of anyone who ...s not like its predominance as some...g of an ingrate. He lists his own ...e-phone number in the directory ...and so do the presidents of the 23 ...nal operating companies that

...rgest individual owner: Showman Billy ..., whose 80,000 shares, worth $11.2 mil...at the current price of $140 each, have ...ght him $288,000 in dividends during the ...ear.



NEEDLING IN "LI'L ABNER"
...try to change your phone company?

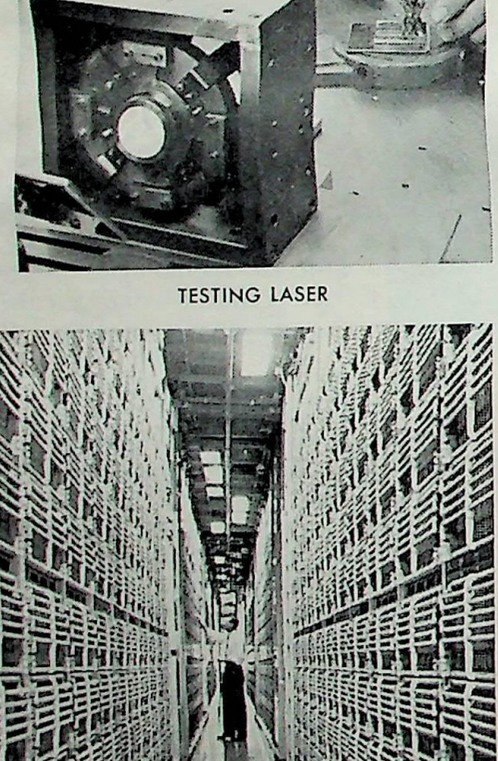
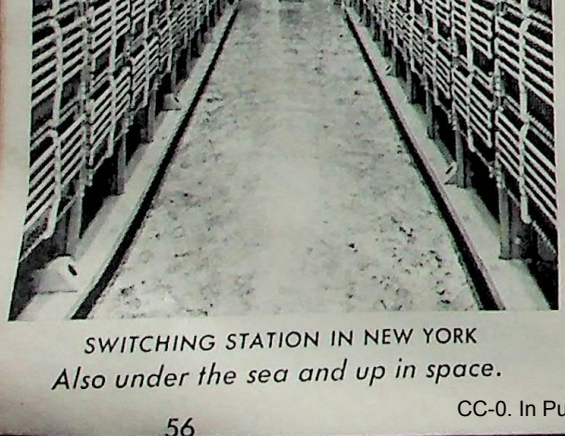
EXPERIMENTING WITH NUCLEAR FRAGMENTS



TESTING LASER



SWITCHING STATION IN NEW YORK

Also under the sea and up in space.

recruiters to search out 2,500 to 3,000 trainees on the nation's campuses. They pick their men only from the top half of the graduating classes, and look for those who have spent more time in the libraries than in the stadiums: A.T. & T.'s studies show that marks are the best indicator of how a candidate works out later, extracurricular activities the least reliable. The head-hunters offer good starting salaries ($6,300 to $7,200) and a stock-purchase plan. Half of all employees own A.T. & T. shares, most of them bought at 85% of the market price and sometimes in installments; but no one in the company ever gets a stock option. About 900 men in Bell's system make $25,000 or more.

The new recruit soon learns that A.T. & T. insists on making one man —any man—ultimately responsible for every single project, however big or small, and that he stands to take the blame if that project sours. As soon as he joins the organization, each candidate is tossed into the decision-making maelstrom, perhaps as chief of a small-town office or traffic department, where his performance can be easily measured. About 20% of all trainees wash out in the first year, but even those who do not make A.T. & T.'s stiff grades are scooped up by other companies eager to hire men with some Bell seasoning.

Internal Competition. To save itself from becoming fat and lazy like most monopolies, A.T. & T. purposely sets up internal competition. It pits man against man, office against office, district against district—and carefully rates each performance on report cards that are analyzed by efficiency experts. "We have people breathing down everybody's neck," says one high personnel man at A.T. & T. The company even rates its accounting departments according to how many pieces of paper each one processes; woe to the junior executive who finds himself saddled with slothful clerks. Every month the company publishes its "Green Book," a 32-page pamphlet that critically compares the performance of Bell's operating companies, one against the other, in 41 categories that range from the percentage of calls affected by static (yearly average: 2%) to the rate of resignations (yearly average: 2.4% for men, 17.6% for women).

Many other companies try to copy A.T. & T.'s training and rating program, but they cannot copy the advantage that bigness gives to Bell. A.T. & T. has so many operating companies, divisions and branch offices that it has plenty of demanding and responsible jobs in which to develop and store up executive talent. Men with the stamp of success on them are groomed for high management positions as much as 30 years in advance. Some of the young executives are interviewed every year by one or more of A.T. & T.'s 20 staff psychologists, who plumb their changing moods, opinions and goals.

The men who travel farthest in this obstacle course are tough, well and able. At the very top, A.T. run by a 23-man group that is Kappel and President Eugene Neely, 63, a stern taskmaster pervises operations and person has followed Kappel into three tive positions since 1949. This is known to company insiders Cabinet." It is made up of an ly close-knit and like-minded men (median age: 57) with similar backgrounds. They feel comfortable with their own kind to the extent of lunching together day in the 22nd-floor executive room. Three-quarters of them from small towns, only a handful to Ivy League universities, and them have engineering training age when more and more are bossed by accountants, sales lawyers, A.T. & T. remains one few giants dominated by engi with all that implies of diligence dence and respect for proven

Conformity or Chaos. Sharp a.m. every Monday, the Cabinet bers sit down in red leather armc the 26th-floor board room for hour meeting. One by one, each briefs the others on development division—new products, spending struggles for higher rates. But the inet seldom wastes time on de minor decisions. All down the A.T. & T.'s middle executives solve all problems long before reach the vice-presidential level only the knottiest ones to the If there is then a dispute, Kap the last word. "I may get into ment," he says. "There's nothing than somebody who agrees with thing. We all agree in advance agree with anything unless we believe in it." But he also argues "there must be some conformity against conformity is to be a der and for chaos."

Though such a sprawling co beyond the power of any one change it substantially, Kappel his mark on A.T. & T. Perhaps nal contribution has been to earnings nicely by pushing through rate increases and introducing new efficiencies. Long-distance tors are now taught by progr instruction textbooks, which cheaper than human teachers reading courses have cut the time that information operators to look up a number from 37.6 to 33.3 seconds, at an annual of $8,000,000. During Kappel years, earnings have jumped last year's $1.5 billion—after and state taxes of $2 billion. habitually pays out 62% of its dividends and invests the rest spending.

Keeping the Reins On. Fre contends that A.T. & T. needs er profits to grow on, but he opposition in Washington.

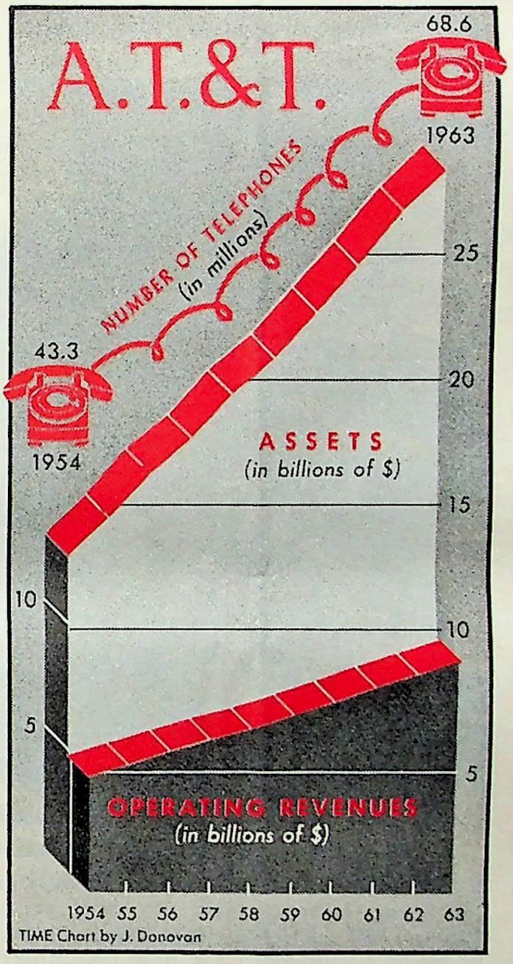
ernment officials insist that his compa-
ny is already too profitable and too
powerful. In terms of return on net cost
of plant, the usual gauge of profitabil-
ity in utilities, A.T. & T. earns some-
what more than the average: 7.2%. The
General Services Administration, repre-
senting the Government as a user in reg-
ulatory hearings, has recommended that
Bell's return should be limited to 6.6%,
and the staff of the Federal Commu-
nications Commission, which regulates
the Bell System and its interstate rates,
has suggested 6.5%. So far, the FCC's
seven commissioners have refused to go
along with this recommendation.

A.T. & T. aims at getting an 8% re-
turn whenever it can. It has to negoti-
ate constantly not only with the FCC
but with local commissions in the 48
states in which it operates (all except
Alaska and Hawaii). In 47 of them,
A.T. & T. hammers out local phone
rates with state commissions, but in
Texas it has to dicker with no fewer
than 1,500 town councils. Rates vary
widely, depending upon how much
money A.T. & T. has invested in an
area, how many numbers residents can
call without paying a toll and what the
local commission will allow. When
commissions agree to give A.T. & T. in-
creases, they sometimes find it politic
to hold local rates steady but to raise
the charges for phone installation and
for such extras as color phones. De-
spite some increases, rates have not ris-
en as much as the overall cost of liv-
ing. While the U.S. consumer price in-
dex has gone up 59% since 1946, local
telephone rates have increased 48%;
interstate rates have actually dropped
20% since 1940, thanks to a combina-
tion of new efficiencies, higher volume
of calling and pressures from the FCC.

Breaks for the Little. Last year the
FCC forced the company to reduce
some of its long-distance rates, so that
anyone can now call anywhere in the
continental U.S. after 9 p.m. for no
more than $1 for the first three min-
utes. Two months ago, the FCC hit
from the other side: it ordered A.T. & T.
to raise rates on its "cheaper-by-the-
dozen" Telpak service, which transmits
printed as well as spoken messages over
big bundles of circuits. The commission
felt that A.T. & T. had originally priced
this fast-growing service abnormally
low in order to attract big users. At the
same time, the FCC denied A.T. & T.'s
request for permission to send printed
as well as spoken messages through its
own transatlantic cables, but granted
the right to international competitors
to lease channels within the cables.
In an open admission of favoritism for
such companies as RCA, Western
Union International and International
Telephone & Telegraph, one FCC of-
ficial said: "They're the little boys, so
they deserve the breaks."

But the big boy has always man-
aged to win the most important battle;
A.T. & T. defeated the Justice Depart-
ment's persistent attempts during the
Truman and Eisenhower Administra-
tions to divorce it from Western Elec-
tric, and not much is heard about that
any more. A virtual monopoly almost
since it was founded in 1877, the Bell
System has preserved its special status
by arguing that it is much more efficient
and economical than a lot of little, lo-
cal phone companies would be. It has
agreed not to invade the territory of the
2,645 independent companies that con-
trol the remaining 17% of the phone
business. Largest of the independents by
far is General Telephone & Electronics
Corp., which has 5,000,000 phones as
well as extensive manufacturing and re-
search facilities. By buying up smaller
companies and shrewdly moving into
rural areas and fast-growing suburbs



that A.T. & T. does not reach, General
Telephone has lifted its sales 1,450%
in the past dozen years—to last year's
$1.4 billion. A.T. & T. has barely ex-
panded its area of coverage in 42 years,
and in 1956 the Justice Department or-
dered it to open its thousands of patents
to all comers.

Lovable Green Giant. Always sensi-
tive about its bigness, and reluctant to
be viewed as the great profitmaker that
it is, A.T. & T. has devised one of the
most effective lobbying and public rela-
tions systems in industry. It keeps many
discreet and well-connected lobbyists in
Washington and in the state capitals.
The phone company's public relations
campaign paints it as a lovable green
giant of communications. In fact, it is so
anxious to be loved that it polls 80,000
stockholders each year to find out what
they think about the company, even
financed a study to determine whether
public telephones are dangerous germ
carriers. A.T. & T.'s answer: No.

Employees take company courses in
politeness and courtesy, are constantly
reminded that they and their customers
have no fewer than 10 billion conversa-
tions a year. A.T. & T. executives are
encouraged to lead civic-uplift drives,
and to join many public service groups.
Once they have joined, they frequent-
ly volunteer to make speeches about
A.T. & T. or show company films,
preaching such slogans as "The Voice
with a Smile Is Still Behind Your Dial"
and "Whatever the Future Brings, It's
Still People Talking."

Fred Kappel himself gives about a
dozen public speeches a year, and in one
of them, delivered four years ago at
Columbia University, he said that "low
tolerance for criticism" is a sign of loss
of business vitality. A.T. & T. certainly
has plenty of business vitality—and
plenty of sensitivity to criticism. Kap-
pel calls A.T. & T.'s Washington critics
"breaker-uppers" and "glorified publici-
ty seekers." Fortnight ago, at the Busi-
ness Council's meeting in Hot Springs,
Va., he deplored increasing regulation
of business by Government, and he be-
lieves that A.T. & T. could have moved
much faster toward creating a large net-
work of Telstars if the Government had
only given it permission to go ahead. As
it is, the ownership of Comsat Corp.—
whose shares were approved for listing
two weeks ago by the New York Stock
Exchange—will be divided among the
public and the nation's communications
companies. The size of A.T. & T.'s stake
has not yet been determined, but it will
be substantial.

Hotter Meetings. When it comes to
the customers, Kappel is often more
puzzled than angered by complaints. He
admits that A.T. & T. made a tactical
error in pushing all-numeral dialing
without a public educational campaign.
By abandoning the familiar exchange
prefixes (KLondike, PEnnypacker, GYp-
sy) and forcing users to dial seven num-
bers, A.T. & T. raised the possible total
of phone numbers in any area by 50%.
But it also raised an uproar, was soon
accused on all sides of an Orwellian
scheme to dehumanize everyday life—
even though it would really have had to
dehumanize life by ultimately limiting
service if it did not have the new sys-
tem. "We've got to do it if the country
is going to grow," says Kappel. "But I
don't believe we did very well when we
started explaining it. We took the atti-
tude it's something we've got to do, and
why the hell bother to explain." The
fuss has since died down, and the advent
of direct distance dialing will, within
the next decade, enable telephone users
to call any major country in the world
by dialing twelve digits.

Other telephone customers complain
that A.T. & T., which owns all its equip-
ment and only rents it to subscribers,
will not permit them to hook up an-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tique phones, and that it charges them 50¢ a month extra for an unlisted number in New York City and Philadelphia; Cinemactor Tony Randall, who can well afford it, has dodged the charge by listing his number under a phony name, Irvine W. Tishman. As in many another company, A.T. & T.'s officers also are getting more and more harassment at annual meetings. Kappel has special controls behind the rostrum at which he stands to cut off any speaker who becomes too windy or unruly. But he delivered his most effective cut without benefit of switch at the April 15 annual meeting, where a professional meeting-goer asked a seemingly endless round of questions, including one seeking to know how much A.T. & T. gave to charity. Told that the amount was $10 million last year, the woman said: "Mr. Chairman, I think I'm going to faint." Replied Kappel coolly: "That would be helpful."

Hooray! For all the complaints, big and small, A.T. & T. has given the U.S. the world's least frustrating telephone service with the world's most trouble-free gadget. Kappel points out that the average U.S. phone needs a repair only once every five years; except in times of flood or other natural disasters, no A.T. & T. switching office in the past 40 years has been out of order for as long as ten minutes. No place is too inaccessible, no service request too small for A.T. & T.'s telephone men. They have put up phone booths in the middle of forests for the convenience of hunters, offer phones with gentle chimes for those who cannot stand the regular bells. Even former FCC Chairman Newton Minow, a voluble critic of many other institutions, told a Senate committee last year: "Having just returned from Europe, I would say hooray for the phone service you get here."

That service is growing even faster than the U.S. Every working day, A.T. & T. installs 11,500 new phones and handles 251 million calls. The number of Bell telephone calls within the U.S. is expanding by 15% a year, and A.T. & T. is straining to prevent a massive clogging of overloaded circuits by steadily expanding and improving its equipment. Actually, the Bell System is one great computer, linked by 2½ billion interconnections and by enough copper wire to spin a four-ply cable to the sun. The computer's innards are an orderly assemblage of $24 billion worth of the most sophisticated equipment ever devised, and its long limbs sprawl over 3,000,000 square miles of city, plain, mountain, valley and river. It is in constant change, works around the clock, seldom errs—and often corrects itself when it does.

Kappel and his long-nosed engineers never cease devising comely new gadgets to hook onto this computer to bring more profit to A.T. & T. and to add luster and convenience to what they call "p.o.t."—plain old telephone service. They have successfully sold the idea of color for telephones: 21 million colored phones are now in use in U.S. homes. For a monthly charge of $25 to $35 apiece, they have installed 17,000 telephones in cars and trucks, including several in Lyndon Johnson's autos. Though 37% of the nation's telephones are already extension phones, A.T. & T. executives figure that less than a quarter of U.S. homes are "fully telephoned"—having all the telephones they could use.

An even greater field for expansion lies in the area of business phones, which already account for fully half of A.T. & T.'s revenues. The company's new pushbutton Touch-Tone, which reduces the average "dialing" time from nine to four seconds, will make every business phone a candidate for replacement. Cost: $5 for installation, plus $1.50 to $1.90 extra a month. Another innovation that A.T. & T. recently introduced is the Card Dialer, which enables a user to reach frequently dialed numbers by slipping a punched-hole plastic card into the base of the phone. It cuts dialing time to two seconds, costs $15 to install, plus $3.50 a month extra, with 40 free cards. This year A.T. & T. will bring out the Trimline phone, whose dial is embedded in the receiver; aside from being good-looking, it also will be a boon for the nearsighted and the bedridden.

YALE JOEL—LIFE

McNEELEY & KAPPEL WITH CARD DIALER
For those in Bell, an almost priestly calling.

The Hell with Economics. These new products—and the ideas behind them—spring from the fertile soil of two A.T. & T.-owned giants in their own right: Western Electric and Bell Labs. Western has 149,000 employees, turns out more than 50,000 kinds of communications gear, and buys parts and materials from small businesses in some 3,000 U.S. towns. U.S. busters complain that Western equipment to A.T. & T. at half price it charges competitors, out that it earns only 5% on its Kappel argues that if A.T. & T. did have Western, its own costs jump by hundreds of millions a and rates thus would have to go Says he: "Our first command to ern Electric is the hell with econ—produce something that will the phone business."

Ideas are the chief products at brated Bell Labs, where 4,575 entists are engaged in what K calls "the exploration of dreams." dreams range from figuring out to stop squirrels from chewing up phone wires to devising a typew that could work by oral dicta Endowed with virtually limited resources and dom, Bell Lab scientists made such major through discoveries as astronomy, magnetic-tap corders, hi-fi, and the important invention World War II, the tran

Thanks to the tran Bell next year will beg slowly convert to a fully tronic switching system will enable the phone to reach frequently numbers by dialing onl digits, to call third p onto the line, and to s incoming calls to other bers if he leaves his or office. MONEY

Conflicting Goals

The economies of the Western nations have been steadily drawn together since the end of World War II by such devices as the World Bank, the International Monetary Fund, the Common Market and countless little meetings among world bankers. Last week, as 700 bankers from 14 nations assembled in Vienna's baroque Palais Schwarzenberg for the annual international conference of the American Bankers Association, some major signs of discord and conflict came to the surface. Said one top U.S. economic policymaker: "There's a tendency to see the divisive factors in the Atlantic alliance as strictly political. Actually, some of the worst problems are economic."

Imbalance & Interest. The alliance faces two basic economic problems: Europe is wrestling with persistent inflation, and the U.S. is fighting a pernicious international payments imbalance and gold outflow. These two problems captured the attention of the meeting, which included almost everybody who is anybody among the world's money managers—from IMF Managing Director Pierre-Paul Schweitzer and Deutsche Bank Chief Hermann Abs to Morgan Guaranty Chairman Henry C. Alexander and the U.S.'s Gardner Ackley, a member of the President's Council of Economic Advisers. The more they talked, the more obvious became their conflicting goals. Nearly every important measure that Europeans take to check inflation tends to aggravate the U.S. balance-of-payments problem. Higher interest rates, which have the effect of curbing demand, are the main weapon that Europeans are using against inflation. Already this year, the central banks of Britain, West Germany and Switzerland have increased rates; last week delegates in Vienna predicted further boosts before long by Britain, Italy and The Netherlands. Europe's high and rising rates tempt many big bank depositors—including some oil-rich Middle Eastern sheiks and Latin American strongmen—to shift their funds from the U.S. to Europe. Though U.S. Treasury Secretary Douglas Dillon reported that "U.S. international payments so far this year have been in approximate balance," he expects the U.S. to do less well as the year goes on, particularly if the European interest rates keep going up.

F. MAIER

ACKLEY AT VIENNA MEETING
Gains and pain from inflation.

Oddly enough, the U.S. also will do less well if the Europeans succeed in tamping their inflation. Europe's rising prices have made U.S. goods more competitive in many world markets and helped to lift U.S. exports to a record $22 billion last year. Says Economist Ackley: "There's no question but that Europe's inflation has helped the American economy."

Clash & Cameras. The fact that the U.S. and Europe are at odds seriously threatens their greatest current attempt to create still more economic interdependence: the so-called Kennedy Round tariff talks that aim to cut almost all duties in half. The Europeans at Vienna tried to disarm the U.S. delegates of their fears that General De Gaulle may scuttle those negotiations, but the chief U.S. tariff negotiator, Christian Herter, was uncharacteristically pessimistic. It became clear at Vienna that unless the U.S. and Europe can resolve their immediate conflicts, the march toward Western economic unity may be set back in a way that would affect the pocketbooks of everyone who buys anything from Japanese cameras to German Volkswagens.

BRITAIN

Dunlop Rides High

Few corporations have a closer or more constant contact with the ordinary Englishman than the 75-year-old Dunlop Rubber Co. Dunlop makes the hot-water bottle he tucks into bed with him, the galoshes he depends on in England's soggy climate, the hose he waters his roses with, and the cricket bat he wields. Most of all, Dunlop makes his tires: half of all British vehicles roll on Dunlops. With car sales strong, business is bullish. This week the company will report that profits jumped 14% last year to $77.5 million on sales of $792 million.

From Uganda to Indianapolis. The world's biggest rubber-goods manufacturer outside the U.S., London-based Dunlop has 51 plants in Britain and 60 more in 15 countries, including one in Buffalo, N.Y. Though its sales rank behind those of the U.S.'s big four (Goodyear, Firestone, U.S. Rubber, Goodrich), Dunlop boasts that it is the most technologically advanced and versatile

ALAN CLIFTON

GEDDES & RACING TIRE
Profit from 1,800 varieties.

of the lot. American tires are meant for high-speed driving on well-paved streets, but Dunlop develops different tires for different kinds of roads. Its Hi-Mu broad-tread tires are specially designed to grip wet British roads, and its engineers at Birmingham's sprawling Fort Dunlop plant—known to employees as "The Vatican of Rubber"—have fashioned tires for smooth German autobahns, cobblestoned French lanes and rock-strewn African trails.

To test the tires and to reinforce its image, Dunlop eagerly participates in auto racing. Every world championship Grand Prix winner since 1959 has worn Dunlops; the Indianapolis Lotus of Current Champion Jim Clark (*see* SPORT) is similarly equipped.

Up from Tricycles. Dunlop rolled into the rubber business aboard a tricycle. Scottish Veterinarian John Boyd Dunlop fashioned a set of pneumatic tires for his small son; they rode so well that he went into business making racing cycle tires. The company still manufactures 4-oz. bike tires for racers. But it makes 1,800 other varieties as well.

Tires represent 60% of Dunlop's business. The rest includes such diverse items as disk brakes, moving sidewalks, even high-fashion boots. With Britons enjoying more leisure time than ever, Managing Director Reay Geddes, 52, is working to see that they spend it using Dunlop golf clubs, tennis rackets, fishing tackle—or latex foam mattresses. Tall, grey-eyed Geddes, who has roamed the world as a salesman, is also busily reorganizing his company. "We had become too big and too varied for a central form of management," says he. Geddes has given more autonomy to managers of Dunlop's 130 subsidiaries, spends much of his time flying to his factories and overseas rubber plantations on inspection trips. The planes he rides, naturally enough, touch down on Dunlop tires.

A Saint in Politics

CORDELL HULL *by Julius W. Pratt.* 2 volumes, 840 pages. Cooper Square. $15.

When President Roosevelt was about to appoint Cordell Hull Secretary of State, five Democratic Senators complained that Hull was too idealistic for the job. The objection was unusual, and F.D.R. laughed it off; but this first biography of Hull shows that the Senators had a point.

A diplomatic historian for 40 years, Julius Pratt has taken a close look at the Hull record. He plowed through the Hull papers in the Library of Congress, the unpublished papers of some of Hull's State Department colleagues. Pratt has written a spare, straightforward narrative that steers shy of judgments. But he does lead a reader to the inescapable conclusion that Hull—an amalgam of idealism, caution, and at times heroic stubbornness—was not up to the job of Secretary of State, even though he held it for nearly twelve years, longer than anyone else.

Confidence of Congress. Hull was a likable Tennessee politician, who became a state circuit judge at 32, served 24 years in Congress and was elected Senator in 1930. Frail but craggy in appearance, he struck people as the solidest of citizens. He looked dignified, even saintlike. He spoke with gravity and with a slight, endearing lisp. When he helped put Roosevelt over at the 1932 Democratic Convention, he was practically assured appointment as Secretary of State. He brought to the job a conviction that all the world's ills could be cured by lowering tariffs and living up to the principles of international law.

In a matter of months, Hull learned the major fact of his new job: Roosevelt intended to be his own Secretary of State. The lesson came when Hull went to the much-vaunted World Economic Conference in London in 1933 with the hope of increasing international trade by stabilizing the world's wildly fluctuating exchange rates. Roosevelt was experimenting with inflation as a cure for the U.S. Depression and did not want to peg the dollar. He torpedoed the conference (and Hull) with a disdainful note saying the U.S. would not cooperate.

But Hull had the confidence of his old colleagues in Congress, and in 1934 he persuaded Congress to pass the Reciprocal Trade Act, allowing the President to negotiate tariff cuts with other countries without having to go to Congress for authorization.

No-Good Neighbors. Hull worked hard to promote the Good Neighbor Policy in Latin America, but had a harder time persuading Nazi Germany to be a good neighbor. If Roosevelt was cautious in speaking out against Hitler for fear of antagonizing the isolationists, Hull was even more timid. He objected to Roosevelt's provocative speeches, argued down such formidable Cabinet colleagues as Henry Stimson and Frank Knox, who were urging direct action against Germany. In 1940 Canada was worried that Germany might invade Greenland and suggested sending some troops there. Hull vetoed the idea as too inflammatory. Soon after, Iceland pleaded for U.S. protection; again Hull said no. F.D.R. overrode him and sent a destroyer to the island.

From then on, the President bypassed Hull, at least in the European theater, and relied on Stimson, Hopkins or Under Secretary of State Sumner Welles for diplomatic chores. By 1943 Hull was humiliated enough to force a showdown. Either Welles had to leave the State Department, he told F.D.R., or he would. Though Welles was a close friend, F.D.R. knew the domestic political value of Hull. Welles left.

HOLMES I. METTEE

CORDELL HULL
The courage of his illusions.

Hull had a freer hand in the Far East. The most important job of his career was handling the touchy prewar negotiations with the Japanese. Hull doggedly insisted that the Japanese clear out of China, as well as out of Southeast Asia, before he would discuss anything else. The Japanese refused to budge. When Pearl Harbor was bombed, Hull admitted the Japanese negotiators into his office and, according to legend, gave them an old-fashioned cussing-out that all Americans cheered. Historians today generally agree that war with Japan was probably inevitable, but it has been argued that Hull never really gave diplomacy a try.

Hull was equally stubborn about Gaulle. The leader of the Free F... exasperated him by criticizing U.S. ... gotiations with Vichy France (... paid off handsomely in the Allied ... African landings). When De Gaul... dered the Free French to occup... Vichy island of Saint-Pierre, o... coast of Newfoundland, Hull flew ... a rage from which he never ... recovered. "Amid gigantic eve... Churchill marveled, "this small ind... seemed to dominate in his mind."

Least excusable of Hull's po... Pratt implies, was the pressure he ... on Chiang Kai-shek to come to ... with the Chinese Communists. ... cerned above all with military v... over Japan, Hull wanted the Co... nists in the war; Chiang had ... boxed into northwestern China. C... repeatedly said that the Comm... had only one ambition: to take ... China. Hull responded that the ... eralissimo showed a "discouraging ... of progress in his thinking."

However, in 1944, his last ye... office, Hull helped foil one mane... the incredible Morgenthau Plan. ... sumably authored by Assistant Tre... Secretary Harry Dexter White, a C... munist sympathizer, the plan pro... to destroy all German industry ... "pastoralize" the nation. Hull wro... er: "It angered me as much as ... thing that had happened durin... career as Secretary of State."

Euphoric Future. Hull shared ... Americans' illusions about Stalinist ... sia. From F.D.R. down, most o... Administration believed that R... would behave nicely in the po... world if the U.S. went out of it... to be friendly. In Moscow in ... Hull persuaded Molotov to agree ... postwar international organizati... return for Allied concessions: one-... of the ships of the conquered I... navy transferred to Russia, reassu... of a second front in the spring of ... In a euphoric mood, Hull went ... to address a joint session of Con... "There will no longer be nee... spheres of influence, for alliances ... balance of power, or any other ... special arrangements through whic... the unhappy past, the nations stro... safeguard their security or to pro... their interests." On the strength of ... vision, which was shared by many ... worked unstintingly to create ... United Nations.

In many ways, the U.S. was luck... have Hull as Secretary of State ... prewar years. Though a Wilsonian ... eral, he had the respect of the ma... conservatives. He helped swing ma... opinion from isolationism to inte... tionalism. But like his mentor Wo... he was too didactic, too cocksu... his own principles. By believing ... the United Nations would solve all ... world's problems and make ... the cold realities of Communist ... he contributed to the bad peace ... followed World War II.

Only Lufthansa's 'Europa Jet' cruises at 600 mph without putting its nose outside Europe

Touching 600 mph is just cruising to the 'Europa Jet', Lufthansa's name for the Boeing 727. Yet Lufthansa will use this new, fast medium-range aircraft on short-hop flights – from Germany to Madrid, Barcelona, London, Copenhagen, Stockholm, Milan, Rome and the Near East. Why? Because you get all the speed, power and importance of a big intercontinental flight, even when you're going only a short distance.

In just 12 minutes 'Europa Jet' can set down and pick up its passengers or cargo. Built-in passenger steps emerge immediately after the arrival. Electric starters speed the jet into flight. The three jet engines have a reserve power unique among passenger-carrying aircraft. Thanks to Lufthansa's 'Europa Jet', intercontinental standards will now apply to air travel from one European city to another. You'll sink back into the cushioned luxury of spacious cabins, and measure in minutes the flying time to Madrid, Milan, Stockholm or London.

More Le Carré Capers

THE INCONGRUOUS SPY by John Le Carré. 381 pages. Walker. $5.95.

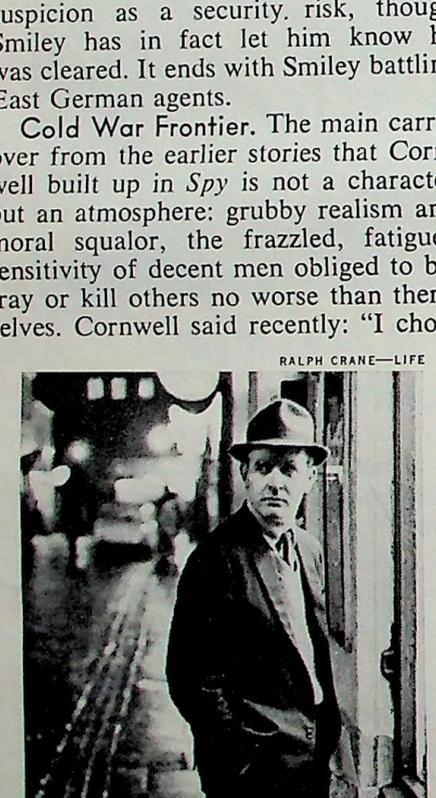
Lurking among the chillier shadows of John Le Carré's *The Spy Who Came in from the Cold* is a plump, worried man named George Smiley. Smiley is the British intelligence agent who sets up the betrayal of the hero's mistress so that another part of the plot can thicken. Though nearly 150,000 copies of *Spy Who Came in* have been sold in the U.S. alone, very few readers will know George Smiley from any other stranger who hurries by in a dark street with his hat pulled low. But Smiley has quite a dossier.

Turns out that Smiley figures in the first two capers by Le Carré (alias David John Moore Cornwell), which are now reissued in one volume as *The Incongruous Spy*. One of the two is a routine British murder mystery set in an Establishment boys' school. The other story is much better.

Call for the Dead was Le Carré's first novel. It examines the same world of seedy treachery that the author got to know better and like even less by the time he wrote *Spy*. The tale begins when a Foreign Office clerk apparently commits suicide because he is under suspicion as a security risk, though Smiley has in fact let him know he was cleared. It ends with Smiley battling East German agents.

Cold War Frontier. The main carryover from the earlier stories that Cornwell built up in *Spy* is not a character but an atmosphere: grubby realism and moral squalor, the frazzled, fatigued sensitivity of decent men obliged to betray or kill others no worse than themselves. Cornwell said recently: "I chose spying as a subject for reasons of polemic. Western democracy seems to have one unifying force: the idea that individuals are more valuable than philosophies. My intention was to write about a group of people who consciously abandon the Western principle in order to defend it."

RALPH CRANE—LIFE



JOHN LE CARRÉ

Morals in the seediest profession.

It is this brand of authenticity and moral paradox on the cold war frontier that led at least one critic to believe that the author must be a spy himself. Cornwell did spend three years in the Foreign Office. "But not espionage —I've never done it." He learned his spymastery from published reports: "I was astonished at how much had been said. Intelligence seems to be an iceberg of which 80% is above water."

"The Ultimate Nonsense." Cornwell detests the James Bond kind of book: "Bond spends what he likes, keeps a stable of cars, fornicates by proxy for six million commuters. He is indifferent to pain (particularly other people's), and is fortunate in one respect: the nearer he gets to the enemy, the more horrible the enemy becomes."

With *Spy* sure to earn at least $200,000, Cornwell recently quit as a British consul in Hamburg and moved self, wife and three growing sons to Crete, where the British income tax does not reach. There, in a white stucco house within 30 yards of the sea, he is working over the final draft of his next book. Called *The Looking-Glass War*, it springs from the fact that in one way he now finds *Spy* not realistic enough. "The biggest fault," Cornwell says, "was that the operation was brilliantly conducted. My next book is about an operation that isn't so efficient." And he sees it as exposing "the ultimate nonsense about spying."

The Shropshire Lad

THE COLLECTED POEMS OF WILFRED OWEN *edited by C. Day Lewis.* 191 pages. *New Directions.* $4.75.

In 1914, a month before the guns of August began to thunder, a 21-year-old Englishman wrote some verse:

Leaves murmuring by myriads in the shimmering trees.
Lives wakening with wonder in the Pyrenees.
Birds cheerily chirping in the early day
Bards singing of summer, scything thro' the hay.

It was charming, Keatsian and somehow like every other poem tossed off by a carefree youth in the flush of summer.

Then Wilfred Owen went to war, and in the muck and death of the trenches wrote a different sort of poem:

If you could hear, at every jolt, the blood
Come gurgling from the froth-corrupted lungs,
Obscene as cancer, bitter as the cud
Of vile, incurable sores on innocent tongues,

WILFRED OWEN

Poetry for the most execrable sig

My friend, you would not tell such high zest
To children ardent for some de ate glory,
The old Lie: Dulce et Decorum Pro Patria mori.

Owen's poems seemed to spea all the war's suffering and brought lish poetry down to earth with homely words. Auden, Spender, Eliot and a whole generation of E poets acknowledged their debt to Now Owen's poems have been pub in the most complete edition to Editor Lewis has added severa published poems that were writ Owen's youth and were in his br possession; in addition many poems have been corrected.

A War of Caterpillars. Owe born in sleepy Shropshire. His was a railway engineer; his mothe a taste for culture. Shy, moody, Owen began writing melancholy, sensuous verse in his teens, dealing erally with "golden gardens and glooms." Since his family did not the money to send him to colleg went to France as a tutor. While war broke out. Owen had no des get involved. He wrote his moth feel my own life all the more pr and dear in the presence of this d ering of Europe."

But he changed his mind an commissioned an infantry officer 1916. Under fire, he matured as man and as a poet. "Hideous lan here," he wrote home. "Vile p foul language. Everything un broken, blasted; the distortion dead, whose unburiable bodies side the dugout all day, all nig most execrable sights on earth, etry we call them the most glor

Owen was soon calling these by their right names in his own p He wanted people at home to fe suffering of the maimed, the blin

dying and the mad, the muddy horror
of no man's land where

Across its beard, that horror of harsh wire,
There moved thin caterpillars, slowly uncoiled.
It seemed they pushed themselves to be as plugs
Of ditches, where they writhed and shrivelled, killed.

Swelling of the Sea. Owen narrowly escaped death many times. One night, he fell into a well, suffering a concussion. He was sent to a hospital in Edinburgh, where he met Siegfried Sassoon, who read Owen's poems and encouraged him. Owen left the hospital convinced of his profession. "I go out of this year a poet, my dear mother, as which I did not enter it. I feel the great swelling of the open sea taking my galleon." Friends tried to get him a job in London, but Owen decided to return to the front. He believed that he could convey the suffering of his fellow men only by sharing it. He won the Military Cross for capturing a number of machine guns and German prisoners: "I only shot one man with my revolver; the others I took with a smile." A week before the Armistice, Owen was leading his company across the Sambre Canal when he was hit and killed.

Shortly before his death at 25, he wrote, in effect, his own epitaph:

Move him into the sun.
Gently its touch awoke him once,
At home, whispering of fields unsown.
Always it woke him, even in France,
Until this morning and this snow.
If anything might rouse him now
The kind old sun will know.
Think how it wakes the seeds,
Woke, once, the clays of a cold star.
Are limbs, so dear achieved, are sides
Full-nerved—still warm—too hard to stir?
Was it for this the clay grew tall?
O what made fatuous sunbeams toil
To break earth's sleep at all?

Also Current

ONE DAY IN THE AFTERNOON OF THE WORLD by William Saroyan. 245 pages. Harcourt, Brace & World. $4.95.

There's more loving here than even Saroyan fan can stand. "Rosey's my daughter," muses the hero, "and Van's my son and Laura's their mother so loving *them* is easy. So I love everybody else, too. I love the dead, I love *them* especially. But not so much as I love the unborn." And most wondrous of all, not so much as he loves "the unborn who are never going to *be* born." But how about the reader who's never going to read it? He'll take more love than even Saroyan has.

DOCTOR GLAS by Hjalmar Söderberg. 160 pages. Little, Brown. $3.95.

Even the Swedes were dismayed by Söderberg's grim-grey novel when it was published in 1910, but today it is recognized as a Scandinavian masterpiece. Dr. Glas has never made love

These 3 tests prove First National City Travelers Checks are "Better Than Money"

Citibank Travelers Checks are the best way to carry money. Actual tests, shown below, demonstrate three specific reasons: *ready availability... immediate acceptability... on-the-spot refundability.* In case of loss, there are thousands of refund points throughout the world... leading hotels can direct you to the nearest one.

In the United States, no Travelers Check is more spendable, more readily available than these famous checks backed by First National City Bank. And, in case of loss, there are many thousands of U.S. refund points... easily located simply by calling Western Union Operator 25.

Test No. 1–Refundability–in London
Miss Isabella M. Cunningham, of New York City, made this dramatic test, actually burned $200 worth of Citibank Travelers Checks. Directed to a nearby bank by her hotel, Miss Cunningham received a full refund on-the-spot.

Test No. 2–Acceptability–in Manila
The Robert D. Highs, of Medina, O., found Citibank Travelers Checks welcome in small shops, useful for all their travel needs.

Test No. 3–Availability–in New Delhi
Joe Gore, of Florissant, Mo. bought more Citibank Travelers Checks right here. It's quick and easy at banks everywhere.

TIME LISTINGS

TELEVISION

Wednesday, June 3

ONCE UPON A MATTRESS (CBS, 9:30-11 p.m.). Carol Burnett's off- and on-Broadway hit musical of 1959, with much of the original cast, including Carol.

Thursday, June 4

MEREDITH WILLSON VARIETY SHOW (CBS, 10-11 p.m.). The first of three specials produced by the Music Man himself, this one features Caterina Valente, Sergio Franchi, Willson and his wife.

Friday, June 5

CBS REPORTS (CBS, 8:30-10 p.m.). "D-Day Plus 20 Years: Eisenhower Returns to Normandy," Ike's commemorative pilgrimage to the invasion beaches with his personal recollections of the events surrounding June 6, 1944.

Saturday, June 6

THE BELMONT STAKES (CBS, 4:30-5 p.m.). The 96th running of the oldest U.S. racing classic, at Aqueduct, N.Y., in which all eyes will be on Northern Dancer, who, if he wins, will become the first triple-crown winner since 1948.

ABC'S WIDE WORLD OF SPORTS (ABC, 5-6:30 p.m.). The English Derby from Epsom, with commentary by Jockey Eddie Arcaro. Also water-skiing from Pine Mountain, Ga.

Sunday, June 7

DISCOVERY (ABC, 1-1:30 p.m.). Repeat of the second part of a visit to London, including Westminster Abbey, Mme. Tussaud's, the changing of the guard at Buckingham Palace, and a chat with Leslie Caron.

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). The story of Wendell Willkie.

DUPONT SHOW OF THE WEEK (NBC, 10-11 p.m.). "The Patient in Room 601," a documentary about 23-year-old Lita Levine and her fight for life after being severely burned in a 1958 plane crash.

Monday, June 8

HOLLYWOOD AND THE STARS (NBC, 9:30-10 p.m.). A repeat of "Monsters We Have Known and Loved."

Tuesday, June 9

THE RED, WHITE AND BLUE (NBC, 9-10 p.m.). Project 20's view of American patriotism, narrated by Walter Brennan and filmed from sea to shining sea.

THE FRENCH ARMY (NBC, 10-11 p.m.). A history, from Verdun to Algeria.

THEATER

On Broadway

HAMLET. Richard Burton is a virile, extroverted Hamlet with no hint of the melancholy self-questioning that stays his killing of the King. However, Burton's fresh reading of the play's famed familiar lines lends great luster to the evening.

FUNNY GIRL. A one-woman burst of star-quality named Barbra Streisand illuminates the rise, the love life and the heartbreak of another great and funny girl, Fanny Brice.

HIGH SPIRITS. Anyone who can count to 10 will recognize the source of all the zany good humor that has been injected into this musical version of Noel Coward's *Blithe Spirit*. The blithesome twosome—Bea Lillie and Tammy Grimes.

ANY WEDNESDAY. Sandy Dennis looks as licit as a child with an ice-cream cone, but she is the Other Woman in a hilariously illicit schedule of sex on the one-day-a-week plan.

DYLAN is a brilliant illustration of how an actor of unparalleled skill can invade the mind and personify the temperament of another man, despite a considerable difference in appearance. For a little over two hours, Dylan Thomas lives again in Alec Guinness.

HELLO, DOLLY! is a big, bouncy, brassy, sassy Broadway musical in the best sense of all those mildly intimidating words. Ditto Carol Channing.

BAREFOOT IN THE PARK. Playwright Neil Simon, Director Mike Nichols and Stars Elizabeth Ashley and Robert Redford pack a hamperful of laughs for this comic picnic about two newlyweds and their ups and downs in a six-flight walk-up.

Off Broadway

DUTCHMAN, by LeRoi Jones, raises the color question to a new and distinctly terrifying pitch of violence. A sexually aggressive white girl and a sedate but inwardly seething Negro tell each other off in words that finally kill.

THE BLOOD KNOT links two South African half brothers in a twisted, tender but tormenting embrace that involves both races and the human race.

THE TROJAN WOMEN. The keening eloquence of body, mind and speech that graces this superb revival of the Euripidean classic is the unstillable cry of tragedy.

RECORDS

Shakespeare

SCENES FROM SHAKESPEARE (London, 4 LPs). Samplers from the first recorded set of Shakespeare's complete works (137 LPs), of which the final six plays are being released this week. All were produced during the past seven years by Cambridge University's Marlowe Dramatic Society, which imported professionals for the leading roles. Directed by Scholar George Rylands, they are meant to be poetic readings rather than aural plays; sound effects are minimized and the actors are anonymous. These four recordings are available separately; one contains excerpts from the comedies, one from the histories, and two from the tragedies. They show the fine diction, well-matched voices and generally high standards of the series. Among the records of the complete plays, *Othello*, *King Lear* and *Much Ado About Nothing* are outstanding. But *Macbeth*, *Hamlet* and *The Tempest* are given comparatively undistinguished performances.

THE TEMPEST (Caedmon, 3 LPs) is the 20th release of the Shakespeare Recording Society, which also intends to record the complete works. They use the star system, generally more elaborate sound effects, and provide a written text. *The Tempest* suffers less than most plays from being heard and not seen, and scarcely at all in a reading like this. Sir Michael Redgrave as a lordly Prospero, his daughter Vanessa as an otherworldly Ariel, and Hugh Griffith as a bestial Caliban join the gallery of other actors who have contributed splendid performances to this series, notably Richard Burton as Coriolanus, Anthony Quayle as Macbeth, Claire Bloom as Juliet, Diane Cilento as Cressida, Sir Ralph Richardson as Julius Caesar, Sir John Gielgud as Richard II.

HAMLET (Columbia, 4 LPs). The new Broadway production starring Richard Burton, who speaks poetry with as rich and melodic a voice as any on records. As Hamlet he rages like Jove, muses like a sage, sparkles in repartee, and keeps the play fast-moving and fresh. But Burton's Hamlet is primarily an Angry Young Man: he is above suffering, he has made all his decisions before he picks up the microphone, he loses his temper but seldom his equilibrium. Paul Scofield (Caedmon, 4 LPs) plays a tortured, questioning Hamlet, sometimes bogged down in his torment, whose words echo less resonantly in the listener's ear but longer in his heart. One believes it when the Queen, magnificently played by the late Diana Wynyard, gasps, "He's mad!"

HOMAGE TO SHAKESPEARE (Argo). Assorted tributes on his 400th anniversary by poets, musicians and scholars on one side of the record, and on the other, brief readings from his later works by 16 leading Shakespearean actors, including excerpts from two plays now on the boards: Paul Scofield reading Lear's reconciliation with Cordelia and Sir Laurence Olivier delivering Othello's speech to the Senate.

CINEMA

THE ORGANIZER. Director Mario (*Big Deal on Madonna Street*) Monicelli's vivid, moving, timelessly beautiful portrait of 19th century Italy comes into sharp focus on Marcello Mastroianni, demonstrating his remarkable versatility as a socialist Savonarola who leads Turin textile workers in a strike that fails.

FROM RUSSIA WITH LOVE. Istanbul provides an exotic backdrop for the harem-scare-'em adventures of James Bond, alias 007, alias Sean Connery. A sly spoof of Ian Fleming's fiction.

THE NIGHT WATCH. In this taut French thriller, five criminals trying to tunnel out of a Paris prison learn that a man can scratch and claw his way to freedom from everything but himself.

BECKET. Church-state conflict turns friends to foes in a glowing screen spectacle based on Jean Anouilh's drama about England's 12th century Archbishop of Canterbury (Richard Burton), who dies defying King Henry II (Peter O'Toole).

THE SERVANT. As a conniving "gentleman's gentleman" who masters his master, Dirk Bogarde puts a fine polish on Director Joseph Losey's study of class distinction in Britain.

DR. STRANGELOVE, OR: HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB. Stanley Kubrick's black comedy about nuclear war features fine performances by Sterling Hayden, George C. Scott and the ubiquitous Peter Sellers.

YESTERDAY, TODAY AND TOMORROW. Disporting themselves *con brio*, Sophia Loren and Marcello Mastroianni make memorable fun of three zesty folk tales directed by Vittorio De Sica.

THE SILENCE. A litany of selfishness, loneliness and death, starkly told and austerely photographed, with a cast of non-normal characters directed with brooding penetration by Ingmar Bergman.

TOM JONES. Lusty lads pursue busty maids through "Best" Director Tony Richardson's wonderfully wicked assault on

New line!

Synthetics: a new line of man-made fibers that perform better than conventional materials. We have been working hand-in-hand with international synthetics manufacturers for years. Result: a line of quality chemicals, developed through intensive Esso research, which are converted into such modern wonders as wash-and-wear clothes, stronger fishing lines and nets. This kind of involvement in an industry is not unusual at Esso. Our business is to know your business: whatever and wherever it may be. Perhaps this is a prime reason why Esso is the **World's First Choice!** Your local Esso organization will gladly advise you on your chemical product needs.

SUMITOMO

28 INDUSTRIES 1 COMPANY NAME

Sumitomo is the name and it is synonymous with practically every kind of industry: chemical, steel, electric, glass, machinery, banking, insurance, trading . . . 28 companies in all. It is also one of Japan's historical enterprises. ■ Sumitomo began more than 300 years ago with a small copper refinery which quickly became the nation's largest copper trader. From this base Sumitomo multiplied its activities right into the 20th century under the control of the Sumitomo family. ■ Today the family ties are extinct. Although the companies now are separate corporate structures, they still act as a group. Their forces are integrated in order to provide a single yet comprehensive source of a wide range of products and services. ■ Sumitomo's collective knowledge can be of great value when you do business in or with Japan. To some of the complexities out of international trade by contacting Sumitomo Shoji Kaisha, Ltd., world-wide trading company and spearman for the Sumitomo Group. There are offices in most of the world's commercial centers.

The stylized Sumitomo emblem, representing an ancient Japanese well frame, symbolizes a never-ending flow of prosperity.

LETTERS

Primary Politics

Sir: My first vote for President of the U.S. was for T. R. This man Rocky is the nearest thing to Theodore Roosevelt the Republicans can find. He has more brains, personality, and experience than any of the others. I hope I will have a chance to vote for him.

ANDREW FISHER

Roxbury, Mass.

Sir: A state that elects Wayne Morse Senator is obviously loaded with screwballs. The results in Oregon [May 22] should not be used as a criterion for the rest of the country.

R. P. MCLAURIN

Kirkwood, Mo.

Sir: Even we bemused bystanders, the Oregon Democrats, gave a reluctant cheer for Rocky, who didn't know when he was licked—and so wasn't! His final days of furious persuasion warmed the stony hearts of our Oregon Republicans.

MONROE SWEETLAND

Milwaukie, Ore.

Sir: You noted that Goldwater had no civil rights platform to offer. Did you ever stop to think that most of the people in this country who are working against a Socialist dictatorship are for individual rights and don't want to burn the barn down to get rid of the rats?

NORMAN E. MCCAY

Los Angeles

Sir: You reported that Senator Goldwater said, "You can't pass a law that will make me like you or you like me." For the Senator's information, there already are such laws on the statute books of man: "And thou shalt love thy neighbor as thyself" (*Lev. 19:18*) and "Love ye therefore the stranger" (*Deut. 10:19*).

DR. GILBERT KLAPERMAN
Rabbi

Congregation Beth Sholom
Lawrence, N.Y.

Sir: TIME expresses surprise that Senator Barry Goldwater is beginning to show some signs of strain [May 15]. It is only natural that a man subjected to so much misinterpretation, misquotation and downright smear attacks should become irritable. We are not dismayed by the fact that the hoopla of a campaign is making our candidate irritable. The qualification for President of the U.S. is not the ability to slap backs or wear funny hats. The qualifications are honesty, integrity and loyalty. Senator Goldwater has these qualifications.

MRS. H. SWEETWOOD

Paterson, N.J.

Marching Through Maryland

Sir: Your statements concerning Senator Brewster's campaign against Governor Tawes [May 29] were the most precise I have seen. Instead of appealing to the intelligence of the voters (the logical way to combat stupidity), Brewster relied solely on a name-calling campaign until it was too late. Surely the Maryland primary will not cause concern about the Northern backlash."

BARBARA FISHER

Baltimore

Sir: I find it shocking that the people of the good state of Maryland should give so much support, in such an important election, to a racist and bigot like George Wallace. I sincerely hope that the people of the other states in the Union will show more sense than those of my own.

BRUCE L. HELLER

Baltimore

Sir: All smearing by the country's liberal press, TV and radio notwithstanding, thank goodness Governor Wallace made quite a showing! Would that more men had his guts and spoke the truth as he does about the vicious so-called "civil rights bill"! So many in the U.S. are willing to sell their traditions and their racial integrity for a mongrelized mess of pottage. If the evil civil rights bill passes, we will be living in a police state.

H. H. BURNS

Columbia, Mo.

Sir: Cambridge has been described as a tense and strife-torn town. It is not. Most of the citizens of both races are trying to live normal lives. Our tension becomes acute only after reading newspapers and watching on television the antics of Mrs. Richardson and her out-of-town guests.

ELIZABETH T. EDMUNDS

Cambridge, Md.

Blowing the Horn

Sir: Let us quickly assure Chairman Kappel [May 29] that we do not want to change our phone company. A.T. & T. is capitalism's proudest product: remarkable service, polite personnel, steady profit for investors, and a credit to our nation throughout the world. If the U.S. Post Office and all the American railroads were promptly turned over to the capable hands of A.T. & T., we could shortly expect two mail deliveries a day, clean post offices, well-mannered clerks, trains on time, plenty of brand-new cars. And, whoopee, none of those dismal deficits!

ARTHUR HORNBLOW JR.

New York City

Sir: Anyone who has dealings with the Bell System finds that he can only talk with computers, which have been programmed with few responses. It does no good to talk with supervisory personnel, as they have been programmed with the same responses; no one has the authority to deal with the public and make decisions that are not on their tape. If there is a more impersonal corporation and one less cooperative, then show it to me!

JIM PILES

Hillcrest Heights, Md.

Sir: If the long-nosed engineers at A.T. & T. would devise a method to quickly trace anonymous telephone calls of an obscene or annoying nature, the need for unlisted numbers would decrease materially, along with requests for number changes.

BERTRAM J. ZOSLAW

Abington, Pa.

Ethnics All Around

Sir: As a Jew, I was quite shocked to read of the scandalous stories being spread by Congressman Farbstein about Democratic Candidate William Haddad [May 22]. Farbstein obviously thinks that any man who is born in an anti-Semitic country is an anti-Semite. If this were true, then what stories should we start telling about Moses?

I. STEVEN SIMON

Lawrence, N.Y.

Sir: Your proud reputation for accuracy is going to pot in a hurry unless you hire some researchers more wide-awake. You state that Candidate William Haddad was a World War II Merchant Marine officer. You also state that he is 35. That means that when the war ended, he was only 16. I think your readers are entitled to an explanation.

REID JORGENSEN

St. Thomas, V.I.

▶ *At the age of 14, Haddad enlisted in the Army Air Forces, had advanced to cadet squadron commander before discovery and discharge. He tried unsuccessfully to enlist in the Army and Marine Corps before signing up in the Merchant Marine, which commissioned him an ensign at 16.*—ED.

Rally Round

Sir: If Quebec "gives" Canada that new heraldic nonentity that is being waved around—mostly by the Prime Minister [May 29]—one lone consolation will accrue. At least the problem (if there is one) of a new national anthem will be solved automatically: why, the *Maple Leaf Rag*, naturally! They will make the perfect couple.

ROY S. CUYLER

Ottawa

Nasser's Dam

Sir: I would like to bring up to date your Nile map [May 22]. Khashm el Girba dam is not any more "abuilding" but is "existing." On April 13, the bottom gates were closed and storage was started. On May 20, water impounded in the reservoir went for the first time into the

of the Main Contractor
Giuseppe Torno & Co., Sudan Branch
Khartoum, Egypt

Sir: You cannot imagine how pleasant it is to read a nice story about Egypt once in a while. For years I have hunted for reports of the kind you have written about the Aswan Dam.

M. ABOU-SABÉ

Pittsburgh

Mutual Interests

Sir: Your story about the retirement of Americans in Mexico [May 22] is a kind of constructive reporting that fosters one of the many complementary interests of Mexico and the U.S., and makes a real contribution to better understanding and friendship.

ANTONIO CARRILO FLORES
Ambassador of Mexico

Washington, D.C.

Still the Greatest

Sir: Pale, sick, exhausted Judy Garland should never have been forced to undergo the ordeal of the Melbourne concert [May 29]. Superb in Sydney, sick in Melbourne —in any shape, size or condition she is still the greatest entertainer alive.

RODNEY FISHER

Melbourne

Mow Those Lawns, Pull Dem Weeds

Sir: After reading your review of Mr. Gunther's *The Weekenders* [May 22] I feel compelled to tell Gunther that all is not lost! Why, our weekends are filled with meaningful things like hanging clothes, doing dishes, writing reports, mowing lawns, changing diapers, answering mail, hollering at children, pulling weeds, charcoaling hamburgers, dashing to church and watching TV (with snide comments, so people will know we're not overly too intelligent for TV). If Mr. Gunther knows of any place here in Ohio where some of that deplorable sin and dreadful hollow fun is going on, could he please let us know—soon? If possible, before next weekend.

(MRS.) JANICE C. GALVIN

Piqua, Ohio

Q. & Aw!

Sir: To add to your collection of wit in its [May 29], I offer the following:

Q. What was purple and conquered the world?

A. Alexander the Grape.

Q. What is yellow and found under water?

A. Mao Tse Sunk.

STEVEN L. HIRSH

Philadelphia

Sir: *Q*. What is green and dances?

A. Fred Asparagus.

Q. What weighs six tons and sings calypso?

A. Harry Elephante.

Q. What is green and yellow and lies in a gutter surrounded by cookie crumbs?

A. A dead Girl Scout.

Q. What is yellow and points north?

A. A magnetic banana.

Q. What is green and clicks?

A. A ballpoint cucumber.

A letter from the PUBLISHER

Bernhard M. Auer

DAVID GAHR

McPHEE & FABER ON FAIR CABLE CAR

SOMETIMES he felt like that twelve-year-old boy who spent nine days and nights at the fair, sleeping in one pavilion or another and scrounging enough money for food by picking coins out of the fountains. But Writer John McPhee spent ten days there and only part of the nights and he ate—as the editorial business manager will discover—without dipping a finger in a fountain. In fact, he ate his way through such delights as soft-shelled crab on a bun, walnut fried Boston sole, partridge with grapes of Almeria, banana dogs, smoked eel of the river Tagus, *Kambing Masak Bugis* and *Ajam Panggang*—and one ham on rye to go. Followed, on occasion, by antacid tablets.

McPhee's mission was to do what no one else had done about the New York World's Fair. It had been previewed, opened, featured, highlighted and was even beginning to produce its own clichés. But there had been no intensive critique of it in the sense that, say, a theater critic reviews a play. McPhee and Researcher Nancy Gay Faber went to and from Flushing Meadow by car, subway, train and hydrofoil, walked and rode through the grounds, stood in the longest lines, went to literally every pavilion, park and exhibit. One day McPhee took two of his daughters, aged three and five, and stayed for more than ten hours. "They were so continuously fascinated," he said, "that they never disintegrated into some of their more conventional behavior patterns."

On the visual side, the color projects team was something of an advance party, covering the grounds earlier for days to put together the eight color pages. Nudged by the demands of engraving deadlines, Associate Editor Peter Bird Martin noted somewhat nervously one day that the demograph on the Equitable Life pavilion registered an increase of 165 souls while he was casing just one exhibit. Artist Boris Chaliapin, departing somewhat from his usual style, treated the cover with a touch of the abstract, a suggestion of pop and a shade of Moses.

The result is what the editors set out to provide for TIME readers: a definitive answer to the question, Should I go?, and a confidential, exhaustive guide to what is great, good, bad, indifferent and just Fair.

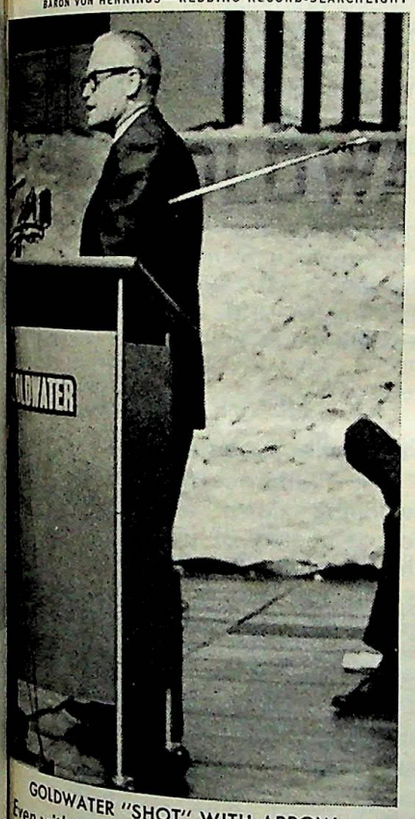
THE U.S.

REPUBLICANS

Straight Down the Middle?

Dwight Eisenhower was chipping and putting as if he were 37 instead of 73. In a charity match at Ardmore, Pa., last week, Ike paired up with Arnold Palmer, almost stole the affections of Arnie's Army in helping beat Dancer Ray Bolger and Golfer Jimmy Demaret

BARON VON HENNINGS—REDDING RECORD-SEARCHLIGHT



GOLDWATER "SHOT" WITH ARROW
Even with his foot out of his mouth . . .

three and two. Even with the match won, Ike insisted on finishing the full 18, and stroked in a superb 40-ft. birdie putt after two rolls and a dip on the 17th green, left the golf course exuberantly, and cried to reporters, "I don't know what I would do without this game. I really love it."

All of which had long since led a lot of Republicans to fear that the G.O.P. might be playing second fiddle to Ike's golf iron during this year's match-play presidential campaign. For months, many influential Republicans had been desperately trying to get Ike to think a bit about par and more about politics—at least to the extent of expressing himself on party principles, policies and candidacies before the G.O.P. convention in July. Again and again, Ike said he'd prefer a straight-down-the-middle stance, supporting no one, rejecting no one.

Most of the pressure on Ike came from anti-Goldwater people, specifically including Milton Eisenhower, Minnesota's former Governor Elmer L. Andersen and, very actively, New York Herald Tribune President Walter N. Thayer.

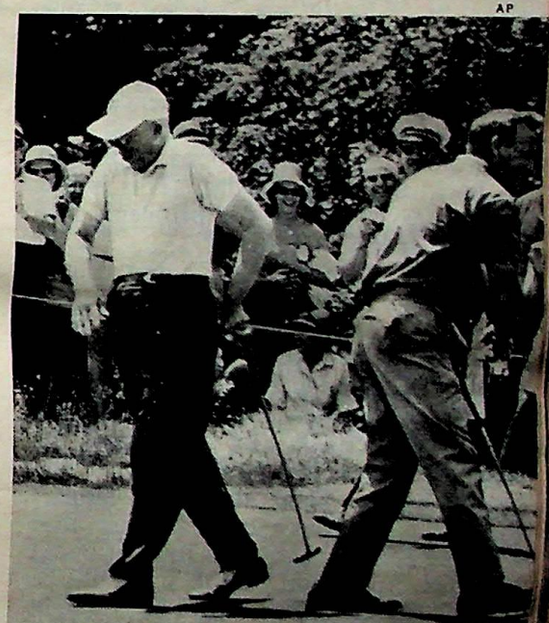
The Prelude. Ike was not exactly warm toward Goldwater, who in 1960 had labeled the Eisenhower Administration "a dime-store New Deal." Still, he declined to become part of a stop-Goldwater movement. On May 14 Eisenhower told newsmen he would support "whoever is nominated," and the next day he appeared on national television to say that "I personally believe that Goldwater—Senator Goldwater—is not as extreme as some people have made him. But, in any event, we are *all* Republicans."

The fact was that Eisenhower simply did not believe that Goldwater could get the nomination. Therefore, why should he help bring on a party split by coming out against Barry? Not until he had pointed out to him a TIME report that Goldwater already had some 550 more or less committed delegates, not including California's 86, was Ike convinced. At that point, he agreed to write a Republican "profile"—without mentioning names—that would detail the kind of G.O.P. candidate Ike really favors. Eisenhower started to draft the statement in his Gettysburg office on May 19, went to New York on May 22 and showed it to Thayer, handed a finished copy to Thayer in Gettysburg the next day, then phoned in some last-minute changes to the Herald Tribune on May 24.

The Statement. "I do fervently hope," wrote Ike, "that the person selected to lead our party in the coming campaign will be a man who will uphold, earnestly, with dedication and conviction, the principles and traditions of our party." G.O.P. principles, said Eisenhower, were "spelled out at length" in the party convention platforms of 1956 and 1960. "These platforms," said Ike, "represented the responsible, forward-looking Republicanism I tried to espouse as President, the kind that I am convinced is supported by the overwhelming majority of the Republican Party, the kind I deeply believe the party must continue to offer the American people."

He listed some of his Administration's domestic accomplishments—establishing the Department of Health, Education and Welfare, extending social security, a new program for medical aid for the aged, urban renewal, the U.S.'s first depressed-areas legislation, as well as the first civil rights bills since Reconstruction. Said Ike: "As the party of Lincoln, we Republicans have a particular obligation to be vigorous in the furtherance of civil rights."

AP



BIRDIE-PUTTER IKE AND PARTNER PALMER
. . . the shoe would never fit.

Then, speaking of foreign affairs, he said that "the overriding concern of the Republican Party—of either party—must be the maintenance of peace while protecting and extending freedom." This, he said, requires military strength and "loyal support for the United Nations in its peace-keeping efforts." He warned that "in today's nuclear-age diplomacy, there is no time for indecision, but neither is there room for impulsiveness."

The Reaction. Ike insisted that his "profile" was neutral, but it hit the Goldwater camp like a hurricane. [illegible] erything, from backing the U[illegible] tions to supporting civil [illegible] mestic social legislation, to the crack about avoiding "impulsiveness" in for-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

eign affairs, struck at least obliquely at Goldwater. Worse, after the 1960 presidential election, Goldwater had scoffed at the same party platform that Ike now praised so highly by saying, "We lost on it." To make sure no one missed the point, Thayer's Tribune planted a column by Pundit Roscoe Drummond squarely alongside the Eisenhower text. Said Drummond's lead paragraph: "If former President Eisenhower can have his way, the Republican Party will not choose Senator Barry Goldwater as its 1964 presidential nominee." And the New York Times headlined its Page One analysis piece: STATEMENT BY THE GENERAL APPEARS TO FIT ALL IN RACE BUT GOLDWATER.

Ike himself appeared taken aback by the stir. When a reporter said, "My editor wants to know if Senator Barry Goldwater fits your specifications," he replied enigmatically, "Let your editor try to fit that shoe to that foot."

As for Goldwater, he tried to make the best of Ike's statement. Said he: "I hail its forthright restatement of the basic Republican principles upon which I proudly stand and its public rebuke to those who would rule or ruin." But Barry knew better. The same day Ike's message was published, he appeared before a Redding, Calif., audience with an arrow tucked under his arm so that, in profile, it appeared to have pierced his back. Said Barry sadly, "This is just to show you some of the problems I've had in the last few days."

Indeed, as things were going, Barry never really could get his foot out of his mouth long enough to try on Ike's shoe. Early last week he raised a new crop of scary headlines by implying his support of the idea that Viet Cong supply lines in North Viet Nam could be uncovered through "defoliation of the forests by low-yield atomic weapons." Barry had to make it clear later that what he really meant was that "it could be done, but I don't think it should be done." When asked why he thought Eisenhower had issued his statement, Goldwater said bitterly that a "mysterious clique in the East that nobody seems to know anything about but everyone agrees is in existence" had probably prevailed upon him.

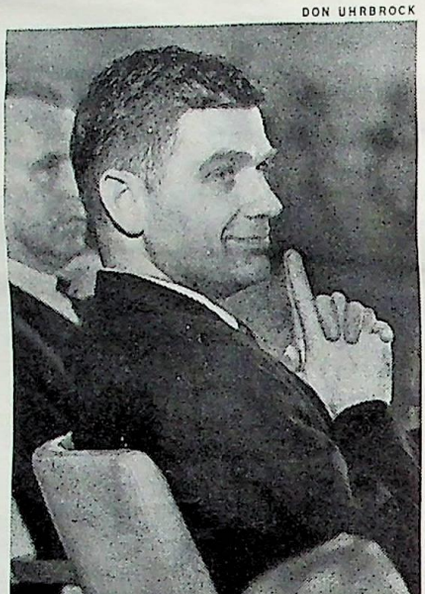
On the other hand, Nelson Rockefeller happily recalled that he had helped draft the very 1960 G.O.P. platform that Ike liked so much. Cried Rockefeller: "I fall within the framework of Eisenhower's description. I don't think Senator Goldwater's views are compatible." Workers for Ambassador Henry Cabot Lodge Jr., having thrown their support to Rocky in the California primary, quickly chimed in that Lodge, too, fitted Ike's qualifications.

On the eve of that primary, there was no telling about the contribution Ike had made to the outcome. But one thing was certain: in the long-range G.O.P. situation, the last Republican President of the U.S. had, intentionally or not, thrown his considerable weight against Goldwater.

Projecting the Image

Time was when top officers of national political conventions were picked because of their position of integral power within the party structure. For example, the permanent chairman has often been the party leader in the U.S. House of Representatives—Democrat Sam Rayburn or Republicans Joe Martin and Charlie Halleck. But such senior party citizens have a tendency toward bald heads, bulb noses, or gravel voices—and none of these come over well on television. The fashion nowadays is to select younger, better-looking men to project the party's image. Thus, the Republican National Committee last week named Oregon's Governor Mark Hatfield, 41, temporary chairman and keynoter and Kentucky's Senator Thruston Morton, 56, permanent chairman for the July 13 nominating convention in San Francisco.

DON UHRBROCK



OREGON'S HATFIELD

WALTER BENNETT

KENTUCKY'S MORTON

Good-looking guys get on-camera.

Hatfield, a man of boyish good looks, will be responsible for whipping delegates into a suitable state of partisan enthusiasm and wooing televiewers to the party cause. Actually, Republicans can expect little by way of breathless oratory from him. His delivery is often crisp and unemotional, whether on the political stump or talking to a group of his fellow Baptist laymen on the subject of "The Erosion of the Lordship of Christ in the Protestant Church." Hatfield will give convention viewers the far reaches of the western U.S. And no one doubts that the well-tailored, button-down appeal of middle-roading Republican Hatfield will be a rating builder.

Thruston (rhymes with House) Morton's Kentucky nudges the Mason-Dixon line, and his appointment offers calculated appeal to Southerner and Midwesterner alike. Morton is a seventh-generation member of a leading Kentucky family, a Yale graduate with citified manners and a Brooks Brothers look about him. Yet not even the backwoods folks of Kentucky would take him for anything but what he is: a tough politician in a state that grows tough politicians. Big (6 ft. 2 in., 190 lbs.) Thruston Morton is a shade to the rough-cut side of Mark Hatfield. But his vibrant voice and impressive manner behind the gavel will certainly project an image.

The third key conventioneer—Republican Platform Chairman Melvin Laird, 41, Congressman from Wisconsin—is bespectacled and a bit on the pudgy side. But that makes little difference; his role will be performed mostly off-camera.

THE PRESIDENCY

The Roller Coaster

The Johnson roller coaster kept swooping down and up—from the forced hilarity of political show biz to the solemnity of tributes to two of the world's lost leaders, from the gaiety of a Gaelic reception to the sentiment of a high school commencement in the President's home town.

"This is not a partisan dinner," declared the President at a noisy party rally in Washington's National Guard Armory. "It is open to any member of any political group who wants to contribute $100 to the Democratic Party in November." For their money, some 6,000 Democrats saw a two-hour show in which Comic Milt Kamen tastelessly joked about the mating habits of the whale, Gregory Peck quipped that 1964 is the year of the "Republican write-in," and the "Democratic shoo-in," Dancer Mitzi Gaynor peered down her middy blouse and asked: "Who knows what evil lurks in the hearts of men? That Dick Nixon knows."

There were fleeting moments on a higher plane. Operatic Soprano Anna Moffo, aglitter in gold, thrilled with a selection from *La Traviata*. Folk Singer Joan Baez, musically effective if a bit maudlin, dedicated *All My Trials* and a plea, "Hush, little baby, don't you cry," to Jacqueline Kennedy. The show crac-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to a close as a huge red heart emblazoned U.S.A. LOVES L.B.J. drifted from the ceiling and the crowd chorused an Allan Sherman parody to the tune *Once in Love with Amy*. Sample lyric:

Once in love with Lyndon,
Always in love with Lyndon;
Love him and love him,
Till our hearts are aching;
Why are we making this fuss?
'Cause Lyndon's always been in love with us.

Beyond Duty. Proving that his devotion to party extends far beyond any sense of mere duty, Johnson sat through the show again two nights later with 16,000 Democrats in Manhattan's Madison Square Garden. He also attended $1,000-a-plate dinners at Washington's International Inn and Manhattan's New York Hilton, a $100-a-plate dinner in Manhattan's Americana Hotel. The five affairs stuffed the party's 1964 campaign wallet with some $2.5 million.

Ireland's tall, tough President Eamon de Valera, 81, arrived for a ceremonial state visit, went to a White House dinner attended by such American-Irish as Eileen Farrell, Ed Sullivan, Speaker John McCormack. Johnson and De Valera both recalled the warm reception Jack Kennedy had received in Ireland last year—a visit that had led the Irish President to plan his U.S. trip so as to be in Washington on Kennedy's 47th birthday.

For the birthday, Johnson invited the Cabinet, the National Security Council and former Kennedy aides to a meeting to pay tribute. Said Johnson: "You served with devotion to his person and dedication to his cause. None of us would deny that a great cause requires great captains. But he also knew, as we must always remember, that beyond this hallowed house and this cherished city abide the people we serve. Without us, they are a strong and free people in a strong and free land. Without them, we are nothing. That and that alone is the secret of this transition."

HENRY GROSSMAN

MITZI GAYNOR AT PRESIDENTIAL GALA
A peek and a tricky answer.

"More Than Any Other." Johnson also noted the passing of India's Prime Minister Jawaharlal Nehru. Said the President: "Perhaps more than any other world leader, he has given expression to man's yearning for peace. In this fearless pursuit of a world free from war, he has served all humanity."

From New York, Johnson flew to Texas to deliver the commencement address for 30 graduates of Lyndon B. Johnson High School in Johnson City. When Lyndon graduated as president of the six-member class of 1924, it was known simply as Johnson City High.

The return put Johnson in a reminiscent mood. Said he: "Forty years ago almost to this very night, I left my high school diploma at home and headed west to seek the fame and fortune I knew America offered. I came back because I realized that the place to really begin was the place I had been all the time. I cannot tell you what the future will be, any more than I could have predicted, when I sat in your place, that I would be standing here tonight. But I know it can be a place in which, in a thousand towns like Johnson City, a boy, young in years, but deep in dreams, can hope to come forth and take his place among the leaders of the world."

Grappling with Succession & Disability

The events of last Nov. 22 stepped up the argument among politicians, legal scholars and political scientists over what to do about a glaring deficiency in the U.S. constitution: its silence on the transfer of executive power when a President is disabled. Last week a Washington forum of the American Bar Association heard from one to whom the question is far from academic. Said Dwight D. Eisenhower: "I have a personal interest in this. Three times I was reminded that I was one of those people who might be found with a disability."

Looking fit and ruddy-faced, Eisenhower reminisced about his September 1955 heart attack. "One morning at two o'clock I had a pain. The doctors came and gave me something in the arm. I was soon under an oxygen tent. I felt rather amused that this could be happening to me." It was a week before doctors would let Ike even discuss any of the normal work of his office. Said Eisenhower: "When Sherman Adams finally came in, he had some tough ones. They kept the newspapers away from me so I couldn't see what the press was saying about my illness. Some of it was acutely embarrassing to me. But within a week I was picking up the burden, and within three or four weeks I was carrying on the essential duties of my office."

Loss of Memory. When Ike was stricken by ileitis in June of 1956, he found himself too preoccupied to ponder the disability problem. Explained Ike simply: "It hurt." About a year later, Eisenhower suffered a minor stroke, which he described as "a spasm of the brain." Said he: "For 24 hours I had an absolute loss of memory for words. If I wanted to see anybody I couldn't possibly remember their names. This passed quickly."

WALTER BENNETT

SPEAKER McCORMACK & SENATOR HAYDEN
Two elderly men and a glaring deficiency.

Eisenhower then endorsed A.B.A. proposals to resolve the disability problem and the matter of filling a vacancy in the vice-presidency. The A.B.A. seeks a constitutional amendment under which the Vice President would become acting President if the President declared himself unable to perform his duties. If the President did not, or could not, make such a declaration, the Vice President could petition the Cabinet to declare the President disabled. If a majority of the Cabinet affirmed the disability, the Vice President would become acting President.

The President could at any time declare himself able to resume his duties and would go back to work unless the Vice President disputed his judgment and was backed by a majority of the Cabinet. In that case the question would go to the Congress. It would require a two-thirds vote of both the Senate and the House to empower the Vice President to continue as acting President. The Bar Association's suggestion on filling a vacancy in the vice-presidency is perhaps the simplest yet proposed: the President would choose his new Vice President, subject only to approval of both houses of Congress.

"Close to Each Other." These proposals assume a close working relationship between the President and Vice President—an assumption with which Eisenhower agreed. Said he: "Here you have a man who has been chosen along with the President and upon his recommendation. When he takes over, he picks another man to work with him in that fashion. In this way you can make sure of bringing into the presidency one who has had full opportunity of know-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

ing all the problems facing the Government. The only individual who can make the decision that a President is disabled is the Vice President. He cannot be excused if he does not act. The U.S. cannot afford to go ahead in these days without someone who's capable of making a decision and ready to do it. It is important that these two people be close to each other."

Later in the week a Senate Judiciary Subcommittee approved a constitutional amendment similar to the A.B.A. plan. Although there is a vacancy in the vice-presidency now—for the 16th time in U.S. history*—the Congress seems likely to ignore the amendment this year. It would call undue attention in a campaign year to President Johnson's 1955 heart attack, and it might offend the men who are in line to succeed Lyndon Johnson: House Speaker John McCormack, 72, and Senate President Pro Tempore Carl Hayden, 86.

THE CONGRESS

"A Salable Piece of Work"

Near adjournment time one afternoon last week, Illinois' Republican Senator Everett Dirksen arose in the Senate. "Mr. President," he proclaimed, "I present an amendment in the nature of a substitute." Passing to Senate Parliamentarian Charles Watkins a 74-page rewrite of the House-passed civil rights bill, Ev resonated: "I doubt very much whether in my whole legislative lifetime any measure has received so much meticulous attention."

By that time the civil rights bill had been before Congress for six months and six days. Reported to the House last Nov. 20, after 22 days of Judiciary Committee hearings, the bill was debated for nine days, then passed by the House 290 to 130. On March 26, the Senate voted to take up the bill, has been debating it steadily since March 30. During the last three weeks, Dirksen, who insisted on 50-odd amendments in return for precious G.O.P. votes in invoking cloture against the Southern filibuster (*see box*), was "beating out the iron upon the anvil of discussion" in conferences with other Republicans, Minnesota's Democratic Senator Hubert Humphrey, and Attorney General Robert Kennedy. The fruit of their endeavors was what Dirksen now offered the Senate.

"We have now reached the point where there must be action," said Ev. "I believe this is a salable piece of work, one that is infinitely better than what came to us from the House."

One who predictably disagreed was Georgia's Democratic Senator Richard Russell. "Stripped of any pretense," he charged, the Dirksen substitute amounted to "a punitive expedition into the Southern states." Russell continued: "As one who lives in the South, as one who has never been ashamed of being a Southerner, and as one who believes that the people of the South are as good citizens as people anywhere else in the country, I resent this political foray." He also had a word of warning for Dirksen: "Unless I am badly fooled," said Russell, "he has killed off a rapidly growing Republican Party in the South, at least so far as his party's prospects in the presidential campaign are concerned."

If Ev was worried he didn't show it; instead exuded optimism over prospects for a speedy cloture vote. "I believe we can get cloture," he said. "And I think we have to have cloture now."

Last week the Congress also:

▶ Approved, in the House Foreign Affairs Committee, President Johnson's $3.5 billion foreign aid authorization request. It was the first time in the stormy, 17-year history of foreign aid that the committee had voted to give the President all he asked for. But Lyndon Johnson wasn't home free. Still to come was the foreign aid appropriations bill, which would no doubt feel the political knife of Louisiana's Democratic Representative Otto Passman, champion slasher of Presidential foreign aid hopes.

▶ Endorsed, in the House Education and Labor Committee, the Administration's $962.5 million anti-poverty program by a party-line vote of 19 Democrats to 12 Republicans. Among the program's costlier features: $340 million to finance 90% of local projects that will attack such poverty-breeding misfortunes as illiteracy, lack of job skills, slums and health hazards; $412 million to establish a volunteer job corps for youths from 16 to 22; and $150 million for a work-training program to pay part of the employment costs of youths who must work to help their families.

▶ Passed, in the Senate, a $1.3 billion deficiency-appropriations bill to keep programs that are running out of money. Included in the total were $1 billion for military pay raises and $45 million for Alaskan earthquake recovery.

CLOTURE ROLL CALL

Required for cloture: two-thirds of the Senators who are "present and voting." Thus, if all 100 Senators were present, 67 votes would be needed to stop the Democratic filibuster against the civil rights bill. The bill's bipartisan supporters say that now that they have presented the package of Dirksen-sculptured amendments, they will have the necessary votes when a cloture petition is filed, probably by the middle of this month. Georgia's Senator Richard Russell, leader of the filibuster forces, makes "no claim as to being able to beat the gag rule."

If the bipartisan coalition manages to invoke cloture, no amendments can be offered without unanimous consent, and no Senator can speak longer than an hour before final action on the bill, and Southern resistance will be futile. The present roll call:

FOR CLOTURE—61

Democrats—41

Anderson (N.Mex.)	McGovern (S.Dak.)
Bartlett (Alaska)	McIntyre (N.H.)
Bayh (Ind.)	McNamara (Mich.)
Brewster (Md.)	Magnuson (Wash.)
Burdick (N.Dak.)	Mansfield (Mont.)
Church (Idaho)	Metcalf (Mont.)
Clark (Pa.)	Monroney (Okla.)

Dominick (Colo.)	Smith (Me.)
Hickenlooper (Iowa)	J. J. Williams (Del.)
Hruska (Neb.)	M. R. Young (N.D.)

FOREIGN RELATIONS

Consular Convention

There was the White House-Kremlin hot line, then the test ban treaty—and now a U.S.-U.S.S.R. consular convention to promote trade and to protect the citizens of each country while dwelling in the other.

President Johnson announced the pact, said it would be signed this week. Under it, each nation may open consulates outside the capital cities, possibly in Leningrad and Chicago. The pact requires that whenever one nation arrests a citizen of the other, it must notify the other nation within three days, and permit a visit from the prisoner's consulmen within four days. It is the first bilateral treaty between the U.S. and the U.S.S.R., and will, of course, require ratification by the U.S. Senate.

* *Eight Vice Presidents took over from Presidents who died in office. Seven Vice Presidents died in office. John C. Calhoun resigned the vice-presidency in 1832 to become a U.S. Senator.*

THE ECONOMY

Raising the Roof

Increases in the huge U.S. debt limit —and there have been four of them in the past two years alone—seem to signal a rip-roaring, breast-beating debate in Congress on Government spending. But last week, when Treasury Secretary Douglas Dillon went before the House Ways and Means Committee to request a $9 billion boost that would lift the limit to an alltime high of $324 billion, there was hardly a protest to be heard. The committee did not even bother with a roll call, instead gave speedy voice-vote approval to Dillon's request.

The fact is that President Johnson has gone a long way toward taking the bite out of the spending issue. Two weeks ago, for example, he announced that spending in fiscal 1964 and 1965

JIM MAHAN

VIRGINIA'S HARRY BYRD
Instead of a battle, a breeze.

would be $700 million under his January estimate, and that the overall deficits for the two years would be decreased by $300 million to a two-year total of $14.6 billion. And while such economizers as Virginia's Democratic Senator Harry Byrd, who wants to cut spending by $6.5 billion in fiscal 1965, are likely to have a lot more to say on the matter, the new limit is expected to breeze through Congress with less difficulty than in many a year.

Facing more resistance, however, is the Administration's request to extend for another year some $530 million in excise taxes that were first levied at the beginning of World War II. Led by Wisconsin's John Byrnes, the Republican members of Ways and Means sought to reduce the 10% levy on jewelry, furs, perfume, cosmetics, watches, luggage and other leather goods to 5% by July 1, and to nothing the following year. With one exception, the committee's proposal to defeat it by a party-line vote of 14 to 11. But that is not likely to be the last of it. Byrnes said he would try to excise the excise taxes when they reach the House floor, and a hot debate is in prospect.

INVESTIGATIONS

Conflict of Interests

Democrats, quite understandably, wish that the Bobby Baker case would quietly disappear. Republicans, also understandably, would like to keep it wide open at least until November. This conflict of interests has caused some spectacular fireworks in the staid Senate chamber.

Slow Burn. New Jersey Republican Clifford Case helped bring things to a head by urging that the Rules Committee reopen the Baker probe and question Senators. "When I hear of an employee of the Senate boasting that he has ten members of this body in his hand," said Case, citing a statement attributed to Baker, "I do a slow burn." Delaware Republican John J. Williams followed with a resolution that would authorize the committee to quiz Senators and to look into "any illegal, immoral or improper activities" including the misuse of campaign funds.

Democrats practically went through the rotunda at that, particularly Washington's Warren ("Maggie") Magnuson. Noting that some of the Senators sponsoring the resolution were up for reelection, he snorted: "I am sure they do not run their campaigns on hot air. They might, but I feel certain they do not." Replied Williams: "The Senator from Washington has a great voice. But he reminds me of my favorite animal when I was a boy on the farm. I always refer to my good friend from Washington as 'Maggie.' That was the name I gave to my old friend on the farm—Maggie. He was a jackass." For a moment Maggie looked as if he had just been kicked by one. Finally he came back with a retort that was, at best, second best: "The Senator keeps some gabby old hens down there too, does he not?"

Shouting Match. The shouting match got worse the next day when the Senate met to consider Williams' resolution. Majority Leader Mike Mansfield was on his feet, attacking the resolution for its "sly innuendo," when suddenly Case bolted from his seat. "Mr. President," he shouted to Teddy Kennedy, who was then in the chair, "a point of personal privilege!" Mansfield ignored him. Case, arms waving and face purpling, kept shouting. By now, Mansfield was getting pretty hot himself. "I do not yield the floor for any purpose!" he cried. For nearly 20 minutes, the two men yelled across the aisle at each other while Teddy and Parliamentarian Charles Watkins flipped frantically through the rule book. Not quite sure of what to do, Democrat Teddy repeatedly thumped his gavel and ordered Republican Case

AP

NEW JERSEY'S CASE
Fueling the fireworks.

to sit down.* The Democrats then defeated the Williams resolution.

Virtually shamed into action by the G.O.P.'s prodding, the Rules Committee did begin studying an 18-page draft report on the Baker investigation prepared by its special counsel, Lennox McLendon of North Carolina. The report noted "the existence of a breeding ground of practices inimical to the public interest," offered three recommendations to Senators and Senate employees: 1) that there be "compulsory public disclosure" of their financial holdings; 2) that they be prohibited from associating with persons engaged in any business with the Government; and 3) that they be required to testify at the request of Senate committees. There was not much chance that the Senate would accept these recommendations.

* For that, Kennedy was later scolded by Mother Rose who phoned him to say: "Teddy, you know Kennedys are never supposed to make decisions unless they have all the facts in command. You weren't sure of your facts, were you?"

RACES

Who Likes Whom

"Would you want your daughter to marry a white man?"

That was the sense of a question put to 721 Chicago Negro families by University of Chicago Sociologists Donald Bogue and Jan Dizard in a four-year study financed by the Ford Foundation. Bogue and Dizard found that nearly half the Negroes said they would try to prevent an interracial marriage, or would permit it only after strong opposition. Most of the others claimed that it "made no difference" if their children married whites. Only a minute percentage—1.1% of Negroes living in slums and 2.5% of Negroes in middle- and upper-income neighborhoods—said that they would encourage their children to marry whites.

"Eighty percent or more of Negro parents would permit their child to marry a white person if the romance had already developed without their knowledge," said the sociologists, "but there is no evidence of a desire for miscegenation, or even interest in promoting it, except among a very tiny minority."

Bogue and Dizard went on to reveal some other racial attitudes they found among the Negroes and 839 white families interviewed. Among their findings:

▶ Forty-eight percent of the Negroes said they wanted to live in neighborhoods where whites and Negroes were about equal in number; 25% said they didn't care one way or another; 22% wanted to live in neighborhoods that were predominantly or wholly Negro; and 5% said they would prefer to live apart from other Negroes.

▶ "A majority of the Negroes denied that their race kept them from getting ahead as fast as other people. When faced with discrimination, Negroes tend to become either passively or actively regretful—they either feel depressed or they get angry. Only about one Negro in 16 believes the Negro is at fault; overall, the Negroes place the blame for the behavior of the whites upon the culture and tradition of the whites and hence believe a good part of the problems of race relations is one of changing the white culture. Negroes do not place all of the blame for the problem of discrimination on the whites, however." The study found that over half of the Negroes "were willing to adopt the position that some, but not most of the troubles that Negroes have are their own fault—their behavior patterns, their outlook on life, and so on."

▶ "Among whites, persons of European ancestry generally showed the greatest desire for residential segregation. About 8% would dislike living near Italians or Jews. More than one-fifth would not like to live near Japanese. Over 75% would dislike living next to Negroes. The Jewish population itself appears to have a rather high level of prejudice against other groups, especially with regard to Negroes and Puerto Ricans. In fact, Jewish respondents showed a greater level of prejudice toward others than others toward Jews. Negroes are anti-Italian and anti-Semitic to nearly the same extent as native Europeans."

posed to be able to do in combat. There's a close interrelationship of fire-power and mobility in the two services, and we're working further on the development of joint doctrine. We're trying out techniques of conventional and nuclear warfare. There's a lot of desert in Africa and the Middle East, and if we ever have to go over there, we'll know what we're doing."

PENNSYLVANIA

Hope in Appalachia

If it ever gets serious, Lyndon Johnson's war on poverty might be waged all around Hazleton, Pa. (pop. 32,500), which is perched amid deserted coal mines high on Spring Mountain in the heart of depressed and desolate Appalachia. But Hazleton has already fought a valiant anti-poverty war of its own. Moreover, it has done so with a minimum of federal help.

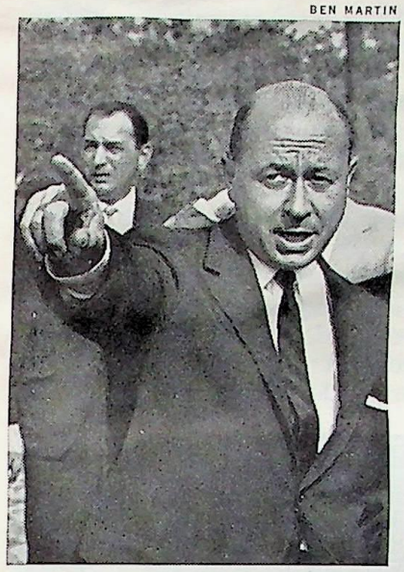
For years, the town lived respectably if not richly from coal mines and textile plants in the area. But after World War II, Hazleton found itself on the skids. One after another, the mines shut down. Between 1946 and 1958, coal-mine employment plunged from 14,000 to 1,750; young people began leaving town at the rate of a thousand a year. In Hazleton it became the rule rather than the exception for wives to plod off to work at sewing machines in the textile and garment plants while listless, jobless husbands stayed home to keep house.

Expensive Experience. Desperately, the Hazleton Chamber of Commerce worked to keep the community alive. When a local silk plant announced that it would move to cheaper labor markets in Mississippi, 70 Hazleton businessmen signed mortgages totaling $50,000 to keep the factory in town. Within three years the plant moved South anyway—putting 2,000 people out of work. Refusing to give up, the chamber formed the Hazleton Industrial Development Corporation, raised $650,000 in bonds and contributions its first year, agreed to donate $500,000 as a no-strings down payment on a $1,600,000 plant built to any prospect's specifications. The Electric Auto Lite Co. (now the Eltra Corp.), accepted the offer, but created fewer than 300 new jobs after the community thought it would employ at least 1,000. It was an expensive, disillusioning experience.

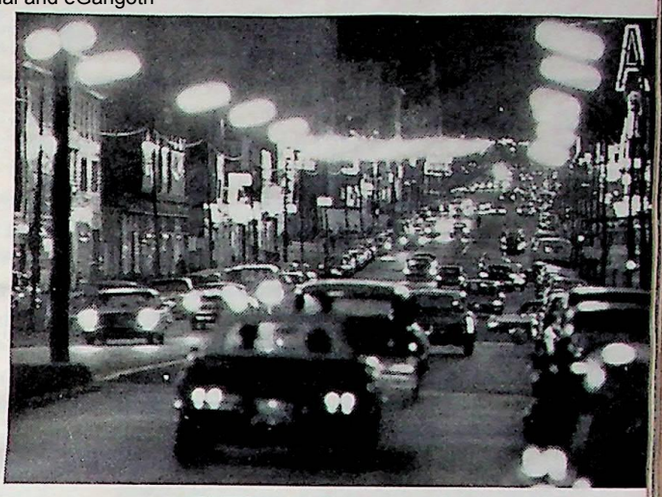
In 1955, Hurricane Diane crashed through—flooding and wrecking the few deep mines that remained. It was almost a death blow. Most of the mines never reopened, and 16% of Hazleton's workforce was unemployed. But the next year proved to be Hazleton's turning point—for the better.

CAN DO. Dr. Edgar Dessen, now 47, a physician, had been president of the Chamber of Commerce during the dark days. Under his determined guidance, a 550-acre site near town was bought for $10 an acre as an "industrial development park." Not long after, the Pennsylvania state legislature passed a law providing loans to towns that could scrape up outright contributions from townspeople—as well as bank loans—to attract new industry. Dessen got a local organization going to get the money, dubbed it CAN DO, then spent three weeks trying to dream up some words to fit the initials. Finally he came up with the coherent if colorless label, "Community Area New Development Organization."

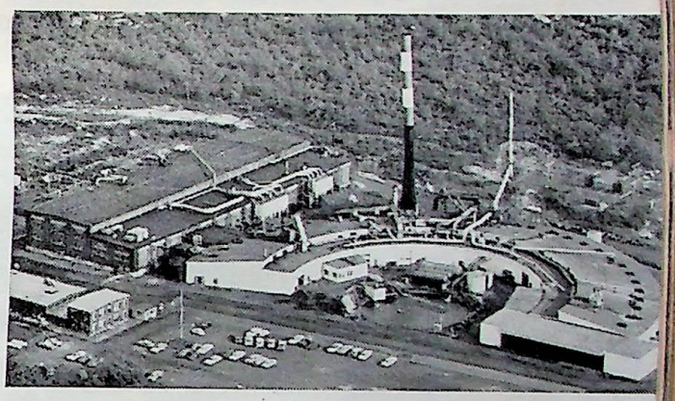
BEN MARTIN



DR. EDGAR DESSEN



HAZLETON'S BOOMING BROAD STREET



BERYLLIUM CORP.'S REFURBISHED ROUNDHOUSE

Out of despair and desolation, a self-made tow

Goal of the first CAN DO drive was $500,000—a part to be acquired by selling 15-year 3% debenture bonds, the rest from donations. Dessen's group put on heavy pressure, had every single contributor listed daily in the Hazleton Standard-Speaker, and classified the lists so that all lawyers or all employees of one factory were together—making for easy (and occasionally embarrassing) comparisons. To keep the pressure up, Dessen went on the radio every noon to read the names and amounts contributed. Within three weeks CAN DO was well over its quota, with $200,000 in cash and $540,000 in bond purchases.

The Road Back. Then the town began to improve its "industrial development park," building roads, sewer and water systems, and a 60,000-sq.-ft., $150,000 "shell plant" on sheer speculation. The General Foam Corp. moved in almost right away, has since enlarged until its investment is almost $5,000,000. About the same time, the Beryllium Corp. was persuaded by Hazleton citizens to take a look at an abandoned locomotive roundhouse built in 1918. Said Dessen: "I was ashamed to show it to them. It was built with reinforced concrete, but it was in a mess. Every window had been broken; there was soot all over everything. They said they had looked at 30 or 40 sites all over the Eastern U.S. and Puerto Rico." But Beryllium bought the roundhouse because it was a good building for a bargain price, now employs 400 people, has an $8,000,000 investment. Later the Sekisui Corp., which makes plastics and is the first Japanese-financed factory built in the U.S., put up a $1,750,000 plant.

Now, with CAN DO's fund-raising drives (collected so far: $2,200,000) keeping the state loans flowing, the once-dying town has, since 1956, attracted 15 new industries with payrolls totaling $13 million a year. No fewer than 11,000 new jobs have been created in the last five years.

Hazleton has its own airport, with daily flights from Washington and New York, a new 175-acre park with a man-made lake, an active arts council; and early this spring ground-breaking ceremonies were held for two new federal superhighways near by. Nearly all of this has been done without federal funds. And even though unemployment in Hazleton is still at an unsettling 7.8%, Edgar Dessen, for one, is not waiting with outstretched hand for poverty-war funds from Washington. Said he: "Federal programs will never rebuild towns that just aren't capable of helping themselves. Some towns should be allowed to become ghost towns—they did in the West. We should not try to create a vast WPA that will make people dependent on the Government forever."

INDIA

Man of East & West

Clad in a white sari, Indira Gandhi sat weeping on the floor beside her dead father's bed. He lay stretched out under a sheet, two crossed lotus blossoms resting above his head. Later, the body was moved to the doorway of the Prime Minister's white-walled house as a line of weeping, shouting mourners two miles long formed to offer final tribute to Jawaharlal Nehru.

Throughout the land, Indians wept and fasted for the remainder of the day. As the news slowly spread to the remote provinces, some feared that Nehru's passing would trigger war or natural disasters—and, in fact, Delhi was twice shaken by earth tremors. Many gathered to chant: "May Nehru live long after his death!"

BALDEV—PIX

NEHRU LYING IN STATE AT DOORWAY OF OFFICIAL RESIDENCE*

After the curling smoke of sandalwood, the true test of greatness.

Though it had long been anticipated, Nehru's passing found India unprepared. Only the week before, clearly enfeebled by the stroke he had suffered in January, he had himself brushed aside a question about his successor with the smiling reply: "My lifetime is not ending so very soon." Last week he had helicoptered back to Delhi from a four-day vacation in the cool hills surrounding Dehra Dun. He woke as usual at 6:30 a.m., but instead of performing his customary yoga exercises, complained of pains in his back. Within minutes, he collapsed in a coma from which he never recovered. At 2 p.m., he was dead. A Cabinet minister rose in Parliament and announced in a choked voice, "The Prime Minister is no more."

The world joined in the mourning, less for the international statesman—whose always exaggerated role as mediator between East and West had declined with the decline of the cold war—than for a tireless national leader. Nehru had more or less held together, in all its nagging greatness, Asia's largest democracy—indeed the largest single mass of unshackled mankind on earth. The true test of his accomplishment might be set by death itself; for it remained to be seen whether Nehru had given his people enough strength and order to go on without him.

Downed Magnum. In his 74 years, Nehru traveled an immense distance—from spoiled child to charismatic leader, from model English gentleman to Oriental father figure. Born in the northern Indian city of Allahabad, he belonged to a wealthy, Westernized family of the highest Brahmin class. When he was 15, the family sailed for England and the boy was entered at Harrow, where, as he put it, "I was never an exact fit." He moved on to Cambridge and two years of law studies at London's Inner Temple. He also had the money and appetite for fashionable parties in the West End, and could down a magnum of champagne without losing his poise or equilibrium. He was attracted by the ideas of his time, from the Fabian Socialism of Bernard Shaw to the moral relativism of Bertrand Russell and the welfare economics of John Maynard Keynes.

Nehru was 22 when he returned to his homeland, and he continued to dabble in a gentlemanly way with revolutionary ideas. His first meeting with Mahatma Gandhi left him unimpressed—civil disobedience and nonviolence had little appeal to a young man who saw himself as Byron in Greece or Garibaldi unifying Italy. The great change occurred when Lawyer Nehru was sent and indulgently visiting an Indian village. "A new picture of India seemed to rise before me, naked, starved, cruel and utterly miserable," he wrote. "... their faith in us, casual visitors from the distant city, embarrassed me ... filled me with a new responsibility ... frightened me."

Midnight Stroke. Nehru joined the fight for Indian independence, and was rewarded by more than ten years in British prisons. Gandhi was the torch that lit the way to freedom and Nehru the organizer who made it possible. In 1947, as British troops left the subcontinent at a slow, half-step march, Nehru rose in the Constituent Assembly to declare, "At the stroke of the ... night hour, when the world sleeps, ... will awake to life and freedom."

From that midnight stroke in 1947 until last week, India's destiny was in Nehru's hands. He guided his nation through partition, the horror of communal strife that cost an estimated 200,000 Moslem and Hindu lives, and the shock of Gandhi's assassination in January 1948. Despite deep poverty, inefficiency and corruption, despite frightening capacity for violence, despite sharp differences in language, religion and caste, India became a nation and a working democracy.

Abroad, Nehru became the spokesman for the nonaligned Afro-Asian nations that wished to stand aside from the cold war—though it often seemed to embittered Westerners that Nehru's moralizing neutrality played into Communism's hands. In part, his policy of nonalignment was based on a shrewd calculated risk. He recognized that India could not afford both a big military budget and industrialization; his role as a peacemonger offered prospects of aid from both sides.

For 15 years, this balancing act worked. But Nehru tarnished his image of nonviolence when he employed force in 1961 to seize the tiny colony of Goa from Portugal. And Red China punished his policy of nonalignment in 1962, when the Reds streamed across the Himalayas and brushed aside the defending Indian troops, long ill equipped and ill guided by a Nehru favorite, the wavering Defense Minister Krishna Menon. Yet the West moved a little closer to Nehru as neutrality became more acceptable, and Nehru moved a little closer to the West as he belatedly sought arms against Red China.

Paid Homage. At home, Nehru gave himself tirelessly to his 450 million people. He was both a kindly father and a stern schoolmaster, and each morning began with a *darshan*, a communion

* At far right, Daughter Indira Gandhi and Sister Viajaya Lakshmi Pandit.

Digitized by Arya Samaj Foundation Chennai and eGangotri

with the pilgrims who gathered daily outside his home. They would sit quietly in rows on the ground while Nehru walked among them, exchanging smiles and the palms-together gesture of *namaste*. Occasionally, a woman would say shyly, "We come to pay homage." Nehru would answer laughingly, "Well, pay homage then."

Darshan was more emotional than verbal, which was fortunate, since of India's many languages Nehru spoke only Urdu with any proficiency. Often his speeches to crowds numbering in the millions were delivered in English and translated into the local dialect by interpreters. The multitudes listened quietly and seemed somehow comforted by Nehru's presence. He could patiently calm the terrors of superstitious peasants who feared the world was coming to an end, yet scream at a servant because a cup was misplaced. He crusaded tirelessly against the ingrained Indian habits of inefficiency, tardiness and cheerful anarchy, but made no real effort to raise up young leaders to succeed him. He railed against the prevalence of holidays, wandering sacred cows, and often fraudulent holy men, yet did nothing about them. He preached socialism but only partly practiced it, calling on Cabinet ministers who were conservative businessmen to administer a half-planned economy.

Normal Confusion. Perhaps his most remarkable trait was his devotion to democracy. Nehru could have become dictator of India, and he knew himself well enough to recognize his dictatorial impulses. Yet all that he accomplished was done under a free parliamentary system. Once, halfheartedly, Nehru spoke of resigning, but he allowed himself to be dissuaded by the clamor of his Congress Party followers, who cried, "Panditji, don't abandon us!"

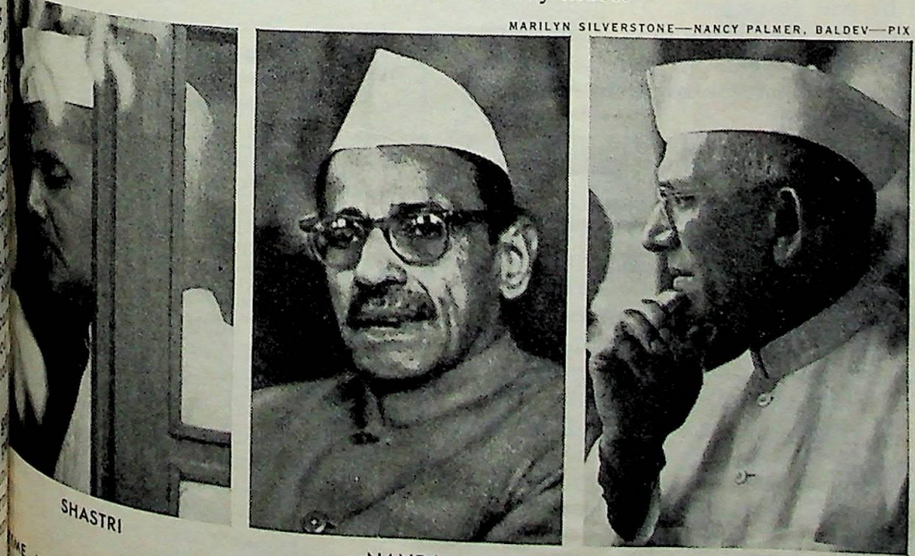
Nehru abandoned India only by abandoning life itself. His slim, bent-shouldered figure, with the fresh rose-red in a buttonhole and the white Gandhi cap, will be seen no more. There will be no more large family breakfasts, with the watchdog nuzzling his knee beneath the table and grandchildren giggling in the corner; no more long hours in the Foreign Ministry office, where monkeys scamper among the colonnades; no more rides along thronged streets to be pelted by flowers and nearly trampled by the ardent heedlessness of an Indian crowd. Perhaps his people had clung to him too fervently, too long—and he to them.

He had consistently refused to designate a successor; on his death, instead of orderly transition, there was some normal confusion. India's President Sarvepalli Radhakrishnan chose the senior member of the Cabinet, Home Minister Gulzari Lal Nanda, 65, to serve as Acting Prime Minister. At week's end the Congress Party working committee, in consultation with Indian state ministers, began meetings to select a permanent successor. Leading candidate: La Bahadur Shastri, 59, who served as Nehru's deputy and is a somewhat obscure political moderate. Among other candidates: Morarji Desai, shrewd, free-enterprising former Finance Minister.

Fanned Ice. After lying in state overnight, cooled against the New Delhi heat by fans blowing across blocks of ice, Nehru's body was placed upon a gun carriage and, to the funereal beat of muffled drums, drawn six miles through Delhi to the banks of the holy Jumna River. A stampede in the huge crowd killed four persons and injured scores. Although Nehru had been an agnostic, his corpse was placed on a Hindu funeral pyre. An Indian air force band played the hymns, *Abide with Me* and *Lead, Kindly Light*. Nehru's grandchild, Sanjay Gandhi, stepped forward and touched a torch to the pyre.

As the flames spread and sandalwood smoke curled toward the sky, priests in yellow and white robes chanted, "He is free of his earthly bondage." In response the crowd shouted, "*Amar rahe* [May he be an immortal]!" But India's deep and visceral feelings for its dead leader may best be found in his own words, spoken on the occasion of Gandhi's death: "A light has gone out of our lives. We cannot run to him and seek solace any more."

MARILYN SILVERSTONE—NANCY PALMER, BALDEV—PIX



SHASTRI NANDA DESAI

Was there strength enough left behind?

SOUTH VIET NAM

Again, the Buddhists

By 6 a.m., a crowd of 50,000 Buddhist faithful had gathered for the sunrise service on the banks of the Saigon River. Packed shoulder to shoulder under a 120-ft.-high pylon put up with the help of army engineers, they were led in prayer by shaven-headed monks while a girls' choir sang hymns. Then down from a candle-laden altar was handed a glass case containing a small blackened object identified as the preserved heart of Thich Quang Duc, the first monk to burn himself alive during last year's Buddhist demonstrations.

The relic was placed on the lead float of a mile-long procession, which began a parade through the city while flocks of pigeons and sparrows were released from cages.* Also swirling overhead: thousands of round paper disks representing Buddha's "wheel of life," air-dropped by chartered Cessna. Lining the parade route, sustaining themselves on peanuts, soda pop and peppered fish sticks, were 250,000 spectators. As the Buddhists celebrated the 2,508th year of Buddha's birth and the first anniversary of their successful campaign against President Ngo Dinh Diem, they plainly showed themselves a growing force in South Viet Nam. Significantly, neither Premier General Nguyen Khanh nor U.S. Ambassador Henry Cabot Lodge was present at the ceremonies—a reflection of growing distrust of Buddhist aims.

Cowing Catholics. Ever since Diem's overthrow, the Buddhists have worked diligently to expand their influence. They have launched a collection drive to build up working capital, are constructing schools. Vietnamese Catholics complain that they are beginning to suffer the same discrimination by Buddhists that the Buddhists complained of under Catholic Diem.

Tension developed between the two religious groups recently when Buddhists demanded the execution of Catholic Army Major Dang Sy, who is awaiting trial for giving the orders to fire on Buddhist demonstrators in Hué last year. Earlier the Buddhists had insisted that no mercy be shown to Diem's jailed brother, Ngo Dinh Can—who was executed even though Lodge privately pleaded with Buddhist leaders against the death penalty—or to Can's aide, Lieut. Phan Quang Dong, who was shot before an enthralled crowd of 8,000 in the stadium of Hué.

In Major Sy's case, Catholics angrily argued that he had only followed superiors' directives to keep order, and Catholic army officers circulated leaflets warning of serious trouble if Sy was shot. Although the Buddhist hierarchy

* Buddhist doctrine teaches that freeing caged birds is one way to earn virtue. As a result, one Saigon bird merchant has reputedly made a fortune by training his feathered charges to return to him as soon as they have been bought and freed by virtue seekers.

LARRY BURROWS—LIFE

MONKS CONTEMPLATING HEART OF THICH QUANG DUC (IN GLASS CASE)
Growing force, growing distrust.

now speaks of leniency for Sy, fear of a clash persists. Khanh, a Buddhist, has taken pains to antagonize neither the Catholics nor the Buddhists. But he is angered by the Buddhists' lack of support for his regime.

Late in the Game. Of particular concern to the U.S. embassy—where he enjoyed asylum for several weeks last year—is Thich Tri Quang, a frail, hot-eyed monk who heads the Institute of Buddhist Clergy. Quang has managed to confuse everyone about his political loyalties, but he masterminded last summer's Buddhist strategy against Diem and is now thought to be a leader of the militant monks exhorting Buddhists to "assert" themselves. What worries the U.S. is the possibility that they will assert themselves for neutralism—and the question of why they have failed to assert themselves against Communism.

The speeches at last week's celebrations were masterpieces of ambivalence, saying nothing for or against Khanh, for or against the Reds. Aged Supreme Patriarch Thich Thien Khiet appealed enigmatically to Buddhists "regardless of their sects" to "achieve more union and to think of the danger faced by Buddhist law and the people." He added, equally mysteriously, that Vietnamese Buddhists "know how to approve of sound policies and resist nefarious ones."

Some observers believe that the Buddhists are still trying to make up their minds about what position they should take on Communism—pretty late in the game. Others suggest that the Buddhists want only to be independent of both government and Communists—which sounds like a neutralism of sorts. Moreover, Communist tactics being what they are, it would be almost miraculous if the Buddhists were not infiltrated by Red agents.

Whatever their aims, the Buddhists are stronger than last summer—a force now rivaling the Viet Cong in organization. Channeled against the Reds, they could quite possibly help win the war by galvanizing the apathetic populace. And, logically, they should want to do so, for their northern brethren have fared badly under Communist rule. But then logic has never been a noticeable spoke in the Buddhist wheel of life.

THE PHILIPPINES

The Last of the Huks

Preoccupied with the war in Viet Nam, the U.S. sometimes forgets that a similar struggle against Red rebels was won in the Philippines. Under relentless pressure from President Ramon Magsaysay's counter-guerrilla forces, Philippine Communist Leader Luis Taruc surrendered a decade ago and accepted amnesty, ceding command of 56,000 remaining Hukbalahap guerrillas to Jesus Lava, a wiry physician.

One steaming noon last week, intelligence agents of the Philippine Constabulary closed in on a modest clapboard house near Manila's center and roused a pale, gaunt man from a pre-lunch nap. His indignant protest of innocence lasted only until the agents found letters from Mao Tse-tung and other top Communist leaders. When confronted by the now respectable Luis Taruc, he admitted he was Jesus Lava, 51, general secretary of the Philippine Communist Party. After years in the backwoods, Lava had apparently come to Manila to visit his family.

Though Lava faced trials for armed rebellion and murder, he was taken to Malacañan Palace for an almost cordial interview with President Diosdado Macapagal. The meeting was symbolic of the fact that the once powerful Huks are no longer a serious threat in the Philippines, even though economic instability and corruption remain dangerous; the hard-core armed Huks probably number only a few hundred, and they may be able to draw on perhaps 10,000 supporters in remote Mindanao and Luzon. Successor to Lava as leader of the Huks is Pedro Taruc, cousin to Luis, who seems determined to continue desultory attacks on remote villages.

SOUTHEAST ASIA
The Alternatives

In Hawaii this week, on the Presidential orders, Dean Rusk, Robert McNamara and Maxwell Taylor will sit down again with top U.S. diplomats and soldiers to discuss the deteriorating situation in Southeast Asia. Lyndon Johnson obviously wants to avoid any drastic action until after the elections, but events may not permit such delay. In the ensuing debate about what to do, what are the alternatives?

Neutralization

Some prominent U.S. voices are convinced that the military commitment in Viet Nam should never have been taken over by the U.S. from the defeated French and must now be liquidated as soon as possible, at almost any cost. Columnist Walter Lippmann, for example, thinks that an honorable and perhaps successful way out lies in Charles de Gaulle's proposal for neutralization. Though never spelled out by De Gaulle, this would mean a negotiated peace under auspices of the U.N. or of a renewed Geneva conference, to stress even by international guarantees the [illegible] made—and since broken—in the original 1954 Indo-China settlement. The possibility is backed by Senators Mike Mansfield, George McGovern and others, who see defeat and humiliation for the U.S. as the only fruits of continued fighting in South Viet Nam.

Proponents of neutralization do not deny that, at the very least, it would increase Chinese "influence" in the area. As the University of Chicago's Hans Morgenthau argues, this influence has always existed and cannot be prevented short of a head-on war with China, perhaps not even then. But some believe that a neutralized South Viet Nam would encourage North Vietnam's Premier Ho Chi Minh to become a kind of Tito in the shadow of Red China. In one view, expressed by Asian Expert Bernard Fall, Ho Chi Minh is afraid of U.S. air strikes, which could destroy his struggling economy, and if suitably threatened he would accept a neutral, more or less independent South Viet Nam.

Most neutralization advocates, however, agree that at present the Communists are doing so well in South Viet Nam that the U.S. couldn't get neutralization even if it wanted it. It would first have to improve the military situation. This means, in effect, urging the South Vietnamese, not to mention the American "advisers," to fight another war with only an uncertain neutrality as the declared prize—a dubious war aim, to say the least. On balance, the State Department and Pentagon are convinced that any agreement to neutralize Southeast Asia, even if one would be concluded, could not be enforced. It would be, in Dean Rusk's words, "a formula for surrender"—merely a cover

TIME, JUNE

Digitized by Arya Samaj Foundation Chennai and eGangotri

Red infiltration and eventual Communization of all Viet Nam, which has been the clear Communist purpose ever since Laos was "neutralized" in 1962.

Withdrawal

Then why not get it over with fast and pull out at once? This is the argument of Senator Wayne Morse, who believes that current U.S. participation in the Viet Nam war is not only unconstitutional but "threatens to engulf the resources and manpower of the American people on the continent of Asia for an undefined time and purpose." Some argue wistfully that the U.S. might as well extricate itself from the messy, soft center of Southeast Asia —Viet Nam, Laos, Cambodia—and make a firm stand along a "hard perimeter" based on Malaysia, the Philippines and Okinawa. There, with massive air support and the Seventh Fleet, the U.S. would at least know where it stands and what it is defending.

Or would it? Under such conditions, staunchly pro-Western Thailand would succumb sooner or later, and Burma, acutely aware of its 1,370-mile frontier with China, would swing away from its current neutralism toward Peking. The pressure on India would be great. For that matter, argue some U.S. strategists, the security of Malaysia and the Philippines has largely been due to the existence of non-Communist buffers in Indo-China. A series of takeovers by the Reds on the Southeast Asian mainland would revive the Communist threat in the island nations, and a U.S. defeat might well persuade Indonesia's Sukarno that he could press his own expansionist plans with impunity. In effect, U.S. defenses would be pushed to Okinawa.

Above all, a U.S. pull-out would convince all of Asia, including Japan, that Americans cannot be relied on as allies against Communism. Chances are that the U.S. would only have to fight later.

Attack the North

If these are indeed the consequences of withdrawal, shouldn't the U.S. move to the offensive right now? Many think so, and one proposal is an attack on North Viet Nam, which guides and supplies the Viet Cong and other Communist forces in Southeast Asia.

Such an attack could take several forms. One would be a drastic insurgent campaign conducted by South Vietnamese commandos in enemy territory. Premier Nguyen Khanh supports the idea only if he receives guarantees of total U.S. backing should moves against the North draw massive Chinese retaliation. Besides, South Vietnamese Special Forces teams have been trying to penetrate North Viet Nam for at least two years, have met with almost total disaster so far.

Another possibility, strongly favored by some U.S. officials, is to bomb Ho Chi Minh's industrial and military bases and supply routes. This could hurt. But everyone at the Pentagon recalls Korea's Operation Strangle, an Air Force effort to prevent Chinese and North Korean supplies from reaching the front in 1951. After each day's bombing, no matter how many bridges and railroad facilities were blown up, the Korean peasants succeeded in patching things up at night. Ho Chi Minh's men doubtless could do the same. Besides, there is a growing belief that, while ideological direction from the North is important, northern supplies are not essential to the Viet Cong terrorists in South Viet Nam, who are armed largely with captured weapons. Many believe that even if North Viet Nam were to withhold all aid, the Viet Cong could fight on for at least two to three years.

If the U.S. did strike at North Viet Nam, would the Chinese strike back by sending their own infantry hordes south? Chances are that Peking would, though no one can say on what scale. Some American strategists would actually welcome such Chinese intervention as a chance for the U.S. to blast Red Chinese atomic developments and other installations.

Yet, for all the tensions of the Sino-Soviet split, who is to say for certain that Russia would not feel compelled to step in on the side of a fellow Communist nation? In fact, could Russia afford not to do so?

Win in the South

One of the seemingly simplest proposals is to ignore North Viet Nam for the moment, drop the U.S. "adviser" role in South Viet Nam and add 30,000 to 40,000 U.S. troops to the fray. Some feel that this added strength in fighting men, plus the addition of perhaps a few hundred thousand newly recruited Vietnamese soldiers to General Khanh's existing 450,000-man force, would be enough to back the Viet Cong into a corner. It would make the ratio closer to the 10-to-1 troop strength the British used to defeat the Reds in Malaya; at present, the U.S. and Khanh are trying to do the job with a troop ratio of only 4½ to 1, inadequate where the enemy has the advantage of guerrilla status.

Such direct intervention would at least demonstrate beyond all doubt that the U.S. means business in South Viet Nam. It would also enable the U.S. to drop the cumbersome and frustrating task of trying to run the war by advising and persuading Vietnamese officers, and instead to assume direct command of operations. In fact, most U.S. military men badly want to do this right now but realize it would be difficult without more U.S. troops on hand.

U.S. forces in the South might well draw Red Chinese "volunteers" into the battle, although Russia probably would not find it necessary to join the fighting on this account. There are other, greater risks. For one thing, relatively modest estimates of U.S. troop requirements are questionable; some believe the U.S. might have to send in 100,000 to 200,000 men to make a dent. Moreover, how would American troops take to a guerrilla war, compared to which even Korea was an old-fashioned textbook conflict? In the swamps of the Mekong Delta, would they be any better at telling friend from foe than the South Vietnamese troops themselves? And how much could an alien Western force do to win popular support?

There is, of course, always the possibility of choosing the *status quo*—with a few new trimmings. One suggestion in the trimmings category does not directly concern Viet Nam but Laos: bomb the Pathet Lao forces, encourage Thailand's army to occupy part of Laos, and move U.S. marines into Thailand more or less permanently. But even if these moves were to be decided on, it is far from clear whether they would make any real difference—or whether they would simply demonstrate the need for real intervention.

KAUNDA GREETED BY CABINET MINISTERS ON RETURN FROM LONDON
Jumping into a new republic.

NORTHERN RHODESIA

Roar of the Black Lion

Welcome banners bedecked Lusaka's postage-stamp airport, and 2,000 jubilant Africans pressed against its wire fence, their faces daubed festively with red ink, and frantically waving ceremonial palm fronds. Out of the Dakota transport stepped a shock-haired, anthracite-black man in a natty suit. To cheers of "Ken, our Zambia boy!" he unfurled a banner that proclaimed: REPUBLIC DAY, OCTOBER 24. Then he said: "I told you before we left we were going to collect a republic. We have brought it back to you."

Thus last week Northern Rhodesian Prime Minister Kenneth ("The Black Lion"*) Kaunda returned from London bearing a long-coveted gift for his 3,500,000 people: a fixed date for independence. Next Oct. 24, Northern Rhodesia will become the Commonwealth Republic of Zambia.

Going It Alone. For ten years Northern Rhodesia formed part of Britain's ill-starred Central African Federation, in which the black-dominated protectorate was bound awkwardly to equally black Nyasaland and white-ruled Southern Rhodesia. Last year, after Northern Rhodesia and Nyasaland demanded independence, London reluctantly cut the ties among the three. Nyasaland is to gain independence in July, but is poor in resources and rich in unemployment. Southern Rhodesia is rent with racial strife because it refuses to grant equal representation to blacks, has received no independence date. Of the trio, Northern Rhodesia's future looks by far the brightest.

One reason is that, despite its need to develop educational and agricultural resources, Northern Rhodesia is inherently richer than its two neighbors—thanks to fabulous copper reserves that net $336 million a year. A more important cause for optimism is Kenneth Kaunda himself. A teetotaling preacher's son and ex-schoolteacher, Kaunda, 40, is a fiery nationalist who has spent his share of time in British prisons. But he has since convinced his former masters that he has the makings of a moderate African statesman in the mold of Tanganyika's Nyerere. Kaunda advocates a "multiracial society" that will protect the rights of the white minority. He favors foreign investment, has promised just negotiations with the British-owned copper companies for an increased local share of the take.

No Nonsense. During the 16-day independence conference in London, Kaunda so impressed the Colonial Office that Northern Rhodesia will be the first British-ruled territory allowed to make the jump to full independence without the usual period of dominion status under the symbolic tutelage of a Queen's governor-general. Under a new constitution that includes safeguards for individual rights, Kaunda will take over as President.

After his return home, Kaunda beamingly shook hands with his Cabinet ministers, who had turned out in slogan-emblazoned "freedom shirts." Then he drove through cheering crowds to his neon-lighted United National Independence Party headquarters (formerly a dry-cleaning plant). There he praised his reception as "nonracial, nontribal and purely Zambian." Then the Black Lion, who has shrewdly raised the pay of his soldiers and police to discourage dissension like that which jarred East Africa, made clear that he can be as tough as he is mild-mannered. Said he, addressing himself to his country's often troublesome trade unions, and by implication to all future Zambians: "This government is strong and here to stay. I do not want to hear any more nonsense from anyone."

* *So nicknamed, according to one account, because he once met a lion, frightened the beast into retreating by staring it down.*

SOUTH AFRICA

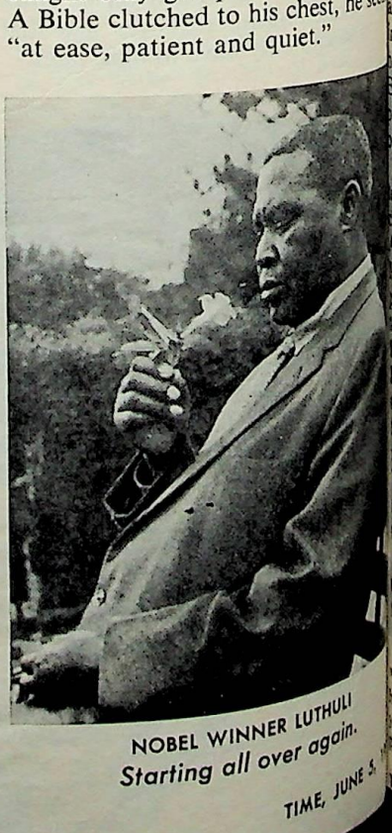
Another Five Years

His followers call it "living death." For heading the African National Congress, an organization dedicated to passive resistance against *apartheid*, the South African government five years ago banished Albert John Luthuli to a 25-acre sugar farm near the Zulu village of Groutville and to the little town of Stanger. Since then he has won the 1960 Nobel Peace Prize and quietly kept up his stance of resistance, though he was forbidden to speak or write for publication.

Last week, the day before the five-year ban was up, two Special Branch detectives caught up with Luthuli in a shop near his farm and handed him a notice. It banished Luthuli for another five years, this time under even more rigid conditions; henceforth he may not even go into Stanger or attend services in the local Congregational Church. They fear he would incite other blacks to riot.

Basis for the new ban: the Minister of Justice, who under the law need not furnish proof, declared himself "satisfied" that Luthuli had engaged in "prohibited" activities and espoused the "cause of Communism." He also linked Luthuli to other leaders of the African National Congress, Nelson Mandela and Walter Sisulu, currently on trial for their lives on charges of sabotage.

Since the ban prohibits visitors to Luthuli's home unless they have government permission, his neighbors caught only glimpses of him last week. A Bible clutched to his chest, he seemed "at ease, patient and quiet."



NOBEL WINNER LUTHULI
Starting all over again.

AUSTRALIA

Civil Rights for Aborigines

Australia's 40,000 full-blooded aborigines,* nearly half of whom live in isolated tribal groups in the Northern Territory, are "protected" by confused statutes restricting their movement, forbidding them to drink alcoholic beverages even if they remain sober and orderly, to own land or firearms, and to cohabit with white Australians.

Liberal-minded critics have long objected to these discriminatory laws. The boomerang-hurling aborigines, who still go naked in many areas, did not seem to mind cohabiting mostly with their own kind, but they took to drinking cleaning fluid and dissolved shoe polish. They also began demanding equal rights and equal pay—cattlemen often employed them at bargain wages.

Last week the state legislature at Darwin passed a law striking down all unequal prohibitions against the aborigines in the Northern Territory and requiring them to attend school in English, since they have no written language. Other states are following suit. Some Australians fear that the natives are not ready for such freedom and should remain wards of the government. Says Western Australia's Native Welfare Minister Edgar Lewis: "Some people think there will be orgies and riots, but I am sure it won't happen."

MIDDLE EAST

You Were Expecting Maybe James Bond?

Like many sensitive young Germans, Graduate Student Frowald Hüttenmeister felt a sense of guilt for Nazi atrocities against the Jews. Studying Hebrew, history and archaeology, he made field trips to the Middle East and came to identify himself with the Jews because, as he later put it, "I was so well received in Israel as a German." Along the way, he became deeply entangled in Israeli-Egyptian espionage, one of the less publicized but most bizarre branches of the spy business.

Recruited by an Israeli agent, Hüttenmeister became convinced that he could somehow make amends for Auschwitz and Buchenwald by helping Israel protect itself against Egyptian plots and plans. After training in cryptography and other techniques in an Israeli-operated spy school in Paris, Hüttenmeister flew to Cairo with instructions to pick up a capsule of microfilm from a Sudanese clerk named Ismail Sabri and smuggle it out of Egypt. The neophyte spy had no sooner taken the film than he was arrested by Egyptian security agents.

Hearing his full confession last week, the Cairo Supreme State Security Court found the defendant guilty of working for the Israeli government. But Hüttenmeister's death sentence was reduced to ten years at hard labor and a $2,500 fine "in view of the defendant's youth and inexperience, and in appreciation of the cooperation of German scientists in Egypt."

Triumphantly, Egyptian intelligence sources then revealed that the young German had been betrayed by Sabri, who, while pretending to work for the Israelis, had for four years fed them phony information. Espionage sophisticates wondered why, if Sabri had really been such a successful double agent, the Egyptians had not managed to catch Hüttenmeister without exposing him. But then intelligence is apt to get fairly intricate, in the Middle East even more than elsewhere. So far this year, Syria has sentenced to death a Lebanese Protestant missionary for broadcasting information to Israel from transmitters hidden inside statues, and Lebanon meted out 20 years to a Jewish woman named Sholla Cohen for recruiting agents at "wild parties" in her apartment. On the other side, the Egyptians not long ago sent into Israel an Armenian agent who disguised himself so thoroughly as a Jew that he not only had a full set of ancestral documents but had even had himself circumcised.

FRANCE

Face Watching

After a three-week rest at his villa in rural Colombey-les-Deux-Eglises, France's foremost convalescent returned to public life last week, and instantly the nation's favorite game became face watching. The face, of course, belonged to Charles de Gaulle, and what his countrymen saw in it depended partly on their politics. The anti-Gaullist weekly L'Express, for instance, carried a photo of a worn, waxen-faced man whose eyes were more deeply pouched than ever. Gaullists found him leaner than before his April prostate operation but fit enough to serve for years and years in the Elysée Palace. And those who viewed him without any political prism saw a man surprisingly vigorous after major surgery—but, after all, 73 years old.

First Fruits. De Gaulle's first public outing took him to the inauguration of the Moselle River Waterway. After six years of work and an investment of nearly $200 million, the Moselle has been widened and provided with locks, thus making the river navigable for big barges and giving the steel mills of Lorraine an easy link to the Ruhr Valley's coal.

France considers the Moselle Waterway so valuable that it paid a handsome price: Paris agreed to foot two-thirds of the bill and renounced its claims to the Saar; Germany paid only one-third of the cost, though nine-tenths of the canal flows through its territory. When the project is linked up with the Sâone and Rhône rivers through a complex system of canals, it will provide an unbroken waterway from Marseille to Rotterdam, a route first visualized by the Roman generals Nero Claudius Drusus and Gaius Antistius Vetus some 2,000 years ago.

JACQUES DE POTIER—PARIS-MATCH

CONVALESCENT DE GAULLE ON DECK*
Worn and waxen or fit for years?

At the French town of Apach, De Gaulle boarded the carnation-decked pleasure boat *Strasbourg*, along with West German President Heinrich Lübke and Luxembourg's Grand Duchess Charlotte, to begin the four-hour cruise along the Moselle to Trier, across the German border. There, De Gaulle hailed the project as one of "the first fruits" of the recent Franco-German *rapprochement*. After "so much pain to which this river was a sad witness for centuries," said he, "we have been able to sail down it together, without meeting any resistance except that of ribbons."

Fecund Frenchwomen. The boat ride tired De Gaulle, and when he returned to Paris, a scheduled Cabinet meeting was put off 24 hours. But after a day's rest, he not only presided over the meeting but played host to King Mahendra of Nepal. Later in the week, De Gaulle received a delegation of 14 mothers who have given his "100 Million Frenchmen" campaign a boost by bearing big families, also welcomed a papal legate on hand to help celebrate the 800th anniversary of the Cathedral of Notre Dame.

While he was in the hospital, according to the latest De Gaulle story making the rounds in Paris, his wife timidly suggested that he might not be up to another term. His reply: "I am *old* enough to know what I should *do*—even another seven years *at the head* of the Republic."

* Thought to be of Dravidian origin and to have migrated to Australia at least 10,000 years ago from Asia via the Indonesian archipelago or over a since sunken land bridge.

* In light hat: *Grand Duchess* Charlotte of Luxembourg.

BRAZIL

Toward a New Economics

Brazil is famous as the lost continent of economics. It has ignored all the rules, maintained a giddy inflation of 40% to 80% per year, built up a foreign debt of $3 billion, and seemed to be operating on four basic Brazilian principles: 1) God is a Brazilian, 2) confidence is a good racket, 3) paper is the stuff money is made of, and 4) the Americans would always bail them out anyway.

All that is changing. Having kicked out Leftist João Goulart, Brazil's new President Humberto Castello Branco is determined to put his country's economic house in order once and for all. To do the job, he has chosen Roberto de Oliveira Campos, 47, a brilliant economist and diplomat, who was Brazil's Ambassador to Washington until last December, when he quit in disgust at Goulart. As Minister of Economic Planning, Campos knows just how big a task he faces. In 31 months of Goulart, the value of the cruzeiro plummeted 83%, and the cost of living rose 340%. The confidence that had always helped Brazil grow in spite of itself disappeared—and so did many outside investors. Private foreign investment went from $85.1 million in 1960 to a trifling $4,500,000 last year.

Historical, Not Hysterical. Campos is far too shrewd to dream that he can turn the economy around overnight. "Our actions are based on historical—not hysterical—concepts," he says. Inflation is obviously the primary target, and as a first step, Campos hopes to slow the spiral to 70% this year. Even that would be a major victory, considering the current rate of 30% for the first quarter. By early 1966, if all goes well, he plans to get it down to a "normal"—at least for Brazil—10% to 20% annually.

For a starter, the new government has canceled Brazil's $200 million-a-year wheat and petroleum import subsidies, cut the national budget 30%, and is promoting a bill that will create a National Monetary Council for stabilizing finance and trade policy. It also intends to cut back commercial credit for businessmen, hold down those famous 100% wage boosts Goulart liked to pass out to unions, expand exports by offering credit insurance.

A $500 Million Boost. The government's mightiest weapon, however, promises to be an emergency tax law to reduce the estimated $1.1 billion budget deficit for 1964. That, says Castello Branco, is "the primary cause of our inflation," and he has already rammed through Congress a bill to increase revenues by $500 million or more this year.

Under the bill, every company has 90 days to revalue its assets to bring them into line with the inflated value of the cruzeiro. The companies will then be required to pay a capital gains tax on the new figures. They can either pay in cash or, for a sweetener, buy a stake in the new Brazil by putting the money in short- and medium-term government bonds paying 6% interest. The government also firmly intends to collect some $23 million in back taxes.

To make the point crystal clear, Castello Branco's tough old War Minister Artur da Costa e Silva went on TV last week to remind everyone that the military will stand for no monkeyshines. "Go and pay now, gentlemen," he warned, "so that we do not have to come and get it from you. You owe a great deal to the revolution; and the government needs that money."

MANCHETE

PLANNER CAMPOS
Time to go and pay.

Planning Ahead. The strong measures have brought wounded howls from many Brazilians. But most businessmen are no longer in love with inflation and are ready to go along. "Inflation," says São Paulo Industrialist Paulo Quartim Barbosa, "is an illusion of grandeur and a guarantee of catastrophe." As for foreign investors, they were busy dusting off all the expansion plans pigeonholed while Goulart was in power. Willys-Overland do Brasil, the country's largest automaker, plans a $30 million expansion, Volkswagen is investing another $21 million in its São Paulo plant, Argentina's Bunge & Born is ready to go ahead with a $16 million superphosphates plant, Columbia Ribbon & Carbon plans an $8,000,000 investment, and Holland's Philips Lamp is set to build a $10 million TV picture-tube factory.

In the last month alone, executives of 35 major U.S. corporations have been scouting São Paulo, and this week six leading Brazilian businessmen will travel to New York—at Banker David Rockefeller's behest—to talk with 1[illegible] other U.S. prospects. "Only by creat[illegible] wealth," says President Castello Branc[illegible] "can we distribute it justly among [illegible] Brazilians. We intend to support a[illegible] stimulate capital."

BRITISH GUIANA

Race War

Terrorist bands of East Indians a[illegible] Negroes roamed British Guiana day a[illegible] night last week, waging sporadic war[illegible] each other, murdering and loot[illegible] burning homes and assaulting wom[illegible] Only the presence of 1,200 Bri[illegible] troops with orders to shoot to kill p[illegible] vented the ugly violence from erup[illegible] into a full-scale civil war, pitting [illegible] country's 295,000 East Indians, led[illegible] Premier Cheddi Jagan, against its 18[illegible] 000 Negroes, who hate Jagan as a r[illegible] and rabble-rousing Marxist.

Cats in the Cane. Tensions have[illegible] building up for years between the [illegible] peoples in Britain's small, self-gove[illegible] ing South American colony. PRIME MINISTER TO A GROWING WORLD

Throughout the world, the real long-term measure is the market. Not decrees. Not legislation. NO individual. ■ In empires, kingdoms, and republics, what works best sells best. Fiat learned this first by producing an automobile that now sells in 125 different countries. As Fiat's cars got around, Fiat became familiar with the transportation needs of all those nations. ■ Next to the need for transport was the need for agricultural mechanization, and advances in industrial and marine power. That is why Fiat cars, trains, trams, trucks, buses, tractors, diesel-powered ships, gas turbines, and jet aircraft operate under just about every flag. ■ No one appoints you to a post like this. You find yourself in it. You have to work hard to hold it. Everyone is watching you. ■ **FIAT S.p.A. Turin, Italy**

killed by a spear thrust in the back, her husband was critically injured, and an Indian watchman on a sugar plantation was shot dead. In Wismar, 60 miles south of Georgetown, Negro bands burned close to 200 homes and killed four East Indians, including one man burned to death. British troops rushed in to disperse the mobs and escort 1,700 East Indians to safety.

At week's end the patrolling soldiers were desperately trying to keep the two races apart. No one had an accurate count of the toll, but so far in Jagan's strike at least 33 East Indians and Negroes have been killed and more than 2,000 injured. As for Cheddi and his Chicago-born Communist wife Janet, they still clamor for immediate independence from Britain and noisily accuse "American imperialists" of stirring up opposition to their rule.

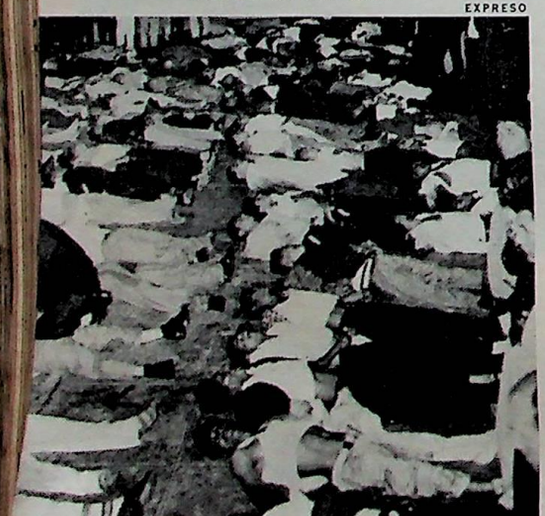
REFEREE PAZOS & "BOMBA" ROJAS

PANIC IN AN EXIT

EXPRESO



IDENTIFYING THE DEAD

Not a game, but war.

PERU

A Crashing of Mountains

Fútbol often seems more important to Latin Americans than birth, marriage and death. It is the mania that lifts a *campesino* from the daily treadmill, that causes a President to put aside affairs of state and listen to a play-by-play broadcast, that brings an entire city to a standstill on the afternoon of an important match. "They don't think it's a game. They think it's a war down there," says William Cox, president of the International Soccer League. And in a war it's not how you play the game, it's whether you win or lose.

Nothing else mattered in last week's clash between Peru and Argentina. National teams from the two countries were playing in a continent-wide round robin to decide on two teams to represent Latin America in the Olympic Games in Tokyo. Argentina, with a 5-0 record, seemed a shoo-in. Peru had two wins and a tie, but with three to play, still had a chance—if it could get by the tough Argentines. Scalpers had a field day. Bleacher seats went for as much as 30 soles ($1.00) apiece, twice the regular rate and equivalent to a full day's pay for many a Peruvian laboring man. By game time, 50,000 fanatic soccer fans had crushed into Lima's National Stadium to howl for a home-team victory. Wild-eyed *aficionados* were already jubilant and confident of the win.

The Bomb. All through the scoreless first half, the Peruvians matched the smoother Argentines with a spirited attack that drew wild cheers from the crowd. Then halfway through the second half, Argentina scored to take a 1-0 lead. At last, six minutes from the end, a Peruvian forward battered his way past an Argentine defender, toed a loose ball in front of the goal, and booted it home for the tying score. A roar like thunder burst from 50,000 throats. Then there was stunned silence in the stands. Referee Angel Eduardo Pazos, a Uruguayan, signaled a foul against Peru and disallowed the goal.

Suddenly, everything that could be pulled loose in the stadium—cushions, bottles, shoes, even bricks broken out of a wall—rained down on the field. A huge Negro, Matías ("Bomba") Rojas, with a police record for previous attacks on referees, came scrambling over the 9-ft. barbed-wire-topped fence separating the stands from the playing field. And the cry went up: *"Ahí va Bomba* [There goes the Bomb]!" The cops caught him just before he could reach the referee. "I hate to see P... ruvians lose," he muttered as t... police hustled him off the field. "I do... know what happens to me. I get b... all over."

Following the Bomb's lead, o... fans got hot all over and raged o... the field. The terrified ref hurried... called the game, giving Argentina a 1... victory, and fled to the security of... steel-doored dressing room. At that... entire crowd went berserk. In the cen... of the field, a small knot of beleaguer... cops started lobbing tear-gas grena... into the onrushing mob. Trying to... store order in the upper stands, a h... less policeman was seized by his ha... and feet, swung back and forth a... hurled to his death on the conc... 50 ft. below; another was strang... with his own necktie.

"Wave in a Bad Sea." The m... fury turned to blind panic. "A horri... noise, like the crashing of mounta... went through us," said a 16-year-... student. A few men stood firm, sh... ing, "*Calma, calma.*" They were sw... aside and trampled in the stampede t... the exits. A woman knelt to pray w... a baby in her arms; both were storm... to death. Recalled Leonardo Ceva... 37, a fisherman who brought his wi... family to the big game: "The peo... came at us like a wave in a bad sea. ... wife and my five children are gone... all of them."

At the stadium's north end, three ... the five steel doors leading out w... still inexplicably closed. One theory ... that the gate attendants had deser... their posts to watch the game's clim... Rank upon rank of screaming, str... gling humanity crashed against the s... until the doors burst open and the m... surged over the crushed bodies in ... corridors. Strips of skin clung to ... walls, and in places the corpses w... six deep. The death toll at the g... alone was 200. Outside, the ric... crowd rolled on through the stre... smashing windows and burning vehi... forcing police reinforcements to ... into their midst. Small parties of gho... scurried around, looting the dead.

All through the night, ambulance... rens wailed through Lima. By morn... the toll stood at 293 dead, nearly ... injured. President Fernando Belaú... Terry decreed a week of natio... mourning and suspended constitution... rights for 30 days to prevent le... agitators from taking advantage of ... situation.

Even taking into account the fe... of *fútbol* fans, why had this happened... Jorge Basadre, Peru's foremost histo... an, tried an answer: "Our people, ... pecially our lower classes, are full ... tensions and frustrations, dark, pen... passions and angers. This situation is ... coming acute under the impact of ... population explosion and the pow... of the masses. Add to this the Com... nist contagion. These people have ... some of their faith and hope. When ... happens, then sometimes people ... behave more like brutes than men."

The important thing for a second-grade teacher is getting across the essence of addition and subtraction. But of late, willowy Social Registerite **Victoria Thompson**, a 1960 Radcliffe graduate who teaches well-scrubbed little girls at Manhattan's exclusive Chapin School, finds her problems multiplying, what with all those reporters nosing around. One newshen nabbed her last week, but Vickie muttered, "I can't talk about that" and hurried away. About what? Well, what that happy band of Rocky boosters on the Coast keeps gloating about: they say that on June 10 Victoria will marry Dr. **James Slater Murphy**, 42, the suave Manhattan virologist who was Happy Rockefeller's first husband.

• • •

"It's just one of those silly things," says New Mexico's Senator **Clinton Anderson**, who started keeping licorice in his Capitol desk years ago to sweeten up dull debates. "I would give **Wayne Morse** some. Then **Alan Bible** would look over and say, 'What are you doing?' and he'd come around. **Gaylord Nelson** is the smartest. He waits till he sees a hand going into the box, then he'll come over. **Mike Mansfield** comes around a lot too. The other day, I accused **George Smathers** of stealing. He said, 'Not only that, I can prove it,' and he pulled two pieces from his pocket." The end of Anderson's free-candy counter for deserving Democrats may be in sight: licorice manufacturers, happily scenting publicity, have started to ship in complimentary goodies.

• • •

By all odds the most nubile director of a corporation listed on the New York Stock Exchange is **Catherine Hohenlohe**, 22, debutante daughter of Polish Prince Alexander Hohenlohe-Langelfingen and the late Manhattan heiress Margaret Schulze Downey. Mother was a working director of Newmont Mining Corp. until her death fortnight ago, and now Catherine has been elected to represent the $5,000,000 worth of Newmont stock held by her mother's estate. Presumably, she'll be getting plenty of mature male advice. But those blue-suited young Wall Streeters had better not apply. She is already engaged to Harvard Graduate Student William Ewald Cook.

James Hoffa, 51, has been on trial in federal court six times in the past six years, and the fees on that kind of action mount up. Until recently, his Teamsters Union footed the bills. But last month Jimmy got the boot instead when a group of unmatey Teamsters sued to keep him from using union funds. Though he plans to fight the suit, Hoffa sadly says that he is selling stocks, bonds, "what amounts to all my savings," to pay costs estimated at $1,000,000 so far this year. "I've got to earn the money somehow," he explained.

MUSIC

COMPOSERS

Music from Manhattan

Since the work was commissioned by the London Symphony Orchestra, it was only right and proper that Aaron Copland should entitle it *Music for a Great City*—diplomatically leaving the city's precise locale to the imagination of his audience. But Copland had no more than struck the downbeat at his new work's première last week when it was obvious to everyone in the packed house at Royal Festival Hall just what city they were hearing about. *Great City* is an unmistakable evocation of Manhattan. It might well be titled "An American in New York."

In an intricate play of rhythm and unabashed melody, Copland caught Manhattan's very voice, from staccato bleats suggesting the cry of the streets to the muffled roar of the subway. The music moves from an almost literal description of the skyline to deeper, moodier explorations that offer Copland's own comment on life in the city. Even the lightest passages have ominous undertones, and in the soaring sonorities and wailing dissonances that punctuate the work, there is a darkness that some critics took to be "a terrifying hopelessness."

Great City is not great music, even by Copland's own standards; it is a symphonic expansion of his score for the film *Something Wild*, and it shows a little too much of his tendencies toward musical reportage. But when Copland had led the orchestra through the explosions of sound that bring the 20-minute work to its sudden, shouted conclusion, the audience greeted him with a standing ovation. Looking lean and youthful at 63, Copland grinned like a boy.

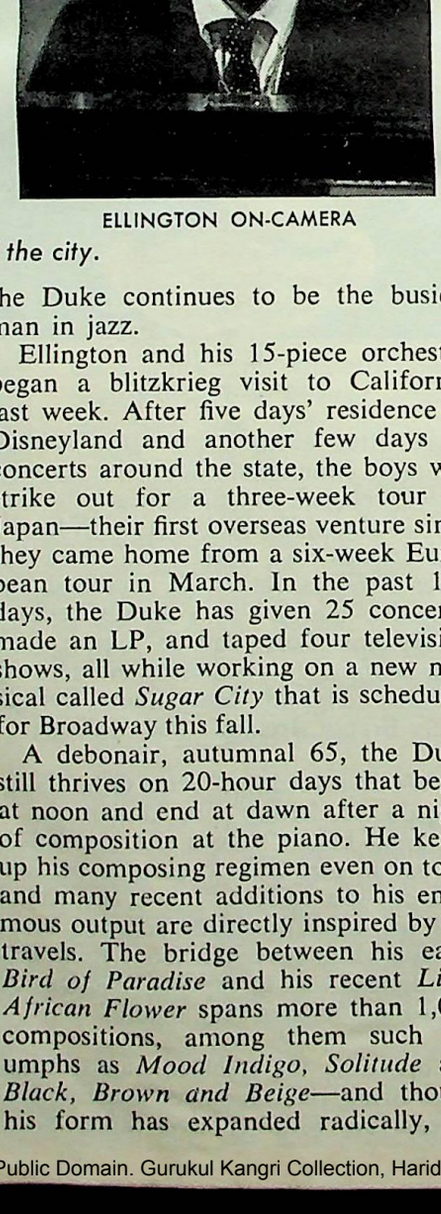
COPLAND IN REHEARSAL

JAZZ

The Duke's Day

The Duke Ellington Jazz Society would be just another fan club if anyone else were its hero. But the Duke exudes the kind of grandeur that makes a simple fan feel like a servant of history, and the society's members cheerfully devote themselves to such quiet works as assembling the world's greatest archive of Ellingtonia. Such attention suggests that the Duke has become a precious cultural heritage, but the honor has not begun to slow him down. As he has been for most of the past 40 years, the Duke continues to be the busiest man in jazz.

DAVID GAHR



ELLINGTON ON-CAMERA

The sounds of the city.

Ellington and his 15-piece orchestra began a blitzkrieg visit to California last week. After five days' residence at Disneyland and another few days of concerts around the state, the boys will strike out for a three-week tour of Japan—their first overseas venture since they came home from a six-week European tour in March. In the past 100 days, the Duke has given 25 concerts, made an LP, and taped four television shows, all while working on a new musical called *Sugar City* that is scheduled for Broadway this fall.

A debonair, autumnal 65, the Duke still thrives on 20-hour days that begin at noon and end at dawn after a night of composition at the piano. He keeps up his composing regimen even on tour, and many recent additions to his enormous output are directly inspired by his travels. The bridge between his early *Bird of Paradise* and his recent *Little African Flower* spans more than 1,000 compositions, among them such triumphs as *Mood Indigo, Solitude* and *Black, Brown and Beige*—and though his form has expanded radically, his substance has never drifted far from jazz. *"Le jazz, c'est moi,"* the Duke seems to say, and students of his music can hardly help but agree.

Sometimes the Duke descends to d... mayingly unctuous moments on the bandstand; "I love you madly," he w... coo, "and the fellows love you m... too." But such lapses do not deter ... musician from his work. When 500 f... gathered at Columbia University ... month for the Ellington Society's ... nual tribute to the maestro, the D... himself appeared to present the ... sical offering. "I will now rehearse," ... said softly, and with that the ... Duke sat down at the piano for an h... of the finest Ellington anyone had he... in years.

ROCK 'N' ROLL

Some Place near Despairsville

The psychodynamics of the rock ... roller has long been a fertile field ... motivational researchers. In the pr... itive *Blue Suede Shoes* era eight y... ago, Elvis was first explained as fa... of a faintly menacing breed of c... dren's crusaders marshaling the ... parent instinct into a kind of teen-... Viet Cong. Later the diagnosis chang... the real rock addict was pronounce... "rhythmic obedient" whose craving ... the big beat was only the expression ... his frustrated wish to obey mother. S... findings were hardly helpful to the r... ord industry in its search for a s... money-making groove. And then a n... type of rock song began to climb ... charts. Now it is the rock fan's wish ... die that is supposed to account for ... success of hot-rod and surfin' song... great tonic to the industry for all ... year now.

Not Today. How ingenious such ... orizing. But death has no dominion ... rock 'n' roll. Songs that hint of a te... age demise do so with a bright insou... ance, as if the singer imagines death ... be only the flip side of life. In su... music—which is just rock 'n' roll dre... for the beach—sudden death is trea... as a nuisance hardly worse than rain:

Angry sea
Took my love from me.
No surfin' today.

And as for hot-rod music—rock 'n' ... with a straight stick and no muffler ... death emerges only in traffic sa... parables:

The last thing I remember, doc,
I started to swerve.
You won't come back from
Dead Man's Curve.

Many of the most popular songs ... crawl around under the hood admir... the engine without so much as a ... tion of speed and danger.

Sure They Fight. It does seem ... bizarre, though, that music intended ... nine- to 16-year-olds should speak ... death at all—or even of life. But r... 'n' roll has lately acquired an engag... relevance to life that is found now ... else in pop music. Says B.M.I.'s Ro...

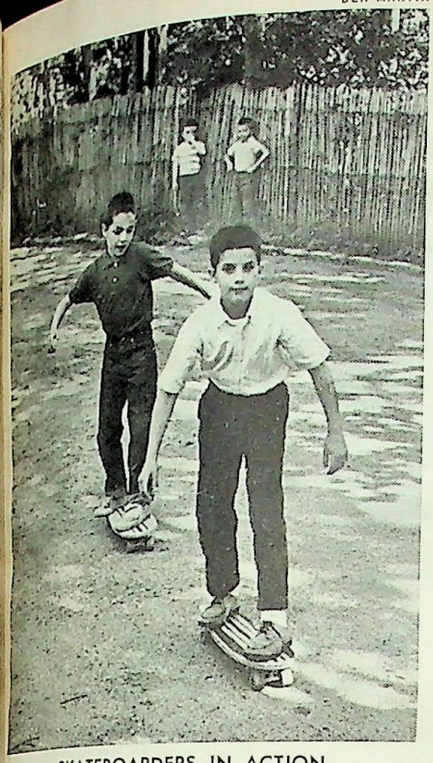
BEN MARTIN



SKATEBOARDERS IN ACTION
Death on the flip side.

Sanjek, whose firm represents battalions of teen music composers: "Who ever flew to the moon on gossamer wings or began a beguine? These songs reflect the times and the audience, and they're closer than they've ever been to their ultimate audience."

That ultimate audience dwells somewhere between Malibu Beach and Despairsville, a spot where life is cursed by school trouble, girl and boy trouble and car trouble. When they climb out of the surf, the songs are addressed to such matters as poverty, suspicion, ill health and the Oedipus complex. Such numbers as *Six Months with My Mother* (*Six Months with My Dad*) are willing to go right into court in pursuit of genuine grief:

Please, judge, bring them back together.
Sure they fight, but all parents do.

A sharp comment, considering the source. Elsewhere parents appear with stunning accuracy as the oddly permissive disciplinarian:

She'll have fun, fun, fun,
Till her daddy takes her T-Bird away.

Dark Message. Today the kids seem to want to listen to a message with their music. But some of the record companies still seem to be listening to the dark message of their social scientists. They are still on the prowl for another salable demonstration of the death wish, and the latest candidate is skateboarding. A skateboard is a surfboard scarcely larger than a steak plate, mounted on roller-skate wheels, and a skateboarder is anyone daring enough to careen over the concrete while aboard one. David Kapralik, a music publisher for Columbia Records, has high hopes for the fad. "It's another thing that reflects the adolescent's self-destructive tendencies," he says eagerly. "Columbia is bringing out a record on it this month."

AUTO RACING

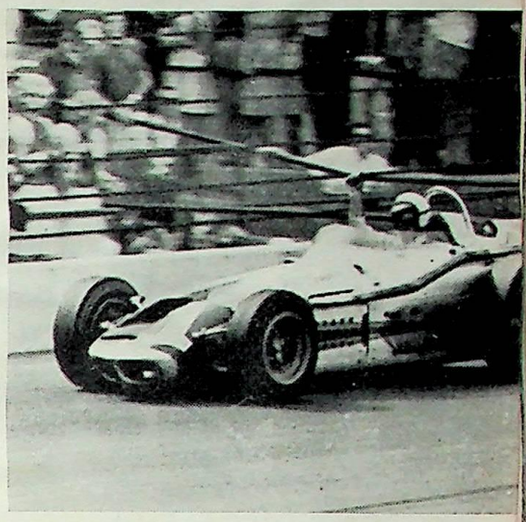
A Day for Survivors

Whatever else it is—a proving ground for automobiles, a nostalgic bit of Americana—the Indianapolis 500 is mainly a dice with disaster. Drivers come and go, cars change, engines get bigger. The one constant is danger. In 54 years of Memorial Day racing at the Indianapolis Motor Speedway, 56 people have died. But nobody has to twist a driver's arm to compete. The prospect of instant fame and fortune is inducement enough —even though he knows, as Eddie Sachs once said, that "in the long run, death is the odds-on favorite."

Sheets of Flame. Last week, the favorite won. The 33-car field was the fastest in 500 history. Driving a rear-engined Lotus-Ford, Scotland's Jimmy Clark roared through the first lap at 149.7 m.p.h., and other drivers strained to match his pace. One was too bold. On the second lap, drifting off Indy's No. 4 turn, Californian Dave MacDonald lost control of his Thompson-Allstate Ford, spun crazily and smacked into the inside wall. In one horrible instant that none of the 300,000 spectators will ever forget, a sheet of flaming gas spread across the track.

Blinded, unable to stop at 160 m.p.h., other drivers tried to pick their way through the fire and smoke. Most made it. Seven did not. In the darkness, Eddie Sachs slammed broadside into the wrecked Ford. Another car piled into the tangle, and ran right up MacDonald's back. Four more cars crunched into the wreckage. By some miracle, five of the drivers survived. Eddie Sachs was trapped in his cockpit; he was dead from the flames by the time rescuers reached him. MacDonald died two hours later in a hospital.

It took 1¾ hours to put out the fires and clear away the debris. And then, Indy being Indy, the race began again. Fans had expected a showdown between the new-fangled rear-engined Fords and the front-engined Offies that had dominated Indy for years. For a while, it looked as if they would get it: Clark again jumped into the lead, but he was quickly passed by Bobby Marshman in another Lotus-Ford. After 39 laps, Marshman was 27 sec. in front of Clark; both were averaging more than 150 m.p.h., smashing Indy's old speed record every time around. The Fords were clearly faster. But could they last 500 miles?



FOYT AT THE MOMENT OF VICTORY

EZ, It Read. The answer was no. On the 38th lap, Marshman cracked his crankcase. Nine laps later, Clark's left axle crumpled, and California's Parnelli Jones, 1963 winner, urged his Offy into the lead. But it was not Jones's day either: running low on fuel, he pulled into the pits. Somehow, a spark got into the fuel tank; the car burst into flame. Uniform smoldering, Jones leaped out

and rolled on the ground; stretcher bearers carried him off.

Carefully nursing his Offy-powered Sheraton-Thompson Special to conserve fuel and tires, burly Texan A. J. Foyt, 29, inherited the lead from Jones on the 55th lap and kept it all the way. Indiana's Rodger Ward, in a Ford, cut his margin to 9 sec. at one point. But Ward kept running out of fuel, had to make five stops to Foyt's two. In the pits, mechanics waved a big blackboard—EZ, it read. Foyt still won by more than a lap. It was his second victory at Indianapolis, and his average speed—147.350 m.p.h.—set a new record. His winner's share: about $160,000. "Everybody kind of laughed at me in this Offy," he said. "I'm kind of proud of them. These old antiques have won me a hell of a lot of money."

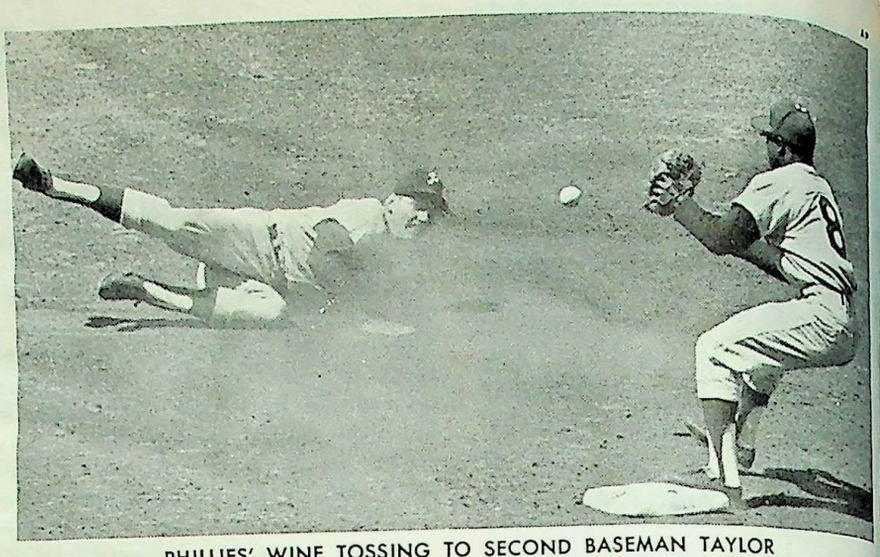
BASEBALL

"Like a Big Infection"

The world has gone to pot. There was a time when the very least that a baseball fan could count on was that New York—or Brooklyn, anyway—would win the National League pennant, and the Philadelphia Phillies would wind up shoveling coal in the cellar. The Polo Grounds is a gutted steel skeleton now; Ebbets Field is apartment houses. And last week the Phillies were leading the league.

It was only by a few percentage points to be sure: Phils .605, San Francisco Giants .600. And strange things do happen in the spring. But the 1964 Phillies are no fluke. Unlike the fence-busting Giants (40 home runs), the Phillies get their runs in sprinkles on singles, rely on sound defense, tight pitching, plus the old-fashioned virtue of team spirit. The urge to win, says Manager Gene Mauch, is "like a big infection," and last week the Phils were breaking out all over. They shut out Pittsburgh 2-0, dropped a protested game to the Pirates, 6-5, and bounced back to edge the Houston Colts, 7-6. By week's end the suspicion was beginning to dawn on Manager Mauch that the infection just might be incurable. "You know," he said, "we could even win this pennant."

Try Suicide. Historians smile at the thought. In 81 years, the Phils have won only two pennants (in 1915 and 1950), and Mauch may be the only manager in history who took a demotion from the minors to the major leagues. A tense, cold-eyed baseball strategist who took the Minneapolis Millers to two straight Junior World Series, he got the Philadelphia job in 1960 when Eddie Sawyer quit after the first game, explaining, "I'm 49 years old and I want to live to be 50." The Phils welcomed their new manager the way they knew best: by finishing dead last. The next year was even worse. The Phils were last again, and set a modern major league record by losing 23 games in a row. "No matter what we tried, it didn't work," says Mauch. "The only thing that I didn't try was suicide."



PHILLIES' WINE TOSSING TO SECOND BASEMAN TAYLOR
Everything but suicide.

In 1962, the Phils climbed all the way up to seventh, and awed sportswriters voted Mauch Manager of the Year. But Mauch and General Manager John Quinn refused to rest on those laurels. They were too busy rebuilding the team's dilapidated farm system and hunting for promising young players. "The secret of a good trade," Mauch says, "is not to try to fool anybody. They know the score as well as you do." Sometimes even better. Occasionally, a deal went sour: Pitcher Curt Simmons got his unconditional release in 1960, has beaten the Phillies 13 times since.

No Use Arguing. But most paid off handsomely. To plug a hole at second base, Quinn hired Tony Taylor away from the Chicago Cubs; all he did was bat .281 last year and spark the Phillies to fourth place. Quinn pried Pitcher Jim Bunning away from the Detroit Tigers; by last week Bunning had already won five games. All three of the Phillies' starting outfielders came by way of trades. The farm system did the rest, producing Pitchers Art Mahaffey (3-2 this year) and Dennis Bennett (5-3), acrobatic Shortstop Bobby Wine, and the brightest new star of all, Third Baseman Richie Allen, a 22-year-old slugger who has nine homers to his credit so far this year.

No molly-coddler, Manager Mauch always has a train ticket ready for a slacker. Starting pitchers know that it is no use arguing when he wants a replacement from the bullpen. He simply marches to the mound and holds out his hand for the ball. His hair-trigger temper is legendary; he has been suspended three times for jawing with umpires, and wise players stay out of his way on a losing afternoon. One day last year, infuriated by a narrow loss to Houston, he stalked into the clubhouse, found the Phillies feasting gaily on a buffet of barbecued spareribs—and flipped the whole table upside down. But that was last year. "Gene's pretty strict," grins Outfielder Callison. "But lately he seems to be easier to get along with."

That Magical Day

A lot of baseball games are wo lopsided scores, and 19 runs is a way from a record. But such is the of the New York Mets that when score 19, fans all across the U.S. s and take notice, and newspapers p pictures of the scoreboard to prove it really did happen.

There is no rational reason why Mets should ever score 19 runs game. But maybe they were rereading those grand old boys' books, *Base Joe* and *Double Curve Dan*. The is in a losing streak—disaster after aster. Then, all of a sudden, comes magical day when everyone has spr in his legs and all the bats are made hoki-moki wood, and the ball spra long ears and a cottontail.

So it was for the Mets last we Of course, the victims were the ni place Chicago Cubs, and only 2 home folks were at Wrigley Field witness the massacre. In the very inning, the Mets scored four runs. added three more in the second, tw the fifth, four in the seventh, and si the ninth. They banged out 23 including 17 singles, three doubles, triples and a home run. Charlie Sm who had driven in only five runs year, drove in five that afternoon. Smith, who had 13 hits to show for whole season, got five in six trips to plate. The Cubs, naturally, were state of complete shock. The cat and first baseman collided chasing foul ball. The rightfielder let a ro fly slip through his hands. One Met scored on a passed ball, and an crossed the plate on a balk. Final sc Mets 19, Chicago 1.

The books always ended there there was more to come, dear re Back home in Shea Stadium a few later, the Mets rose up and smoo fearsome San Francisco Giants, 4- fore 55,062 wildly cheering fans. It the biggest crowd of the year in league. Now that kind of a house serves an encore. And so next day, Mighty Mets walloped the Giants more, this time by a score of 6-2.

This seat is not for sale

You'll have to buy a whole Mercedes-Benz if you like this seat. What makes it so precious? It is not merely the leather, the correct seating position it offers, the good ventilation of the upholstery, a finish which is hard to equal. Precious is not the right word — exquisite is better. And, of course, the seat is not the most important part. Just the most comfortable.

The 220 SE Cabriolet or Coupe for example has 2 individual seats in front and a bench seat in the rear (all leather). On request bucket seats can be supplied. Door and side trim, as well as 4 armrests are all finished in leather. Overall there are 25 items of equipment for your comfort.

EDUCATION

INTEGRATION

More Speed, Less Deliberation

"With all deliberate speed" was the well-calculated phrase that the Supreme Court used in 1955 to describe how U.S. public schools should be desegregated. Last week the court decided—in the words of Associate Justice Hugo L. Black—that "there has been entirely too much deliberation and not enough speed." In separate unanimous decisions, it gave federal district courts considerable powers to reverse one flagrant defiance of the law in Virginia's Prince Edward County and to challenge a typically tortoise-paced Southern effort at obeying in Atlanta.

"Inordinate Delays." There was a measure of exasperation and even anger in Justice Black's decision on the "inordinate delays" in Prince Edward County, which closed its public schools in 1959 rather than integrate them. Since then, white children have been educated by the "private" Prince Edward School Foundation. Now supported largely by parental donations, the foundation was helped along by a system of state and county tuition grants until 1961, when a district court ruled that such grants were illegal so long as the public schools remained closed. Negro children, who for four years had virtually no education at all, now have a temporary school system, paid for mostly by out-of-state donations. Since every other county in Virginia operates public schools, the court decided that the Prince Edward system denied Negroes equal protection of the law under the 14th Amendment.

The court accepted without quarrel a Virginia court decision that every county in the state has the option to operate public schools or not. But, the U.S. court added, it was unmistakably clear that Prince Edward County had exercised its option solely to prevent white and Negro children from attending classes together. "Whatever nonracial grounds might support a State's allowing a county to abandon public schools, the object must be a constitutional one, and grounds of race and opposition to desegregation do not qualify as constitutional," wrote Black. Since "relief needs to be quick and effective," the Justices declared that federal district courts had the power to compel county supervisors to raise taxes for the reopening of the public schools.

The Atlanta decision was a gentle attempt to accelerate one of the South's best-publicized plans for achieving integration without revolution. In 1961 Atlanta adopted a system of desegregating classes at the rate of one grade a year, starting with the twelfth grade. Since then, only 150 of the city's 45,000 Negro pupils have gone to school with whites, and the program will not make full effect until 1971. The Justices therefore ordered the federal district court in Atlanta to take another look at the plan and consider changes if it does not fit the Supreme Court's rulings.

Room for Evasion. The decisions left plenty of room for more segregationist evasion. In Atlanta, school officials were relieved that the court had not directly outlawed their mode of gradualism. Said Superintendent of Schools John Letson: "I think that the district court will review what the board of education has done, and see that it has done it in good faith."

Prince Edward County also had some leeway. Since the Supreme Court ruling on the subject of tuition grants limited itself to pronouncing them illegal when part of a school-closedown program, county supervisors could presumably reopen the public schools for Negroes and any whites who wanted to attend —and then resume their old practice of providing funds to help the white-only foundation schools. To settle this issue will take another long battle through the state and federal courts.

ADULT EDUCATION

Retraining in South Bend

It was an irrefutable bit of logic that forced South Bend, Ind., to open job-training schools: minimal relief for 6,900 workers let out by Studebaker Corp. last December would cost about $1,000,000 a year more than a big program to retrain them. Now, as a result of the economic blow that it suffered, South Bend is the pattern-maker of a branch of U.S. education that could potentially enroll most of the nation's 4,000,000 unemployed.

Hidden Illiterates. South Bend's effort is a joint venture of the local, state and federal governments, plus the nonprofit National Council on the Aging. On a grant from the U.S. Labor Department, the council interviewed 1,348 of the dropped employees of 50 years and older, many of them Negroes and men of Polish and Hungarian extraction who had worked for Studebaker all their lives and had never before hunted for a job. Testing by the Indiana Employment Security Division showed that more than a tenth of the men had forgotten—or never knew—how to read and write with any skill. One cook, for example, had memorized the first letter of each item on the menu, and thus hid his illiteracy; his downfall came when the boss ordered him to get some wine and he could not read the labels. The first step, for many, had to be elementary schooling.

Now 96 students attend classes in a former high school for 6½ hours a day. They start out by shuffling packs of 2-in. by 2-in. cards with a one-syllable word printed on one side and a picture on the other; they then go on to cards that must be phonetically arranged (*low, row, blow*). Some students have covered six grades in two months.

The stories in their readers eliminate Dick, Jane and Spot in favor of history, geography and Arabian Nights fantasy. One student's daughter was taunted by a neighbor who said her father was attending "dumb school"; she replied that she was proud of him. Kids surreptitiously aid parents. One homework book came back to school marked by a helpful child: "If you look on page six, you'll find the answer."

In Small Bites. Once they can read and write, the adults join 384 others in vocational training. At Studebaker's abandoned truck assembly plant, they are taught new skills—data processing, air-conditioning maintenance—by nonprofessional teachers who are experts at their trade. Says Harry Lane, 46, who gave up his used-car lot and repair shop to become a teacher: "It's like teaching a baby to eat. You have to do it in small bites." But the work is rewarding: "Three men out of my first class are

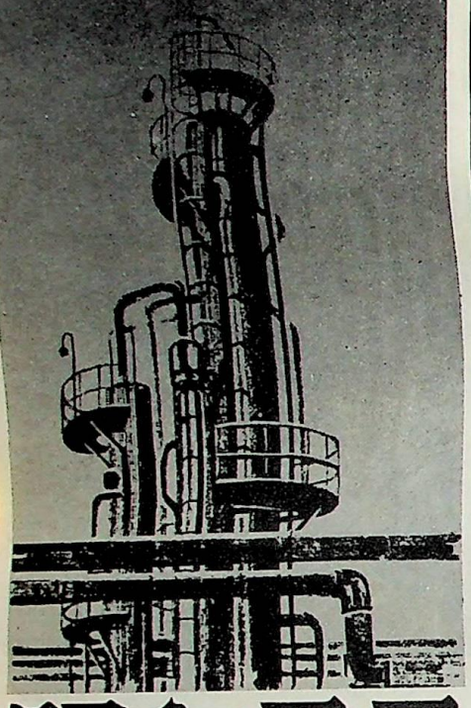
WHAT'S IN A NAME



昭和電工

SHO WA DEN KO

This is the way Showa Denko, the name of a leading Japanese chemical and metal manufacturer, is written in Japanese.

"Showa" is a proper noun—the name of the period under the reign of the present Emperor of Japan. Thus, in Japan, 1964 is known as the 39th year of Showa. "Denko" means electrical industries. It was originally adequate because the company started out as a manufacturer of electrochemical and electrometallurgical products. As a result of continued expansion in these sectors, today it consumes more electricity than any other enterprise in Japan.

With its rapid advance into petrochemicals in recent years, however, Showa Denko has outgrown its name. The petrochemical products now manufactured by Showa Denko and its subsidiaries include polyethylene, synthetic rubber, carbon black and propylene glycol. It also uses petrochemistry in producing vast amounts of ammonia.

There has been much advice to the contrary. But we're holding on to the name, because it has become synonymous to so many people both inside and outside Japan with products of uniformly high quality.

Main Product Lines

Aluminum	Organic Chemicals
Ferroalloys	Inorganic Chemicals
Electrodes	Chemical Fertilizers
Abrasive Grains	Nuclear Reactor Materials

SDK *Write for our new catalog.*

SHOWA DENKO K.K.

34, Shiba Miyamoto-cho, Minato-ku, Tokyo, Japan

now making more money than they ever made in their lives."

Since the vocational training center opened, three-fourths of the graduates have found new jobs. Recently a cooking class moved in, and after a week of lectures was doing so well that it will soon be feeding the student body. By the time the 48-week course ends, promises Instructor Charles Harper, the class will be able to turn out French, German and Italian specialties for the Florida hotel trade—and every student will be able to read the menu.

KUDOS

Political Color

In an election year, the chance to honor a big-catch politician with a degree often lets a university push forward a favorite son, influence the vote, win cubits of reflected prestige, or give a statesman a platform. President Johnson inaugurated the kudos season by accepting a Doctor of Civil Laws degree at the University of Michigan, then got an LL.D. from Texas (*see below*). But if politics promised to color the commencements, honors were also going as usual to artists, inventors and scholars. Last week's:

BOB JONES UNIVERSITY

George Corley Wallace, Governor of Alabama—LL.D. *You have demonstrated in the showing which you have made in states long dominated by cheap demagogues and selfish radicals that there is still in America love for freedom, hard common sense, and at least some hope for the preservation of our constitutional liberties.*

OTIS ART INSTITUTE (LOS ANGELES)

William L. Pereira, architect—Arch.D.

UNIVERSITY OF ARIZONA

Howard Hanson, composer, conductor and director of the University of Rochester's Eastman School of Music—Litt.D.

UNIVERSITY OF MICHIGAN

Clarence L. ("Kelly") Johnson, vice president for advanced development projects, Lockheed Aircraft Corp., designer of the U-2 and A-11—Eng.D.

UNIVERSITY OF PENNSYLVANIA

John Presper Eckert Jr., co-developer (at Penn in 1942) of ENIAC, first electronic digital computer—Sc.D.

William Warren Scranton, Governor of Pennsylvania—LL.D. *To the manor born and to American politics also, your statesmanlike vision has ranged over this country as well as this commonwealth. Your energetic and determined leadership has caught the imagination of your fellow citizens everywhere in the nation.*

UNIVERSITY OF TEXAS

Lyndon Baines Johnson—LL.D. *A native Texan who has remained in private life and in public career a devoted Texan, without boast and without apology.*

Claudia Taylor Johnson—Litt.D. *As the wife of a leading citizen of the world, she has accompanied him with grace and*

AN AMERICAN EDUCATION FOR YOUR CHILD

KINDERGARTEN — EIGHTH GRADE

Wherever you may be, you can give your child an American education in your own home. Approved Calvert Courses come to you by mail. Helpful step-by-step instructions guide home teaching. Children may start any time, transfer easily to American schools.

The courses are kept up to date by continuous pretesting in Calvert's laboratory-school in Baltimore. Emphasis on the three R's and cultural subjects. Calvert Courses are used to enrich the educational experience of the above-average child. 58th year. Non-profit. Free catalog (give age, school grade).

FAIRS

The World of Already

(See Cover)

It returns the child's eye to the retinas of men. Emerging from subway. train or even hydrofoil, the visitor to the New York World's Fair feels that he is in a special world, full of runaway pylons, impossible cantilevers, and buildings that look like flowers or accidents of flowing lava.

Is it the future? Not exactly. The 1964 fair both celebrates and illustrates the fact that in the last 25 years science has so far expanded the human imagination that anything seems possible. Crowds at the 1939 New York fair stared with skepticism at exhibits of air conditioning, television and the first nylon stocking. The 1964 fair displays not what might be done in the future, but rather what has already been done. The 1939 fair was a promise. The 1964 fair is a boast.

BEN MARTIN

NEW YORK WORLD'S FAIR: FIRST LOOK
A boast, a bazaar, and a feeling.

Much of it, to be sure, has a tacky, plastic, here-today-blown-tomorrow look, as if it were a city made of credit cards. But much of it has grace and substance. From nations to corporations, everybody is there to hawk and hornblow. All the crammed buildings are engaged in a mad struggle for attention. And somehow, in its jostling, heedless, undisciplined energy, it makes a person happy to be alive in the 20th century.

The place has been open for a little more than a month now, and has at last settled down so that it no longer rings with hammers and confusion. More than 6,000,000 people have been there already; and the question in millions of other minds is whether or not to go. The decision should be yes.

Scant Martini. With more than 300 companies, 66 nations, Mormons, Methodists, Catholics and assorted amusement-park types all reaching for him, a fairgoer is lost without a plan, since it is possible to spend a whole day in a series of places that might better be avoided for a whole lifetime. A casual browser is better off in Death Valley than in Flushing Meadow, and the fair's avenues and promenades are already lined with the whitening bones of people who did not read up on the fair and map out their itineraries in advance.

One good way to start is to float over the grounds in a Swiss cable car. At 115 ft., the ride goes high enough to offer a sweep of the jumble below, but still low enough to make the rider feel the clash of the architecture and the overall dynamic of the vast bazaar. If his timing is lucky, he can almost feel the heat as tawny Samoan youths prance beneath on mats of fire, and only moments later he may be staring down into the whites of the eyes of a dozen Zulus. He flies from Denmark to Switzerland via Korea, Venezuela, Central America, Hong Kong, Indonesia, Polynesia, Taiwan, the Philippines, Jordan, Lebanon, Greece, Malaysia, and most of Africa, with the rest of the world stretching one way down a series of pools to the Bell System, and another way across the Unisphere to the sovereign republics of Ford, Chrysler and General Motors.

The one-way cable ride costs 75¢,* lasts four minutes, and is thus like a two-ounce martini, slightly intoxicating but only enough to create a need for more. It should be followed by a 50¢ elevator trip to the top of the tow-ers at the New York State pavilion, where one gets a panoptic, 360° fix on the fair, standing on a platform more than 200-ft. high. All the frantic collages that meet the eye nearer the level straighten out up there, as one sees from above the order of the fair.

Creative Study. It is laid out along the patterned streets that were designed on the same site for the 1939 fair. Most world fairs have been meticulously planned, their buildings a harmonious continuum expressing the genius of a committee. Robert Moses, president of the current fair, had no such architectural ambition. He merely leased the land and let everyone erect what he pleased.

This was probably the only intelligent thing in the past 75 years that New York's Robert Moses was permissive. Moses, whose vision has changed the face of New York State, is the sort of man who likes to knock things over rather than walk around them. When he took over as fair president, he forced the resignation of Robert Kopple, a builder from Long Island who conceived the idea in the first place and who raised the initial money for the fair because he felt that his children were ignorant of the world. Kopple had once made the mistake of opposing Moses on a New York city project. At least Kopple now has a free pass to the fair. Few other people do. Free passes are as rare as five-leaf clovers. The fair cost $[illegible] million. Moses is determined to make it profitable, so that there will be enough money left over to develop a park in the city.

Moses also shrugged off the International Bureau of Expositions, which refused to sanction this one on such grounds of finance and timing. So the fair is unofficial. But it has as great a spread of national exhibits as any previous fair, thanks to trade syndicates who hurried in where governments would not go.

Fins & Pylons. Moses once had a committee of architects somewhere underfoot, but they quit when they realized that no one was going to mind more than grass seed. Left to their own, many exhibitors predictably put up the sort of eyecatchers that suggest refreshment stands on the midway. In the main, even the fair's most interesting and successful structures are not really buildings. They are events. They were built, after all, to last for two years and then be demolished. They were built as elements of a fair, not as gatehouses to stately cities. Designed in words, they sound spectacular enough, but they are really just spectacular, for example.

For General Electric, for example, architects turned a huge dome inside out, revealing its supporting latticework of intersticed steel so that its overall effect suggests *tripes à la mode de Caen* in a glorious defiance of sanitation.

set what appears to be a 50-ton egg on a nest of plastic in the tops of metal trees. Johnson's Wax has suspended a huge gold clam over a blue pool inside six slender white pylons that rise high and flare into unearthly petals. Eastman Kodak has built a plaza under an undulating roof of thin-shell concrete that plays hide-and-seek with geometry, now ducking up into conical pinnacles, now forming a hole so that real and artificial rains can pour through onto Sculptor Harry Bertoia's metal flowers below. People can walk up and down dale on the roof. Young boys go there and control the rains by pinching their fingers over dozens of brass nozzles, spraying all the girls below.

The eye stops appreciatively on the massive, floating box-and-cloister of Charles Luckman's United States pavilion, and disapprovingly on Bell Telephone's flying wing, which looks more like a big hunk of sedimentary rock than an airfoil. The three-acre building that houses General Motors' Futurama ends in one gigantic tail fin, which may be good as advertising but is ridiculous as architecture. The boldest structure at the fair is Architect Philip Johnson's New York State pavilion: 16 tremendous columns support an elliptical roof of colored plastics that is larger than a football field.

Beware Behemoths. Beyond architecture, one other characteristic of the fair stands out from above, and before depending to join the masses the fairgoer might do well to contemplate it. There are sometimes more than 200,000 people down there and half of them seem to be standing in lines. People have waited more than 2½ hours to get into Ford, two for General Motors, one for General Electric. There is obviously a number of minutes beyond which a show is not worth waiting for. The fair is full of fine things that demand no queuing at all.

Ford's Magic Skyway is worth a wait of perhaps 30 minutes, on a cool day. But lines mass there as if the company were giving away Fords. The superb showmanship of putting people in new automobiles and driving them past an assemblage of plastic reptiles and plastic cavemen by Walt Disney is more than the contemporary world is able to resist. The prehistoric pageant lasts only twelve minutes. The car radio announces: "This is the world that was," and the rider swerves past little dinosaur eggs hatching before his very eyes, while off to the left a two-story *Tyrannosaurus rex* is busily killing a tough stegosaurus. A caveman with Cro-Magnon bravado appears, confronting an 800-lb. bear. A pert little cavewoman turns meat on a spit, while her cave-baby warms his bottom beside her. Cavedaddy turns out to be the first tycoon. He invents the wheel.

General Motors, star of the '39 fair with its revelations of the future, has again attempted to be visionary. Its Futurama is built around the idea that the human population has ample room to explode, and proves the thesis with wonderful models of future machines and future cities in contemporary wastelands. Man will subdue the primordial jungle, for example, with a G.M. machine a couple of hundred yards long. Out in front of it, smaller machines fell the great trees with laser beams. Blink, blink. The red beams slice the trees and they topple. The great mother machine now takes over, moving forward to eat the trees and all the undergrowth, meanwhile extruding four-lane highways from its distant rear. Dazzling cities spring up out of the bush to either side.

But for the rest, the present is abreast of the presumed future. There is an undersea hotel (Jacques Cousteau has already developed a five-man sea house), an aquacopter (just a baby submarine) and a space dormitory for moon travelers (it closely resembles the Indonesian pavilion half a mile away).

Egg & Carousel. IBM makes a show of its own mechanics. The audience of 500 sits on steeply tiered seats at ground level; and when the program is about to begin, this entire "people wall" is lifted 53 ft. into the air by two hydraulic rams. They end up inside the lofty IBM egg, watching nine movie screens at once, in a demonstration meant to explain how the human brain is just another computer.

Of all the big shows, G.E.'s Carousel of Progress is one of the most frankly commercial, but it is so studded with million-dollar gimcracks that it is worth seeing. Six audiences watch it at once, revolving in their seats to stop in front of segment after segment of a central stage. The star is a man who looks like Lowell Thomas full of formaldehyde. He sits in his kitchen, taps his foot nervously, blinks, and brags about his household appliances. He is made of plastic—Walt Disney again—and so is his dog, which grrrs and twitches on the floor. Caroline Kennedy saw the dog and wanted to take him home.

First the man crows about the faithful pump in his sink, the new icebox and his coal-burning stove. The year is about 1898. All these relics are choreographed to gush rusty water, pop open, or glow genially while he talks. The revolving audience sees him in three additional incarnations—in the '20s, the '40s, and today in his ultimate, modern G.E. home, with indirect colored lighting and clear-plastic, form-fitting kitchen chairs. The older appliances are wonders to behold. But the plastic man's life gets duller as it progresses.

BEN MARTIN

THREE-SCREEN TEEN-AGE SCENE IN JOHNSON'S WAX MOVIE
In the tentative leaps to adulthood, the mind fills the gaps.

Walt's Wonders. Disney's realistic robots, in fact, stalk the fair. Pepsi-Cola has about 350 of them, doll-size, flanking a boat ride that children seem to like more than anything else. Scottish dolls climb steep plaid mountains, Iranian dolls fly on Persian carpets, and French dolls cancan. The dolls sing an original tune about the cohesion of the peoples of the world that might have been composed by Wendell Willkie.

Disney's final contribution to the fair is a modest attempt to revive Abraham Lincoln by rebuilding him out of steel, aluminum, gold, brass, soft epidermal plastic, air tubes, fluid tubes, pneumatic and hydraulic valves. Abe works a twelve-hour day at the Illinois pavilion. He does a show every twelve minutes, speaking without notes and repeating bits of six of his earlier speeches, reminding his countrymen that "right makes might."

With a Nudge. The World's *Fair is* so resplendently miscellaneous *that it* defies a blue ribbon for *any one* pavilion, exhibit or show. *Nonetheless,* there is nothing better *on the* grounds than a movie called *To Be Alive!*, presented

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by Johnson's Wax. It lasts 17½ minutes, has nothing to do with wax and does not even mention the company.

Its technique alone is of great interest. It uses three projectors, like Cinerama, but it resolves the problem of Cinerama with a simple touch of invention: the screens are set a foot apart. The mind fills the gaps without noticing them. Moreover, the separate screens enable the film makers—Francis Thompson and Alexander Hammid—to use them in multiple combinations, now showing three aspects of one scene, now three separate scenes, now a three-dimensional, three-screen headlong ride down a plunging highway that kneads the stomach far more than the roller-coaster ride in the first Cinerama.

Beyond technique, however, Thompson and Hammid have made a film of surpassing excellence about the universalities of human experience. When it begins, it is speeded up like an old Charlie Chaplin picture, showing New York masses rushing to work. On the corner of 42nd and Fifth Avenue, buses and cars go by like military projectiles, and hundreds of people zip across the screen like clouds of buckshot. Then—ping—the whole wide scene suddenly contains nothing but a drop of water in a pool. The movie starts life over again. A little Chinese boy studies a land turtle he has found in a field. A little boy in New York stares through a prism with which he can change the very face of the city. A little boy in the jungle learns the rhythm of a drum. A narrator speaks in the first person, describing his life from childhood to manhood, while the images on the screen shift constantly from the familiar to the distant, from face to face, from suburb to desert, from young Africans flirting in canoes to young Italians at a wedding feast in the hills of Assisi. The film is funny, informative, poetic, moving, ingenious, instructive, entertaining and beautifully photographed.

Film Fair. After that one, the most discussed picture is *Parable*, presented at the Protestant and Orthodox Center. Its central figure is a whitefaced clown. The circus is operated by Magnus the Great—a kind of Barnum and Belial character who sits in his tent and manipulates human marionettes strung on ropes high in the air. The whitefaced clown releases the ropes that hold the marionettes and frees them from bondage, replacing them himself. Stabbed by the agents of the malevolent Magnus, he is lofted on high, bleeding and suffering. He lets out a cry of agony and dies.

Throughout the fair, films are a basic denominator. In the United States pavilion, audiences are ridden past dozens of screens that light up consecutively with moments from American history. The narration is straight from *This Is Your Life*, styled in the second person singular, telling each and every American that *you* tamed the wilderness, then *you* invented the electric light, and *you* are now assaulting the universe.

Both New York State and the Port of New York Authority show movies that are the ultimate in wide screens, being 360° around. Audiences stand in the center. The device works well, and the state's show is a bit better than the Authority's. Riding in a car up a highway, you can look out the back window and see the road receding, or look forward and feel its onrush, while fields and trees stream by on either side.

Plunging Roots. Socony Mobil uses films in a fine game for teen-agers. Thirty-six kids at once sit in drivers' seats, hold steering wheels, adjust themselves to brakes and accelerators, and stare at a road ahead of them which is shown on small individual screens. With a whoosh and voom, they're off all 36 zinging up the same road in contest to see who is the most economical and safest driver. They are graded electronically as they meet situations—a school bus discharging its under cargo, an idiot driver warping and woofing all over the right of way.

A pavilion called Sermons from S[cience], one of the minor discoveries of the fair, presents the Word only as kind of commercial at the ends of excellent and varied movies on scientific subjects, which contain, among other things, fascinating studies in time lapse photography: cumulus clouds boiling upward, taproots plunge down through the soil like fast-moving snakes.

View It Yourself. Not all the fair's good shows, however, are on film or indoors. Several times a day, five Mexican Indians climb a giddy, 114-ft. pole outside the Mexican pavilion. One begins to dance on top of the pole, and four companions lean over backward and fall toward the ground. They are tied to long ropes which are wrapped tightly around the summit of the pole. Hanging upside down, all four men begin to spin in accelerating, expanding, awesomely descending circles as the ropes unwind, righting themselves just in time to drop lightly to the pavement.

At the State of Oregon's timber carnival, a talented sculptor named Ken Kaiser casually shapes human figures from massive logs, using a roaring 30-in. gasoline-powered chain saw. Logrollers stand on thick timbers in the Flushing River, trying to jar each other into the scented currents. Husky lumberjacks heave double-bit axes at targets, handbuckers go through 2-ft. logs in about 40 sec., and competing axmen hack chips the size of dinner plates out of the remnants of trees.

At the Coca-Cola pavilion, the visitor takes an amusing, self-propelled international walk, first through Hong Kong where there are fish stalls in floating markets, with the smell of incense heavy in the air. For one startled moment, sniff again. Damned if the incense doesn't smell like Coca-Cola. Move on, turn a corner, and there is Garmisch-Partenkirchen, high in the Bavarian Alps, where the towering balsams have the unmistakable scent of pillows stuffed with Coca-Cola. A few more giant strides and there is a Cambodian jungle, where monkeys inhabit the lush vegetation and Coke bottles dangle in cool rushing streams, secured by their necks to trailing, primeval vines.

Million-Dollar Touches. Two of the fair's most attractive edifices stand out for their sense of permanence in a garden of transience. Spain's increasingly beautiful pavilion could probably stay in the meadow for a thousand years if it were permitted to, and it should at least be moved somewhere in 1965. It was designed by Architect Javier Carvajal and somehow suggests the courtyards of Castile and the filigreed palaces of Andalusia in its unending surprises of space and light. Spain, bidding for

Digitized by Arya Samaj Foundation Chennai and eGangotri

status in the conversation of international trade, has spared no expense to shine at its national best. Flamenco dancers of what Spaniards would describe as great purity perform in the pavilion's theater. From the Prado come Goya's great *majas*, clothed and nude. One could do worse than spend a day in the Spanish pavilion.

The Belgian Village looks as if it had been standing right where it is for at least 500 years—or will when it is finished. The biggest international exhibit at the fair, it is a giant section of a Flemish town consisting of 134 buildings. The roofs are being made of real slate and real tiles. The windows are leaded. The streets are all paved with cobblestones.

Three-year-olds and upwards are entranced by nearly everything at the fair, but there are certain stops, like the Pepsi-Cola ride, that are particularly smashing from their point of view. U.S. Rubber's Ferris wheel (50¢) is the largest replica of a tire ever made, and no child wants to miss it. The flume ride (95¢) is a bumping, bouncing, water-sprayed trip in a hollow plastic log through a reasonable simulacrum of rapids, ending with a plunge into still waters. General Cigar presents a brief but first-rate magic show. Sinclair's Dinoland is dinolated by nine prehistoric monsters made of fiberglass, scattered through a grove of pines. At the end, there are machines that make plastic dinosaurs. Put 50¢ in, wait a while, and out pops a little dinosaur like a hot dinner roll.

Cash Flow. One of the most common sights at the fair is of grown men wandering dazedly, holding their trouser pockets inside out in the timeless gesture of bankruptcy. People who have just rounded their first million sometimes go there to celebrate and are whimpers by nightfall. No complaint is more frequently heard at the fair than the cries of the nouveau broke.

With a little foreknowledge, this need not be. Nearly all the better things at the fair are free, and those that are not cost little. Actually, the biggest money drain is the high cost of drinks. In Switzerland the gutters are full of kirsch, but at the Swiss chalet a *petit* shot costs $1.25. Cocktails and highballs are free at $1, more common at $1.50.

Food is expensive too, and sometimes not very good. Entrees at the major restaurants average $6. The most elegant room is the Toledo, downstairs in the Spanish pavilion, where the chef of Madrid's Jockey Club somewhat inconsistently serves French cuisine.

In Denmark's beautiful small building with latticed woods and spacious glass, a smorgasbord with Danish smorgasbord is served for $6 a person. Sweden presents its own excellent smorgasbord for the same price. At the Indonesia pavilion, the *Rijsttafel Gambling Masak Bugis* and *Ajam Pangang* cost $6.50. From Mexico (*Carne Asada Tampiqueña*, $7) to India (*Chicken Masala Jaipure*, $5.75), the

fair abounds in places where one can eat well and pay well.

But nothing much is missed if all of this is skipped. There is no lasting culinary memory to be taken from the fair, as there was in 1939 when the Pavillon's Henri Soulé made his U.S. debut at the French *pavillon*. Moreover, great Curnonskian meals absorb too much time. The smartest way to eat is to bring your own sandwiches or buy a quick one in a place like Liebmann Breweries' oldtime tavern, where a fast beer and a ham on rye cost $1.10.

There are many other places to eat rapidly without surrendering to the hamburger and hot-dog stands, most notably in the International Plaza, a busy jumble of closely packed shops and food counters. The corner-lot boomtime atmosphere is a pleasant change from the more ordered pace of the rest of the fair. Ecuadorian banana dogs cost 50¢, Norwegian loganberry punch 25¢, and a 99¢ Belgian waffle covered with fresh whipped cream and fresh strawberries can be a meal in itself. Peptic athletes can eat Egg Foo Yumburgers, Fishwiches, and frankfurters packed in cornmeal, and wet it all down with Philippine beer. The Luxembourg, a restaurant the size of a closet, serves all the sausage-loaded country onion soup you can eat for $2.

Traps & Troubles. There are a few flypaper palaces that have the bads and should be noted for it. The Hall of Education is full of plastic flower exhibits and other flotsam that has nought to do with education. The Better Living and Transportation & Travel pavilions are both traps. Their Kafkan walls are lined with booths from which predator salesmen claw for the jugular. The pavilion of American Interiors is only a big furniture showroom that charges 50¢ admission. The Underground House ($1) is the pavilion of American Interiors six feet under. Hollywood ($1.25) is a stockade full of tacky TV and movie sets, plus a museum that misspells the names of stars (Tallulla Bankhead).

The so-called Lake Amusement sector is merely a disaster area. Its trouble is simple: the amusements the area offers are almost all less amusing than the free shows of the industries. In 1939 this amusement area was four times as large, and there were nudes there. This time there are a few trained porpoises and the flume ride.

But these things are not enough to draw crowds, especially when the main entrance to the fair is so far away. The major shows of the area would have to do that, and they are not succeeding. Texas' huge production, *To Broadway with Love*, costs from $2 to $4.80 and is an oversized, undertalented anthology of Broadway show tunes—done by performers who seem to have been drawn from the senior class at high school. A circus playing to 35 people is one of the rainiest sights in the world, and one can see it in the Ringling tent. The circus is a good one too. Finally, the entire amusement area is ringed by American Machine & Foundry's monorail, which is a good ride but commands a view of the dreariest part of the fair.

Pike & Watusi. The ultimate amusement really comes with the fair's endless cosmopolitan touches, both great and trivial.

You can see how they dance in Guinea, buy a fez from Morocco, eat a soft-shell Maryland crab. While the Malaysians aren't looking, you can run Malaysian tin ore through your fingers. You can eat walleyed pike from Minnesota and see a chef from India baking bread in mud pots. In the calm oasis of the Irish pavilion, you can drink coffee primed with Irish whisky and listen on earphones to actors like Micheal MacLiammoir and Siobhan McKenna reading Yeats, Swift or Synge. In the Indonesian pavilion, you can look over the Indonesian girls that were personally selected by President Sukarno. There is even a portrait of a beautiful woman painted six years ago by Sukarno himself. Upstairs more girls dance to the *gamelan* music of Bali.

Fresh Sudanese dates cost 25¢, and 50¢ buys a look at the recently discovered 1,000-year-old Sudanese Madonna. You can watch a New York harnessmaker make a saddle and West Virginians blow glass. At the Singer exhibit, you can see jeweled woolen fab... that cost $1,200 a yard. Men of Steel

The Scientist

Behind the workers at the steel making furnaces stands the scientist. To him it is a matter of emission spectra, of lines on a film disclosing the answer to the composition of every batch of steel from the B.H.P. organisation—makers of 98 per cent of Australia's steel.

B.H.P.—a public company with forty-four thousand employees, is owned by some ninety-seven thousand shareholders. During 1963 the equivalent of almost one hundred million U.S. dollars was invested in new capital works.

Current output of B.H.P. steel is at the rate of five million long tons of steel ingots a year. And increasing.

The Broken Hill Proprietary Company Limited and subsidiaries: a group of companies engaged in a complete operation comprising mining and shipping of raw materials and the manufacture of iron and steel.

Look South for Steel

HEAD OFFICE: 500 Bourke Street, Melbourne, Australia. Resident representative for South East Asia located in Singapore, and distributors in Hong Kong, Indonesia, Malaysia, the Philippines, and Thailand.

Secret of airline service unique in all the world

As Shoko Yamamoto welcomes you aboard, you immediately sense the delightful difference of Japan Air Lines. Here in the cabin of a magnificent modern Jet Courier, Shoko and her sister hostesses create for you the serenity of classic Japan.

Part of their secret is Japan's gracious code of etiquette, cherished like a family treasure, practiced by daughters of the household since antiquity. The smallest service is performed with courtesy, warmth, and charm—as you discover to your delight on JAL. How gracefully your kimono-clad hostess offers warmed *sake* and *tsumami-mono* delicacies . . . later your favorite continental cuisine . . . attends your every wish amid the classic Japanese surroundings of your Courier cabin.

This unique hospitality, plus JAL's dependable airmanship, is yours *on JAL the world* around. Throughout the Orient, JAL's swift Jet Couriers shuttle between Tokyo and Hong Kong—direct, or via [illegible] —and between Hong Kong, Bangkok, Singapore, and Djakarta. Jets also link Tokyo with Okinawa and, now, Tokyo with [illegible]

To the U.S.A., JAL offers 14 flights a week—all via sunny [illegible] where you can stop over, if you wish, at no extra fare. Mornin[illegible] evening Tokyo departures give you added flexibility in planning [illegible] venient stopovers and fast connections.

To Europe, you can choose from two JAL routes. Take JAL's [illegible] Road" through the Middle East via Calcutta and Karachi. Or, [illegible] Tokyo, fly to Europe direct, over the fast Polar route.

Wherever you fly, enjoy the unique pleasures of flying JAL [illegible] the calm beauty of Japan at almost the speed of sound. Your [illegible] agent or nearest JAL office can give you complete details.

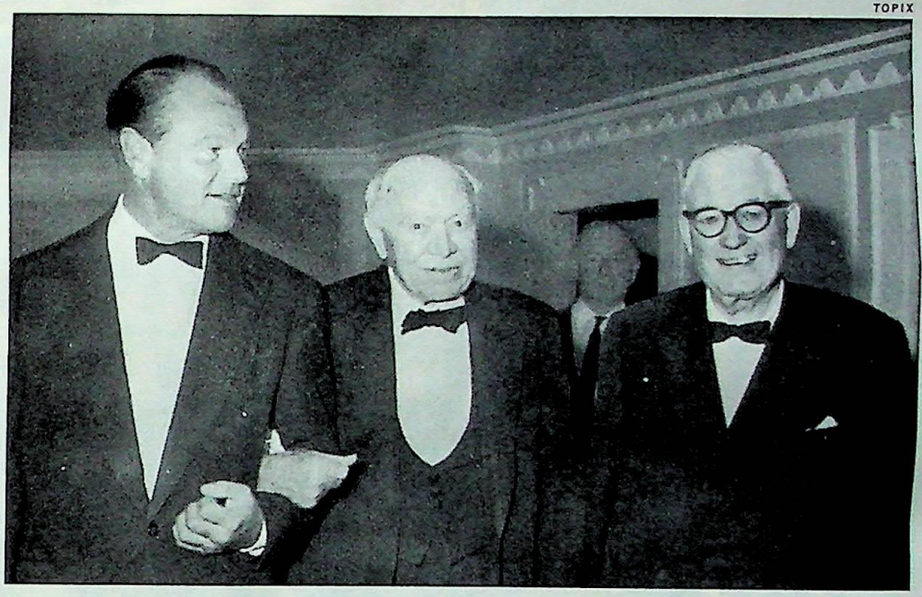
PUBLISHERS

The Eternal Apprentice

The ballroom of London's Dorchester Hotel was crammed with stuffed beavers, scarlet-coated Mounties, feathered Indians, and R.A.F. trumpeters announcing the roast beef. Moist-eyed press lords bawled *Happy Birthday to You* and *Land of Hope and Glory*. All of which seemed only proper for a party given by Roy Thomson, the Canadian-born press lord who owns more newspapers than anyone else, for Max Aitken, Lord Beaverbrook, another Canadian-born press lord, who long since established himself as one of journalism's greats.

TOPIX



LORD BEAVERBROOK (CENTER), WITH SON MAX AITKEN JR. (LEFT) & ROY THOMSON

The journalist's code is written on his heart.

Burdened though he may be by sciatica, gout, and the cumulative fatigue of the 85 years he had come to celebrate, the feisty little guest of honor stole the show. So forcefully did he define his profession and the practices and crusades of his own turbulent lifetime, that even men who had long opposed him stood to cheer.

"It is quite true that I am old bones," he began in that gravel voice before which many an editor learned to quail. "My legs are very weak, but I still have something in the way of a head. I am still headstrong, and self-willed at that. I will try to make you a speech. Many shrewd observers will say that I have not had any pattern or continuous theme in my long life. Certainly I have. But I have never been a successful leader. I have always been an apprentice.

"In learning about journalism I had to learn about journalists. No other profession is so heavily criticized. No other is preached at so much and told so often to mend its ways. Some of the loudest critics have a very simple code for us. It is this. 'Don't ever print anything about me that I wouldn't want people to read.'

"I am not much impressed by all the talk about standards and codes. The code of a good journalist should be written on his heart. First, he must be true to himself. The man who is not true to himself is no journalist. He must show courage, independence and initiative. He must be no respecter of persons but able to deal with the highest and the lowest on the same basis, which is regard for the public interest and a determination to get at the facts. I take more pride in my experience as a journalist than in any other experience I had in a long and varied life."

The Beaver saved his best line for his peroration. Just before he left the room, he said: "It is time for me to become an apprentice once more. I have not settled in which direction. But somewhere, some time soon."

COLUMNISTS

Prose from the Pros

The U.S. golfer supports a costly habit. Last year, playing on seven thousand golf courses, he lost or disfigured 60 million golf balls, invested more than $110 million in golf equipment and, if he had the cash left, took lessons to improve his game. If he could not afford an average $15 an hour for personal advice from a pro, the addicted duffer got the word anyway—in the nation's newspapers. Season after season, it is dispensed by experts in the sports sections of the daily press.

There, between the baseball scores and the fishing tables, the nation's leading golf pros have turned syndicated columnists. It can be an extremely lucrative sideline. Mark H. McCormack and Arthur J. Lafave Jr., Cleveland attorneys who handle the literary careers of Arnold Palmer, Jack Nicklaus, Doug Sanders and Gary Player, count it a poor year when their clients' bylines do not earn at least as much as their tournament play. Palmer's column, which

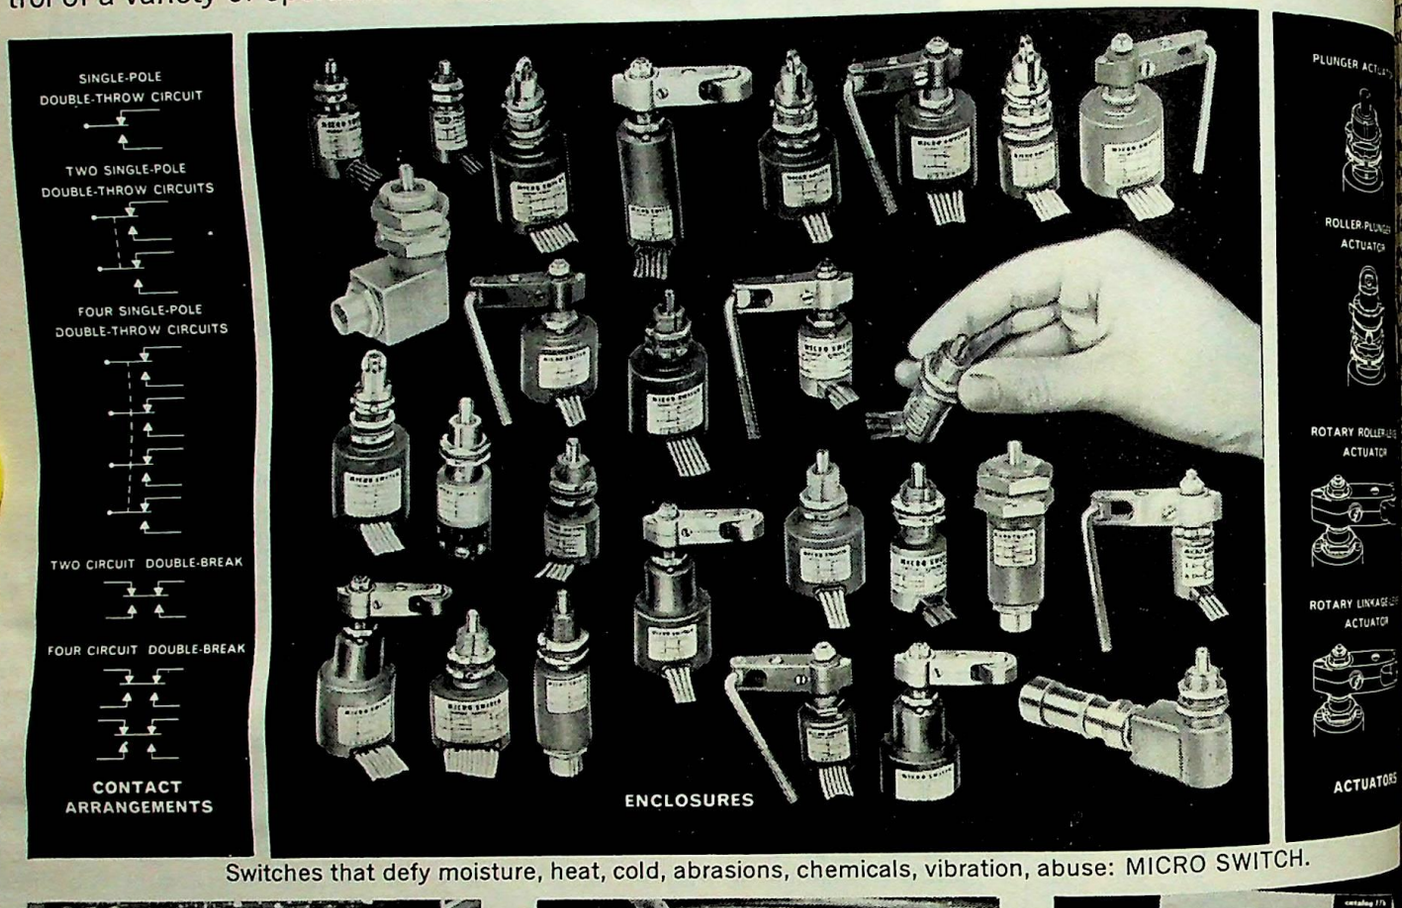
PRECISION SWITCHING REPORT BY HONEYWELL

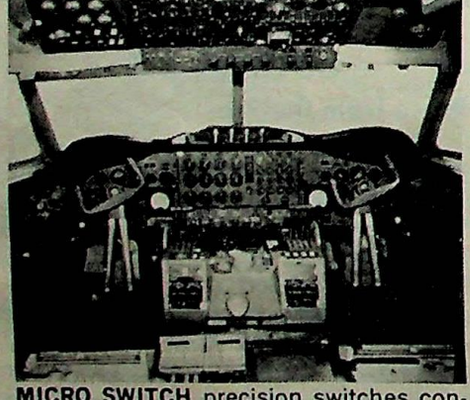
The first step toward automation!

Precision switches by MICRO SWITCH are bringing many of the advantages of automatic control with only a small investment. Switches that sense, detect, remember, alarm, provide automatic control of a variety of operations and processes.

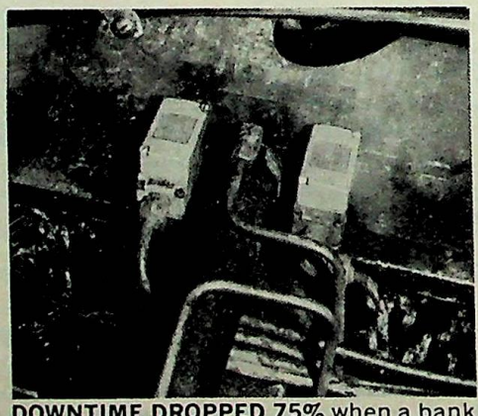
Look into the low-cost MICRO SWITCH way of automating operations. More than 16,500 combinations of various actuators, mountings, sizes, seals, circuits and capacities provide economical, reliable solutions to any switching problems.



Switches that defy moisture, heat, cold, abrasions, chemicals, vibration, abuse: MICRO SWITCH.



MICRO SWITCH precision switches control many important functions of today's high-performance aircraft. These rugged switches are ideal for any application where space is limited or where extremes of temperature and vibration are encountered.



DOWNTIME DROPPED 75% when a bank of MICRO SWITCH "Plug-in Limit" Switches were installed on this gear-hardening machine. Despite punishing use and continual flooding with water and steam, the switches operate accurately, dependably.

LET US HELP YOU with your control problems. Tell us your needs and we'll send catalogue for your requirements. Write, telephone today to the nearest office of Honeywell Pty. Ltd. or Paykel Bros. (See addresses below.)

Honeywell

HONEYWELL INTERNATIONAL: Sales and service offices in all principal cities of the world. Manufacturing in Canada, France, Germany, Japan, Netherlands, *United Kingdom and United States.*

AUSTRALIA: Honeywell Pty. Ltd., 63-73 Ann St., Surry Hills, Sydney, N.S.W. Branch Offices: Adelaide, Brisbane, Canberra, Hobart, Melbourne, Newcastle, Perth. NEW ZEALAND: Paykel Bros. Ltd., P.O. Box 5046, Auckland, C1. Branch Offices: Christchurch, Dunedin, Wellington.

ppears in 150 papers, generates up-ward of $50,000 a year.

Literary Caddies. Palmer commands the added income with the effortless grace that goes into a good tee shot. An editor of *Golf Digest*—one of the many magazines that also buy prose from the pros—writes Palmer's copy; the line drawings illustrating the text are traced from photographs taken of Palmer in Pittsburgh in 1959. About the only editorial control that Sam Snead exerts over his column, which has been running since 1940, is to insist that he be shown wearing that familiar Snead trademark, the porkpie straw hat.

Tommy Armour, Gene Sarazen, Alex Morrisson—almost every oldtimer still able enough to handle a club or a typewriter gets into the act. Cary Middlecoff, the dentist from Memphis, continues to drill out advice, though he stands farther than Palmer from the actual practice of journalism. His ghostwriter, Reporter Thomas E. Michael of the Memphis Commercial Appeal, last contacted the dentist nine years ago. "I'm very much by myself," says Michael, who has since managed six Middlecoff lines a week—for steadily dwindling readership. Most golf columns lose readers at about the same rate that their mentors lose tournaments. And since Middlecoff hasn't been winning any lately, his syndication is down to 30 papers from a high of 75.

Teeing-Off Tips. The newspaper lessons peddled by the masters cover much that the duffer knows full well: "If it actually is raining," began one Palmer column, "rule No. 1 is to keep your equipment and your hands as dry as possible. A good idea is to carry a towel." Jack Nicklaus can also belabor the obvious: "Prior to driving, a golfer can improve strokes merely by *looking down the fairway.*"

The golfer's every move gets detailed attention. The simple act of getting set for a shot turns Tommy Armour into a walkable encyclopedia. "As you address the ball," he said in one offering, "wiggle your toes." Another day, he had another approach. "As you address the ball be sure that your *left elbow is straight* and your right elbow is a bit bent and close to your body, a little bit forward of in line with your right knee." Sam Snead's approach is anatomical, right down to the X rays: "Imagine that your backbone is visible." Chances are most golfers are busy looking elsewhere —if only at another column of syndicated advice.

CENSORSHIP

No Change in Saigon

No matter who happens to be the boss in South Viet Nam, Saigon's newspapers lead a precarious existence. Those that don't die of malnutrition, a common fate where even the biggest daily is hard put to it to muster 35,000 readers, run the risk of offending the government. The late President Diem controlled the press with a heavy hand. And, after a temporary lull, so did the junta government that overthrew him. Last week Major General Nguyen Khanh, who overthrew Diem's overthrowers last January, demonstrated that he was no different from any of his predecessors. In two successive days he ordered seven Saigon dailies out of print.

The banned papers had sinned in the traditional South Viet Nam way—that is, by printing something not to the authorities' taste. One paper had dared to refer to Khanh's military regime as a "so-called democratic government." Another, noting that terrorists had scuttled a U.S. aircraft ferry in Saigon harbor last month, challenged the adequacy of Khanh's security measures.

Franco's New Commandments

For 26 years the press in Franco's Spain has been fenced in by a "provisional" code of *El Caudillo's* own construction. Its comprehensive restrictions, bound into law, taught newspapers such docility that enforcement of the law was rarely necessary. Last week, as a reward to his domesticated press, Franco proposed replacing the old law with what purported to be a more liberal statute. But the first six

AP

EL CAUDILLO (RIGHT) & PRINCE JUAN CARLOS*

Injunctions backed by excommunication.

press commandments enunciated by Minister of Information Manuel Fraga Iribarne suggested that in Franco's Spain press freedom would remain only a dream:

▶ "Observe the norms of Christian morals and maintain fidelity to the principles of the national movement."

▶ "Keep in mind the requirements of security and national coexistence, order and public health."

▶ "Give special care to everything that affects themes or publications destined for children and young people."

▶ "Observe the strictest respect for the dignity, privacy, fame and reputation of persons."

▶ "Keep the professional secret, except in cases of obligatory cooperation with justice."

▶ "Be loyal to the company for which they work."

To encourage newsmen to follow these injunctions, Iribarne also cited the severest penalty for disobedience: excommunication from the profession of journalism—as practiced in Spain.

* Shown last week as Franco for the third successive year chose the occasion of a massive military display to greet Prince Juan Carlos de Borbón y Borbón, leading contender for the Spanish throne.

PLAY BETTER GOLF

By Tommy Armour

Keep Head Steady

Turn head to right

YOU'VE got to keep your head steady or you haven't got a center of your swing. I think many common golfers right at the start get their necks and shoulders so stiff it is impossible for them to swing with any freedom and smoothness. A tip that helps a lot of them is to turn the head a little so the chin points to the right of the ball. Then they can turn their shoulders easily without getting out of balance. They'll find it easier, then, to follow the very old (and still very good) advice to keep the head steady until the left shoulder swings around and under the chin, then until the right shoulder touches the chin. It might give you a simple picture of the swing to think of staying steady while you worked your swing from the tip of your left shoulder.

a new company is born...

one that's already a hundred years old

The new company is Mitsubishi Heavy Industries, Ltd. It's the happy result of a merger (June 1) between Mitsubishi Nippon Heavy-Industries, Ltd., Shin Mitsubishi Heavy-Industries, Ltd., and Mitsubishi Shipbuilding & Engineering Co., Ltd. (Mitsubishi Zosen) — three companies with a hundred years of manufacturing experience behind them.

What does this make Mitsubishi Heavy Industries? A big leader among Japan's industrial giants. Estimated total annual sales will be more than those of any other company (one billion dollars in 1964). Also, we have more employees (79,500). And with several thousand different products to its name, Mitsubishi Heavy Industries becomes the most diversified organization in the entire Orient.

But that's just the size of the company. The merger brings about several distinct advantages. More money is now available for research and development. Efficiency is gained by having a single chain of command. Double investments are eliminated, the company's financial structure is economically sound, and all export business has been combined for quicker service.

Mitsubishi Heavy Industries, Ltd. will continue to honor all license agreements the three former companies had with foreign corporations, and no doubt sign a few more besides. Experience, as they say, is always the best teacher, especially a hundred years of manufacturing experience, and this has simply taught Mitsubishi never to stop learning. Or growing.

1000 Thrills 1000!

That Man from Rio. Sssh. Out of a shadow a shadow glides, a sinister shape that stands up like a man but treads as softly as a jaguar. Stealthily the figure slips past the guard as he closes the main gate of the *Musée de l'Homme* in Paris; silently the figure vanishes along an aisle. Some minutes later the museum guard hears the crash of shattering glass, and away he runs to find out who is stealing what. Some minutes after that the police stand pondering a curious coincidence. The object stolen from the museum, a religious effigy, and the weapon used to eliminate the faithful guard, a poisoned dart, were both made by pre-Columbian Indians in the jungles of Brazil. "The Maltecs were a mysterious people," somebody murmurs portentously and then goes on to add, "Who knows? A few may have survived, and now they have come to reclaim their god!"

Go ahead, groan. Up to this point, Rio unreels like a bad French imitation of the standard filler thriller Hollywood produces for the shrunken-head set. But beyond this point, groans turn to giggles and giggles to guffaws. Made by Philippe de Broca, a young French director (*The Five-Day Lover*) of stunning *esprit*, the film turns out to be a clumsy but almost continually hilarious parody of the typical next-earthquake-please, throw-away-the-script-boys-this-is-an-action picture.

Director De Broca's technique is to assemble several hundred stock movie situations and fire them at the screen like soggy old lemons. In hysterically rapid succession his hero (Jean-Paul Belmondo):

Sees two ice-cold chocolate Maltecs steal his sweetie pie (Françoise Dorléac).

Chases the trio with brio to Rio.

Ducks a barrage of poisoned darts.

Squeezes through a tenth-story window.

Rescues his drugged darling.

Loses her to one of those mad scientists.

Pursues her upside down in an airplane.

Bails out.

Falls crunch into the craw of

A crocodile—what else? Much else, and all of it shrewdly calculated to make the customer laugh out loud at all the lousy movies he has ever seen and at the same time have a wild and wonderful time watching them again.

BELMONDO & DORLEAC IN "RIO"
A romp with soggy lemons.

HENRY GROSSMAN

LUALDI IN "DISORDER"
A slip-up at the party.

Malaise à la Milanese

Disorder boasts an impressive roster of international film stars sloshing through still another odyssey of contemporary moral chaos. In this artiest of art films, the malaise reaches epidemic proportions. To make his points, fledgling Italian Director Franco Brusati borrows freely but not well from Antonioni, Fellini, Visconti and perhaps Bunuel, hopefully compiling a whole movie from the kind of footage the masters might have left out.

The first episode pries into a decadent country villa where wealthy Industrialist Curt Jurgens is dying upstairs while his son Sami Frey throws a winging below. Suffering through the Oedipal conflict, language dubbing and dense cinematic trickery are Jurgens' wife Alida Valli and daughter Susan Strasberg. Among the more perceptive waiters hired for the revels is Hero Renato Salvatori, who abruptly exclaims: "What a house—lonely, sad, mean and rotten!" Salvatori heads home to Milan, only to find more moral chaos. Jean Sorel is so alienated that he goes to a party and seduces his own wife, luscious Antonella Lualdi, who clearly prefers Host Louis Jourdan. But Jourdan prefers a young man called Bruno, Salvatori's friend. Then, trying to get his mother out of the poorhouse, Salvatori meets a kindly, supposititious priest whose ramshackle home turns out to be a haven for prostitutes and transvestites. This last illusory retreat is literally and symbolically shattered when a demolition crew razes the place to make way for something new. Perhaps one of those sterile Milan apartment dwellings. The film's unwitting moral: people who stone glass houses deserve all the *Disorder* they get.

Bates begins as a lowly clerk in an upper-U firm of London property agents. En route to a partnership and a Westminster Abbey wedding with the boss's daughter (Millicent Martin), he hires an aging, aristocratic wastrel (Denholm Elliott) to guide him through a whirlwind curriculum of fashionable prejudices. "Say 'bloody' a lot," counsels Elliott. "Know a few dirty jokes about the Caesars." When tutor and pupil take aim at the Establishment in a series of daft vignettes—playing squash, touring Cambridge, or off on a jolly shoot—*Nothing but the Best* looks and sounds like superlative satire.

Later, the potholes in the plot tend to become troublesome, particularly in Bates's dealings with an oversexed landlady who helps him to conceal a corpse. But Director Clive Donner (*The Guest, Genevieve*) maneuvers between black comedy and melodrama with absorbing skill. Maintaining a light, steady touch on the story line, he deploys his camera for a series of witty asides, mocking views of upper-crust life as it is temptingly reproduced in the advertising on the lid of a cookie tin. And one ripe interlude at a hunt ball finds all the horsiest young socialites in full cry.

Democratic in its savagery, the film takes equal delight in nailing down its hero. Aping his betters, he finally, ironically, proves himself inferior—faster, bolder, by necessity more resourceful, but at bottom just a greedy, churlish Jimmy who yearns with might and main to be known as James.

RELIGION

EPISCOPALIANS

Critic from Within

To many young Protestant ministers, Christianity's newest and most challenging frontier is a mission to city slums—a proposition that often works out as putting aside the preaching of the Gospel for the sake of social work. To William Stringfellow, a Harvard-trained lawyer and Episcopal lay theologian, such ideas are anathema. In a newly published book called *My People Is the Enemy* (Holt, Rinehart & Winston, $3.95), he labels the theory for what it is: sectarianism, "no less than it is where a church is established on grounds of class or race or language or any other secular criteria."

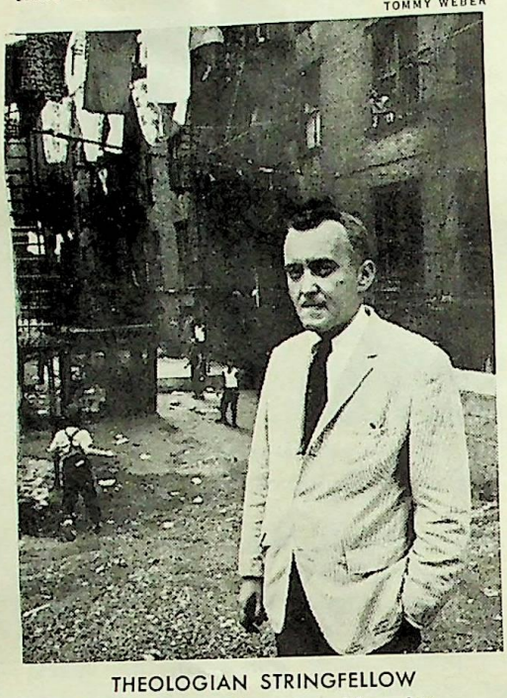
Stringfellow knows what he is criticizing. A former member of the group ministry at the famed East Harlem Protestant Parish, he lived and practiced law for more than six years in a $24.30-a-month flat in Spanish Harlem. In *My People*, he writes with vivid feeling and detail about what it means to exist in Manhattan's Puerto Rican ghetto, and how the slums are preserved by sloth, corruption and civic indifference—Mayor Robert Wagner, he notes, is a man of "extravagant apathy."

Gospel for the Hungry? But important as the urban mission is, Stringfellow writes, it is just one of many frontiers for the church—no more or less important than the university, the suburb or the technology lab. And on every frontier, the church faces the danger of conforming to the world "by accommodating the message and mission to the particular society in which the church happens to be, in the slums and in the suburbs, instead of honoring the integrity of the Gospel for all societies and for all sorts and conditions of men in all times and places."

If the Gospel cannot be preached to the hungry until they are fed, as the mission romantics claim, "then this is no Gospel with any saving power, this is no Word of God which has authority over the power of death. The Gospel is a Word which is exactly addressed to men in this world in their destitution and hunger and sickness and travail. The church must trust the Gospel enough to come among the poor with nothing to offer the poor except the Gospel, except the power to apprehend and the courage to reveal the Word of God."

Unapologetic Jeremiads. Such trenchant comments have made Lawyer Stringfellow one of the most persuasive of Christianity's critics-from-within; Karl Barth, on his U.S. trip in 1962, referred to him as the man "who caught my attention more than any other." Now 36, Stringfellow gave up his street-corner practice in Harlem two years ago to form a midtown Manhattan law firm, but he still takes many cases on behalf of the poor. During the academic year he delivers about 20 lectures a month, most of them sharply critical of organized Christianity's pretensions. He is fond, for example, of calling the current church interest in race as "too little, too late and too lily-white." But Stringfellow makes no apologies for his jeremiads. "Protestantism has forgotten that it is a community, a nation," he says. "It has little sense of being God's people. The church suffers from guilt about its own infidelity, and from time to time it feels a need to hear criticism for its own sake."

TOMMY WEBER



THEOLOGIAN STRINGFELLOW
Too little, too late, too lily-white.

ROMAN CATHOLICS

In Dutch with the Vatican

The sources of radical and rebellious Roman Catholic thinking used to be the industrial missions in urban France or the theological faculties of German universities. Lately, the fount of ideas that may skirt heresy—or may become the accepted reshaping of church thinking—is the staid and sober Netherlands.

The latest incident to alarm Rome's Holy Office involves a lively magazine called *De Nieuwe Linie* (The New Frontier). Owned by Catholic laymen but numbering three Jesuits among its editors, the magazine has within the past two years become one of the most provocative in Europe. It has run articles discussing the moral licitness of the birth-control pill for Catholics* and has suggested a change in church ru... limiting mixed marriages. Last F... ruary two priests used its pages to q... tion clerical celibacy. A month l... a Catholic layman raised ques... about the doctrine of transubst... tion, which holds that the bread ... wine change into Christ's body ... blood at the consecration of the ...

A Box on the Ear. A report on articles was sent to Rome by the ... tiously conservative Apostolic Inter... cio, Archbishop Giuseppe Beltrami... April the Jesuit General, Father ... Baptiste Janssens, ordered the ... Jesuit editors to leave the staff of ... *Nieuwe Linie* because he could ... agree with the magazine's edi... views. Other journals—Catholic, ... estant and secular—hurried to ... defense of *De Nieuwe Linie*, and a ... ber of Dutch Jesuits have openly ... tested Father Janssens' blunt ha... of the case. Two of the Jesuits ... ignored the order, still show up ... work at the magazine every day.

Such small signs of defiance ... kept Archbishop Beltrami and his ... ecessor extremely busy writing to ... superiors in recent years, and ha... month goes by that some Dutch ... logian does not receive a *mo...* (warning) from the Holy Office. ... call it a box on the ear," says one.

Translation Errors. Although ... bishops in The Netherlands are ... siderably more conservative than ... priests and laymen, they too have ... in dutch with Rome. Shortly ... the Vatican Council began in 19... Italian edition of their encyclical ... posing considerations for the co... was withdrawn from circulation ... cause of "errors" in the translati... fact, the Holy Office objected t... Dutch bishops' defense of the no... miliar idea of episcopal collegia... that is, the bishops' sharing ruling ... over the church with the Pope. ... also informed Bernard Cardinal A... of Utrecht that the principal auth... the encyclical, the brilliant Dom... speculative theologian Edouard Sc... beeck, would not be acceptable ... theological adviser to the Co... Preparatory Commissions.

Dutch Catholics do not question ... right and duty of the Holy Of... keep the faith of the church fr... error. Thus most of the censured ... logians have accepted their *mon...* have either kept silence or co... what Rome regards as mistakes. ... a land where Catholics (40% o... population) live elbow-to-elbow ... Protestants (38%) and the gener... el of education and intercommu... is high, Rome's fetters often seem ... anachronistic and Italianate. ... John's summoning of the coun... vinced the Dutch that renewal ... hand; and now, says one Dutch ... gian, with pride in his voice, ... Catholics have protested openly ... time Rome takes an action th... don't like."

* Last week the Vatican's *L'Osservatore della Domenica* suggested that medical research might call for a re-examination of Catholic teaching on birth control. In an interview for an Italian weekly last week, Alfredo Cardinal Ottaviani of the Holy Office said that public discussions of the pill are up to the Holy See and the Vatican Council rather than individual theologians—but he did not outlaw further consideration of the problem by moralists.

SCIENCE

AERODYNAMICS

Blown Flaps For Slow Landings

Constantly increasing air travel has brought commercial airlines constantly increasing headaches. And control of the swift traffic aloft is only a part of the problem. With their high speeds and long landing runs, the big jetliners demand long runways on which to set down, but few cities have that kind of space near by. Convenient, close-in airports, which are usually small, have become the domain of smaller planes and feeder airlines.

Now pilots of the National Aeronautics and Space Administration are learning how to land the big jets closer to town. At Wallops Island, Va., they bring their Boeing 707 slanting out of the sky at a limping 100 m.p.h.—50 m.p.h. slower than a standard jetliner. They float over the end of the runway and touch down at only 90 m.p.h.—as slow as an old-fashioned propeller-driven DC-3.

How can a big sweptwing jet stay in the air and maneuver safely at such low speeds? The answer can be read in the big landing flaps at the rear edge of its wings. On the landing approach the flaps extend at an unusually sharp angle; sometimes they droop as much as 70°. Ordinary flaps would not work effectively at this angle; instead of giving more lift, they would merely create drag as the air passing over them curdled into turbulence.

On NASA's 707, though, the steep-angled flaps have help. Just ahead of their leading edges, where they join the wing, streams of high-pressure air from the compressors of the jet engines spurt out of nozzles and bathe the flaps' upper surfaces, smoothing the air flow and creating extra lift. To supply enough air at 100 lbs. per sq. in., the engines must run at high speed, developing too much thrust for a plane on its landing approach. But the research ship picks up no extra speed; its extra thrust is contained by big clam-shell deflectors that can be controlled by the pilot. As NASA's 707 drops down to the runway slowly that its horizontal tail surfaces need special, upside-down flaps, which jet upward from the stabilizer's leading edge, to make the air flow over them properly at low speed.

RESEARCH 707

Clam shells for closer to town.

This system of "blown flaps" was first developed in 1956 by NASA's predecessor, the National Advisory Committee for Aeronautics, but it roused little interest. At that time the airplane industry was more concerned with the high cruising speed of jetliners. Landing speed seemed secondary. Now everyone knows better.

OCEANOGRAPHY

Deep-Down Submarines

The loss of the nuclear submarine *Thresher* last year in 8,400 ft. of water was a painful reminder of just how much of the ocean bottom lies below the Navy's reach. The bathyscaphe *Trieste* could dive to the general area of the *Thresher's* wreck, but it could not do much that was worthwhile when it got there. Instruments and grappling devices operated from surface ships were all but useless in strong currents and rough seas.

Urged on by the disaster, work on deep-submergence systems has been picking up pace ever since. The Navy has recently recommended that $333 million be spent on the design and construction of deep-diving submarines capable of exploring the bottom and doing useful work at extreme depths. And in response to the growing demand from both Government and industry, the drawing boards of the nation's naval architects are producing a fleet of small, odd-looking submarines, most of them aimed at great depths.

▶ *Alvin* (named for Oceanographer Allyn Vine), is a perky little craft built by Litton Industries with Navy funds for the Woods Hole Oceanographic Institute. It is 22 ft. long, weighs 13 tons, and has a reasonably conventional submarine shape, but the outside hull serves only for streamlining and control. When *Alvin* submerges, the water enters that thin skin freely. Inside is a 7-ft. sphere with walls of high-strength steel 1.33 in. thick to protect the crew from water pressure down to 6,000 ft. Its four viewing ports permit the pilot and observer to see ahead and below, and its three steerable, battery-powered propellers, two of which can swivel to point up or down, give high maneuverability and a top speed of about 7 m.p.h. Before *Alvin* tries deep and perilous submergence, it will begin practice runs this month in the pleasant shallows near Cape Cod.

▶ *Deepstar*, which looks like a close cousin to *Alvin*, is being built by Westinghouse in collaboration with Jacques-Yves Cousteau, co-developer of the Aqua-Lung. It, too, has a streamlined outside hull containing a thick-walled pressure sphere to protect its crew. Its intended depth will be 12,000 ft., and it will have a claw like a giant lobster. *Deepstar* will not be ready until 1965, when Westinghouse will begin using it in its own underwater research, besides leasing or selling it to other organizations that feel an urge to explore the ocean bottom.

▶ *Aluminaut*, probably the biggest research submarine under construction, is now being built for Reynolds Metals Co. by the Electric Boat Division of General Dynamics at Groton, Conn. It will be 50 ft. long and made mostly of 6½-in.-thick aluminum. To be launched this summer, it is expected to cruise comfortably three miles down and can stay submerged three days with a crew of three.

▶ *Turtle*, Lockheed's odd-looking entry, is lens-shaped to allow it to scoot along the bottom like a flounder. After experiments with a small, self-propelled model, Designer Willy Fiedler decided that the lenticular shape, made of two strong metal saucers joined at their edges, is the best for the moderately deep ocean. It will resist pressure and have more maneuverability than a sphere. Dr. Fiedler hopes to use it to spy on fish and learn to catch them cheaply. It can repair damaged cables and bury radioactive wastes in the ocean bottom. Lockheed has high hopes of eventually being able to build large *Turtles* to carry cargo, perhaps operating under Arctic ice.

CITY PLANNING

The Pennsylvania Hypotenuse

As the nation's TV viewers know from watching many an open Cadillac —or caisson—make the trip, Pennsylvania Avenue in Washington, D.C., has both grandeur and grubbiness. As it stretches toward the Capitol, the stalwart neoclassical façades of federal buildings rise evenly on the right. But on the left side is an uneven collection of old hotels, decayed storefronts vacant above the first floor, and dreary parking lots.

Yet, as conceived by George Washington, who suggested it to the capital's original planner, French Engineer Pierre Charles L'Enfant, Pennsylvania Avenue was to be a symbolic "axis of the nation," balancing democracy at either end in the architecture of the executive White House and the legislative Capitol. Last week the Kennedy-launched Council on Pennsylvania Avenue, chaired by Architect Nathaniel A. Owings, released plans that might make L'Enfant's dream finally come true.

Haussmannian. More than the stopgap panaceas and two-dimensional thinking of much urban renewal, the plan is Haussmannian in scope and architectural in dimension. The council would turn Pennsylvania Avenue into a ceremonial boulevard with distinctive brick paving, bordered by double or triple rows of graceful shade trees, and three-level sidewalks to take the rubbernecking out of parade watching. Constitution Avenue, which now makes a messy, scissorslike intersection with Pennsylvania, would neatly dive beneath it.

City planners have often pronounced the Treasury Building, at the White House end of the avenue, to be "misplaced," because it blocks the presidential residence from view down Pennsylvania. The new report turns this deficit into asset: the White House, the council members have perceived, is less impressive a terminus for the street than the colonnaded Treasury.

But more than the Treasury is needed, so they would create a great National Square that gives a distinguished destination for the avenue, provides access through a monumental gate to the White House grounds, and offers a car-free plaza for people afoot. Halfway between there and the Capitol, they take advantage of the fact that the National Gallery and the Archives Building now sit facing each other [illegible] latedly on opposite sides of the ave[illegible] and would create another big M[illegible] Square that gives vistas of the fa[illegible] of both buildings.

Northern Triangle. But the co[illegible] while keeping grandeur in mind, [illegible] more than a nice street for ina[illegible] parades. Pennsylvania Avenue i[illegible] hypotenuse of two triangles. [illegible] bounded on the south by the M[illegible] composed of existing federal bui[illegible] —the Department of Justice, the [illegible] Office and Department of Comm[illegible] The council now proposes to finish [illegible] northern triangle south of G S[illegible] presently a junky commercial [illegible] The most striking feature would [illegible] daring mezzanine that carries pe[illegible] ans over traffic. Lifting strollers [illegible] cars, it would bring people into [illegible] theaters, hotels and restaurants w[illegible] around new federal buildings. [illegible] commerce could draw Washingto[illegible] who are building away from the [illegible] tol, back toward the center of the [illegible]

As befits an auto-age capital, w[illegible] not only shoppers, workers and the [illegible] tion's second biggest stream of tra[illegible] pour into the center of the city, p[illegible] ful double-level underground ga[illegible] are provided, with accesses from n[illegible] boring streets but not from the [illegible] eight-lane boulevard itself. It i[illegible] told, a bold step up (and down) [illegible] the one-curb city.

COLLECTORS

The Abstract Businessman

The British critic Sir Kenneth [illegible] wrote once that he understood a [illegible] tain private collection of Fragon[illegible] rococo oils when he looked at the [illegible] owner's collection of butterflies. [illegible] collector's eye had plainly d[illegible] strength from the kinship of fra[illegible] fluttery forms in art and nature. T[illegible] down the taste of California Entr[illegible] neur Norton Simon, 57, the most [illegible] criminating art collector on the [illegible] Coast (*see picture pages*), is a st[illegible] exercise in analogy. But Simon's [illegible] collection is companies.

He began as head of Hunt F[illegible] and Industries, the world's largest p[illegible] er and distributor of tomato foods, [illegible] and has since branched out into [illegible] a dozen businesses from Ohio M[illegible] Co. to *McCall's* magazine. He s[illegible] controlling stock in other firms in h[illegible] of improving them, and, says one [illegible] seum curator, "in the same way [illegible] picks up a company that could be [illegible] ing better, Simon makes a good pi[illegible] ing more important by adding it to [illegible] collection." By hanging it in the c[illegible] pany of centuries of masterworks, [illegible] Simon's Rembrandt gains characte[illegible] a personal choice, and returns the c[illegible] pliment to Simon's spread from Le[illegible] zo Monaco to De Kooning. It [illegible] coincidence that Simon speaks [illegible] existential philosopher and terms [illegible] self an abstract businessman: he [illegible]

THE SIMONS AT HOME
Making good paintings more important.

man's fulfillment of self in art and business.

Agony in a Yawn. A hallmark of the collection is its focus on the well-painted picture with perfect brushwork. Nothing among Simon's pictures looks unfinished or sloppy. "Simon's primary consideration is esthetic quality without regard for periods," says Richard Brown, director of the Los Angeles County Museum. "And he lives with it just that way, hanging a Van Dyck alongside a Gorky in his office, a Memling alongside a Degas at home. This takes courage and taste, because it means holding the bat full length, not shortening up."

Another hallmark is Simon's eye for restrained treatment. His Gorkys are flamboyant, his late Van Goghs unimpairing. But the peaceable appearance of Simon's art masks the tough quality within. As Brown explains it, Simon has "a sympathy, an understanding, a desire to recognize agony in life," and Simon himself, a self-made intellectual who quit college after six weeks, considers "the facts of life and hard reality as bona fide subjects of art. The yawn of Degas' laundress conceals the agony of poverty and agony boredom.

Buying Art Slowly. Just as he painstakingly analyzes a business investment, Simon buys art slowly. Often, he will study a painting for a year before acquiring it. His collection began ten years ago with a Bonnard, broadened with other 19th century postimpressionists (he owns twelve Degas, nine Cézannes), yet is not slavish to any single style. He scattered Picassos throughout his William Pereira-designed administration building in Fullerton, Calif., and then smoothly turned to Renaissance painting.

Along with Dun & Bradstreet reports, file drawers in his secretary's office are stuffed with Wildenstein catalogues, Parke-Bernet auction lists, and color transparencies. On his desk sits a Honoré Daumier bronze of a humble country bumpkin. He also wants his

employees to appreciate art, gives them plenty to look at. Rarely have they failed to enjoy it, but once he had to take down a Léger tapestry of a mechanical man in the office foyer. Employees read themselves uncomfortably into the image.

MUSEUMS

The More Modern Modern

It was a long way from the backwoods hollers of West Virginia; yet there was the First Lady in a white silk faille gown, saying: "This generation is engaged not only in a war against the poverty of man's necessities, but also in a war against the poverty of man's spirit." Then Mrs. Johnson inaugurated Manhattan's revamped Museum of Modern Art, which, as it reopened last week after a six-month, $5,500,000 expansion, looked splendidly equipped to fight in the second of Lady Bird's wars.

Two days later, the museum opened to the public. Back were the sandal-*schleppers* in ponytails, the docents lecturing groups of housewives, the high-schoolers and collegians scribbling notes religiously. "Are you going to describe only the paintings you like?" one asked another. It was just as if they never had been away.

Double the Fun. The old entrance, known by its Arp-like curving marquee that tried to turn the façade toward Fifth Avenue, is now a wide breezeway through to the garden. To the east of it, Architect Philip Johnson, once the museum's director of architecture and design, has built a new wing with a façade of muscular steel beams framing huge plates of glass from sidewalk to roof (a similar wing will eventually be built to the west). Inside, the doubly expanded museum seems more than doubly competent to its task. Extra room lets it show how the whole family of modern art lives in harmony: photography, cinema, industrial design, architecture, graphics, paintings and sculpture all have permanent galleries.

The whole parade of the last 80 years of art unwinds through a continuous maze of 37 galleries from Rousseau's primitives to Claes Oldenburg's plaster hamburgers, which the museum—swallowing hard but still proud of being first—says it bought before anyone else got the hunger. Of the museum's 1,800 paintings and sculptures, some 550 are on view, more than double the previous number. The sculpture garden grew to three-fourths of an acre, where weeping beeches hang over a raised level roofing on top of a 60-ft. by 75-ft. exhibition hall. Among the garden's weightier new residents are Herbert Ferber's jangle-in-a-box *Homage to Piranesi I* and Alexander Calder's creeping *Black Widow*. More than ever, it is an oasis amidst city din, filled with spouting fountains and bronze genies.

Time-Tested Modern. For 24 years the Museum of Modern Art refused to label its works as a permanent collection, and always planned to switch time-tested art to dustier museums. It bought paintings on the calculation that one out of a dozen might have permanent value. "Today's masterpiece is sometimes tomorrow's bore," wrote the first director, now director of museum collections, Alfred H. Barr Jr., in 1942. Even today, the official permanent collection numbers fewer than 20 works.

But in the end, the museum could not find the heart to send away what might yet prove good, and what might yet prove good turns out to be a stunning display of art. Now the Museum of Modern Art has room to show it, and it also has a vast willingness to bank on tomorrow, as if by definition modern art can never run out.

ALFRED STATLER

CHAMBERS, GREENBERG & MOTLEY
Enforcing the precedents.

CIVIL RIGHTS

Constitutional Commandos

It may be the sit-ins, pray-ins, stall-ins and school boycotts that stir headlines and dramatize Negro grievances. But the fundamental civil rights revolution has been in the courts, where in ten years U.S. Negroes have made giant strides.

The leading force behind this progress is a kind of constitutional commando—Manhattan's *N.A.A.C.P. Legal Defense and Educational Fund, Inc.* Though it has only 14 fulltime lawyers, the aggressive defense fund has in recent years argued more cases before the Supreme Court than any other nongovernmental organization. Last week it scored again when the court ordered faster school desegregation in Atlanta (*see* EDUCATION). While also celebrating its 25th birthday, the "Inc. Fund," as it is now known by its many friends and many foes, basked in praise from such admirers as Burke Marshall, the Justice Department's civil rights chief, who called the fund "a gigantic force for change."

Revolutionary Counsel. Now proudly independent, the Inc. Fund grew out of the N.A.A.C.P.'s legal victories of the late 1930s, which were largely the work of two brilliant Negro lawyers, Charles Houston and young Thurgood Marshall. On a budget of less than $10,000 a year, their office a car speeding from court to court, Houston and Marshall won a key desegregation case against the University of Missouri Law School in 1938, and suddenly the N.A.A.C.P. was deluged with a flood of new cases to try. To raise cash, it spun off the legal fund in 1939 as a tax-exempt organization.

In 1950, Director-Counsel Marshall pierced "separate but equal" segregation when the Supreme Court ordered *Heman Sweatt* admitted as the first Negro at the University of Texas Law School and told the University of Oklahoma to stop isolating Negro Graduate Student George McLaurin. *Sweatt* and *McLaurin* opened the way for 1954's *Brown* v. *Board of Education*, the landmark Supreme Court decision against school segregation. After that came a virtually unbroken string of Inc. Fund triumphs against segregated buses, beaches, golf courses, hospitals and courtrooms—the major victories of the U.S. civil rights revolution.

Top Training Ground. When Marshall became a federal judge in 1961, he was succeeded by Jack Greenberg, then 36, a Columbia-trained lawyer whom Marshall fondly calls "about as Negro as a white man can get." Greenberg's No. 2 man is a woman, the formidable Negro lawyer and New York State senator, Constance Baker Motley (Columbia '46), who in 1962 calmly convoyed James Meredith through the courts into Ole Miss. "We couldn't have asked for anyone better," says the Justice Department's Burke Marshall. "She could work for anyone."

But not anyone can work for the Inc. Fund; its current staff, including three whites, is heavy on ex-law-review editors and Ivy League products. Under a pioneering legal-intern program, the fund is training and will subsidize civil rights lawyers to fill an urgent need: fulltime practice in the South. The entire state of Mississippi, for example, has at present only four Negro lawyers. One promising recruit: Julius L. Chambers, son of an auto mechanic and first Negro to edit the North Carolina *Law Review*.

Solid foundation grants have now boosted the Inc. Fund's bankroll to $1,500,000, which is still austere for an organization that last year (aided by 102 cooperating lawyers) defended 10,487 civil rights demonstrators, fought 168 separate groups of legal actions in 15 states, and pushed 30 cases up to the Supreme Court. A single such high-court case costs as much as $50,000; in six months of defending 3,000 Birmingham demonstrators last year, the fund shelled out $105,000.

Rewon Freedoms. Director Greenberg sees the fund's main future as "enforcement of the major precedents we established." Acting on last week's Supreme Court order in Atlanta, for example, the fund aims to tackle tokenism in 80 other school cases. Also [illegible] way are training institutes for S[illegible] ern civil rights lawyers, taught Northern law professors, plus legal [illegible] inars for more Northern lawyers [illegible] 2,000 Northern collegians, who [illegible] spend this summer trying to reg[illegible] Negro voters in Mississippi. If and [illegible] the civil rights bill passes, pre[illegible] Greenberg, "massive resistance to enforcement" will plunge the fund [illegible] more litigation than ever.

THE SUPREME COURT

The Job No Young Lawyer Can Afford to Turn Down

When Mr. Justice Holmes ascen[illegible] from the Massachusetts Supreme C[illegible] to the U.S. Supreme Court in 190[illegible] brought along his custom of each [illegible] picking a bright young clerk from [illegible] vard Law School. Himself childless, [illegible] explained that his clerks gave him [illegible] fun of fatherhood without the [illegible] since his "sons" changed every [illegible] Holmes's legal family became so [illegible] ular that it soon grew into a sch[illegible] Rhodes scholarship of U.S. law. C[illegible] ing for the Supreme Court is no[illegible] launching pad for all kinds of later [illegible] —be it heading the State Depart[illegible] (Dean Acheson), running U.S. [illegible] (Irving Olds), going to jail ([illegible] Hiss), becoming a leading sociol[illegible] (David Riesman), or returning [illegible] Supreme Court Justice (Byron W[illegible] "It is much more than a meal ti[illegible] explains one ex-clerk. "It's an inc[illegible] lably valuable experience."

Picking Patterns. By federal stat[illegible] the eight Associate Justices are [illegible] each entitled to two clerks, and [illegible] Chief Justice to three. At $8,745 [illegible] pay is equal to the starting salar[illegible] top law firms, and there is an a[illegible] $1,000 for the chief clerk, who se[illegible] the Chief Justice. Most law clerks [illegible] not all, are fresh out of law schoo[illegible] the brightest in their class, the edi[illegible] of the law review. Geographical p[illegible] erence and a loyalty to certain scho[illegible] are the only patterns of prejudice [illegible] are known to attract the Justices, b[illegible] all its history the court has picked [illegible] one woman clerk, Lucille Loman, [illegible] served Justice Douglas in 1944, and [illegible] Negro clerk, William T. Coleman, [illegible] served Justice Frankfurter in 194[illegible]

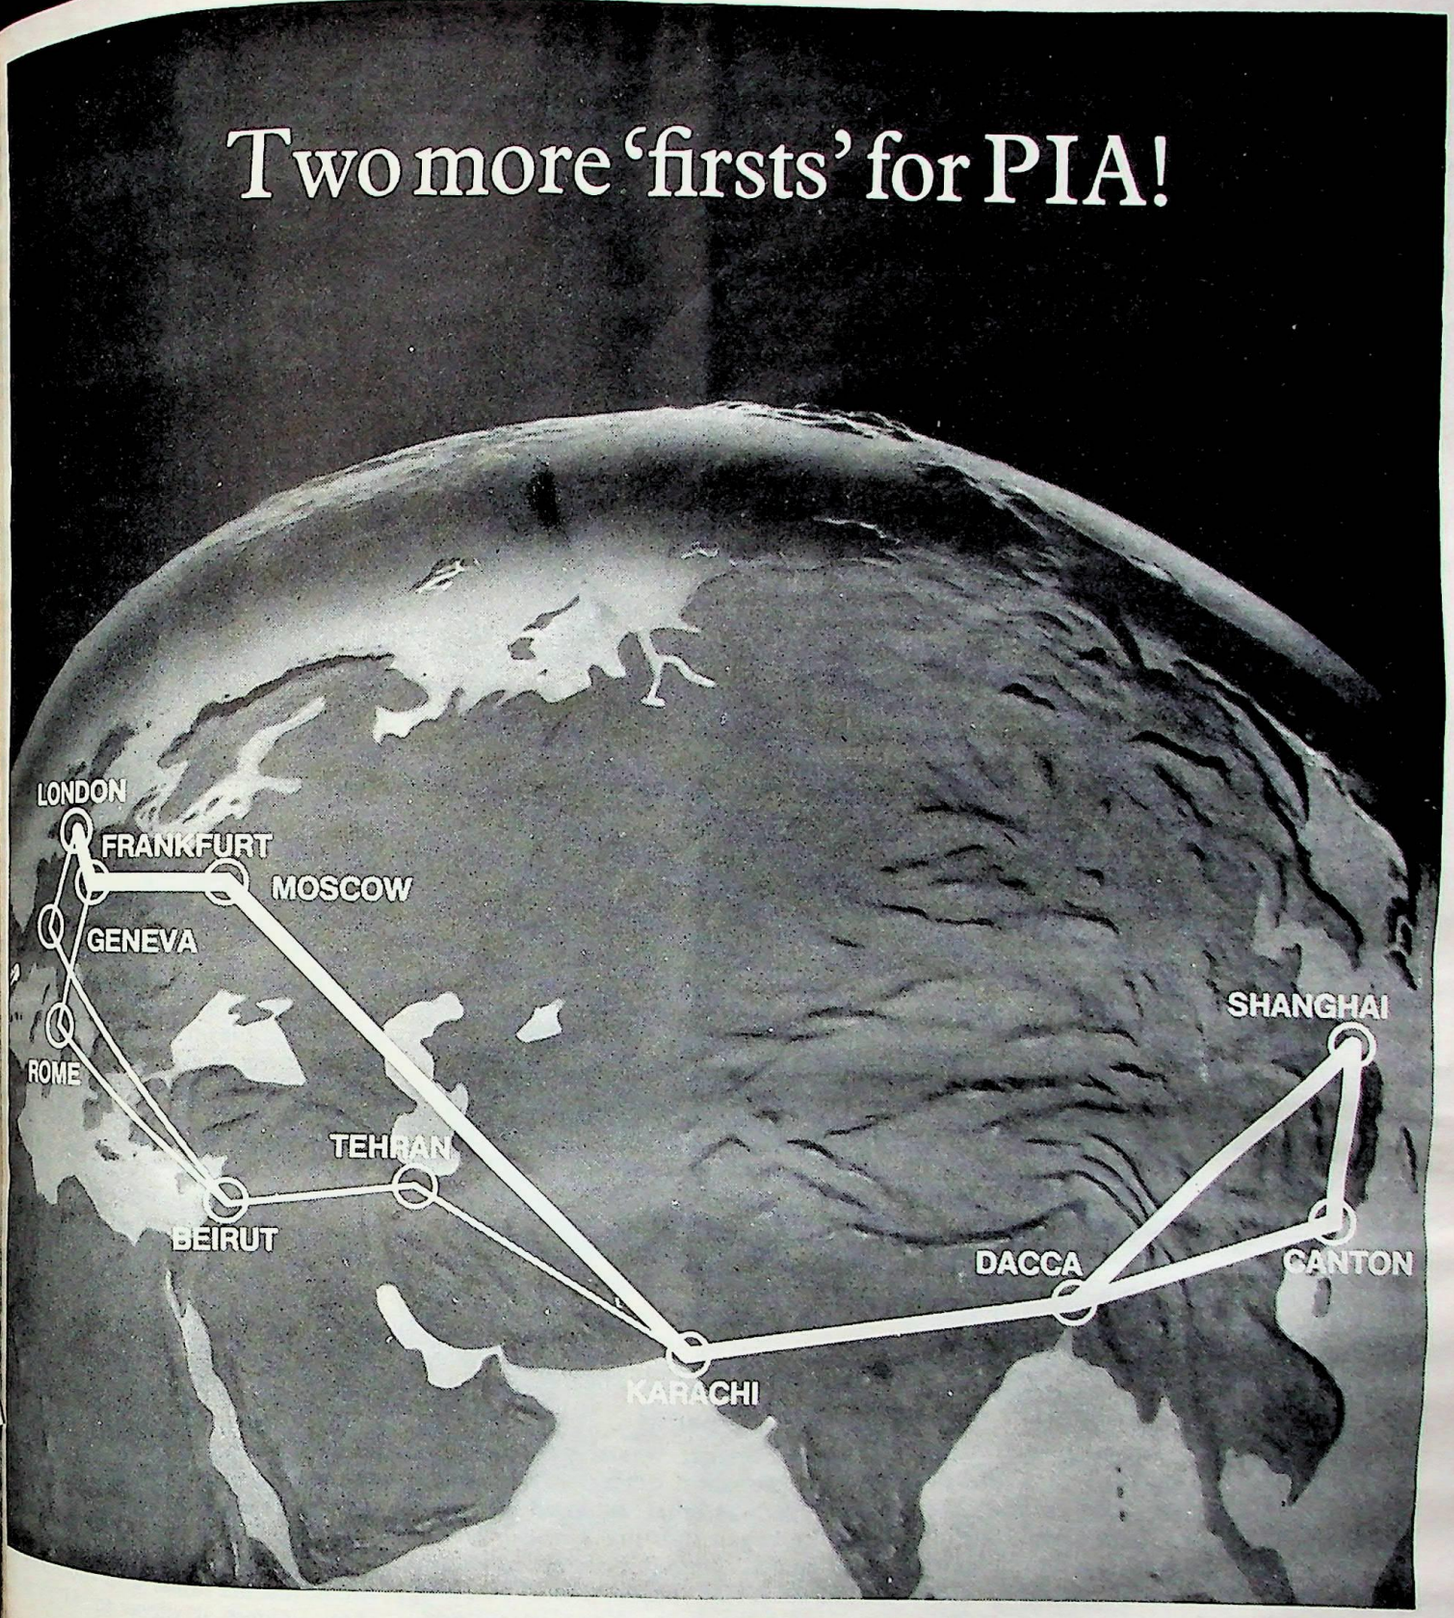
Two more 'firsts' for PIA!



FIRST THROUGH MOSCOW AND ONWARDS

FIRST INTO CHINA WITH BOEING FAN JETS

LONDON, FRANKFURT, MOSCOW, GENEVA, ROME, BEIRUT, TEHRAN, KARACHI, DACCA, CANTON, SHANGHAI

Now five flights every week by PIA Boeing 720B fan jets between London and Karachi! The fifth flight—a completely new service through Moscow, and an airline-industry 'first' for PIA! For PIA is the only international airline to fly to Moscow and onwards. And now, too, another 'first' for PIA! PIA introduce the first jet service to Canton and Shanghai—thus pioneering a direct air-link between Europe and China! Add this to PIA's 88% punctuality average last year and you can understand why travellers say PIA are great people to fly with.

Great people to fly *with*

PAKISTAN INTERNATIONAL AIRLINES

In the classic Holmes manner, Justice Brennan relies on Harvard Law Professor Paul Freund (who clerked for Justice Brandeis) to send him the best he has. Justice Douglas relies on a West Coast lawyer named Stanley Sparrowe. The others do more scouting and interviewing on their own. Justice Stewart is high on Yalemen, Justice White favors Westerners, Chief Justice Warren looks for Californians. Justice Black likes fellow Alabamians; Justice Clark tries to tap lesser-known law schools. Aspirants know all these quirks. "My best chance was either slipping in as one of Stewart's Yalies," said one of this year's hopefuls, "or under Warren's California quota."

Rich Crop. By last week, all of next year's clerks were known—18 of them, since Justice Douglas uses only one, plus a 19th for retired Justices Reed and Burton. Harvard's six clerks made up the lion's share—followed by Yale and Pennsylvania with three, Virginia and Stanford with two, Texas, Columbia and North Carolina with one. Seldom had the court had a richer crop. Samples:

▶ Harvard's Paul Dodyk, 26 (picked by Justice Stewart), is the son of a Ukrainian immigrant and Detroit auto worker, went to Amherst on a General Motors scholarship, made Phi Beta Kappa and went on to Oxford as a Rhodes scholar. At Harvard Law School, he ranked seventh in his class, was a law-review editor, and while still a student himself taught U.S. tax law to foreign students.

▶ Yale's John H. Ely, 25 (Chief Justice Warren), is a *summa* Princeton graduate with the further distinction of having collaborated on a landmark Supreme Court case (*Gideon* v. *Wainwright*) before he got out of law school. Ely researched Plaintiff Clarence Gideon's appeal while working for the Washington law firm that handled the case. Second in his class at Yale (*magna* '63), he has since been working for the Warren Commission investigating the Kennedy assassination.

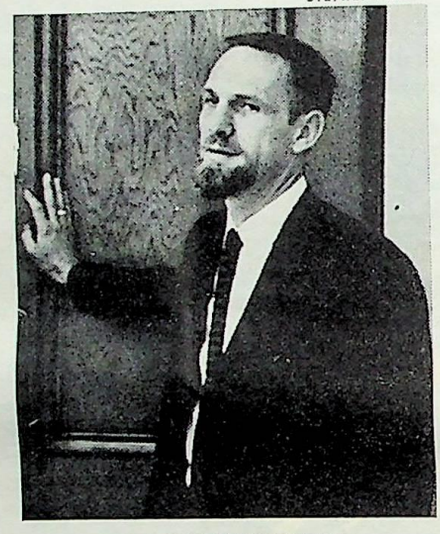
▶ Penn's Stephen Goldstein, 26 (Justice Goldberg), is the son of a Philadelphia postal clerk, won a mayor's scholarship to college and earned a Phi Bete key. First in his class at the law school ('62), Goldstein matched the school's highest average in 30 years but failed to get a Supreme Court clerkship on graduation. Grabbed by a prestigious Philadelphia law firm, he later got a second chance to clerk and accepted because "I couldn't afford not to."

▶ Columbia's Dale S. Collinson, 25 (Justice White), the son of an Oklahoma lawyer, is a *summa* Yale B.A. First in his class at Columbia Law School last year, he was turned down for a Supreme Court clerkship. While he waited for his next chance, Collinson clerked for U.S. Circuit Court of Appeals Judge Paul Hays in New York.

Such is the prestige of Supreme Court clerks that some ultracautious Congressmen have accused them of Svengalian powers and have urged "security" checks on clerks to keep them from infecting the Justices with sinister notions. Contrary to legend, however, the "junior court" does not come close to running the Supreme Court. Clerks have been known to help draft an opinion, and they serve the function of conveying what their old professors think (often not much) of their new bosses' thinking. But mostly they toil away at screening *certiorari* petitions (appeals for review), writing memos that sum up the issues, and doing the research that goes into well-honed opinions.

Some clerks have extralegal duties as well. The late Justice Stone had his clerks accompany him on walks, and Justice Black until recently was suspected of picking clerks for their tennis skill. But real influence? On a Supreme Court Justice? Snaps Mr. Justice Brennan: "Judging is not delegated." Adds one ex-Warren clerk: "The Justices can't even change one another's opinion, and if they can't do that, no law clerk is going to change their minds."

STEPHEN FRISCH



APPELLANT FORSTNER
Saved by hairsplitting.

DECISIONS

No Guilt-by-Beard

James Forstner was a well-regarded juvenile probation officer in San Francisco. He was, that is, until last fall when he began sporting a beard. Shave it off, he was ordered. Forstner's charges would get a bad "impression of beatnikism," said the boss. When he refused, Forstner was fired. When the civil service commission rejected his appeal, he went to state superior court. "Maybe every beatnik wears a beard," argued his hairsplitting lawyer, "but not every person who wears a beard is a beatnik."

"Arbitrary, capricious and violative of due process," ruled smooth-shaven Judge Joseph Karesh. "There is no end to what can be done if a superior is allowed to make this kind of decision. The next step is a thick mustache, then the thin mustache and then probably the crew cut. Where does it end?" Answering his own question, the judge wasted no time ordering the city of San Francisco to reinstate Probation Officer Forstner.

STATE OF BUSINESS

hat Ever Happened the Business Cycle?

Now that the economy is entering the th month of expansion, many people e wondering whether U.S. business as repealed its own law of gravity. ne of the hard facts of economic life as been that what goes up eventually mes down, sometimes with a thud. the classic business "cycle" of ups d downs (*see chart*), even the post-orld War II boom has been inter-pted by four disturbing recessions, ough they have been growing briefer d shallower. But the current recovery s shown unprecedented staying pow-, having survived the steel price show-own, a stock market slump, the Cuban issile crisis and the Kennedy assassina-n. Already it ranks as the best peace-e expansion in history—and there is end in sight.

The important indicators keep point-up. In 1964's first quarter, corpo-e profits after taxes spurted 22% ve the year-ago level, to an annual of $31 billion. New construction tracts in April ran 9% ahead of last ; orders for machine tools in April e 35% higher than in March. Con-er demand is rising, and money was er so plentiful—$418.7 billion in dis-able personal income this year *v.* 7 billion a decade ago. Auto sales id-May set an alltime record, run-g 8% over last year's rate. Steel-ers are revising their estimates up-d, now expect this year's produc-to equal 1955's record 117 million . At the American Iron and Steel ute convention in New York last , Inland Steel Chairman Joseph L. k foresaw at least twelve more rths of "increasing business tempo."

In Rare Tandem. Some business leaders believe that the U.S. may be able to moderate the cycle well enough to avoid sharp recessions altogether. That would take intelligent Government policy, economic sophistication, and some luck—all of which the U.S. economy has enjoyed in recent months. Both Government and business, working in rare tandem, have shown an increasing ability to keep the economy rising. Several economists call the current recovery "the managed expansion."

In the Government's campaign against the cycle, the Federal Reserve Board has sacrificed some of its independence, now meshes its policies more closely with the Administration. It has kept credit easy (average interest rate on business loans: 5%). The Administration has steadily increased federal spending, which now comes close to 20% of the gross national product. Washington has generally aimed to spend for the trend, stepping up the increases when private investment falters, and slowing them when business spending jumps—as it is doing now. The Government has given business more expansion capital by liberalizing depreciation allowances, putting through tax credits for industrial expansion, and passing the $11.5 billion tax cut. Says M.I.T. Economist Paul Samuelson: "The business cycle is doomed, thanks chiefly to the Government."

Well, let's not underestimate the businessmen's part. Thanks to electronic computers, businessmen can now spot trends much faster, keep inventories spare and flexible, and plan capital spending more shrewdly. Industry continues to expand at a sturdy pace, this year will spend an alltime-high $43 billion to grow, modernize and automate.

Business leaders have been helped by new sophistication on the part of some labor leaders, who are coming to realize that extravagant wage demands bring on the kind of inflation that eats into paychecks, and that higher costs can hurt U.S. products on world markets. During the current expansion, wages have gone up only 3% yearly while productivity has increased 4% with the result that the labor cost per unit of output has actually fallen and wholesale prices have remained steady.

Toward Mastery. Many economists are far from convinced that the cycle has been fully mastered. Arthur Burns, who was the Eisenhower Administration's first chairman of the Council of Economic Advisers, is worried that the economy could be "overstimulated" by easy money on top of the tax cut, proposes that the Federal Reserve clamp a lid on credit. "The danger is that the economy may move ahead too rapidly for the expansion to be sustained," he says. Other economists watch for signs of an unrealistic buildup of business productive capacity or private debt—but as yet no signals have appeared. In fact, consumers have been using much of their new tax savings to reduce personal debts. One possible pitfall lies in the auto industry's labor-contract talks this July. A long strike or an inflationary wage settlement—which now seem unlikely—could throw all forecasts out of kilter.

For political as well as economic reasons, President Johnson will do all he can to keep the economy growing at least until the election, and probably beyond. "We are prepared to take whatever measures may be necessary to avoid any declines," the President said recently. "I wouldn't say for a moment, though, that recessions are not possible." But they are a lot more manageable.

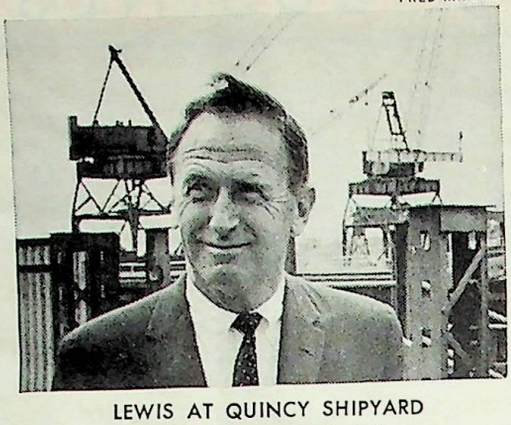
U.S. AIR FORCE

TFX WINGS IN DIFFERENT SETTINGS

FRED KAPLAN



LEWIS AT QUINCY SHIPYARD

Two and two makes five.

AP

NUCLEAR SUB MIDSECTION

CORPORATIONS

The Rescue

In February 1962, Roger Lewis took over as president of General Dynamics, a sorely troubled company. Within a month, he flew from headquarters in Manhattan to the company's unprofitable and stubbornly independent Convair subsidiary in San Diego, where he boarded up the executive dining room, sold off the fleet of a dozen company limousines, and transferred the executive barber. Says Lewis, now 52: "That convinced them we meant business."

Under this we-mean-business management, the nation's fourth largest defense contractor (after Lockheed, Boeing and North American) is behaving like a lithe and freshly revitalized giant. In Miami last week, General Dynamics showed off the first scale model of its TFX adjustable-wing plane, for which orders may reach as high as $8 billion in the next five years, and in Washington the company was awarded a $237 million contract to build the Centaur mooncraft. In Quincy, Mass., it laid the keel for the first vessel—an attack submarine—that it will build in the shipyard it bought last January from Bethlehem Steel. In Groton, Conn., General Dynamics launched its first civilian submarine, a research sub for the University of Pennsylvania. It also broke ground for a lime-processing plant in Detroit and delivered a 160-passenger CL-44 turboprop plane to Icelandic Airlines. Altogether, General Dynamics has rebounded from a 1961 loss of $143 million—the largest deficit ever suffered by any U.S. corporation—to a 1963 profit of $50 million on sales of $1.4 billion.

"That's All Gone." Most, but not quite all, of the credit for this remarkable comeback belongs to Lewis. He benefited from the courage of his predecessor, Frank Pace, who wrote off all General Dynamics' losses in the year they occurred instead of stretching them out. That meant the company was unburdened of past losses and that Lewis began with a $143 million tax credit. But the tax credit has long since been exhausted, and the new chief has shown a big order of courage and savvy of his own. Lewis cut back the Convair division, shifted some of its projects and executives to other divisions in the company and fired more than a few. With his aides, he analyzed each one of the company's 100 major programs, from missiles (Mauler, Redeye, Terrier, Tartar) and planes (B-58, CL-44) to nuclear reactors and metal forming devices. He speedily closed down production of Convair's money-draining civilian jetliners, but put stronger emphasis on the TFX.

Most of all, Lewis restored central management to a company whose dozen divisions once traveled in separate directions. Says he with a smile: "We used to have a so-called management board—but, oh boy, that's all gone." Lewis, who likes to chop wood on weekends to release some steam, hacked way heavily at the loose hierarchy and put his mark on almost every important activity. Though many business theorists contend that a top executive should have no more than eight men reporting directly to him, Lewis deals face to face with 24. He writes no memos, and his company has no operational manuals or organizational charts. "Corporate policy," says he, "is formulated in conversation with the doers."

Sacrificing $1,425,000. In Lewis' book there are three kinds of executives —brilliant, mediocre and those in between. The job of the chief executive, he believes, is to inspire the in-betweens to rise to brilliance. At General Dynamics, he does it by grinding out a 75-hour week that inspires other executives to work almost as hard, and by running the company with a shirtsleeved informality. He has lured high executives away from such companies as General Motors and General Foods. Believing that "cross-fertilization" increases efficiency, he has also transferred 850 scientists and engineers to different divisions. Says Lewis: "If you shift a man from submarines to aircraft, pretty soon you'll find that two and two makes five—in productivity."

A Stanford economics graduate (B.A., '34), Lewis started as a metal cutter at Lockheed, rose during the war to boss of sales but quit in 1947 to join Canadair, a General Dynamics subsidiary. He was an Assistant Secretary of the Air Force when Pan American World Airways President Trippe hired him in 1955 as an executive vice president. When he left Am to join General Dynamics, he only gave up an odds-on chance succeed Trippe some day but made tremendous financial sacrifice: he feited stock options that by now have brought him a paper profit $1,425,000. Last year, at General namics, he earned a highly taxed 750 and picked up no options.

Lewis obviously delights in h "General Dynamics' history goes 65 years," he says. "Thirty years now, I hope someone will say, 'Lewis didn't goof this thing. He this thing going.'" More than Lewis has succeeded in the most arating job an executive can have cuing a mighty company.

MERCHANDISING

Diamonds Are A Dealer's Best Friend

They stored diamonds in mi in South Africa during the De —who could afford them? B more than 40 million American en wear diamonds, and last year icans bought about $400 million of the precious stones. Last w their biennial convention in M tan, members of the World Fed of Diamond Exchanges predicte U.S. diamond sales would rise another 10% this year, and looked forward to continued s Says Amsterdam's Louis Asscher mer chairman of the Interna Diamond Manufacturers Assoc "There won't be any queuing up fany's or Cartier's, but good d will be harder to find than ever.

Gems by Mail. Demand for has overrun the supply in the years, largely because producers want to exhaust their uncertain at the mines, and dealers like t the prices in the way-up-there b Last week South Africa's De Beers

ses are for engagement rings, the st popular type being stones of about -half carat that retail for about 50. Styles are shifting: the pear shape emerald cut are fading in populari-but sales of the marquise and bril-t cut are sparkling. New York is richest market (20% to 25% of all S. sales), followed by Chicago, Texas Southern California. Surprisingly, ny Americans order their diamonds ough the mail. Says a partner in one anhattan firm that caters to custom-who buy large and expensive stones: ears sells more diamonds than Tiffa-, but Harry Winston probably sells most of all."

Buyers outside the U.S., exerting their n affluence, are also plunging into e diamond market. Sales are expand-g twice as fast in Europe as in the S. and jewelers boast that they are ccessfully "educating" young Europe-

Modeled at last week's meeting of diamond ers and cutters in Manhattan.

ans in the American custom of buying diamond engagement rings instead of simple gold bands or no rings at all. At the same time, Japan has eased its barriers against luxury imports, last year spent $11.5 million for diamonds.

Stones Under the Sea. Producers have lately begun to increase their output, but only slightly. Black Africa is making its first major effort to expand its mining and marketing; mines in Sierra Leone and Liberia have increased production. For the first time in 56 years, De Beers has reopened its big Old De Beers mine, using modern equipment to extract stones that once were thought uneconomic to mine. It has also helped to bankroll a Texan named Sammy Collins (TIME, Nov. 9, 1962), who is digging diamonds from under the sea off the coast of southwest Africa. But no dealer fears that production will ever rise high enough to hold down prices or remove any of the glitter from a girl's—and a dealer's—best friend.

COMMUNICATIONS

Mother Bell in Orbit

The U.S. Government often uses its vast powers to restrain big companies and give the smaller fellows a lift. But last week, as the federally sponsored Communications Satellite Corp. sold its first 5,000,000 shares (at $20 apiece) to U.S. communications companies, executives of American Telephone & Telegraph Co. were pleasantly surprised by the size of their allotment: 2,895,750 shares. That will give A.T. & T. by far the largest stake—a dominant 29% ownership—in the space company, which will transmit television programs, telephone calls and telegraph messages.

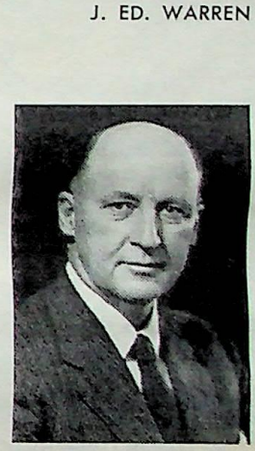
Though A.T. & T.'s $58 million holding is only two-thirds of what it bid for, the block is big enough to entitle Mother Bell to share a signal honor with the President of the U.S.: each will appoint three members to Comsat's 15-man board. International Telephone & Telegraph, which bought a 10.5% holding, will name one member, while General Telephone (3.5%) and RCA (2.5%), will join with 159 other smaller communications companies—all of which got all the shares that they asked for—to elect two members.

This week Comsat will offer another 5,000,000 shares, also at $20, to the public. Because of brisk demand, brokers will limit purchases by individual customers to 50 shares or less, and then the shares will be traded on the New York Stock Exchange. The public will elect six directors. But small shareholders seldom take the initiative to put up a slate; the public directors of Comsat Corp. will probably be nominated by the Government-appointed organizers of Comsat. It thus looks as if the commanding voices in the new space communications company will belong to President Johnson and A.T. & T. Chairman Frederick Kappel.

PERSONALITIES

WHENEVER the Government needs a troubleshooter in the oil business, it turns to J. (for John) Ed. Warren, 63. Washington called him to duty as a consultant during World War II, the Korean war and the Suez crisis, and he is now a part-time Pentagon adviser. Last week Cities Service Co. named him chief executive to replace Burl S. Watson, 70, who remains chairman. A stocky, straightforward man with a whimsical twist, Warren treats his promotion lightly ("You can't take yourself too seriously"), but concedes that he always had his sights on the top job. Warren started as a roustabout in the West, moved around the country as a geological scout and engineer, rose to become a senior vice president of New York's First National City Bank (in charge of oil matters). He joined Cities Service just six years ago, became president a year later. The ninth biggest U.S. oil company (1963 sales: $1.2 billion) has lately diversified into businesses as varied as plant foods and copper mining, and under Warren it will continue to explore new fields.

J. ED. WARREN



CHARLES BRINCKERHOFF

THE copper mines of Chile are a natural proving ground for the boss of Anaconda Co.—Charles M. Brinckerhoff, 63, who last week was promoted from president to the newly created post of vice chairman and chief executive officer. He succeeds Clyde E. Weed, 74, who stays on as chairman. A Columbia-trained mining engineer, Brinckerhoff spent 23 of his 38 years with Anaconda supervising its Chilean mines, the source of 70% of the output and 80% of the profits of the world's second largest copper producer (after Kennecott). Among his honors: the Bernardo O'Higgins Order of Merit, Chile's highest award to a foreigner. "The company will not stay static," says tall, even-tempered Brinckerhoff, who reported "encouraging" copper explorations in Arizona. Last year Anaconda's sales rose 2% to $709 million, but earnings dipped slightly, to $45 million. Brinckerhoff faces other headaches: labor contracts in the U.S. and Chile expire this month, and nationalization of foreign-owned mines is a hot issue in Chile's September elections.

TRAVEL

One Export Never Leaves Home

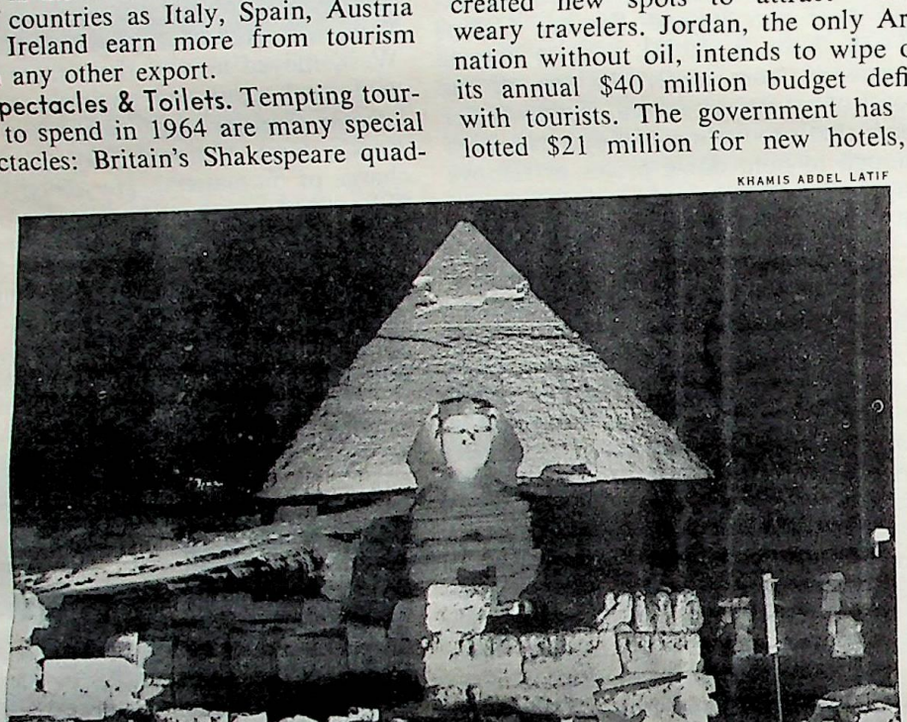
What is the most important commodity in the world's $132 billion annual volume of international trade? Oil? Steel? Cotton? No, it is an export that is sold at home: tourism. This year it will grow by almost 10%. Some 60 million international tourists will spend $9 billion, which in turn will generate $29 billion in wages, purchases and taxes in the countries they visit. Already such countries as Italy, Spain, Austria and Ireland earn more from tourism than any other export.

Spectacles & Toilets. Tempting tourists to spend in 1964 are many special spectacles: Britain's Shakespeare quadricentennial, France's 20th anniversary of D-day, Japan's summer Olympics, and the New York World's Fair. Last week Pan American and TWA reported transatlantic reservations for the summer were 50% above last year's.

Governments are investing heavily for the long term too. The Greek government has financed 60 hotels and rest houses in the last ten years, and West German castle owners who convert their properties to sight-seeing attractions can get state assistance. Ireland has budgeted $30 million for hotel development. Egypt, aware that increasing tourism will soon bring in about as much as tolls on the Suez Canal ($170 million), is spending $60 million on 40 new hotels, Nile River tourist boats and a Red Sea fishing resort at Ghardaka. The government now floodlights the Sphinx and the Pyramids of Giza, and stages a four-language "Sound and Light" panorama that relates the story of the Pharaohs. India is subsidizing airplane trips to the remote temples of Konarak. To ease Occidental sensitivities, Tokyo's municipal council recently allocated $560,000 for Western-style toilets in the city's older inns.

Along with improving tourist facilities at home, governments promote aggressively abroad. There are now no fewer than 520 state tourist-information offices in foreign places (105 in New York City). Britain, Canada and Mexico each spend $3,000,000 a year on promotions, and Australia allows tax deductions for companies sponsoring tourist advertising. The promotions have created new spots to attract world-weary travelers. Jordan, the only Arab nation without oil, intends to wipe out its annual $40 million budget deficit with tourists. The government has allotted $21 million for new hotels, is advertising both its camel races and a new seaside resort at Aqaba.

KHAMIS ABDEL LATIF



FLOOD-LIT SPHINX & PYRAMID IN EGYPT

Elsewhere safaris & sanctuaries for nudists.

Spreading Net. Until lately lures have been directed at near neighbors and Americans, whose spending is so lavish that foreign resort owners eagerly followed the progress of the U.S. tax-cut bill. But jet planes, higher incomes and the loosening of foreign-exchange restrictions have spread the net. Switzerland may soon begin tourist campaigns in Australia, Japan and Latin America. Spain, whose tourist income has risen 500% in five years to $900 million, has started an ethnic enticement toward Latin America. East Africa's safari promotions have drawn inquiries from Russia.

Russia, along with other Iron Curtain nations, has perceived the hard-money benefits of capitalistic tourism. It expects more than a million tourists this year, including 22,000 Americans. Bulgaria's Black Sea resorts are wooing German nudists, and Czechoslovakia attracts West Germans and East Germans, who hold surreptitious reunions there. Yugoslavia ("Europe in ture") spent $50 million last roads and hotels, anticipates a lion return this year. Even Red falling into step. The city of repainted for this spring's trade guest houses have been equipp air conditioning and Western but Americans are still unwelco

In this wooing of wayfarers, has been a late but eager three-year-old U.S. Travel maintains nine offices abroad $2,600,000 budget. The U.S. a million visitors this year, 60,000 Japanese. They will vantage of Japan's recently rela rency and travel restrictions t Hawaii and the U.S. mainland numbers for the first time since The visitors will spend $375 and see just about everything thing, that is, except some Americans, who by then will the country spending $3.1 bil where and tipping the U.S. b payments the wrong way.

WESTERN EUROPE

Where the Pay Is

The golden ruler by which business success is most often is income. This week Britain's ated Industrial Consultants L bring out the most thorough date on who makes how muc rope. After surveying the mid agers of 462 companies in countries, the questioners c that the best-paid managers English and the worst-rewarded Dutch, who have a surfeit of ment talent.

A chief accountant, for earns an average of $6,440 Britain but only $5,260 in The lands (and $6,160 in Belgium in West Germany, $5,400 in Britain also does best by its pl agers ($7,000), design-researc ($7,000) and domestic sales ($8,400).* The fringes are also in Britain. Almost two-thirds of managers drive company cars, private use, but less than one their German counterparts do is big on subsidized lunches; 4 middle managers eat at least the house. France leads in the subsidized housing, and the get the best Christmas bonuses two or three months' extra sa

OLIVETTI'S VISENTINI
Slowed by Underwood.

industrialists and bankers who stepped in to refinance the company, last week picked the first man outside the Olivetti family ever to head it. He is Bruno Visentini, 54, the vice president of Italy's huge, state-owned industrial holding company, I.R.I. (TIME, March 27). Visentini's main task is to strengthen the position of Olivetti's U.S. subsidiary, Underwood Corp., which has not kept up with its U.S. competitors. In addition, Olivetti (1963 sales: $360 million) is troubled by import restrictions in its sizable Latin American market. Visentini, a lawyer well-connected with Italy's center-left government, will also try to fight off recurrent threats of nationalization.

At Machines Bull, a group of financiers who had been called upon to save the French giant from losses and the prospect of nationalization selected Banker Roger Schulz, 44, to be boss. A director of the Banque de Paris et des Pays-Bas, rugged and athletic Schulz has specialized in reviving comatose companies. Bull, the Continent's largest computer maker (1962 sales: $69 million) was gored by IBM and others when it tried to expand its line of small computers by building bigger models. The previous president, Joseph Callies, left under pressure after the French government vetoed his plan to get cash from General Electric and make it a major partner. Though the government opposes U.S. "takeovers" of French companies, it has been unable so far to induce other French electronic equipment makers to bail out Bull. Last week the bankers and politicians were negotiating a complex deal to split Bull into subsidiaries, let General Electric buy a share of some of them. President Schulz flew to Manhattan to talk with the top men in G.E.

BROADWAY

Sisters Under Their Skins

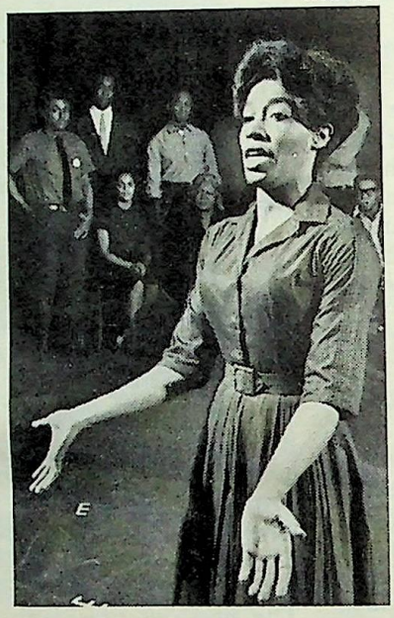
James Baldwin's *Blues for Mister Charlie* is a hard play for a white man to take. Brutally and sometimes eloquently, it tells every white man how much every Negro hates him, and enough of them have stayed away from the ANTA Theater to put *Mister Charlie* in imminent danger of folding.

But two young matrons who saw the play last week were so moved that they rushed backstage after the final curtain and donated $5,000 apiece on the spot to keep *Charlie* going. One was Mrs. William J. Strawbridge Jr., 25; the other was her older sister, who is married to the Rev. Robert L. Pierson, a dedicated civil-rights advocate who was arrested in 1961 for participating in a bus station pray-in in Jackson, Miss. Both are daughters of New York's Governor Nelson Rockefeller, and their generous and spontaneous gesture won't do Candidate Rockefeller any harm with the Negro vote.

PERCY RODRIQUEZ

ROCKEFELLER GIRLS, HUSBANDS & BALDWIN AT "MISTER CHARLIE"

GJON MILI



ACTRESS SANDS

The message was rage; the response was $10,000.

What probably most moved the sisters was a raging soliloquy by a young actress named Diana Sands. Her lover has been murdered by a white man. Standing alone in a spotlight with the stage dark behind her, her pretty face turns visibly gaunt with agony as she hurls her love-born hate at God's "icy snow-white heaven! If He is somewhere around this fearful planet, if I ever see Him, I will spit in his face! In God's face! How *dare* He presume to judge a living soul . . . Oh, let me be pregnant, let me be pregnant, don't let it all be gone!"

Diana Sands is a very promising young actress, and she has had the luck to emerge at a time when, at long last, Negroes can be actors or actresses, not just entertainers or character actors playing bit parts as Uncle Toms or Mammies. In the recent past, the great Negro names in lights are identified with song and dance—Harry Belafonte, Sammy Davis Jr., Ethel Waters, Lena Horne—and the dramatic roles open to Negroes have generally been stereotypes or slim pickings. But suddenly there is a new range of Negro roles and a new generation of Negro actors to fill them—Sidney Poitier, James Earl Jones, Ruby Dee, Ossie Davis, and now Diana Sands.

A handsome girl with high cheek bones, liquid eyes, and a voice like the woodwind section of an orchestra, Diana was blessed with good parents. Both her carpenter father and her milliner mother encouraged Diana in her ambition to become an actress, enrolling her in Manhattan's High School of Performing Arts. She sharpened her skill on an enviable series of supporting parts, won awards for her performance in *Raisin in the Sun* as a zany coed running a high fever in her frontal lobes and raves from the critics for her performance as a whore in last season's *Tiger Tiger Burning Bright*. She labored in television's well-trampled vineyard, in roles ranging from one on *Outer Limits* ("I played a beige monster") to a brilliant characterization of a bereaved mother on *East Side, West Side*. Next fall she will have her first Broadway lead, in a new play called *Wedding Band* by Negro Playwright Alice Childress—about an interracial love affair.

Diana is so serious about her work that she was even pleased when a voice in the audience booed her recently during a curtain call. "That's somebody I've reached," she said. Smiling at herself, she added: "I'm not saying that booing is my favorite sound. I also like it when they applaud."

They do plenty of that.

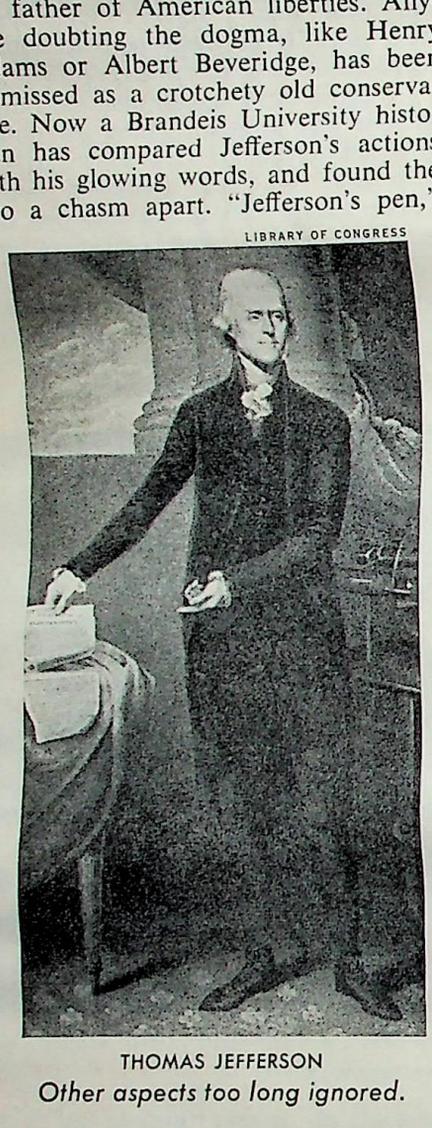
Better Pen Than Practice

JEFFERSON & CIVIL LIBERTIES by Leonard W. Levy. 225 pages. Belknap. $4.50.

If there is any truth held to be self-evident, it is that Thomas Jefferson was the father of American liberties. Anyone doubting the dogma, like Henry Adams or Albert Beveridge, has been dismissed as a crotchety old conservative. Now a Brandeis University historian has compared Jefferson's actions with his glowing words, and found the two a chasm apart. "Jefferson's pen,"

LIBRARY OF CONGRESS



THOMAS JEFFERSON
Other aspects too long ignored.

writes Leonard Levy, "was mightier than his practice."

Jefferson's principles as enunciated in the Declaration of Independence were exemplary but he had trouble applying them to specific situations. He was not a genuine thinker like James Madison or John Adams, who hammered out a consistent theory of liberty. He cheerfully assumed he knew the truth and, much like the fanatics of the French Revolution, always thought he was expressing the will of the people.

Throttling the Press. As a leading member of the lower house of the Virginia legislature during the Revolutionary War, Jefferson supported a loyalty oath requiring all males over 16 to swear allegiance to the state. Those refusing were forced to pay triple taxes and stripped of their civil rights. He also helped pass a bill to round up Tories and ship them to designated areas in the interior. He drafted a bill of attainder—which in effect condemns the victim without a trial—against a group of Tories who were plundering the countryside.

Levy cites evidence to argue that Jefferson was just as careless of civil liberties as a peacetime President. Angered by vicious journalistic attacks on him, he advocated "wholesome prosecutions to restore the integrity of the presses." With Jefferson's tacit approval, a federal judge whom he had appointed secured indictments against a group of publishers and clergymen for libeling the Government. Charges were dropped only after it became clear that one of the ministers had facts and figures to back up a gamy story that the President had once attempted to seduce a friend's wife.

When the erratic Aaron Burr started recruiting men in Louisiana for some mysterious purpose, most likely an invasion of Mexico, Jefferson panicked. He feared that Burr meant to seize New Orleans and detach the Western U.S. Though Burr had been cleared by a federal grand jury, Jefferson pronounced him guilty of treason and had him arrested. When Chief Justice John Marshall refused to hold Burr on a treason charge for lack of evidence, Jefferson demanded a constitutional amendment making federal judges removable by the President.

War Against Americans. During the Napoleonic Wars, when both Britain and France were stopping U.S. ships and seizing their cargo, Jefferson clamped an embargo on all foreign trade. His aim was to keep the U.S. from being dragged into war, but he succeeded only in paralyzing the U.S. economy.

When merchants tried to circumvent the embargo, Jefferson had Congress pass what Levy calls the "most repressive and unconstitutional legislation ever enacted in peacetime." The army was empowered to invade homes to seize any goods suspected of leaving the country. The Fourth Amendment (forbidding arbitrary search) was repeatedly violated; rules of evidence were suspended when merchants were brought to trial. Though Jefferson had always opposed a large standing army as inimical to liberty, he asked to increase the army by 50,000 men in a frenzied effort to enforce the law. Under tremendous pressure from constituents, Congress balked, and soon the embargo was lifted. "To avoid foreign war," writes Levy, "Jefferson made domestic war."

Jefferson was a politician of considerable vision and audacity. He created the first national political party in the U.S.; he made a strong President; he purchased the Louisiana Territory. As head of a new, struggling nation, he had to cope with real dangers, even if he exaggerated them. Levy's polemic deals with only one aspect of Jefferson, as Levy readily admits, but an aspect that has been too long ignored. Historians serve neither Jefferson nor the truth by making him the embodiment of all wisdom and benevolence.

heds—the Civil War being the first. It was after the Civil War that industrial money—"brazen new money," as Edith Newbold Jones Wharton called it—began to change the face of New York. Wharton was the first American novelist to use the breakup of preindustrial American society as the stuff of fiction—Sinclair Lewis, in recognition of the fact, dedicated *Babbitt* to her—but she was in some ways the last to understand it. Her best pre-World War I novels (*The House of Mirth, The Custom of the Country*) were groping toward an understanding, and her failure to achieve such an understanding was finally the measure of her failure to become a truly first-rate novelist.

The difficulty becomes fascinatingly clear in her restrained, carefully cultivated autobiography, first published in 1934 and now reissued. Her backward glance is to "an old tradition of European culture which the country has now totally rejected" and which she herself partially rejected. But she could not reject it entirely, and so she suffered the disadvantage of being a perpetual outsider, resentful of an older social order but fearful of what replaced it.

Daughter of an old Manhattan family, Edith Jones grew up believing that the universe was composed of a row of brownstones in New York, a street in Newport and the continent of Europe. A child in that society was taught only two things: the modern languages and good manners. Now that I have lived to see both these branches of culture dispensed with, I perceive that there are worse systems of education."

The social fabric fascinated her even as a little girl. At eleven, she started her first novel, beginning: " 'Oh, how do you do, Mrs. Brown?' said Mrs. Tompkins. 'If only I had known you were going to call I should have tidied up the drawing-room.' " (On which her mother commented: "Drawing-rooms are always tidy.") Soon she was dispatching poems to *Scribner's* Magazine with her calling card attached, and when she began to be published she learned her first hard truth about old New York society: it had no use for brainy women. "My literary success," she wrote, "puzzled and embarrassed my old friends far more than it impressed them. None of my relations ever spoke to me of my books, either to praise or blame—they simply ignored them." Her marriage, at 23, to Boston banker Edward Wharton, did not improve matters: "I was a failure in Boston because they thought I was too fashionable to be intelligent, and a failure in New York because they were afraid I was too intelligent to be fashionable."

Best Remembered. She was not a success in Europe. Starting in the 1880s, she spent nearly all her time abroad, ostensibly for her husband's health (he was a neurasthenic). Her idol was Henry James, and of the famous people she met, he is the one she remembered best and the one with whom, as James put it,

she was "more and more never apart." Intentionally or not, she makes him out to be a buffoon. He was so convinced of his own poverty, she recalls, that when guests visited him at his home outside London, "the dreary pudding or pie of which a quarter or half had been consumed at dinner reappeared on the table the next day with its ravages unrepaired." He had a "passion for motoring," and he indulged it "to the last drop of petrol of any visitor's car." He was a hypochondriac and a fussbudget and noticeably thin-skinned where criticism of his work was concerned. But he was also the "greatest talker" she had ever met.

If the portrait of James seems incomplete, it is because Edith Wharton was a lady, and there are things a lady never tells. She makes no mention, for instance, of how unhappy her marriage was (her husband, said a friend, was "more an equerry than an equal") or how it ended after 28 years in divorce when her husband was finally declared insane and Henry James counseled her to "continue making the movements of life." And although she mentions a Washington lawyer named Walter Berry as a valued friend and literary adviser, she never hints that she was in love with him during and after her marriage or that she had requested that she be buried by him in the cemetery at Versailles (as she finally was when she died in 1937 at 75).

The end of *A Backward Glance* describes instead the last years in France, when she was already a legend, hostess to most of France's literary lights (although she never sought out Proust, whose work she admired, because she suspected him of being a "climber"). Her enormous output (42 novels) yielded her easily $75,000 a year. Yet the feeling of nonbelonging, she confesses, never really left her. Looking back, she saw herself as the last survivor of a civilization "as remote as Atlantis or the lowest layer of Schliemann's Troy."

Love Withheld

NEW NEGRO POETS: USA *edited by Langston Hughes.* 127 pages. *Indiana University Press.* $4.95.

"Every Negro poet has 'something to say,'" wrote Gwendolyn Brooks in 1950, hanging out a precarious shingle for all her Negro colleagues. "Simply because he is a Negro, he cannot escape having some important things to say." This same claim is invoked in the foreword to this collection of 37 new Negro poets, but what the book proves is happily quite the opposite: it is because they are poets, not Negroes, that they have something to say.

The poets are all young, but none of them seems to feel obliged to say something Negro, and their apparent lack of concern for the social revolution that will certainly be their generation's accomplishment may seem puzzling. But with the racial struggle now moved into the open, the poets are free to turn their thoughts to other matters, and they write with an invigorating rustle.

Some of the poems, of course, are protest pieces, and a few even come in the tired, familiar voice of the hipster:

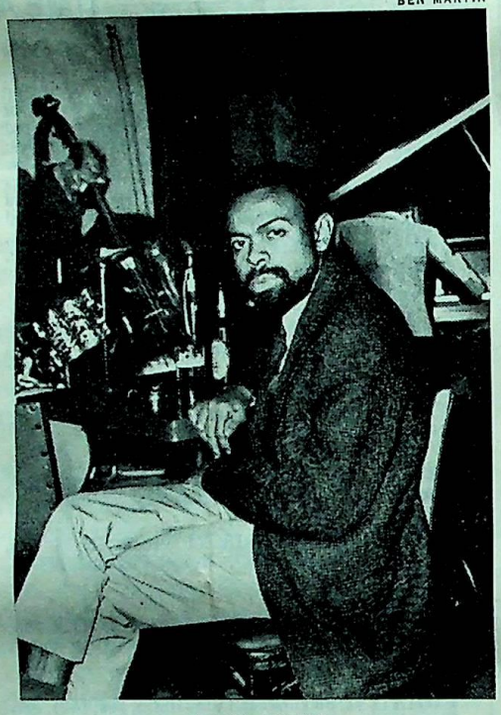
It is time for everybody to swing
(Life don't mean a thing if it don't swing)

But the most striking qualities of the poems that address the racial crisis are their personal depth and indirection: the pain their words imply could be anyone's. Some have the ring of ghetto humor:

I stand in my low east window looking down.
Am I in the wrong slum?

But by looking out another window, a

BEN MARTIN



LeROI JONES
A wish for a weird looking animal.

poet such as LeRoi Jones perceives a malaise beyond sociology:

What I know of the mind
seems to end here;
Just outside my face.
I wish some weird looking animal
would come along.

Expectedly, 37 new poets turn out to be about 30 too many, but among the best are some whose work deserves a longer hearing than the book provides—David Henderson, Audre Lorde, Conrad Kent Rivers, and the late Ray Durem. Jones, in particular, has a wit and bitter whimsy that raises the simplest words to the level of poetry:

Each morning
I go down
to Gansevoort St.
and stand on the docks.
I stare out
at the horizon
until it gets up
and comes to embrace
me. I
make believe
it is my father.
This is known
as genealogy.

The Marxist Myth of Mexico

MOVING AHEAD

without destroying the past

Japan's hope: to move at top speed toward full modernization without destroying the great qualities of old Japan. One tool for this task is superior quality, economical steel, the kind of steel that the name of Fuji stands for. Fuji Steel is proud to provide, annually, about 20 per cent of Japan's total steel output, much of which is consumed domestically. In the international market place, too, Fuji has earned the patronage of forward-thinking organizations. For shipbuilding, construction and manufacturing ... Fuji is the moving force in Japanese steel.

713 trips around the earth that improve the Mercedes-Benz engine

Mercedes-Benz trucks have logged hundreds of thousands of miles on every continent. This experience under day to day working conditions has proved invaluable. Even now it is being used to help improve the future performance and economy of Mercedes-Benz engines.

The most a Mercedes-Benz truck has been known to clock up is 1,320,475 miles. And the 41 best from all over the world have covered a total of 17,787,575 miles. That's 713 trips around the earth.

What's missing from this picture?

(Three of **39,000 different B.F.Goodrich products** on the job around the world!)

Too bad the picture isn't bigger—we'd be able to show you more of the 39,000 other B.F. Goodrich products at work around the world. But here's a sampling of what you will find in service around almost any airport: B.F.Goodrich air, fuel and water hoses. BFG radar noses. Protective clothing. Baggage conveyor belts. Aircraft brakes. Wheels. De-icers. Plus tires for both planes and ground equipment. For long, rugged service, specify products made by B.F.Goodrich —where satisfaction, quality and dependable service are built-in.

B.F.Goodrich

FIRST IN RUBBER

Don't these products belong in your picture?

"CUT PROTECTED" aviation tire has a rugged Armor Belt of shredded wire to protect against cuts and give longer life. And it can be retreaded again and again!

AIRCRAFT FUELING HOSE undergoes some of the most rigid quality control inspections of any BFG product. Meets all NFPA specifications. Available in several types and sizes.

B.F.GOODRICH TIRES are available for all types of trucks and ground equipment. Each specially engineered for long service under any conditions.

For complete information about any B.F.Goodrich product, write: International B.F.Goodrich, 500 South Main Street, Akron, Ohio, U.S.A.

TIME LISTINGS

TELEVISION

Wednesday, June 10

CBS REPORTS (CBS, 7:30-8:30 p.m.).* The current controversy over the citizen's constitutional right to "bear arms."

Thursday, June 11

THE MAKING OF THE PRESIDENT 1960 (ABC, 9:30-11 p.m.). Emmy Award winner as "program of the year," a television adaptation of Theodore H. White's Pulitzer-prizewinning study of the late President Kennedy's campaign for the presidency. Repeat.

Saturday, June 13

SATURDAY NIGHT AT THE MOVIES (NBC, 9-11:14 p.m.). John Huston's *Asphalt Jungle*, a classic tale of an attempted jewel robbery, starring Sterling Hayden, Louis Calhern and Sam Jaffe.

Sunday, June 14

DIRECTIONS '64 (ABC, 2-2:30 p.m.). The position of the nun in the modern world is examined by a panel of lay Catholics and nuns.

THE BUICK OPEN (ABC, 4:30-6 p.m.). The final 18 holes of the seventh annual Buick Open Golf Tournament.

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). The 1942 fall of Singapore, called by Winston Churchill "the worst disaster and largest capitulation in British history."

DU PONT SHOW OF THE WEEK (NBC, 10-11 p.m.). A U.S. State Department troubleshooter (Arthur Kennedy) is assigned to a dictator-ruled Latin American country. Color.

Tuesday, June 16

HIGH ADVENTURE WITH LOWELL THOMAS (CBS, 8-9 p.m.). Première of a summer series featuring rebroadcasts of Lowell-led adventures in remote areas of the world.

THEATER

On Broadway

THE SUBJECT WAS ROSES but the theme is thorns in this fine new play by Frank D. Gilroy about the barbed bloodletting that drains away the lives of people who live within the intimacy of the family without being intimate. The three actors, Jack Albertson, Martin Sheen and Irene Dailey, are so nearly perfect that they must have been cast under a favorable sign of the zodiac.

HAMLET. Richard Burton is a virile, extraverted Hamlet with no hint of the melancholy self-questioning that stays his killing of the King. However, Burton's fresh phrasing of the play's famed familiar lines lends great luster to the evening.

FUNNY GIRL. A one-woman burst of starfire named Barbra Streisand illuminates the rise, the love life and the heartbreak of another great and funny girl, Fanny Brice.

HIGH SPIRITS. Anyone who can count to two will recognize the source of all the zany good humor that has been injected into this musical version of Noel Coward's *Blithe Spirit*. The blithesome twosome—Bea Lillie and Tammy Grimes.

ANY WEDNESDAY. Sandy Dennis looks as licit as a child with an ice-cream cone, but she is the Other Woman in a hilariously illicit schedule of sex on the one-day-a-week plan.

DYLAN is a brilliant illustration of how an actor of unparalleled skill can invade the mind and personify the temperament of another man, despite a considerable difference in appearance. For a little over two hours, Dylan Thomas lives again in Alec Guinness.

HELLO, DOLLY! is a big, bouncy, brassy, sassy Broadway musical in the best sense of all those mildly intimidating words. Ditto Carol Channing.

NOBODY LOVES AN ALBATROSS. How to be a charmingly roguish phony is demonstrated by a zany TV writer-producer (Barry Nelson) who spouts triple-tongued, two-timing dialogue.

BAREFOOT IN THE PARK. Playwright Neil Simon, Director Mike Nichols and Stars Elizabeth Ashley and Robert Redford pack a hamperful of laughs for this comic picnic about two newlyweds and their ups and downs in a six-flight walk-up.

Off Broadway

DUTCHMAN, by LeRoi Jones, raises the color question to a new and distinctly terrifying pitch of violence. A sexually aggressive white girl and a sedate but inwardly seething Negro tell each other off in words that finally kill.

THE BLOOD KNOT links two South African half brothers in a twisted, tender but tormenting embrace that involves both races and the human race.

THE TROJAN WOMEN. The keening eloquence of body, mind and speech that graces this superb revival of the Euripidean classic is the unstillable cry of tragedy.

RECORDS

Chorus & Song

VERDI: FOUR SACRED PIECES (Angel). Just before he wrote *Falstaff* at 79, Verdi composed the *Ave Maria* and *Laudi alla Vergine Maria*; he finished the *Te Deum* and *Stabat Mater* at 83. Together they make a magnificent and devout peroration to the lifework of a man who was a freethinker in his youth. The *Te Deum* includes a most urgent prayer, and Verdi asked that the music be buried with him. Carlo Maria Giulini leads the Philharmonia Orchestra and Chorus (240 voices) in a stereophonic recording that matches the soaring splendor of the music.

SCHUBERT: DIE WINTERREISE (Angel; 2 LPs). Dietrich Fischer-Dieskau, the greatest living lieder singer, sings some of Schubert's greatest lieder—a 24-part cycle about a rejected lover who sets out on a winter journey of despair, tantalized by everything he sees and dreams. These were Schubert's own favorites among his songs and were written just a year before his death at 31. Hermann Prey, a younger German baritone of growing renown, has also recorded *Die Winterreise* (Vox; 2 LPs). His voice is richer, but his interpretation is less subtle: while Fischer-Dieskau suffers a hundred varieties of hurts, Prey suffuses the whole in a single sorrow.

SONGS OF NED ROREM (Columbia) sung by Regina Sarfaty, Phyllis Curtin and others. Since the death of Poulenc, Indiana-born, 40-year-old Ned Rorem is probably the world's best composer of art songs. Here he puts to music the slithering of Theodore Roethke's *Snake*, the slow flow of Paul Goodman's *The Lordly Hudson*, and Elizabeth Bishop's po about Ezra Pound in St. Elizabeth's H pital for the mentally ill, which beco a chilling Baedeker of bedlam. Rorem jettisoned tonality, but his rhythms generally as even as pulse beats, and lets voices rise and flow within their ural limits.

BACH: CANTATA NO. 51 (Decca). "M a joyful noise unto God," sings Sco Judith Raskin as she proceeds to d outshining a trumpet obbligato in a s of brilliant salvos. It is a virtuos formance of some of Bach's most di and florid arias, and Thomas Dunn's tival Orchestra of New York is almos unobtrusive.

STRAVINSKY: SYMPHONY OF PSALMS lumbia). "God must not be praised i forte music," Stravinsky once dec and he holds to deliberate tempos conducts the CBC Symphony and Festival Singers of Toronto in his posing setting for Psalms 150 and In notes on the upside-down pyrami fugues and other components of thi orate musical structure he created in he explains: "One hopes to worship with a little art if one has any."

BACH: CANTATA NO. 211 (Nonesu Wearing his worldly wig, Bach wro miniature operetta called the *Coffee ata*. A father threatens every punish to save his daughter from vice, but persists: "If I don't get my coffee t times a day, I'm like a piece of dri meat." Coffee, she sings, is "better a thousand kisses." A gay sprig of ho music, the cantata is given an airy stylish performance by the soloists, c and chamber orchestra of Radio Ber

CINEMA

THAT MAN FROM RIO. Jean-Paul mondo ducks poisoned darts, outwits scientists, and narrowly escapes a zilian crocodile in Director Philipp Broca's wonderfully wacky distillation all the adventure movies ever made.

NOTHING BUT THE BEST. In this cle stylish, often mordantly funny varia on *Room at the Top*, an aristoc wastrel (Denholm Elliott) teaches a ly British clerk (Alan Bates) how t tain Establishment status.

THE ORGANIZER. Marcello Mastroia superb as a scraggly 19th century re tionary in Director Mario (*Big De Madonna Street*) Monicelli's film beautifully photographed, warmly hu drama about a textile strike in Turin

THE NIGHT WATCH. In this taut Fr thriller, five criminals trying to rustle of a Paris prison learn that a rat scratch and claw his way to freedom everything but himself.

BECKET. Church-state conflict friends to foes in a glowing screen tacle based on Jean Anouilh's about England's 12th century Archb of Canterbury (Richard Burton) dies defying King Henry II (P O'Toole).

FROM RUSSIA WITH LOVE. This dry of Ian Fleming's fiction follows Agent 007 (Sean Connery) to Is where wine, women and wrongs are ly and impeccably Bonded.

THE WORLD OF HENRY ORIENT. A p teen-age furies pursue Concert Pian ter Sellers around Manhattan with ous results.

THE SERVANT. All candlelight and ing crystal, this smooth essay on distinction in Britain casts Dirk Bo

How to cure a bad case of remoteness

You know what will happen if we don't vaccinate the entire mob in time . . ." Ronny was breathing heavily into the telephone, through the static of the 600 miles between us which made him sound more raspy than ever. When Ronny sounds concerned, I get very worried. He knows as much about sheep as anyone in Australia. In fact, that was the biggest reason I went into partnership with him five years ago. Ronny manages our sheep station in Queensland's Outback district. I run the business office in Sydney, flying to the coastal cities in our Cessna to sell the wool for export.

Now, just as the company was showing a profit, two lambs in our mob had contracted Contagious Ecthyma—sore mouth. Thousands of our sheep, all the one-year-olds and under, would have their growth stunted if the disease spread.

"Try the veterinarian in Hungerford," I told Ronny. "He should have the vaccine on hand."

"I have. He won't be back until late afternoon and even if he starts up here then he can't make it before midnight. You know these Outback roads."

"All right." I looked at my watch—eight-ten a.m. "You isolate the one-year-olds while I get a vet here in Sydney and fly up. We'll be there in four hours."

I telephoned a vet and told him to meet me at the airport with the vaccine.

The Super Skywagon was ready when I arrived at the airport and we loaded the doctor's equipment. I started the Cessna and we taxied out and took off. At level-off I set the power at high cruise and looked at the doctor. "We'd better make good time!"

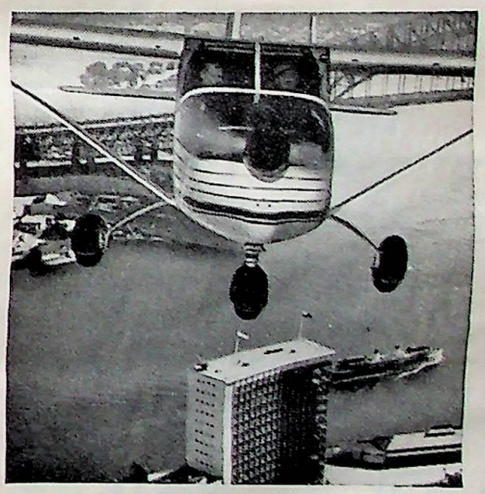
"Every minute counts," he said. Then his attention was drawn by the peaks of the Great Dividing Range as they flashed below.

We approached the Grey Mountain Range just after noon and I began a let-down. The station's landing field is short, so I used the Cessna's big Para-Lift flaps and greased her in from a steep descent.

Ronny was pacing up and down beside the pickup truck when we taxied in. We transferred the equipment to the truck, drove to the sheds and began to work.

By five o'clock the lambs were all vaccinated. The two that were already infected looked pretty bad, but none of the others had the swollen mouths that indicate the disease.

Finally Ronny relaxed. "Looks like we caught it in time. We're back in business!"



IF TIME IS IMPORTANT IN YOUR BUSINESS: See your Cessna dealer and find the easiest way for you to fly your own Cessna. He'll study your travel costs and needs, and recommend that you join an aero club; lease, rent, or charter a plane, buy a used Cessna, or buy a new Cessna. (He may suggest the new 6-place 177 m.p.h. Super Skywagon shown here.) But in any case, go out for a demonstration flight. Or if you prefer, for more information write Cessna Aircraft Co., Dept. TA 4-6, Wichita, Kansas, U.S.A.

LETTERS

Ballot Boxers

Sir: I have heard Goldwater's victory blamed on everything from middle-class selfishness to hostility toward Rockefeller's baby. Let's admit that a lot of voting citizens believe in a conservative philosophy for the good of the country.

CAROL KASPER

San Francisco

Sir: By carrying well over 1,000,000 votes in America's most populous state, Goldwater has surely demonstrated his tremendous vote-getting abilities even to the satisfaction of those who would love to nominate again the 1964 counterparts of Tom Dewey and Wendell Willkie. Honest Republicans could not support or work for any other nominee should Senator Goldwater be cheated of the nomination by a small element in the party.

MARTIN J. SWANSON

New York City

Sir: As a registered Republican, I may find myself without a candidate to promote in July, and I may find myself without a country in December. Considering Goldwater's ideas on the possible use of atomic bombs in North Viet Nam, his rejection by the British press, and the alarm of the Soviets at his views, to say nothing of the domestic chaos advocated, I'll be voting for a Democrat like my life depended on it—and it may.

ALAN E. BAYER

Tallahassee, Fla.

Sir: Senator Goldwater's supporters claim that their candidate is the only one who can give the voters a real choice in November. I suggest that a choice between the President of the U.S. and an irresponsible extremist is no choice at all. The only way the voters can have a real choice is if a moderate Republican is nominated at San Francisco.

JACK B. HARMELL

San Francisco

Sir: Goldwater's victory in California is hardly surprising in a state made up of misfits, political madmen, and a spirit of political rightism that has been described by some as a fear hysteria unequaled since the darkest days of McCarthyism. If the American people are herded into electing Goldwater, they will get exactly what they deserve.

WILLIAM LUNCH

San Diego

Sir: It takes a good man to be so strongly opposed by Governor Rockefeller and the big-money interests, Khrushchev and the Communists, U Thant and the internationalists, Senator Javits and the "liberal" Senator Kuchel and the anti-right-wingers. Votes are being generated for Goldwater by those united in opposition to them.

J. KESNER KAHN

San Diego

Mr. Moses' Fair

Sir: We could not see everything at the World's Fair, and we aren't rich. Your report [June 5] gives us some valid alternatives—both in time and money.

GLENN E. JACKSON

Daytona Beach, Fla.

Sir: I'm madly in love with the fair—and you captured every bit of every reason in that confidential guide. It was, at the very least, as gay as one full day spent within that square mile of magic!

(MRS.) RUTH G. KLUGE

Ardsley, N.Y.

Sir: The fair is not a "World's Fair"; it is the "American Fair for the World." It is nothing but a beautiful example of how commercialized and ignorant Americans can be.

SUE SLOGER

Chicago

Sir: Mr. Boris Chaliapin's Fair cover reminds me very much of the movie version of that terrifying but benevolent character, "The Wizard of Oz."

LEONARD E. KORCZYKOWSKI

Buffalo

Death of Nehru

Sir: In spite of vehement criticism from Nehru's close associates, his recent attempts to find a solution to the 17-year-old Kashmir dispute deserve praise from one and all. As peace-loving human beings, we sincerely hope that Mr. Nehru's successor makes an honest endeavor to continue his efforts to bring permanent peace between Pakistan and India.

(MRS.) ZEBUNNESSA RAHMAN

Dacca, Pakistan

Sir: Mr. Nehru's death is undoubtedly a setback to peace. With his policy of nonalignment, Mr. Nehru showed to the world that the friend of the U.S. need not be the enemy of the U.S.S.R., and vice versa. The world may have to wait for a long time before another Nehru or the like of him appears on the world scene.

K. KUMARASWAMI

Kilpauk, Madras, India

Sir: It is sad that even now people in the U.S. consider Nehru's action in Goa as a diversion from his policy of peace and nonviolence. They do not understand that, after patient urging for 14 years, this "prince of peace" had to use force to cleanse the "Indian temple" that had been defiled by colonialists for centuries.

VIJAI LALL

Christian Theological Seminary
Indianapolis

Building a Library

Sir: Under the heading "business donors," you stated that IBM contributed $350,000 and that Continental Air Lines contributed $100,000 to the John F. Kennedy library fund [May 29].

Neither of these companies has yet contributed. We hope that they, along with many other corporations in America, will eventually want to support this project.

EUGENE BLACK
Chairman

John F. Kennedy Library, Inc.
New York City

▶ TIME's *source was the "Gifts or Pledges" list kept by the Joseph P. Kennedy Jr. Foundation in Manhattan.*—ED.

Sir: This corporation has made no contribution to the Kennedy library.

T. J. WATSON JR.
Chairman of the Board

IBM Corp.
New York City

Sir: To classify the Kennedy Memorial Library project as philanthropy is questionable. Countries such as Puerto Rico, Venezuela and Liberia could use their contributions toward alleviating internal problems. To be sure, a library in Boston would be a meaningful endeavor, but perhaps an agriculture or housing project in the above countries would be more of a living memorial to our late President.

JOHN R. WAGGONER
ROBERT M. HONTZ JR.

Elizabethtown College
Elizabethtown, Pa.

Clarified Prayer

Sir: Many Catholics regret the coming use of the vernacular [May 29]. The Latin prayers sung by priest and choir to music written by masters are too precious to be separated from the ritual itself.

AUDREY WRIGHT

Omaha

Sir: Although many of us are fond of the stately language of our Book of Common Prayer, a large body of opinion exists within the Episcopal Church that would favor changes in that language so as to make it more understandable to the 20th century Christian. The type of language chosen by our Roman Catholic brothers has in many ways shown us the need to update our own forms of worship.

STEPHEN K. JACOBSON

Episcopal Theological School
Cambridge, Mass.

Hopper v. Everybody

Sir: Miss Hopper did not wait until 1963 to write her life story as implied by your writer [May 29], but did so back in 1952 when *From Under My Hat* was first published. Her second volume, *The Whole Truth and Nothing But*, was written in 1962 but held up for five months by the

JUNE 12, 1964

A letter from the PUBLISHER

Bernhard M. Auer

YOUR views, like those of most strong men, may not be acceptable to all—nor, under our means of government, should they be . . . Your future will be watched with more than normal interest."

So read the citation that accompanied the honorary LL.D. awarded by Hamilton College to Senator Barry Goldwater in 1961. As the probable Republican nominee for President, Dr. Goldwater is TIME's cover subject this week, for the third time in almost three years.

As we reported his gradual entry into the mainstream of the news—whether or not into the "mainstream of Republican thought"—we also noted that honorary doctorate, and we did so under one of the oldest standing heads in TIME. Our EDUCATION section began its annual listings of academic honors in 1924, 16 months after TIME's first issue, and started using the title Kudos in 1925. The selection of a few dozen from among the hundreds of honorary degrees that bloom each spring has always been difficult, and TIME warned at the outset: "It is not necessarily implied that either the institutions or individuals listed are the 'best.'"

•

In selecting the kudos we report, we are apt to play the big, inevitable items against the surprising, the unpredictable, the offbeat. This, of course, also applies to our selection of other kinds of news. We like to think that we bring special qualities to the week's big "musts," but we also know that TIME does not live only by the inevitable stories. We are particularly concerned with the people and events that do not force themselves to the top of the news but must be sought out by the enterprising journalist—just as many an honorary doctor must be sought out by the enterprising giver of kudos.

This issue contains a number of stories in this category. In THE U.S. we report not only on the California primary but on a new airplane that, though still on the drawing boards, might some day provide the answer to the nagging jungle war in South Viet Nam. In THE WORLD we tell not only about the new Prime Minister of India but about the "king" of Sankt Pauli, the notorious center of Hamburg's gaudy night life, and his "Black Gang."

•

In other sections, too, you will find news that is not conveyed by the headlines or the bulletins. SHOW BUSINESS, for instance, covers Manhattan's most unusual entertainment (it happens on the sidewalk). MUSIC tells about one of the newest and most exciting masters of the dance, LAW about a philanthropist who would like, if he could, to bail out every prisoner in the land. BUSINESS talks about the comeback of the small grocer, and RELIGION about a hotel that owes more to Moses than to Conrad Hilton.

As for EDUCATION, it runs not only the season's No. 2 installment of Kudos but a story about a new system that teaches children to read by keying consonant and vowel sounds to certain colors. According to this system, by the way, TIME is "spelled" magenta, light yellow and scarlet orange.

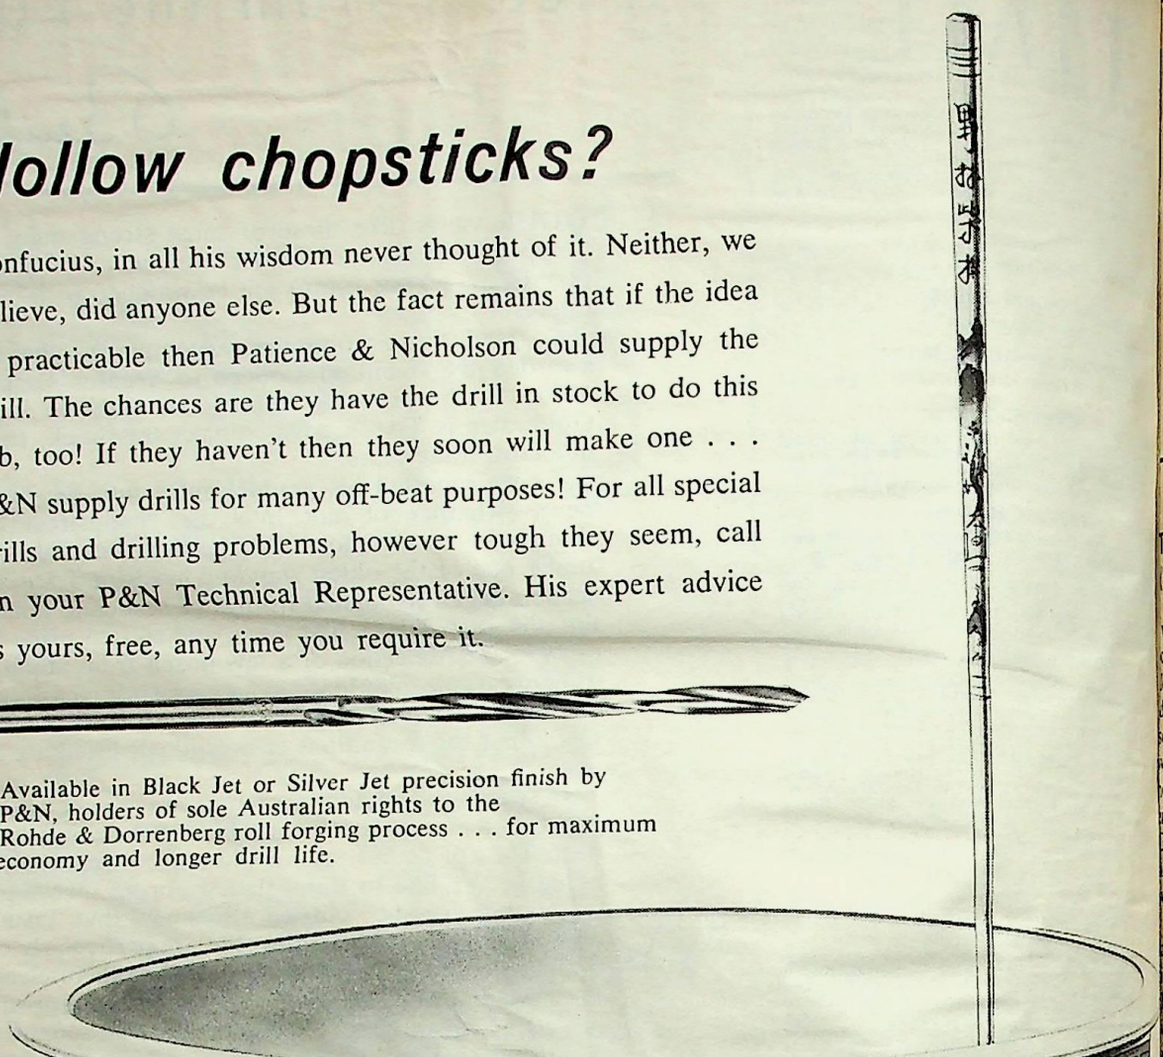
Hollow chopsticks?

Confucius, in all his wisdom never thought of it. Neither, we believe, did anyone else. But the fact remains that if the idea is practicable then Patience & Nicholson could supply the drill. The chances are they have the drill in stock to do this job, too! If they haven't then they soon will make one . . . P&N supply drills for many off-beat purposes! For all special drills and drilling problems, however tough they seem, call on your P&N Technical Representative. His expert advice is yours, free, any time you require it.

Available in Black Jet or Silver Jet precision finish by P&N, holders of sole Australian rights to the Rohde & Dorrenberg roll forging process . . . for maximum economy and longer drill life.



For further details of R & D processed drills ask for P&N Tool Data Sheet No.

THE WEEKLY NEWSMAGAZINE
June 12, 1964 Vol. 83, No. 24

THE U.S.

REPUBLICANS

The Man on the Bandwagon

(See Cover)

In the Royal Suite of Los Angeles' venerable Ambassador Hotel, a man clad only in dark-rimmed glasses and a long white nightshirt with red polka dots sat *watching* television. On the screen, Richard Dix was battling his way against great odds through a 1941 horse opera called *The Round-Up*. After many a cliffhanging episode, the Good Guys vanquished the Bad Guys, and the Grand Old West once again was made fit for Decent Folks.

Barry Morris Goldwater, 55, was relaxing, almost oblivious of the fact that in that same afternoon last week, more than 2,000,000 California Republicans were making a decision that would weigh heavily on his personal future as well as that of his party and perhaps his country. "I don't worry about it," said Goldwater. "We take what comes. We've done the best we can."

The best was good enough. When the votes were finally counted in California's Republican presidential primary, Goldwater had defeated New York's Nelson Rockefeller by a dime-thin 59,000 votes—1,089,133 (51.3%) to 1,030,180 (48.7%). And with his California victory Goldwater came within handshaking distance of the G.O.P.'s 1964 presidential nomination (*see box p. 11*).

The Pollsters. In his effort to achieve that nomination, Goldwater has become the central figure in as classic an American folktale as any horse opera. To his admirers he is the very epitome of the Good Guy, fighting to make the U.S. safe for Decent Folks. To his critics he is the personification of the Bad Guy, shooting first and answering questions afterward. In traveling the California trail, he faced not only a direct shoot-out with Rocky, but passed through close-call ambushes from the pollsters and the press, which raised about him the aura of defeat.

Rarely have the pollsters shown to worse effect. Take the case of Lou Harris, who, after missing by a total of 20 points in his prediction that Henry Cabot Lodge would beat Rockefeller in Oregon's May 15 primary, announced that Rocky led Goldwater by 57% to 43% in California. Then Harris began having anguished second thoughts. Twenty-four hours before last week's primary, he said that Rocky might get 55% or more. But on the morning of the election, he was less bullish about Rocky, declared, "Goldwater has seized the momentum in the last 24 hours. Dramatic changes now are taking place in California."

AP

GOLDWATER AFTER CALIFORNIA VICTORY*
Over an ambushed trail to a shoot-it-out.

One factor that misled the pollsters throughout was the large number of voters who insisted that they were "undecided." Former Congressman Pat Hillings, long a Nixon lieutenant and now a Goldwater leader in California, later explained: "The big undecided vote was not undecided. The undecideds were mostly Goldwater-oriented, but they didn't want to admit it to the pollsters. The opposition succeeded in tying the tin can of extremism to Goldwater's tail, and so a vote for Goldwater was in danger of being considered a vote for extremism. And what respectable Republican businessman wants to be an extremist—much less admit it openly?

"We in the Goldwater camp felt this. We had trouble getting businessmen to allow their names to be used in ads. They wouldn't come out openly for Goldwater. Many of them wouldn't even contribute money because then their names would be on record. If anyone asked them how they felt, they were undecided. But they voted for Goldwater."

The Press. Part of this tendency to be counted in the polling booth rather than in the polls could be attributed to the attitude of the press. Most major California newspapers opposed Goldwater, including the staunchly Republican Los Angeles Times, which campaigned against him on Page One. Nearly all of the scores of reporters visiting California for the campaign thought that Rockefeller would win, wrote endlessly of the *élan* in his camp and of the pall of gloom hanging over the *Gold-*

* With Daughter Peggy and *Wife Margaret* at the Ambassador Hotel in *Los Angeles*.

water forces. Some of this stemmed from the personal political predilections of many of the newsmen. But it was more than that—for, to the reporter who did nothing more than travel around with the candidates, the atmosphere was indeed deceptive.

To these newsmen, Rockefeller's organization seemed a marvel of efficiency. Nothing was left to chance. At every stop on Rocky's itinerary, accommodations for the press were waiting: typewriters, pencils, paper, telegraph facilities, telephones, press releases. Transportation was there when it was needed. So were the hotel rooms. And so was Rockefeller himself, nearly always available to any reporter who wanted to talk to him. Wherever Rocky went, his smooth public relations firm of Spencer-Roberts saw to it that the crowds were there to greet him; in San Jose, for example, Spencer-Roberts rounded up more than 8,000 people who waited six hours just to shake the Governor's hand. Rocky himself seemed to enjoy every smiling, finger-crunching minute of it. He breathed confidence—for the simple reason that he *really* thought he was going to win.

By contrast, Goldwater's contingent seemed a shambles. The campaign management, directed by onetime Senator William Knowland, was at best unsteady. The schedule underwent constant change. The candidate rarely indulged in more than the most perfunctory chitchat with reporters. Barry shrouded himself *in an impenetrable diffidence, acting for all the world like a reluctant dragon slayer.* In his public appearances he hardly ever exhibited that electric quality which, for example, helped him hold the 1960 Republican National Convention in thrall. He seemed to stay on the defensive, endlessly trying to answer his enemies' charges that he wanted to sell TVA for a dollar, that he would take the U.S. out of the United Nations, that he would abolish social security, that he had an itchy finger on the nuclear trigger.

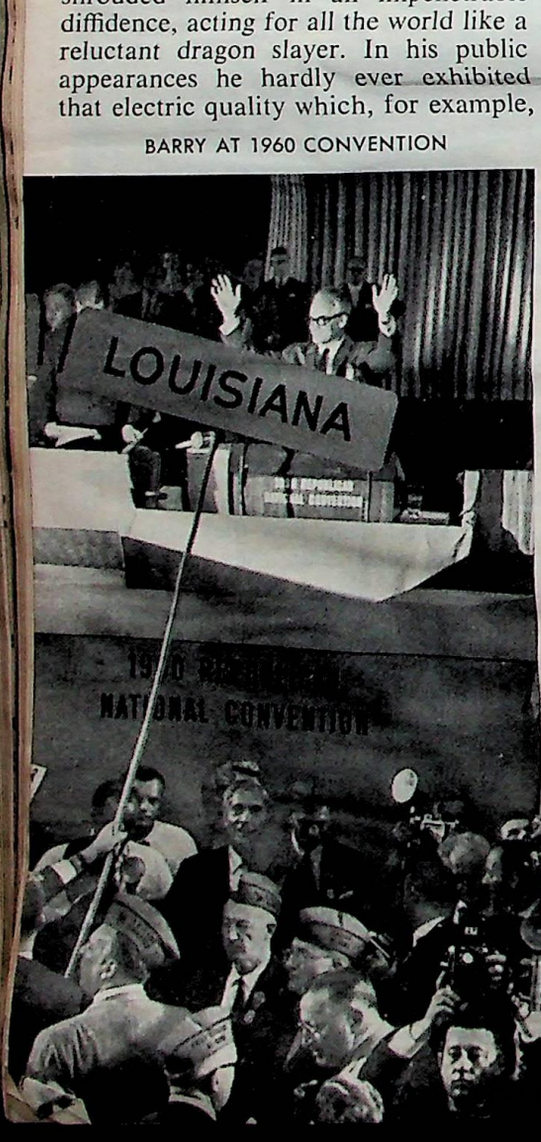
Blow followed blow. With their own man not entered in California, Lodge forces threw their support to Rocky; it made minimal difference that Richard Nixon, William Scranton and George Romney later wired their assurances that they were having no part of a Stop Goldwater movement. Dwight Eisenhower came out with his "profile" of the ideal G.O.P. nominee; the hurt was hardly lessened when Ike later denied that he had meant it to be used against Barry. A *Good Housekeeping* writer said he had been told by Goldwater's wife Peggy that Barry had suffered nervous breakdowns, due to business pressures, twice in the late 1930s. Columnist Drew Pearson picked up the item and with his characteristic kind of punch, raised the question of whether Goldwater was mentally stable enough to be President. Goldwater's longtime physician denied that Barry had ever suffered any such breakdown. Goldwater himself simply pointed to his record as a World War II pilot and his present rank as a major general in the Air Force Reserve. But the doubt had been planted.

All these troubles, and more, sent the Goldwater entourage into a deep slough of despondency. This was what the newsmen accompanying Goldwater saw, and this was what they reported in their predictions of defeat. Theirs was a limited vantage point. What they missed was the fact that while Rockefeller carried his organization around with him, Goldwater's, as masterminded by Los Angeles Attorney Bernard Brennan, was much larger, infinitely more zealous, and was hard at work in almost every precinct in the state.

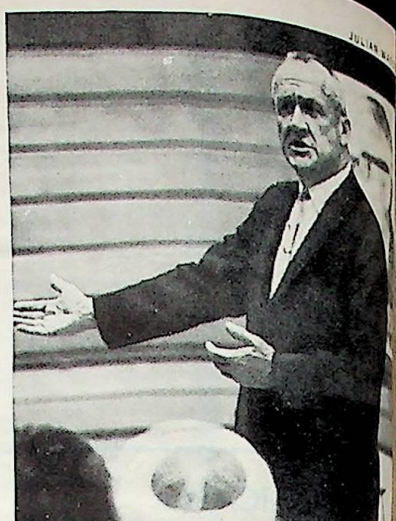
"Operation Q." That Goldwater organization was a phenomenon. It included a share of the cranks and zanies that Goldwater critics tend to think of as his only supporters. But these were in the minority. In fact, Barry's ranks were peopled by men and women, young and old, in all walks of life, who held in common only one thing: an enormous and uncomplicated faith in Goldwater, and the willingness to work for him as few candidates have been worked for before.

The Goldwater volunteers had been going virtually fulltime since March, when they launched "Operation Q," the effort to secure enough qualifying signatures to get Barry's name on the ballot. So determined were the workers that they greatly surpassed the necessary 14,000 signatures on their petitions, came up with more than 50,000 names before noon on the first day of their drive.

BARRY AT 1960 CONVENTION



STAN WAYMAN—LIFE



STATE CAMPAIGN CHIEF KNOWLAND
It was better in the precincts.

From that time on, they labored vidly in the precincts, rounding up recruits. Near campaign's end, one these was none other than Mrs. H nah Nixon, Richard's mother. W Goldwater leaders discovered that was hustling votes on their behalf. aide suggested that she be invited present Mrs. Barry Goldwater flowers on, say, election eve before TV cameras. But somehow, 3,000 away, Hannah's favorite son lea about the idea, and Mrs. Nixon soon aboard a plane, headed fo vacation in New York.

The Goldwater drive was concen ed in Southern California, particul in Los Angeles County, where nea 40% of the state's Republicans re Volunteers swarmed through the c ty two weeks before the election, more than 300,000 G.O.P. voters they felt about Barry. The resp was immensely encouraging, but ju make sure the voters were leveling Goldwater workers phoned a ma of them, identified themselves as R feller people, and asked if "the ernor can count on your suppor the primary." A good 90% hel to Goldwater.

In the final days, the volunteer ganization was expanded. Official of voters' names, supplied by the were programmed into computers sheets were made listing G.O.P. by street, the side of the street, and house address. "Community Chairm handed out cardboard information with detailed maps and names of Goldwater voters circled in red. volunteers made at least two co door-to-door checks on election make sure that the voters had to the polls.

The Payoff. As the returns p in that night, it was immediately parent that the massive Southern ifornia drive had paid off. Rocke

CALLING THE ROLL OF DELEGATES

"I do not have this thing sewed up," said Barry Goldwater after his California victory. Perhaps not—but with the Republican Convention in San Francisco just a month away, Goldwater needs only a few more stitches to tie together the 655 votes needed for the presidential nomination. The probable first-ballot roll call of delegates, as reported by TIME *correspondents in all 50 states:*

Alabama (20 votes): Goldwater is sure of all 20.

Alaska (12): Give Goldwater a goose egg here, though he could wind up with 2 or 3 of the undecided delegates. There are 6 for Rockefeller, 1 apiece for Lodge, Nixon and Scranton, 3 undecided.

Arizona (16): For the native son.

Arkansas (12): G.O.P. National Committeeman Winthrop Rockefeller may get them all on the first ballot as a favorite son, but if Goldwater really needs them, he can call on 8.

California (86): All Barry's.

Colorado (18): Goldwater has 14 going for him; the rest remain uncommitted.

Connecticut (16): Not yet chosen, though Barry may get at least 2. Rest split among Nixon, Rockefeller and Scranton.

Delaware (12): There may be a first-ballot holding action with all votes going to Senator John J. Williams as favorite son. If not, count 5 for Goldwater, 4 for Scranton, 2 for Nixon, 1 undecided.

Florida (34): Barry may get 21 votes, but put him down for 13 sure ones. As for the rest, 3 are leaning toward Nixon, 18 aren't quite sure which way to jump.

Georgia (24): All but 2 are instructed for Goldwater, and those 2 lean heavily toward him. Make it 24 for Barry.

Hawaii (8): Goldwater likely to get 4, while 4 are undecided or leaning toward more moderate candidates.

Idaho (14): This week's state convention vote should yield 14 for Goldwater.

Illinois (58): Primary Winner Goldwater has bedrock strength of 39, with another 6 leaning heavily toward him. Rockefeller gets 1; the rest are uncommitted.

Indiana (32): Barry's primary victory gives him all 32 on the first ballot.

Iowa (24): Goldwater should get at least 8 here, with another 2 leaning to him but not yet certain. Scranton can count on 5 votes, with 1 leaning to him. The other 8 are undecided.

Kansas (20): A solid dozen for Barry, with anti-Goldwater Governor John Anderson controlling the other 8.

Kentucky (24): Senator Thruston Morton was thinking of entering the convention as a favorite son, but decided against it, so Barry should pick up 13 here. The rest are uncommitted.

Louisiana (20): All Goldwater's.

Maine (14): Favorite Daughter Margaret Chase Smith gets all on the first ballot. After that, it will split every which way, with at least 2 for Goldwater.

Maryland (20): Barry has 3 solid votes, with 7 leaning toward Rocky. The others don't know or won't say.

Massachusetts (34): Lodge should get 29 on the first ballot, with 5 for Goldwater.

Michigan (48): If Governor George Romney goes in as a favorite son, he will pick up 42 to 46 first-ballot votes with 2 for Goldwater. If Romney frees the delegation on the first ballot, Barry should get at least 15.

Minnesota (26): With 10 delegates yet to be picked, Goldwater already has 6 pledged to him. Another 4 are behind U.S. Congressman Walter Judd, a favorite son; 6 are undecided.

Mississippi (13): All Goldwater.

Missouri (24): Barry has 16 likely votes, with 4 uncommitted, 4 yet to be chosen at this week's state convention.

Montana (14): Goldwater has 12, Nixon may get the other 2.

Nebraska (16): Goldwater picked up all 10 delegates at last week's state convention, to go along with the 5 he won in May's primary. The other one leans to Lodge.

Nevada (6): All for Barry.

New Hampshire (14): Primary Winner Lodge gets all on the first ballot.

New Jersey (40): After California, at least 9 jumped on the Goldwater bandwagon. The rest will head for San Francisco uncommitted, hopeful of playing kingmaker.

New Mexico (14): Rockefeller picked off 4 stragglers, but Goldwater has 10.

New York (92): Native Son Rockefeller did well in last week's balloting for delegates, is certain of 86. Goldwater has at least 2. The remaining 4 are uncommitted but could very well go for Goldwater. Make it only 2 for Barry anyway.

North Carolina (26): Barry has 25 sure votes, may get the 26th.

North Dakota (14): Goldwater has a fairly solid 9, perhaps 11. Scranton has 2, Nixon 1.

Ohio (58): All should go to Favorite Son Governor James Rhodes on first ballot. If Rhodes releases his delegation during the first ballot, Goldwater stands to get at least half of Ohio's votes.

Oklahoma (22): In Barry's pocket.

Oregon (18): Rocky gets all, at least on the first ballot.

Pennsylvania (64): Favorite Son Scranton gets 62 on the first ballot, with 2 for Goldwater. Anywhere from 6 to 12 others should go for Barry after the first ballot.

Rhode Island (14): Governor John Chafee announced for Scranton last week, and all 14 are likely to follow his lead on the first vote. Though Barry could pick up 2 after that, give him a first-ballot blank in the smallest state.

South Carolina (16): Sold on Barry.

South Dakota (14): An uncommitted slate of delegates beat a Goldwater slate in last week's primary, but at least 6 of them aim to vote for Barry anyway, with 2 for Nixon, 6 undecided but probably pro-Goldwater.

Tennessee (28): Barry has bedrock support from 22, with 3 more leaning toward him, and 3 uncommitted.

Texas (56): Pure Goldwater.

Utah (14): Barry seems sure of 9, with 3 leaning to Lodge, 1 to Nixon, 1 undecided.

Vermont (12): Way northeast of Goldwater country, Barry gets 6 delegates, with 2 for Rocky, 1 for Smith, 1 for Scranton, 2 uncommitted.

Virginia (30): Of 18 delegates already chosen, Barry is certain of 17, the other is leaning heavily toward him. Count him for 14, though he will likely end up with 29 or all 30.

Washington (24): At least 22 for Goldwater. If Barry looks like a winner by the time Washington gets to vote, all 24 may hop aboard his bandwagon.

West Virginia (14): Goldwater has 4 solid votes, may get as many as 10. Rocky has 2, with 2 uncommitted.

Wisconsin (30): A first-round courtesy vote for Favorite Son Congressman John Byrnes is in the cards, but a Goldwater stampede could persuade at least 15 delegates to go for Barry on the first ballot.

Wyoming (12): All Goldwater.

District of Columbia (9): Rockefeller should get 5, Goldwater 4.

Puerto Rico (5): All Rockefeller's.

Virgin Islands (3): The works for Rocky.

Thus, by the most conservative possible reckoning, giving Goldwater only those votes committed to him or leaning strongly toward him, he has a minimum of 648 first-ballot votes, with plenty of reserve strength in such states as Ohio, Pennsylvania and Wisconsin. His rivals trail so far behind as to be almost out of sight: Rockefeller with 139 votes, Scranton with 86, Lodge with 48, Nixon with perhaps a dozen.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

forces had hoped to hold Barry to a 100,000 vote margin in Southern California, then more than make up the deficit in the northern part of the state, especially the San Francisco Bay area. But Goldwater took Los Angeles County by 158,000 votes, adjacent Orange County by 49,000 and San Diego County by 16,000.

Rocky could not overcome that lead, and just 22 minutes after the polls in Southern California closed, CBS-TV programmed its vote-analysis computer and declared Goldwater the winner with 53% of the vote. As of that time, the polling places were still open in northern California, and CBS suffered a few bad moments when the later returns began to arrive and showed Rocky closing the gap and even moving ahead. All the while, NBC, locked in hot competition with CBS, quite nervously stuck by its position that the race was close, and refused to name a winner. In the end it was NBC's less venturesome attitude that gave the viewer a better understanding of how close the race was.

Goldwater's California win was impressive in light of the powerful opposition, but it was about as narrow as a win can be. To some observers it gave further proof that Barry is a poor vote getter. Indeed, his record in this year's previous primaries was unimpressive. He lost to Lodge's write-in candidacy in New Hampshire. He won Illinois, but his only on-the-ballot opponent, Maine's Margaret Chase Smith, got 26% of the vote. He won Indiana, but Harold Stassen, of all people, got 26%. He won Nebraska, but write-ins gave Nixon 31.4%. He all but withdrew from Oregon, leaving Rocky as the only active candidate in the field.

Yet the fact remains that while others were getting the primary votes, Goldwater was getting the delegates in state after state. Why? One answer is that Goldwater's followers, just as in California, were willing to work. Another is that in nonprimary states, Barry had no opposition in the form of serious contenders for the nomination. Rockefeller, the only other major avowed candidate, based his whole campaign on the primaries, made little effort to win delegates at state conventions. That left Goldwater confronted only by favorite sons and state leaders who wished to go to San Francisco uncommitted. It was not much of a contest, and while others were making headlines with their primary showings, Barry was simply moving closer to the nomination.

Faced by Fact. Thus California's 86 delegates very nearly put Goldwater over the top, and his bandwagon was on the move. His national campaign manager, Phoenix Lawyer Denison Kitchel, predicted after the California victory that the wagon would soon be overflowing. Said New York Public Relations Executive F. Clifton White, another top Goldwater aide: "I can hear those adding machines clicking out there in the uncommitted states already. From here on in, we just hit those state conventions and rack up the delegates." Noting that Ohio State G.O.P. Chairman Ray Bliss controls 56 delegates who are prepared to give their first ballot to Favorite Son Governor James Rhodes, another Goldwater staffer said: "If I were Bliss, I'd be adding all this up and thinking that I'd hate like hell to be the last one to come over to Goldwater."

CARROLL & COLLISON—PI

GOLDWATER WORKERS AT VICTORY CELEBRATION
In the ranks, an enormous faith.

All of which leaves the Republican Party, the nation and the world faced with a probable G.O.P. nominee for President of the U.S. who is one of the most controversial politicians in recent history. The reaction to Goldwater's California victory in the foreign press was nearly hysterical. Said the London Times: "The sight of a major party endorsing and promoting a man so blatantly out of touch with reality, so wild in his foreign policy, so backward in his domestic ideas and so inconsistent in his thinking, would be a serious blow to American prestige abroad." West Germany's Frankfurter Rundschau called Barry "not only conservative, what is more dangerous, a confu... and weak man who hides his weak... and uncertainty with fiery speech... Stockholm's Dagens Nyheter c... California "a victory for stupidity... ignorance." The Glasgow Herald ... that "Goldwater in the White H... would be disastrous. His policies ... not merely reactionary, they are ... of them) stupid to a degree th... incredible."

Digitized by Arya Samaj Foundation Chennai and eGangotri

start." In January he said that no President could take such a step without the advice and consent of the Senate. Since then, he has agreed that such consultation is not required by the Constitution, but says he would consult anyway. He now holds that that withdrawal of recognition should be used as a "bargaining device" to gain advantages from Russia. "Russia needs us far more than we need Russia. I would look on recognition as a tool to be used in negotiating for such things as free elections in other countries, for negotiating to get the troops and weapons out of Cuba." He still argues that diplomatic relations with the Soviets are of no value to the U.S. because "we don't know any more about Russia now than we did when we established diplomatic relations 30 years ago."

• SOCIAL SECURITY. In New Hampshire, Goldwater was asked if he favored continuing or altering the social security system. Replied he: "I would like to suggest one change, that social security be voluntary." Almost everyone agrees that a voluntary social security system would be actuarially unsound, and Goldwater's remark was certainly a factor in his New Hampshire loss. But in California a fortnight ago, he said flatly that he does not advocate making the system voluntary, and insisted that "anyone who says I am against social security lies."

• CIVIL RIGHTS. The civil rights bill is "like a three dollar bill—it's a phony." Goldwater opposes the public accommodations and FEPC sections of the pending civil rights bill, says that they are unconstitutional because they infringe on the rights of private property. He believes that "there are too many old laws which aren't even working. And there is this above all, the oldest law of all: you cannot pass a law that will make me like you or you like me. This is something that can only happen in our hearts. This is a problem of the mind, not a problem of the lawyer and the Senator. If we believe that our rights come to us from God, when the day comes that we act as if we believe it, all differences of the white and white and the black and black will be wiped off the face of this nation."

• INCOME TAX. Though he once condemned the graduated income tax and suggested instead an across-the-board tax of, say, 10%, he has changed his stand somewhat. "I don't like the progressive features of the income tax," but "we cannot do away with progressive features entirely."

• AID TO EDUCATION. He opposes the principle of aid to elementary and secondary public schools, but favors federal aid to colleges.

• TVA. He no longer advocates selling the entire TVA to private business, but would sell the steam-generating plants and the fertilizer program that are associated with TVA.

• JOHN BIRCH SOCIETY. He refuses to denounce it because "members of the Birch Society have a constitutional right to take the positions they choose, even though I might disagree with them."

"They." In a post-California statement, Goldwater adapted a phrase that Rockefeller had been using about himself, claimed a victory for the "mainstream of Republican thinking." Certainly Barry's ideas flow somewhat to the right of that mainstream. Yet only after California were many leaders of moderate Republicanism, including the G.O.P.'s so-called "kingmakers," finally convinced that their party was likely to nominate for President a man whose views do not represent theirs.

Throughout much of the land, there is almost a mystique about Republican kingmakers, centered mostly in the Northeast and commonly referred to as "they." But so far in the present presidential contest, they have done no noticeable kingmaking. For one thing, they have had the strong feeling that neither John Kennedy nor Lyndon Johnson was likely to be defeated by any Republican. For another, they rather like Lyndon, especially his frugal fiscal positions. For still another, they have tended to underrate Goldwater's volunteer strength and to overrate the possibility that Barry would somehow beat himself.

Perhaps most of all, they have been unable to coalesce behind a single available alternative candidate. Rockefeller, once by far the Republican front runner, probably sacrificed his chances with his remarriage (one school of thought insists that the birth of his son, Nelson Aldrich Jr., just three days before the California primary worked to his disadvantage, reminding voters of his recent marital situation). There has been little enthusiasm for Richard Nixon since he turned out to be a poor loser in the 1962 California gubernatorial race. Despite Cabot Lodge's strong showings in primaries and polls, he is unpopular with many Republicans who feel that he is, in unlikely combination, too aloof and patrician and liberal; indeed, the main effect of Lodge's New Hampshire primary victory this year probably was to divert and delay any concerted effort that anti-Goldwater Republicans might have mounted.

CONRAD—LOS ANGELES TIMES

THE MAINSTREAM OF CALIFORNIA REPUBLICANISM

UPI

PENNSYLVANIA'S SCRANTON
The one who's left.

"It's Very Late." By process of elimination, that leaves Pennsylvania's Governor William Scranton as the best remaining hope for anti-Goldwater Republicans. Until last week, Scranton was genuinely unwilling to make a move. For months he insisted that he did not want the nomination, would not seek it, and would only reluctantly accept a genuine draft. Despite Scranton's repeated statements, it was behind him that anti-Goldwater Republican leaders late last week tried to rally. On Saturday, Dwight Eisenhower asked Scranton to visit him in Gettysburg. Ike urged Scranton to begin taking a "positive" view about the Republican nomination, and Scranton indicated that he would do so. Almost immediately the word was passed by Ohio's Governor Rhodes, attending the National Conference of Governors in Cleveland, that Scranton was willing. Next day Scranton said he is available.

But even if all the Republican leaders who oppose Goldwater were to gather around Scranton, would they be able to stop Barry's bandwagon? There is deep doubt that they could. "It would take a superhuman effort," says Maine's Fred Scribner, general counsel to the Republican National Committee. Says General Lucius Clay, an authentic Republican kingmaker: "It's late, very late."

If such an attempt were to be made, it would, if successful, leave the Republican Party in a deeply divided state. Barry Goldwater himself would undoubtedly support Scranton or any other nominee; he has made party loyalty his gospel. But his dedicated followers have gone too far and worked too hard to accept an eleventh-hour defeat. Thus, as the situation stood last week, the G.O.P.'s probable course was to accept Goldwater, rally behind him, and work to influence him toward mainstream positions.

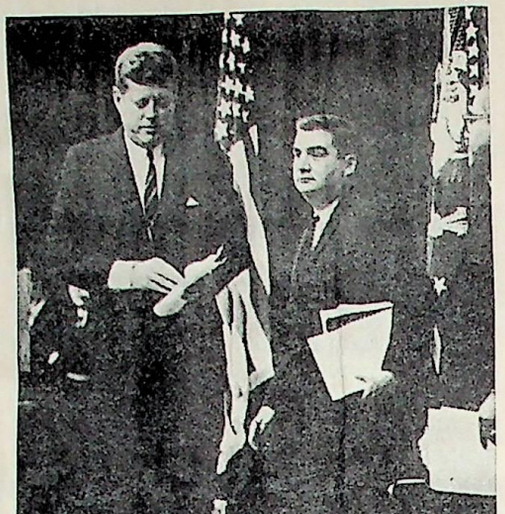
UPI



SALINGER & J.F.K. (1963)

A conflict between the late show and a lucky shirt.

CALIFORNIA

Nomination by Association

Pierre Salinger's entry into California's Democratic Senate primary was late and funny. He filed only two hours before the deadline, then had comic-opera troubles convincing legal authorities that he was a Californian; after all, he had not lived in the state for nine years, for the past four had been a voter in Harry Byrd's Virginia, and on primary day could not even vote for himself. "Carpetbagger!" cried Pierre's chief opponent, State Controller Alan Cranston. Asked what issues he and Salinger disagreed on, Cranston replied acidly: "The only subject I see at the moment that Mr. Salinger and I could productively debate is his apparent desire to reapportion the U.S. Senate with three seats from Virginia and one from California." Pierre reapportioned the Democratic vote to his side, 1,193,934 to Cranston's 1,051,106.

Memories of Jack. In the crucial final stages of the campaign Salinger got important help from a pair of ladies. Lucretia Engle, wife of popular incumbent Democratic Senator Clair Engle, who was forced to withdraw from the primary after his second brain operation since August, came out for Salinger. And Jackie Kennedy said: "President Kennedy valued his advice and counsel on all major matters."

Salinger's past association as press secretary to Jack Kennedy clearly was his best issue. He constantly recalled the crises through which he had gone with the late President. In the final hours of the campaign, Pierre's people mailed 4,000,000 postcards, each bearing a blue-bordered photo of Kennedy, an italicized caption "In His Tradition," and a sample ballot with an "X" after Salinger. On election night, he made certain that he wore his lucky pink-and-white-striped election shirt—the same one he had worn for elections ever since Kennedy won the New Hampshire presidential primary in 1960.

Among the primary byproducts were: 1) new prestige for State Assembly Speaker Jesse ("Big Daddy") Unruh, who backed Salinger from the start; 2) a numbing blow to Governor Edmund ("Pat") Brown, who had lunged in to support Cranston; and 3) a badly torn Democratic Party. Dismayed by it all, Brown mumbled, "Even though I'm disappointed, I feel good about having such a fine man as Pierre for Senator." Cranston, too, promised he would support Salinger—but added that he would not drop a $2,000,000 libel suit against Pierre for making the campaign charge that Cranston had put the campaign-fund arm on inheritance-tax appraisers whom he had appointed.

Help from Shirley. In November Salinger will face a Republican who gathered a lot of votes from a somewhat more distant past image. He is filmdom's veteran Song and Dance Man George Murphy, now 61, who is still getting a lot of free TV exposure on late-late shows as, among other things, the charming, marvelously nimble adult dancing partner of a ten-year-old named Shirley Temple. Murphy is a thoroughly respectable candidate, has been a top California Republican figure for a decade, describes himself as a "dynamic conservative," and has refused to embrace publicly either the conservative or the liberal faction of California Republicanism. Said George Murphy of the November elections: "If I win that one, I'll invite Pierre to play the piano and I'll do a little dance."

Chances are, with 1964 looking like a Democratic year in California, that Pierre will end up dancing.

uckley was in position to do a lot of vors for a lot of important Demo- ats. President Kennedy went out of is way to praise Buckley publicly. Pres- dent Johnson supported him with a armly worded letter in his fight against Bingham. Robert Kennedy spoke in New York on behalf of his re-election.

Who's a Stiff? Buckley contemptuous- y dismissed Reform Challenger Bing- ham, 50, as a "punk" and a "big stiff." At one point, he chortled, "Jonathan— now what kind of a name is that for The Bronx? And look at his middle ame—Brewster—isn't that pathetic?" Bingham indeed seemed out of place in The Bronx, which in considerable part is a low-income land of garment work- ers and small shopkeepers, of tenements and Bronx cheer. A slim, silver-haired, impeccably tailored product of Groton nd Yale, Bingham has been for the past three years a U.S. representative to the United Nations.

But Bingham also had something to talk about. He attacked Buckley's no- table record of House absenteeism (pres- nt for only 34% of House roll calls last ear), charged him with padding his House committee payroll to pay per- onal political aides. Each day Bingham rode through Bronx streets, shaking ands and making impromptu speeches, often accompanied by his grey poodle, amed Yankee Poodle, who wore a sign, Underdogs for Bingham." At cam- paign's end he came as close as he ever id to language that Charlie Buckley ight really understand when he told a roup of campaign workers: "If the adies will excuse me, we fought like ell." He won 26,000 to 22,000.

Measure of Influence. Two other ma- ine men were stopped in New York st week. In the 21st Congressional istrict, Chief Buckley Lieutenant and e-term Representative James C. Hea- y lost 20,000 to 22,000 to Reformer ries H. Scheuer. In Greenwich Vil- ge, onetime Tammany Hall Boss Car- ine De Sapio lost a second bid to re- in his district leadership to Attorney dward I. Koch in a 5,904 to 5,740 re. In one exception, however, 19th

TOMMY WEBER

WAGNER WITH BINGHAM
...uch to talk about.

District Congressman Leonard Farbstein, an oldtime Tammany politician, turned back reform Challenger William Haddad, 35, with 19,851 votes to Haddad's 16,700.

All four victories were shared by one man—New York's Democratic Mayor Robert Wagner. Wagner came out publicly for Farbstein, the only Tammany type the mayor chose to support. The mayor endorsed both Bingham and Scheuer, has long fought to keep Tammany Tiger De Sapio from power. His decision to back Bingham despite the Administration's endorsement of Buckley probably won Wagner no presidential good will. But the outcome certainly increased his stature in and influence over the New York Democratic Party.

ILLINOIS

With the Courage to Purge

What a mess! Required by constitutional amendment to redraw Illinois' political districts, the state legislature fussed and fought, finally had the only redistricting bill that it did pass vetoed by Democratic Governor Otto Kerner. Result: this year candidates for all 177 seats in the Illinois assembly must run in a statewide, at-large election. Moreover, a Republican-Democratic agreement since regularized by law prohibits either party from nominating more than 118 candidates—amounting precisely to a two-thirds assembly majority.

Confusing? Worse than that. Chaotic. But in that chaos, former Bell & Howell Board Chairman Charles Percy, 44, the G.O.P. nominee for Governor against Kerner, saw opportunity. He reached for it in a fashion that should disprove the notion that youthful, well-scrubbed, idealistic Chuck Percy is more an Eagle Scout than a tough politician.

The West Side Bloc. The situation was this: for years, the balance of power in the closely divided Illinois assembly has been held by a handful of nominal Republicans, most of them coming from Cook County and, for the sake of re-election, more than willing to play footsie with Chicago Mayor Richard Daley's Democratic machine. It was with the help of this group that in 1961 the assembly, although it had a narrow Republican majority, nonetheless elected a Democratic speaker. The so-called "West Side bloc" also gave the state Republican Party a bad image by standing steadfastly against such reforms as anti-gambling legislation.

Since the Illinois ballot will be on paper, not machines, and since it will be long and complicated, there is every chance that a vast majority of citizens will save themselves trouble by voting straight tickets. Thus Percy spotted a chance not only to enhance his own candidacy but to end up as Governor with a genuine Republican assembly by cleansing the G.O.P. slate of West Side bloc leaders. And that is what he set out to do. "We have a special problem

UPI

ILLINOIS' MURPHY WITH PERCY
A purge in the dance hall.

in Illinois that beclouds our reputation and helps keep Republicans at home," he said. "I mean the West Side bloc. Here are men holding important positions within our party who always stand against any law that will fight organized crime effectively or that will enable us to reform our election laws to help prevent vote fraud."

Better to Belong To. Marked for purge were six men, including Assembly Majority Leader "Bingo Bill" Murphy and Assembly Appropriations Committee Chairman Peter Granata. Put on Percy's slate were such men as Dwight Eisenhower's brother Earl, 66, the public relations director of a suburban Chicago newspaper chain, which insisted that he resign his job to make the race; onetime Chicago Daily News Reporter and Scandal Sleuth George Thiem, and former TV Weatherman Clint Youle.

At last week's state convention, held in the Springfield Elks Club, Percy resolutely pushed through his purge, staring coldly into space when Murphy came to whisper in his ear. The six purgees bellowed their protests from the convention podium. Cried Granata: "Where have you ever witnessed such dictatorship and bossism as you are witnessing today, except in Russia?" Purgee Robert Austin, noting that all those on Percy's blacklist were Catholics, claimed the whole thing was anti-Catholic. One "Babe" McAvoy pointed a finger at Percy and said: "If you are elected, you will have a Georgia chain gang legislature and you'll be the man holding the whip."

All the while, Chuck Percy sat smiling benignly. He had the votes and he knew it. Of the first 28 delegates to vote, 27 went for Percy's slate, whereupon two of the purgees withdrew and the rest were plainly finished. In his victory, Percy may have suffered some slight attrition around Cook County. But the Illinois G.O.P. was plainly a better party to belong to.

THE PRESIDENCY

That's Quite a Platform

The Republicans may, and probably will have a furious fight over their platform. But there is no doubt about what the Democrats' will be: President Lyndon Johnson standing foursquare for all things for all men.

Unity. As commencement speaker at the University of Texas, he was, for one thing, the Great Moderator. Said he: "It is one of the great tasks of political leadership to make our people aware that they share a fundamental unity of interest, purpose and belief. On the basis of this unity, I intend to try and achieve a broad national consensus which can end obstruction and paralysis and liberate the energies of the nation for the work of the future."

Might. In New London, Conn., before the graduating class of the Coast Guard Academy, he was the tough-talking Commander in Chief. The U.S., he said, possesses a military power against which "the combined destructive power of every battle ever fought by man is like a firecracker thrown against the sun. We have now more than 1,000 fully armed ICBMs and Polaris missiles ready for retaliation. The Soviet Union has far fewer and none ready to be launched beneath the seas. We have more than 1,100 strategic bombers, many of which are equipped with air-to-surface and decoy missiles to help them reach almost any target. In the past three years we have raised the number of combat-ready divisions by 45%. They can be moved swiftly around the world by an airlift capacity which has increased 75%. We, and our NATO allies, now have 5,000,000 men under arms. In every area of national strength, America today is stronger than it has ever been before. It is stronger than the combined might of all the nations in the history of the world."

Peace. A few hours later, at a nuclear submarine keel-laying in nearby Groton, Conn., Johnson was the Great Peace Seeker, warning against the rash use of military might. In an obvious crack at his probable November opponent, Barry Goldwater, Johnson said: "Those who would answer every problem with nuclear weapons display not bravery but bravado, not wisdom but a wanton disregard for the survival of the world and the future of the race."

Friendship. Then too, there was the Friend of All Cultures. Two weeks ago Johnson entertained Ireland's President Eamon de Valera. Last week he became the first U.S. President to receive officially an Israeli chief of state, Prime Minister Levi Eshkol, 68, whom Johnson entertained with a state dinner and Bach music by Violinist Mischa Elman, 73, and by the Parisian Swingle Singers, who perform their Bach with a modern beat. Said Johnson in an accolade to Eshkol: "We are very much alike. We are both farmers." Two months ago he had received an Arab potentate, Jordan's King Hussein. Now came a non-Arab Moslem, Iran's Shah Mohammed Reza Pahlevi and his Empress Farah Diba, to whom Johnson gave cowboy suits for their three-year-old son and one-year-old daughter.

Prosperity. On the home front, he was the Architect of Prosperity. Boasted Johnson at a White House press conference: "Our record economic expansion, which entered its 40th month yesterday, is showing new vitality. The expansion will roll on through 1964 ... we believe well into 1965."

Poverty. Finally, Johnson flew to ... York to address the International ... dies' Garment Workers Union on ... 50th anniversary of its Health C... and became the Defender of the U... trodden and the Crusader Against ... erty. Said he: "We will help the ... privileged and the underpaid by ... ing minimum wage and unemploy... compensation. We have mounted ... tack upon the final fortresses of po... We will continue the hundred ... struggle to give every American ... ery race and color—equal opp... in American society."

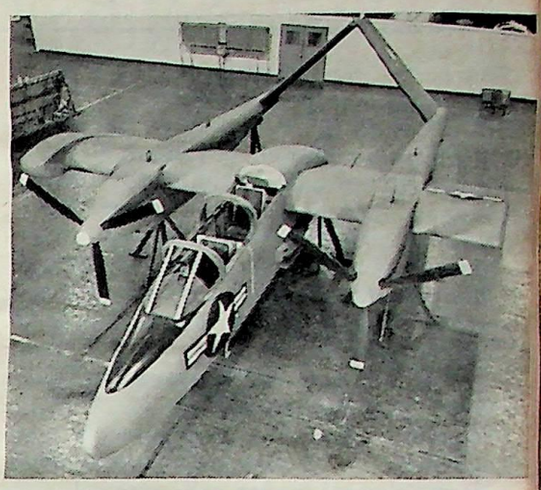
DESIGNS BY CONVAIR

BY LOCKHEED

A cross between tortoise and hare.



BY MARTIN

as part of a bigger pattern—a wave of terrorism on the trains. Within 96 hours of the Kings Highway station outbreak, these incidents also took place:

▸ *Five Negroes* crowded around Michael Sadev, 17, on a Manhattan express train, demanded his money, insisted he play his transistor radio for them. When Sadev refused, one punk stabbed him in the shoulder while dozens of other commuters watched—apparently afraid to intervene. All of the Negroes were arrested, but they were released in custody of their parents because they were juveniles and Sadev refused to press charges.

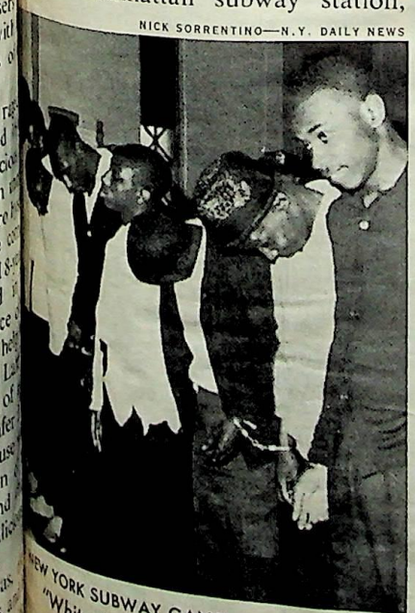
▸ Four young Negroes, one swinging a meat cleaver, ranged through the cars, terrorizing passengers on a Brooklyn train. Finally, one yanked open the door of Motorman George Dauenheimer's cab, held the cleaver at his neck and snarled, "Are you black or white?" Dauenheimer said, "I'm white." The Negro shouted, "I'm just going to cut your head off." But when Dauenheimer stopped the train, the hoodlums jumped off. When they tried to break into a change booth, they were arrested and jailed by subway police.

▸ A Negro walked up to Ismael Velez, 22, in a Manhattan subway station, plunged a knife into Velez' chest and left without a word. Velez lived, but could not identify his assailant.

As the subway savagery mounted, New Yorkers—millions of them totally dependent on subways for transportation—began to feel desperate. Adding to their fear was a chilling slogan—"White Man, Your Time Is Up"—scrawled on subway station walls. Civil rights leaders and police insisted it was not a campaign organized by racist Negroes. N.A.A.C.P. President Roy Wilkins declared that subway terrorists did not attack from "purely racial motivations," but he added: "Part of the context in which these Negro delinquents are bred is indeed bitterness and frustration, which all Negroes feel at the continued denial of equal opportunity everywhere and at the unpunished beatings and killings of Negroes, which continue to feature the civil rights theme in the Deep South." At midweek, New York's Mayor Robert Wagner said grimly, "I am determined that we're going to have law and order in our subways." He announced that 200 Transit Authority policemen would go on daily overtime duty in subways, another 500 regular New York cops would do the same on the streets above, and all of the city's 20,000 patrolmen—most of whom travel to and from work on subways—would commute armed and in uniform from now on.

Just hours after Wagner's beefed-up subway force went on duty, a Negro pulled a knife and slashed it across the face of Cab Driver Henry Feist, 64, as he rode a Brooklyn train. The man was arrested and held on assault charges. But Nick Philippides, his face still swollen and battered, now spoke for a whole city when he said: "Of course I'll have to take the subway. I have no car, and I have to work for a living. But I'll be afraid."

NICK SORRENTINO—N.Y. DAILY NEWS



NEW YORK SUBWAY GANG AFTER ARRESTS
"White Man, Your Time Is Up."

ARMED FORCES

A Hot COIN

As the world's mightiest military power thrashes about for ways to subdue the light-footed Communist guerrillas in South Viet Nam, more effective use of aircraft often seems the obvious answer. But the supersonic jet is too swift for efficient coordination with jungle-bound ground troops, the helicopter sometimes too slow and vulnerable. Now U.S. Navy officials believe they have found a potential solution in COIN (for counter-insurgency), a "flying squad car."

The COIN project was first suggested in December 1962 by Secretary of Defense Robert McNamara's office, which gave it to the Navy for administrative development. The Navy came up with some stiff specifications for such a plane. It must have a top speed of 316 m.p.h., be able to linger over a target for two hours, clear a 50-ft. barrier on takeoff within 800 ft. of its starting point, operate out of sod fields, off gravel roads and, when equipped with pontoons, from water. It would require two engines so that it could still fly if one were knocked out. Finally, it must be able to carry up to six paratroopers, two crew members, four machine guns and four conventional bombs.

Nine manufacturers have submitted ingenious proposals for doing the job. The Martin design utilizes hot engine gases flowing past a V-shaped tail to keep the tail high even at 28 m.p.h. General Dynamics proposed a detachable pod for carrying the soldiers. Lockheed features a more conventional fuselage, but its high wings are detachable so the craft can be transported in cargo planes. Most of the firms, however, could not meet the original cost goal of a $100,000 aircraft, figured the cost above $200,000. And once a manufacturer is selected, it will take up to five years to get the plane operational.

The whole project will soon be back on McNamara's desk for a decision on whether to proceed. Already he has questioned whether COIN's cost is justified by its advantages over the modified Navy Skyraider propeller planes now being assigned to Viet Nam. He also must consider whether there will be a need for COIN-type aircraft five years from now. On the other hand, there is a rising clamor in the Congress for new and decisive action against the Viet Cong. Thus, while COIN at the moment is a hot topic mainly in the aircraft industry and in the military services, it could easily blow up into a big national debate.

INDIA

After Nehru

The man chosen last week to command one-seventh of the world's people has a turkey neck, a smudgy mustache, and an expression of ineffable meekness. It is a little misleading, insists Lal Bahadur Shastri, the new Prime Minister of India. "I am not as simple as I look."

Nothing is simple in India, including Shastri's unanimous election. He was the clear choice of the country's three kingmakers, 1) Congress Party President Kamaraj Nadar, who controls four south Indian states, 2) Atulya Ghosh, boss of eastern India, and 3) Bombay's S. K. Patil, who personally directs some 100 of the 537 Congress Party M.P.s. All three closed ranks behind Shastri as the man most capable of bringing "unity" to the nation. And all three opposed the only other candidate, conservative, autocratic Morarji Desai, the former Finance Minister, who was supported by rightists, leftists and untouchables. On tree-shaded Delhi lawns and in air-conditioned bungalows, the kingmakers argued that a man like Desai might start quarrels at home and be too intransigent abroad. For India's sake they begged that the new Prime Minister be elected unanimously. Once he was sure of a majority, Patil went to Desai's bungalow, sat beside him on the floor and asked him to withdraw from the race. Desai finally agreed, conceding, "It would hurt some to have an election contest. It is better that I am hurt than others."

Typically, Shastri had stayed aloof from all the politicking. Next morning, he rose early, had a modest breakfast with his family. He was the last to reach Parliament, where the other Congress Party members were already gathered beneath the high dome of the central hall. In a soft, reedy voice, tiny (5 ft., 112 lbs.) Shastri promised to carry on Nehru's work. Then he drove to the Jumna River to pray at the site where Nehru had been cremated.

Into the Ganges. Though Nehru's will had specifically requested no religious ceremonies after his death (Nehru was an avowed agnostic), his daughter Indira Gandhi had ordered the funeral performed with full Hindu religious customs and traditions. Nehru also had asked that a handful of his ashes be thrown into the holy Ganges River at Allahabad, his birthplace, not for religious reasons but because "the Ganges especially is the river of India, beloved of her people . . . running into the present and flowing on to the great ocean of the future." The remainder of his ashes, according to Nehru's w[ish] will be scattered from an airplane [so] that they might mingle with the [air] and soil of India and become an in[dis]tinguishable part of India."

SHASTRI ELECTED

When Nehru suffered his first [stroke] he called on Shastri to take over [as] deputy prime minister. The new [P.M.] insists he was not especially marked [for] succession, and during Nehru's [illness] told newsmen, "If the Prime Min[ister] has something in his mind, he has [not] informed me of it." What, then, focu[sed] attention on Shastri? His personal [hon]esty, for one thing, and his deftne[ss in] conciliation for another. A secret [of]

A MAN OF SILK & STEEL

FREELY translated, Lal Bahadur Shastri means "Graduate Brave Jewel." He was born in 1904, the second son of a minor tax collector in the village of Mughal Sarai, near the holy city of Benares. His father died when he was an infant. The child belonged to the Kayasth caste, who were disdained as quislings by other Hindus because they became clerks and officials under the Moslem rule of the conquering Mogul emperors. Their reputation for shrewdness is so great that an Indian saying runs, "If you meet a Kayasth and a serpent, kill the Kayasth first."

Lal Bahadur showed little of his caste's supposed brilliance, although he cared enough about an education to walk eight miles a day to school, sometimes taking a short cut by swimming the Ganges River, carefully strapping his books to his head before entering the water. He made his first total commitment at 16, when Mahatma Gandhi spoke to students in Benares. From Gandhi, says Shastri, "I learned of the moral aspect of life—to serve your country without love of power and authority, if possible." To fight for freedom, the lad quit high school three months before he was due to graduate, and, in all, was arrested eight times by the British, serving a total of nine years in jail. In 1932, when police refused to let Indian nationalists hoist their flag on the clock tower of Allahabad, he rode by in a cart, disguised in the veils of a Moslem woman, suddenly leaped off and sprinted up the tower stairs, raising the flag before the police could stop him.

Repaid Loyalty. In his home state of Uttar Pradesh, India's most populous and the birthplace of Jawaharlal Nehru, Shastri became the protégé of the Hindu traditionalist leaders, Purushottamdas Tandon and Pandit Pant. With independence in 1947, he rose through the state government to become Home Minister of Uttar Pradesh. When Prime Minister Nehru broke with the conservatives in 1951, Shastri abandoned one preceptor, Tandon, to join the other, Pandit Pant, in supporting Nehru. From that moment Lal Bahadur Shastri never left Nehru's side, and the grateful Prime Minister repaid the loyalty with a succession of Cabinet jobs.

In a nation where politicians affect superior airs, Shastri is modest and retiring. Among a people given to rhetoric and ritual, he is concrete and practical. In a land reverencing charismatic leadership and far-reaching intelle[ct] looks like a messenger boy [and] parages his own brain. Above [all] reassuringly rational. Though [he] corruption, he does so with [intel]and compassion, well aware that paid public servants will invari[ably] tempted by bribes.

In foreign affairs, Shastri ma[y be] provincial, since he has only once beyond India's borders, and then to neighboring Nepal. In a nat[ion] divided by religion, language [and] gionalism, his great strength is [his] ty to bring people together. When atile language dispute broke out sam, Lal Bahadur quietly worked settlement. When the Sikhs campa[igned] for a separate state, Shastri was talk the Sikh leader out of a fast unto death. "I listen to [all] viewpoints. I have the capacity derstand them. I keep an open [mind]. As Home Minister, he noted: "A[lthough] I am a mediocre, yet I find that a cre like me is able to produce thing new and original, not in high sense, but whatever new [things] suggested in the Ministry, well generally come from me, and [the] ficers who are far, far abler [than] self go on with their routine

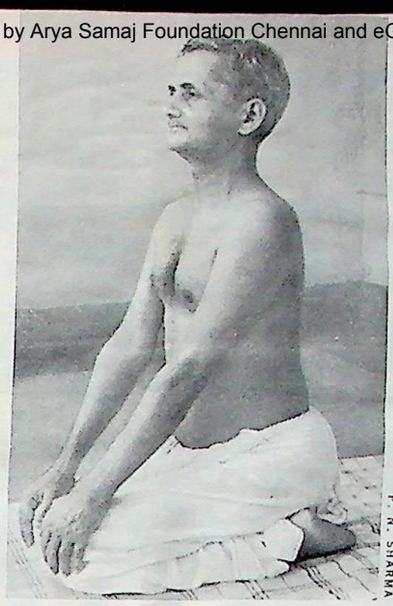
SHASTRI ON BADMINTON COURT

Out of mediocrity, something new and original.



P. N. SHARMA

SHASTRI AT YOGA

ernment poll revealed that Lal Bahadur, next to Nehru, was the best-liked, best-known figure in India.

Under the Maulshree. After his acceptance speech, Shastri returned to his bungalow and submitted to his first press conference, sitting at a desk beneath a spreading, white-blossomed *maulshree* tree. He was amiable but hardly informative. Would he follow the same principles as Nehru in forming a Cabinet? Shastri blinked, asked slyly, "What was his approach, the late Prime Minister?" Would he engage in peace talks with China about the disputed Himalayan border? "Let me be in office a few days before I answer that."

In office Shastri would immediately have to start thinking about the hard business of running a government. As he huddled with advisers on the makeup of his new Cabinet, it seemed likely that the Foreign Ministry might go to Indira Gandhi, while the defeated Desai was almost certain to be offered a portfolio, even if not the top one he demands. Another likely minister: S. K. Patil.

Perhaps the most accurate prediction was made by Shastri's 85-year-old uncle, Ram Pershad. Gazing at his newly eminent nephew, Ram Pershad said, "Yes, he is now Prime Minister, and now he has just created a thousand enemies."

SOUTHEAST ASIA

Something Happened to the Crisis

In the sparkling sunshine of a Hawaii morning, a stream of limousines purred up to a yellow concrete building overlooking Pearl Harbor. Central Intelligence Agency Director John McCone alighted from one and hurried inside. Joint Chiefs of Staff Chairman General Maxwell Taylor emerged from another. Secretary of State Dean Rusk and Defense Secretary Robert McNamara, both in slacks and open shirts, arrived together, were greeted under the portico by Pacific Commander Harry Felt. Last to arrive, 20 minutes late, was U.S. Ambassador to South Viet Nam Henry Cabot Lodge, natty in an olive suit.

What brought all the brass to Hawaii's Camp Smith, named for retired Marine General Holland M. ("Howling Mad") Smith, was a two-day conference on the deteriorating U.S. position in Southeast Asia. The meetings got under way in a top-secret briefing room that rivaled the war room in *Dr. Strangelove*. There were flashing lights, whirring projectors and 9-ft.-high maps bristling with red pins. On one wall was an 18-ft. by 30-ft. colored map of Southeast Asia. On another, facing a semicircular table at which the key conferees sat, were multicolored lights positioning every vessel in the U.S. Pacific fleet and maps pinpointing Viet Cong supply areas, Soviet and Red Chinese ships and munitions dumps, and other strategic targets.

No Plans. It was the ideal setting for a crisis-atmosphere conference. But the conference was barely under way before it took on a non-crisis air. In Laos, the Red Pathet Lao had momentarily halted their drive, in some areas were even pulling back—though at week's end, after the Hawaii conference broke up, they were beginning to shoot again. In South Viet Nam, the number of attacks launched by the Viet Cong guerrillas had suddenly dipped sharply.

Desperately anxious to avoid having to make painful election-year decisions involving war or peace, the Johnson Administration seized on the respite offered by the Reds and began softening its tough talk about intensifying the war in South Viet Nam or extending it to North Viet Nam. After Wisconsin's Republican Congressman Melvin Laird told a radio audience that "the Johnson Administration's position is to move north, and we are prepared to move north," the President told a news conference: "I know of no plans that have been made to that effect." Laird stuck to his guns, but in Hawaii, Rusk, McNamara & Co. sought to downplay talk of any bold new measures.

Routine. As a result, what had been shaping up as a grim meeting designed to chart a potentially risky new course in Southeast Asia suddenly turned into a routine conference on the war in South Viet Nam—the 14th such meeting in Hawaii since December 1961. At a working lunch, the VIPs brought swimming trunks to the Navy Officers' Club on shimmering Keehi Lagoon, left their "classified" folders on the tables while they enjoyed a quick dip. Lieut. General William Westmoreland, the newly designated U.S. military chief in Saigon, gave a virtuoso display on one waterski. During off-hours, Rusk and McNamara relaxed at Felt's flower-decked Makalapa Guest House, while Lodge could be seen sipping coffee in splendid isolation at Waikiki Beach's Royal Hawaiian Hotel.

The routine meeting also yielded some routine decisions. "Essentially," said one official, "we were talking about how to do what we're doing better." About the only suggestion of any consequence to come out of it was that the U.S. send a team of perhaps 20 or 30 officials to South Viet Nam to make sure, in the words of one official, that economic aid "gets where it's supposed to go, and not to a bank in Geneva."

Yet the U.S. could not go on indefinitely letting Hanoi call the shots in South Viet Nam. For all the soothing qualities of the lull, Lyndon Johnson might soon be faced with the need to win Congress over to a plan for putting new pressure on North Viet Nam —something short of bombing Hanoi or outright invasion, but something far more convincing than the conference offensive conducted so far.

linking and, perhaps, their routine way working."

Grumbling Friend. Shastri is close to country's mind and soil. He is one the few Congress politicians not to ve amassed a large fortune or propby or donations from wealthy busiesmen. He has no auto, would prefer stay on in his tiny bungalow, and still es part of his salary to the Servants the People Society, a group devoted public service with whom he worked a young man.

Shastri usually rises at 5 a.m. By his lawn is crowded with audiencekers. COPS & RIOTERS IN PUSAN
With rice skyrocketing, a refusal to Park.

SOUTH KOREA

After the Shadow

Marking the third anniversary of his military takeover in South Korea, General Chung Hee Park confessed last month that he was sorry about how things had worked out thus far. He admitted that the coup's objectives—prosperity, solving the food shortage, arresting inflation, halting corruption—had not yet been achieved, added mournfully, "I sorely regret this." Last week, after two months of growing unrest, Park was joined in his regret by thousands of rioting students.

Park's list of failures was accurate enough. Corruption and speculation are rampant, the price of rice has skyrocketed 150% in the past 15 months, and mounting unemployment now stands at 2,500,000—more than 10% of the population. Sporadic student demonstrations began in March, ostensibly protesting Park's conditions for "normalizing" relations with Japan,* then turned on the government in general.

In a scene reminiscent of the last days of Syngman Rhee, some 12,000 placard-carrying students, cheered on by thousands of adults, marched in drizzling rain down Seoul's Capitol Avenue one day last week, crying "Drive Park out!" and "People are hungry! Let us eat profiteering millionaires!" Outnumbered police opened up with tear gas; the rioters replied with rock barrages, broke through police lines and drove off nine army trucks being used as barricades. The screaming, cursing clashes lasted all day and into the night, left scores of injured littering the wet pavement. Clamping on martial law in the capital, President Park ordered in thousands of army troops. The following day new riots erupted in twelve other cities; in Pusan, students fought the police for hours; in Kwangju, 165 miles south of the capital, 6,000 students sacked the provincial headquarters.

Hoping to disperse the rioters, Park ordered all colleges and universities closed until July 4, which is one day before the regular summer holiday begins. Then, as an appeasing gesture, Park reluctantly fired his top collaborator: Kim Chong Pil, Park's nephew by marriage and head of Park's Democratic-Republican Party. Kim is hated by the students because of the ruthless way he once ran Park's Central Intelligence Agency and because he has been instrumental in the controversial negotiations with Japan. Kim is fond of saying, "I am nothing but a shadow of the President." Would the man who casts the shadow be the mob's next victim?

* South Korea has long demanded heavy indemnification for its 35 years of occupation by Japan from 1910 to 1945; now the government is considering a Japanese offer of a $600 million reparation package, previously dismissed in Seoul as inadequate, and a compromise on fishing rights.

FRANCE

Détente Cordiale?

Charles de Gaulle, who in private conversation once described President Kennedy as an "adversary," has been getting along no better with the Johnson Administration. From NATO to the U.N., Latin America to Red China, there is hardly an issue or an area in world politics on which France has not taken a stand at variance with U.S. policy. The activities of some French officials in Southeast Asia often lead exasperated U.S. diplomats stationed there to wonder if France is not actually trying to thwart U.S. efforts to keep the area from falling to the Communists.

Cordial Cooperation. Paris is apparently awakening to the dangers of its widening policy differences with Washington. ards of Herbertstrasse alone, 20 bor-dellos stand perfumed cheek by painted bowl, while round-the-clock shifts of whores sit waxen and wooden-faced be-hind show windows. Elaborately coifed transvestites in spike heels wobble lump-ily along the side streets, brushing shoul-ders with stewbums in cowboy boots and pale-faced hoods with patent-leather hair. At the Hippodrom, on a lurid ave-nue appropriately named Grosse Frei-heit, bored horses trot in a circle as equally bored equestriennes strip while balancing on their backs. Along the Raper, a tourist can shoot a fake duck, get a tattoo, watch an "intimate" movie in Technicolor, or cheer a brace of Amazons clad only in black panties as they wrestle in a tub of mud.

The Black Gang. What a tourist can do most easily, though, is get clipped. Unwary visitors commonly find them-selves staring at bills for as much as $80 after a brief bout of drinking. One sucker discovered to his horror that he had been buying champagne for the whole house, including band and B-girls, and finally coughed up $600. Blackmail, extortion and strong-arm tactics com-plete the repertory, and in recent years many a waiter has become an owner himself, or else tucked away a small fortune before leaving the Raper for more respectable surroundings.

Most blatant of the district's toughs was balding, broad-shouldered Paulie Müller, 38, head of the "Black Gang" and "King of Sankt Pauli." Flanked by his muscle man, a hulking waiter known as "Hans the Swine," and tailed by such hangers-on as "Boxer Fred," "Emil the Bull" and "Gambler Heini," Müller cut a wide swath along the Raper, intimidat-ing bar owners and roughing up any-one who challenged him. But last Octo-ber Paulie Müller met his nemesis in the form of a camel's-hair coat.

It was brand-new and the proud prop-erty of a nightclub waiter named Heinz ("Harry the Ox") Hopp. When Müller expropriated the coat for himself, Hopp got hopping mad, pulled a gun on Paulie and was rewarded for his temerity with a beating that put him in the hospital for a month. It was enough to turn Harry the Ox into Harry the Fink: he provided the police with sufficient evidence against Müller and the Black Gang to bring them to trial. Last week a motley audience of shills, pimps, whores, strip-pers and bullyboys gathered in Ham-burg's dingy criminal court to hear sen-tence pronounced on the Black Gang. Found guilty on 16 counts ranging from assault and battery to extortion, Paulie Müller was sentenced to five years in prison, while Hans the Swine drew a four-year term and others of the dozen defendants received fines and shorter jail terms. A young blonde in a green sweater sobbed quietly, while a nattily dressed sharper muttered: "It's a damned dirty trick, putting Paulie away."

The Golden Egg. The demise of the Black Gang marked a major triumph for Hamburg's Security Chief Kurt Falck, 42, who for the past year has been crusading to clean up Sankt Pauli and the Reeperbahn. Realizing that the district's reputation was driving away tourists, Falck began by withdrawing cabaret licenses from the more flagrant violators and refusing to license prospec-tive troublemakers. To date, he has pulled 22 licenses and refused 34 appli-cations, while under his prodding, bar and cabaret operators have grudgingly turned back $1,150 to customers who complained of overcharging.

Old merchant sailors who remember Sankt Pauli when it was the roughest, toughest port on the North Sea run fear that Falck's crusade will eradicate what-ever sinful spontaneity remains along the Reeperbahn. But Hamburg is not about to kill the leering goose that lays a $25 million golden egg each year. "We don't want to chemically clean Sankt Pauli to the point where it's a con-vent school for 15-year-old girls," says one official. "We want to keep it a place where men can seek pleasure without fear or danger." With the Black Gang gone, it might be just that.

CYPRUS

Anger Again

Turkey has long since learned that the best way to advertise the plight of the Turkish minority on Cyprus is to move a large number of soldiers into the port of Iskenderun, send out some ships on "patrol," and arrange for someone to make an inflammatory speech in An-kara. Invariably, the result is panicky fear of a Cyprus invasion that brings mobilization by the Greeks on Cyprus and a sudden feverish burst of diplomat-ic energy in every major capital in the West. Just such a fright last week caused Cypriot President Archbishop Makarios to call out his 30,000-man Home Guard, sent NATO Supreme Allied Commander in Europe General Lyman Lemnitzer scurrying off to Ankara, and even brought President Lyndon Johnson into the fray.

"Final" Decision. This time, the Turks were calling attention to the help-lessness of Turkish Cypriots in the wake of Makarios' recent decision to call up all youths between the ages of 19 and 21 for military service, and more omi-nously, his open threat to begin import-ing heavy weapons, probably from the Soviet Union or the U.A.R. Early last week, Turkish Cypriot Fazil Kuchuk, who is technically Vice President of Cyprus but no longer even dares to go to his office in Nicosia's Greek sector, pro-posed that he and Makarios hold a con-ference on "the Green Line," the heavi-ly guarded border separating Greeks from Turks. Makarios flatly refused, and throughout the island Turkish tem-pers flared. On the mainland, Iskende-run was suddenly alive with troops, and Turkey's Premier Ismet Inönü went on the radio with electric words: "Our de-cision is final. We have to provide an

unshakable security for the future of the Cypriot Turks."

Within hours, Lemnitzer was huddling anxiously with Turkey's top soldiers, urging moderation. Nervous at the possibility of a war that would set NATO allies Greece and Turkey to fighting, Johnson hurriedly sent a personal message to Inönü urging that the Turkish leader exercise moderation and come to the U.S. to discuss the whole Cyprus mess. Inönü declined because of "the pressure of current affairs," but a Turkish spokesman made it known that the invasion threat was over "for the time being."

Something in the Fiat. On Cyprus, the invasion scare only briefly distracted the Greek Cypriots from another source of tension last week: a bitter squabble with the British that led Makarios' men to demand that London withdraw its 2,000 troops from the 7,000-man U.N. peace-keeping force on the island. Anger was triggered by the arrest a fortnight ago of R.A.F. Senior Aircraftman Keith Marley, his wife and one-year-old baby near the town of Morphou, in northern Cyprus. The following day, Greek Cypriot Interior Minister Polykarpos Georghadjis announced that Marley had been carrying in his Fiat two mortars and two frogmen suits. Claiming this to be evidence of British collusion with the hated Turks, Georghadjis declared that "the British can no longer form a constructive element in the international peace-keeping force in Cyprus."

Proclaiming every Briton to be a potential gunrunner to the enemy, the Greeks last week began searching every British car they found on the roads. Soon the word got around: in the north-coast port of Kyrenia, a mob stoned the British-owned Harbour Club. In Nicosia, 3,000 Greek schoolchildren marched through town shouting "British go home!"

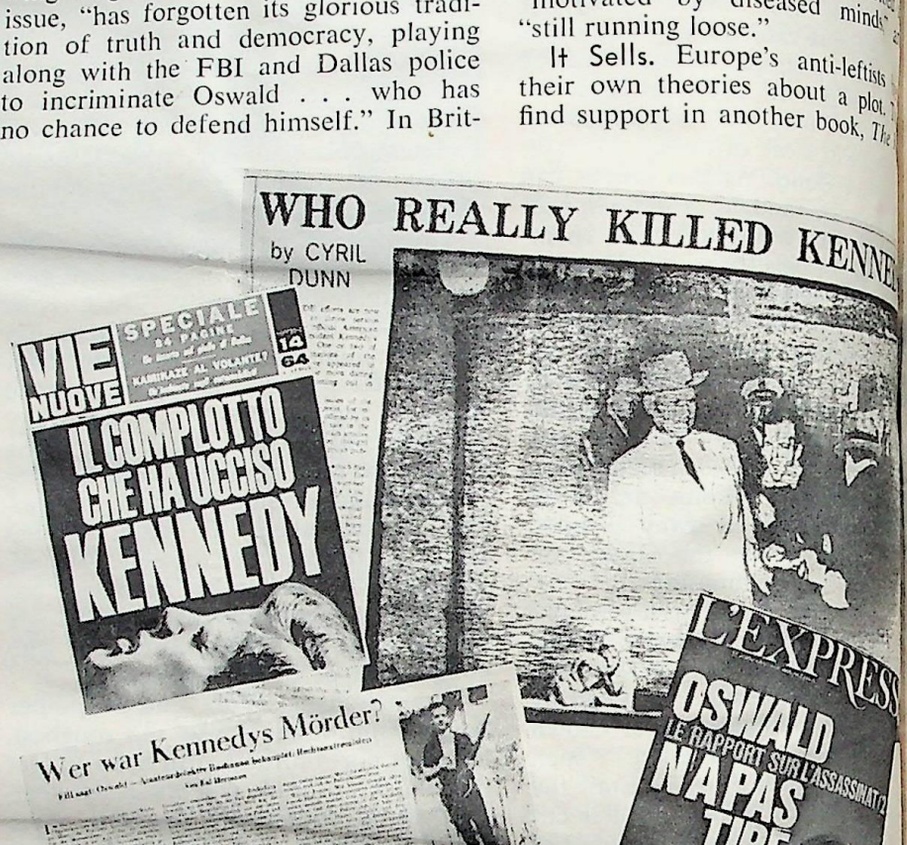
Britain was of a mind to do just that. In London, British Commonwealth Secretary Duncan Sandys was cheered when he rose in the House of Commons to insist that "while they are performing this thankless task, we feel that our troops and their families have a right to be treated with courtesy by those who so readily accepted our offer to come to their aid." On June 27, Britain's present commitment to the U.N. force will end. Whether it will be renewed, Sandys hinted, is open to question.

EUROPE

J.F.K.: The Murder & the Myths

The most myth-filled aftermath of John F. Kennedy's assassination is the stubborn refusal of many Europeans to accept the belief that the U.S. President could have been killed by a lunatic loner. Headline after headline and book after book roll off the presses with a bewildering array of theories suggesting a deep, dark plot.

Loudest skeptics are Europe's leftists, who will not be dissuaded from their original conviction that Marxist Lee Harvey Oswald was the unwitting tool or the scapegoat of some well-oiled, darker rightist conspiracy, and then was silenced by Jack Ruby. This impression was fed by the bad assumptions made by many reporters and commentators in the first minutes after the assassination in conservative Dallas, and it has never been fully erased. "The American press," declared Italy's left-wing magazine *Vie Nuove* in a recent issue, "has forgotten its glorious tradition of truth and democracy, playing along with the FBI and Dallas police to incriminate Oswald . . . who has no chance to defend himself." In Britain, that sometime philosopher, Bertrand Russell, has already set up a "Who Killed Kennedy?" committee to look into the situation.



EUROPEAN HEADLINES
Did the CIA do it?

Mr. X? The doubters abroad find ammunition in the arguments of two like-minded Americans. One is Baltimore-born Thomas G. Buchanan, 44, a onetime reporter fired by the Washington Star in 1948 after he admitted membership in the Communist Party. He now lives in Paris and is the author of a widely discussed tome, *Who Killed Kennedy?* Buchanan suggests 1) "that the author of this crime is a millionaire of Texas, called Mr. X"; 2) that Oswald was an accomplice; but 3) that the shooting was done not by Oswald but by two triggermen, one from the Texas School Book Depository building and one stationed on an overpass ahead. Buchanan's book is being published in eight European countries, already is a bestseller.

Rivaling Buchanan for attention is Oswald's posthumous defender, windmill-tilting Manhattan Attorney Mark Lane, who has been stumping the C[ontinent] with denials that Oswald was [the] assassin. Both Buchanan and Lane h[ave] received smash play in the Eastern E[uro]pean press, whose line has al[ways] been that Kennedy was the victim o[f a] three-way conspiracy among South[ern] racists, Pentagon generals, and the [mys]ty CIA. Two months ago, Lane, [ad]dressing the Communist-front Inter[na]tional Association of Democratic Ju[rists] in Budapest, declared that the [as]sor killers, whom he has describe[d as] "motivated by diseased minds" [and] "still running loose."

It Sells. Europe's anti-leftists [have] their own theories about a plot, [and] find support in another book, *The [Last] Roses of Dallas,** published in F[rance] by a correspondent for European p[ub]lications, Nerin Gun, who covered the [as]sassination. Newsman Gun hints str[ong]ly that it is possible that Oswald k[illed] Kennedy out of admiration for C[astro] —a theory that still lingers in the m[ind] of some U.S. Government officials [who] cannot fully shake off the suspicion [that] Oswald was acting for Castro.

The average European by no m[eans] swallows every far-out theory, but [his] own intrigue-steeped national histo[ry] make it easy for millions to doubt [that] Oswald did it alone. In Italy, [where] Julius Caesar got his and where [Machi]chiavelli elevated plotting to [the] bility, the only question is [when] conspirators will be unmasked. [Many] Frenchmen, who have long had a [re]

* Named for the bouquet Jackie K[ennedy] carried in the fatal Dallas parade.

chant for ideological crime, the rumors went back to last year's arrest of Yale Professor Frederick Barghoorn in the Soviet Union on spy charges. According to this account, the CIA had solemnly denied to Kennedy that Barghoorn was a CIA agent, but when the professor returned he told the President that he had indeed been spying for the CIA. Angered, Kennedy threatened a wholesale shake-up of the intelligence agency. Later the CIA got wind of the plot against Kennedy—but did not warn him because the agency wanted to eliminate what it feared to be a threat to its own existence.

There are other factors behind Europe's prolonged suspicion. It is regularly fanned by the Continent's press, because the Kennedy story is a sure-fire newsstand seller. Europeans are also confused at the welter of oft-conflicting reports that have emanated from the investigation.

Last week word leaked from the Warren Commission that its report would spike each of the overseas theses and endorse with few changes the FBI's original version that Oswald killed alone. However, this is hardly likely to end the myth-making in Europe. Asked a suspicious Frenchman last week: "Will the commission have the right to publish its real conclusions?"

COMMUNISTS

Around to the Dulles Position

In a celebrated 1956 attack on the principle of nonalignment, John Foster Dulles defined neutralism as a policy that "pretends that a nation can best gain safety for itself by being indifferent to the fate of others." It is, Dulles added, "an immoral and shortsighted conception."

The U.S. has since taken a more patient view of neutralism, while an evolving Russia has become less tolerant of the uncommitted nations that receive aid from both camps. Last week in Moscow, the party's theoretical journal *Kommunist* huffily denounced neutralism in terms that, in their way, were the same as those John Foster Dulles used eight years ago. Said *Kommunist*: "The leaders of young countries who really desire progress for their peoples cannot occupy intermediate positions between contradictory world social systems. There are only two paths of development—one path leads to capitalism and the other to socialism. There is no third way."

Moscow's outburst was clearly aimed at Egypt's President Nasser, who has received massive U.S. aid as well as some $271 million in Soviet loans and grants for the Aswan Dam. "The policy of nonalignment," grumped *Kommunist*, "presupposed only nonparticipation in military blocs and alliances, and by no means an identical attitude to the friends and champions of peace, on the one hand, and to the enemies and aggressors on the other."

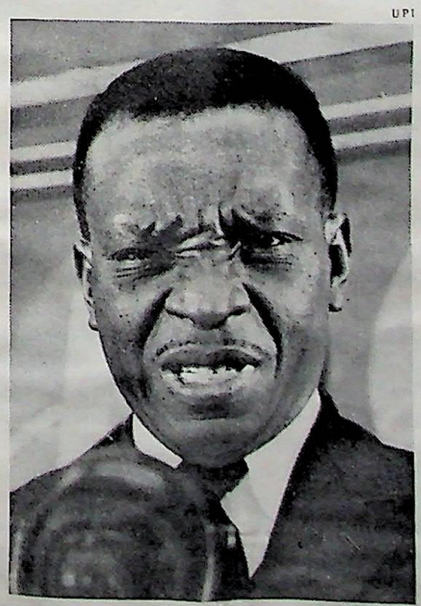
THE CONGO

With Magic Juice & Lucky Grass

It took a peak commitment of 19,400 United Nations troops to restore a sullen peace to the strife-torn Congo. By June 30, the last 3,000 members of the U.N. force will be withdrawn, and already chaos is coming back. Leopoldville has been rocked by a succession of antigovernment plastic-bomb explosions since May. In Kwilu Province, the Communist-inspired *Jeunesse* (youth), led by Pierre Mulele, still hold their own against Congolese troops. Though one of the Congo's provincial presidents recently sent Premier Cyrille Adoula a hippopotamus, the traditional sign of loyalty, it is clear that the Congo's 21 provinces remain precariously balanced on the brink of anarchy.

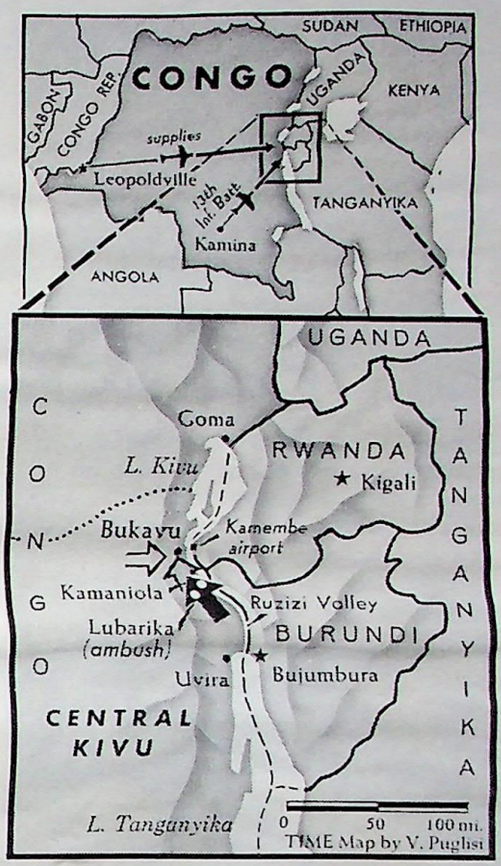
To counter the *plastiqueurs* of Leopoldville, Adoula imposed a 6 p.m. curfew, and now each day when the sun sets over the Congo River, Leo is transformed into a ghost town. Adoula also closed his border with the neighboring Brazzaville Congo, where the Peking-backed Congolese National Liberation Committee has its Western headquarters. Formed by politicians loyal to the late Patrice Lumumba and imprisoned Antoine Gizenga, the rebel group is determined to carve up Adoula's tottering nation. Last week, in bucolic, mountainous Kivu province, where the Congo borders Rwanda and Burundi, the rebels were well on their way to success.

Panic & Poo-Poo Guns. Egged on by a Liberation Committee agent, a loosely organized band of 5,000 pygmoid Bafulero tribesmen rose against the Congolese army. Armed with poisoned arrows and "poo-poo guns" (homemade muzzle loaders that fire bolts and nails) and anointed with *mai Mulele* (Swahili for "water of Mulele"), the 5-ft.-tall warriors believed they had been filled with a juice that made them invulnerable to bullets. In their first encounter with government troops, screaming, white-painted Bafulero died



UPI

PREMIER ADOULA
Could a hippo help?



in droves under a hail of bullets near the village of Kamaniola (*see map*).

When a government patrol was attacked by spearmen at the village of Lubarika, the troops fled, leaving their commanding officer skewered in the dust. As the panic-stricken patrol sped north, government soldiers along the way were infected with their fear, and news of the "massacre" spread. By early last week, there were no Congolese soldiers left in the Kivu capital of Bukavu, and the rebels threatened to take the entire province, once the coffee-producing pride of Belgian white settlers.

Chaos & Countermeasures. In Bukavu, U.S. Consul Richard Matheron burned his secret papers, armed his staff and two American newsmen on the scene, and began evacuating women and children. The government's local commander, who had been a sergeant in the Belgian *Force Publique*, regrouped 300 of his men in Bukavu, got advice over the phone from three Belgian colonels and his former commanding officer, now Belgian Ambassador to Burundi. Premier Adoula swallowed his pride and asked the U.N. for help. In flew a U.S. Air Force C-130 with armored cars and reinforcements. For the moment, the pygmoid threat to Bukavu seemed to have diminished. But the Congolese soldiers were taking no chances against *mai Mulele*: their witch doctors told them to wrap grass around their gun barrels in order to counter the magic water of the Bafulero.

Workmen were busy erecting a reviewing stand in Leopoldville's Ivory Market for the Congo's fourth Independence Day celebration on June 30. With the U.N. force pulling out finally and emphatically on that day, the cheers could ring hollow.

CUBA

Can't Anyone Here Play This Game?

Fidel Castro must have laughed till he split his fatigues. Incredibly, disastrously, Manolo Ray, the Cuban freedom fighter who had promised to be operating inside Cuba by May 20, was exposed as a bungling amateur. Worse, Fidel did not have to lift a finger. The British, with an assist from the U.S. Coast Guard, put the damper on what was surely the most ludicrous act yet in the endless, tragicomic opera of anti-Castro moves.

Five days before the May 20 deadline, the exile leader had quit his job

AP

RAY BOUND FOR TRIAL
Hiding in a hole.

in Puerto Rico and dropped out of sight. For two weeks, nothing was heard from him. Miami tingled with stories that Ray was in Cuba, carrying out a cleverly conceived plan to harass and eventually topple Castro. As it turned out last week, Ray did not start until May 24 and never set foot in Cuba.

Everybody Knows. Following standard procedure, Ray and his seven companions, including a woman radio operator, were launched from a CIA-sponsored "mother ship" that obligingly runs exiles to within striking distance of Cuba. As Ray and his men later told it to TIME Correspondent Ed Reingold, the weather was terrible the first few days, and Cuban patrol boats were everywhere. "Big, fast boats," recalled one of the infiltrators. "We saw ten in all." So the small band zoomed around tiny keys that lie between Florida and Cuba, testing their 24-ft. catamaran and tinkering with their boat's two 100-h.p. Volvo inboard-outboard engines. The Volvos were gobbling gas and running hot at high speed. Nevertheless, Ray finally decided that the time had come. The five FN Belgian rifles with flash suppressors, 1,000 rounds of ammunition, hand grenades and masses of plastic explosives were unloaded for a final check at the Anguilla Cays, where Ray planned to make a last radio transmission.

The good thing about the Anguilla Cays is that they are only 40 miles off the Cuban coast. The bad thing is that everybody knows it. Castro watches them; so do the British who own them, and the U.S. sends over numerous reconnaissance flights. So it was hardly surprising that Her Majesty's destroyer *Decoy* steamed up to look around. But it surprised Ray and his group. Frantically, they tried to hide their equipment. Then five of the party, including two freelance photographers, gunned away in the catamaran, hoping to decoy the *Decoy* away from the island while Ray stayed behind.

A Green Lump. It didn't work. The quite-competent-thank-you British captain saw the launch departing and sent a landing party to see what it might be leaving. "I found a shallow hole," related Ray, "and I threw myself down in it and covered myself with a green cloth. I crossed my arms and put my head down and hoped they wouldn't find me. They almost didn't." But on the second search of the island, one British sailor noticed the green-covered lump and hustled Ray to his feet.

Meanwhile, back at the launch, the Cubans were holding their own against the pursuing destroyer. But it was all over when two U.S. planes showed up and began dropping messages, the third and decidedly last of which ordered them to heave to or risk a barrage of 4.5-in. shells.

And so Ray and his party were carted back to Nassau to stand trial for illegal entry into the Bahamas. At first, when police discovered Manolo's identity, the group tried to arrange for another Cuban to take his place at the trial. Next, a CIA type showed up, gave a different name to each newsman present and prepared to pay whatever fine was levied against the culprits, explaining that he was a "friend." At the trial, the Cubans were all so busy jostling around Ray to conceal him from photographers that no one could have missed him, and one newsman happily snapped Ray framed under a protecting armpit. The terribly understanding Nassau judge meted out $14 fines to each of the eight, plus a warning never to trespass again.

Aside from the CIA's less-than-glorious role, the depressing thing about the whole sorry business was that Manolo Ray up to last week was considered a small but genuine threat to Castro. A former Castro ally, he had the bearded one so worried that Cuba went on a full-scale military alert; scores of suspected Ray supporters were arrested, and Castro announced the execution of eight "CIA men" in the last fortnight. Unless the whole thing was some exceedingly devious ploy, Ray's dunce-[cap] for failure seemed all the bigger, [as] have experience, and we are just [as] determined as we were," he said [after] the Nassau trial. "We think it will [be] easier next time. Fidel knows me, [and] he knows I'm coming." That may [be] so, but after last week's fiasco, [he] may not care.

BRITISH GUIANA

Working to Divide

Premier Cheddi Jagan's govern[ment] last week washed its hands of all re[-] sibility for maintaining law and or[der] the strife-torn South American co[lony]. In a teary speech to British Gui[ana's] Senate, Janet Rosenberg Jagan, [the] Cheddi's Chicago-born, Commu[nist]-sworn wife, announced her resigna[tion] as Minister of Home Affairs after a [year] in the job. Janet accused her own [party] of racism and sabotage, charged [that] the 90% Negro force is bitterly [anti-] Jagan, has done nothing to halt persec[u-] tion of the country's Jagan-supporting East Indians.

Actually, British Guiana's Marx[ist] husband and wife team have themselves busily stirred up racial trouble by [urg-] ing on East Indians to support "to the death" Cheddi's demand for immediate independence from Britain. And [they] contributed mightily to the curr[ent]

Latest version of the world's most versatile airlifter

This is the C-130E version of the famous Lockheed Hercules. It is just as rugged, reliable, functional, and versatile as the other Hercules models — but it flies farther with more cargo. And it can land on short, rough fields or ice and snow equally well.

The C-130E, like all Hercules aircraft, will accept unitized, containerized cargo units and outsize items straight in through its huge rear doors. Or vehicles may be driven directly into the cargo hold on a built-in ramp.

Other interesting C-130E statistics: gross weight, 155,000 lb.; takeoff ground roll, 4,000 feet at maximum gross weight; cruising speed, 350 m.p.h.

The Hercules is a proved aircraft, in worldwide use. Now in its seventh continuous year of operation, it has made aircraft history in every corner of the free world. Today, there are nearly 700 C-130s flying for 7 nations in 21 different versions.

BRAZIL

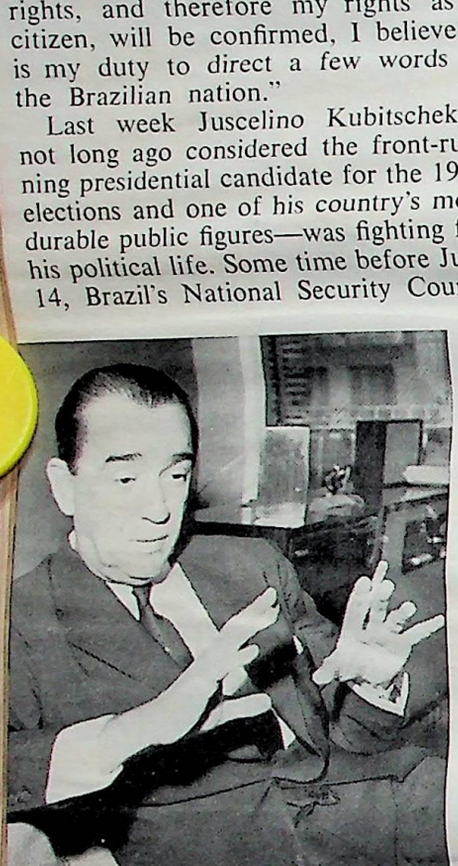
Seeds of Injustice?

The tired, drawn figure rose wearily in his seat in Brazil's Senate chamber and switched on a microphone. Gone was the familiar exuberance, the wall-to-wall smile. "I am overcome by the most terrible sadness I have ever known in my whole public life," said Brazil's onetime President. "In the expectancy that the cancellation of my political rights, and therefore my rights as a citizen, will be confirmed, I believe it is my duty to direct a few words to the Brazilian nation."

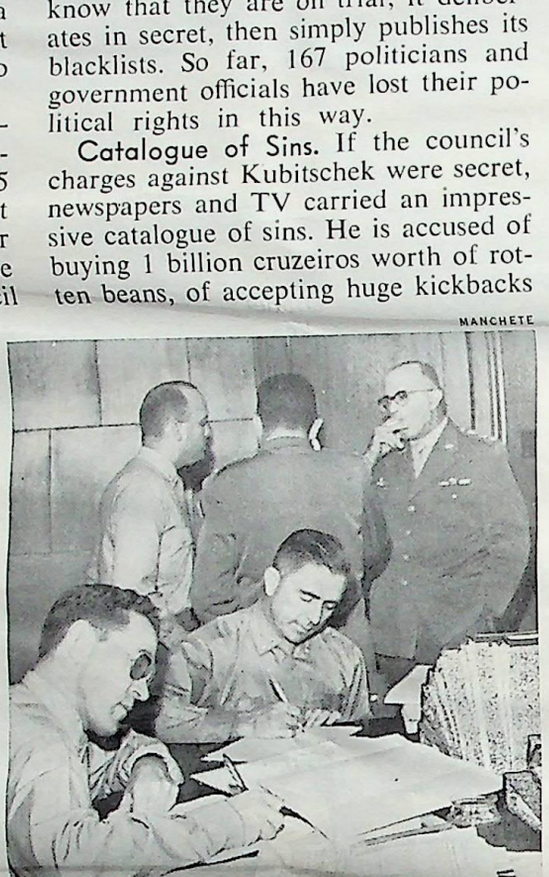
Last week Juscelino Kubitschek—not long ago considered the front-running presidential candidate for the 1965 elections and one of his country's most durable public figures—was fighting for his political life. Some time before June 14, Brazil's National Security Council hard-bitten old War Minister—decided to settle matters with the ex-President as well. Their weapon was the National Security Council, composed of Cabinet ministers and key military leaders. While the fight against both Communism and graft remains urgent after Goulart's disastrous, Red-leaning misrule, some of the council's methods are alarming. The council denies suspects the right of defense, the right to know the specific charge, even the right to know that they are on trial; it deliberates in secret, then simply publishes its blacklists. So far, 167 politicians and government officials have lost their political rights in this way.

Catalogue of Sins. If the council's charges against Kubitschek were secret, newspapers and TV carried an impressive catalogue of sins. He is accused of buying 1 billion cruzeiros worth of rotten beans, of accepting huge kickbacks

MANCHETE



FORMER PRESIDENT KUBITSCHEK



INVESTIGATING OFFICERS

"I will not be intimidated."

will blacklist another group of Brazilians accused of Communism or corruption, depriving them of all political rights for the next ten years. On the list will be Congressmen, Senators, diplomats, businessmen, at least three state Governors, and some Cabinet members who served under deposed President João Goulart. At the top of the list, unless Brazil's new leaders back down, will be Kubitschek.

One More List. As Brazil's President from 1956 to 1961, Kubitschek raised farm and livestock output 37.9%, steel production 100%, aluminum production tenfold, oil production fifteenfold; he built the auto industry from scratch toward its present level of 174,000 units a year, added thousands of miles of roads and the new $600 million inland capital of Brasília. But he also touched off an inflationary spiral and made many enemies with his damn-the-cost drive. After he left office, rumors of corruption constantly swirled around his administration; so far, however, there has been no proof.

When Goulart was tossed out last April, Kubitschek's enemies—among them Artur da Costa e Silva, Brazil's on construction jobs, awarding contracts without public bid, stealing federal funds and committing election fraud. Then there is the Communist angle. He is supposed to have signed a secret 1955 agreement with Communist Party Boss Luis Carlos Prestes to get his election support, encouraged Communist infiltration in his government, then paid Prestes $50,000 for his support in the 1965 elections.

Kubitschek's supporters prepared a White Paper to "prove" his innocence, sent a petition to President Humberto Castello Branco. The Brazilian Council of Bishops also did some petitioning. "Let those who are accused have the sacred right of defense," the bishops pleaded. Answered the chairman of the Central Investigating Committee: "Defense is impossible."

As word got out that he was up for blacklisting, Kubitschek issued a rare press statement. "I will not retreat," he said. "I will not be intimidated." He persisted all the way into the Senate chamber last week. "The revolutionaries have turned against the most sacred concepts of the law," he cried. "This tyrannic act, banishing me from public life, is staining and marring the revolution undertaken to save us from Communism. The seeds of injustice, of arbitrary action, of ill will, will take root . . . The blow they want to strike against me will strike instead at our democratic life."

BOLIVIA

A New Mandate

The grey clouds of South American winter hung low over La Paz as a blue, bulletproof Cadillac pulled up to the newly constructed grade school. Bolivia's President Víctor Paz Estenssoro stepped out, strode into the crowded schoolyard and took his place in line. "We are here to vote," he said simply. After a 25-minute wait, Paz dropped his pink ballot into the box, dipped a finger into a cup of red ink to prove he had voted, then drove off to attend to other affairs of state.

So it went last week throughout Bolivia. In calm, peaceful balloting, the Andean nation's voters turned out to elect Paz to his second straight term and his third since the 1952 revolution that toppled the country's feudal ruling aristocracy. All threats of anti-Paz demonstrations, violent strikes, even hints of an assassination attempt proved empty. Early returns gave Paz 677,000 votes, a clear majority of the country's estimated 900,000 eligible voters and more than enough to secure his mandate for another term.

Two weeks before, Paz's enemies, led by Juan Lechín, leftist boss of the country's tin miners, had withdrawn from the elections, urging all voters to abstain or cast blank ballots in protest. Two days before the vote, Lechín and Hernán Siles Zuazo, onetime President (1956-60) and a former Paz supporter, went on a hunger strike hoping to mobilize public opinion against the President. But on voting day, abstentions and blank votes ran only 20% or so, and the hunger strikers soon started eating again.

The best Lechín could do was call his tin miners off the job. By the morning after the election, most of the country's tin production had shut down. Paz coolly shrugged it off. "The strike," he said, "will last only three or four days because the miners don't want to lose their production bonus." Sure enough, three days later, the miners were back.

Lechín and Siles then announced the formation of a "National Revolutionary Front" to unite most forces, both left and right, in opposition to Paz. If it lasts, the Front will be the first sizable, organized political opposition in Bolivia since the 1952 revolution. But Paz remained unexcited. "I don't believe we are going to have a counter-political problem," he said. Referring to his former political allies, he added: "Some people are necessary for the early part of a revolution, others for a later stage. When the revolution enters the construction period, these people aren't necessary."

PEOPLE

When her dad said he would vote for L.B.J., the G.O.P. had the distinct sensation of being kicked by a mustang. Now a filly is bolting the stable too. Charlotte Ford, 23, Henry's eldest daughter, has joined a group called Young Citizens for Johnson.

• • •

Big fat cigars used to be Wall Street's symbol, but today they're the stuff that comrades are made of. Soviet U.N. Delegate Nikolai Fedorenko, 52, lit up his Empresa Consolidada at a World's Fair luncheon last week, puffed a cloud of smoke at his U.S. counterpart, Adlai Stevenson, 64, and chuckled, "It's a Havana, of course, the best. Revolutionary!" Lately, however, Fedorenko has been indulging in a pretty counterrevolutionary bourgeois-capitalist deviation. In the Security Council, he has been seen chomping American chewing gum; and who knows, if word of that gets back to the Kremlin, Nikolai might wind up doubling his pleasure, doubling his fun, somewhere in outer Kazakhstan.

• • •

He has been dead only a year, but petitions from throughout Italy pour in beseeching the Vatican's Sacred Congregation of Rites to start proceedings for the beatification of Pope John XXIII. As the first step toward canonization, beatification requires lengthy investigations (lasting 40 to 60 years) and proof of two miracles; but the villagers of tiny Sotto il Monte, where John was born, are confident that one day he will be "Blessed John." Already, the parish priest says, he has heard of a girl recovering her eyesight and an aged man regaining his health through prayers to the late Pope for his intercession with God.

the orchestra's sleeper hit of the season. How does the top pop get in the mood for the mop-top hop? It's very simple. He puts on his thinking wig.

• • •

Way down in Greenwich Village, where the elite meet to beat, once stood an off-Broadway citadel called The Living Theater. Its keepers were Julian Beck, 38, and his wife Judith Malina, 37, and because they were "artists" they also kept their federal taxes. There wasn't enough money there to save The Living Theater (it died), but naturally the IRS haled them into court, and naturally they had a theatrical ball conducting their own defense, and naturally a bunch of squares found them guilty of avoiding taxes. "Victims of injustice!" squealed the Becks at the verdict. "Innocent! Innocent!" The long-suffering judge found them guilty of contempt as well, sentenced Julian to 60 and Judith to 30 days in jail. It would take more than that to upstage Judy. She soon had the galleries sobbing as she proclaimed how lucky she was to be loved by a man like Julian, who once "stood by while six men beat me with clubs and did not move—not because he is a coward, but because he loves nonviolence more than me."

• • •

Somebody must have known where the fire was, but it wasn't the driver of the big red fire engine on the road outside Athens, because he slammed on his brakes to ask which way. The Thunderbird trailing behind was tooling along at the usual fast pace of its owner, Greece's dashing bachelor King Constantine, 24, with his sister, Princess Irene, 22, and it did not stop on a drachma. Instead, it crashed into the rear of the fire engine. The reigning monarch and Irene came out of the accident with a few bumps, but the front of the car was a wreck, and Premier George Papandreou still has the shakes, because while Constantine may not be the world's greatest driver, he is the only male member of the Greek royal family.

• • •

Two years after his father was hanged in Israel for his role in the extermination of 6,000,000 Jews, Horst Adolf Eichmann, 23, a mechanic, hung a swastika flag in front of his Buenos Aires home and goose-stepped off to a nearby bar for a press conference. Announcing he had joined Argentina's Neo-Nazi National Socialist Party, he declared that the reason for his adopted country's troubles was "the Zionists, who through their trusts and monopolies are carrying out their program for world exploitation. My father fought those who are suffering from the international Zionist conspiracy." Added Horst: "On this anniversary, I want to remember that he did not die in vain."

• • •

A guy can't eat lunch with his friends any more—not if the place is a Broadway chophouse, the friends are eminent Manhattan bookies, and the guy happens to be onetime Rackets King Frank Costello, 73. Poor Uncle Frank. (That's what the doorman at his Central Park co-op calls him.) The feds cut in at the gefilte fish, hauled the bookies down to the courthouse for failure to buy their $50 gambling stamps, brought Costello along on a vagrancy charge, being, as the law says, "without visible means of support." Fortunately, his attorney explained that he was "retired," and even the New York Civil Liberties Union came to his defense. "An outrage!" barked its counsel, Emanuel Redfield. "An action of a police state, not a democracy!"

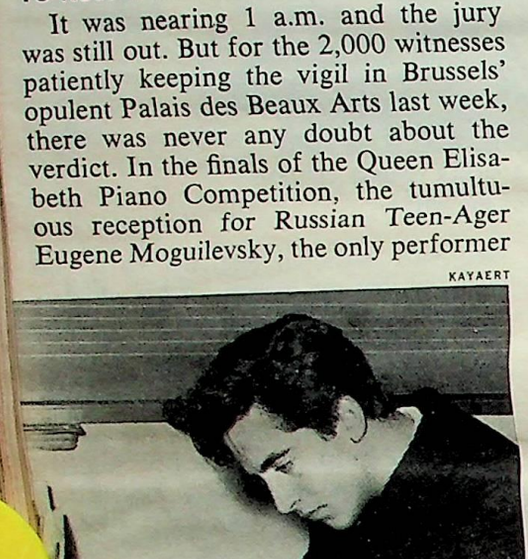
CONTESTS

To Russia with Ease

It was nearing 1 a.m. and the jury was still out. But for the 2,000 witnesses patiently keeping the vigil in Brussels' opulent Palais des Beaux Arts last week, there was never any doubt about the verdict. In the finals of the Queen Elisabeth Piano Competition, the tumultuous reception for Russian Teen-Ager Eugene Moguilevsky, the only performer among the record 70 contestants to receive a standing ovation, was evidence enough.

KAYAERT



MOGUILEVSKY IN TRAINING
A matter of discipline.

The judges agreed with the audience and awarded the $3,000 first prize to the tearful Moscow Conservatory student, while Belgium's Queen Elisabeth herself, an 87-year-old wisp of a woman regally draped in white, excitedly waved her approval from the royal box. Just 18, Moguilevsky, whose parents teach piano at the conservatory at Odessa, displayed a dazzling technique deftly tempered with a controlled maturity of approach. He is the youngest pianist to ever win the coveted Queen's crown. "Moguilevsky has everything," raved *La Dernière Heure* critic Pierre Modaert, "a blessed musical nature . . . great artistic presence." Echoed the Flemish daily De Standaard: "A blessed musical nature."

Quality, Not Quantity. The youngster's triumph, the sixth time in eleven tries that a Russian has earned top honors in the prestigious international competition, was a particularly bitter pill for the older U.S. contingent to digest. With 20 entrants, by far the largest delegation among the 28 countries represented, the Americans had clearly come to conquer. But in the two withering weeks of elimination rounds, quantity gave way to quality, leaving but four American hopefuls to compete in the contest finals along with three of the five rigorously trained Russian entries.

Exiled in an isolated mansion with no liberty privileges, the dozen finalists dug in for one last hellish week of practice, practice, practice. All but the Russians chafed under the regimen. While Anton Kuerti, 28, most promising U.S. contender, kept the other tenants awake into the small hours slaving at the keyboard a minimum of twelve hours a day, the well-prepared Russian trio held their practice sessions to four hours at the most, then blithely played soccer and lounged on the sloping lawns. It was downright disconcerting. "To us Americans, that week was like jail," groaned Michael Ponti, 26. "To them it was a paradise."

Pingpong. Some, like France's Evelyne Flauw, who fled the stage sobbing and gulping tranquilizers, cracked under the pressure. The skittish Americans turned in credibly flashy but often expressionless performances, were faulted for losing control of their pyrotechnical bursts. Results: the disciplined Russians placed first, second and seventh; the Americans fourth, fifth, sixth and eleventh.

Coolest of the lot was Winner Moguilevsky. An hour and a half before he was to walk on stage, he unconcernedly primed himself by heartily polishing off a steak and playing pingpong.

DANCE

Style in Stuttgart

Dancers from virtually every major opera house in Europe tripped into Stuttgart. They came not to dance but to huddle in the wings and watch the latest creations of Württemberg State Opera Ballet Director John Cranko, who has built a reputation among dancers and audiences alike as the most creative young choreographer in all of Europe. At the conclusion of last week's annual Ballet Festival, the burgeoning army of Crankophiles was more enthusiastic than ever.

For openers, the company staged its *pièce de résistance,* a robust rendering of Prokofiev's *Romeo and Juliet,* followed by a lavish, streamlined *Swan Lake* featuring nothing less than the reigning tandem of Margot Fonteyn and Rudolf Nureyev, who had volunteered their services and spent one week of intensive rehearsals mastering the myriad refinements of Cranko's interpretation. But the creation that stirred the most frenetic response from the crowd was the première of a handsomely preened and plumed production of Stravinsky's *Fire Bird,* grounded in the Fokine tradition but soaring to new heights on the wings of Prima Ballerina Marcia Haydée's flattering, levitating flight through a la forest primeval.

CRANKO

All & More. For Cranko, 37, a spare gentle man of steely determination, the festival was one more step toward realizing his vision of expanding the horizons of his company "to encompass and incorporate all known dance forms and then add some more." A native of South Africa, Cranko first became hooked on ballet while working as a puppeteer in Cape Town, soon pulled other strings to land a job in 1947 with London's Sadler's Wells Theater Ballet as a dancer and sometime choreographer. Five years later, critics were calling him "the young hope of British choreography." Lured as a choreographer with the Royal Ballet, he carved a reputation for uncommon versatility and invention. But always he nurtured a burning itch to discover and develop a new "pattern of movement and expression which is already deeply ingrained into the mainstream of our artistic experience and potential." He longed for his own ballet company, and when he got an invitation from Stuttgart five years ago, Cranko leaped at the opportunity.

Since Noverre. The fruits of his Stuttgart efforts first appeared on the international scene at last year's Edinburgh Festival, where his achievement was hailed as "staggering" and "beyond praise." Yet for all the lavish encomiums, Cranko is the first to admit that he and his relatively small company still need five or more years of maturing before they are ready to lay claim to the authentic "Stuttgart style" label some critics have already begun to discern in glowing, enthusiastic terms. But one thing is already certain: not since the city's celebrated Ballet Reformer Jean Georges Noverre set out two centuries ago "to smash the masks, to burn the wigs, to present a spirit which rises high in the realm of the creative art" has old Stuttgart seen so much style.

STUDENTS

"A Nourishing of Excellence"

It was former Schoolteacher Lyndon Johnson's own idea: the accolade of "presidential scholar," to be bestowed on outstanding students as they finished high school and headed for college. Announcing the program in April, the President said, "These awards are to recognize the most precious resource of the United States—the brain power of its young people—to encourage the pursuit of intellectual attainment among all our young people." This week the first year's scholars, 121 strong, gather in the White House for a presidential handshake and a medal designed by sculptor Jacques Lipchitz.

Winners were chosen by a committee headed by Dr. Milton Eisenhower. The 500 finalists were screened by the National Merit Scholarship Corporation primarily from top performers on its own tests and on the "college boards" given by Educational Testing Service. Virtually all the scholars scored in the mid 700s on the college boards and no less than 15 had perfect 800s. Half a dozen had perfect National Merit exam scores, supposedly impossible.

The first presidential winners include 64 boys and 57 girls, who will attend 73 different colleges and universities. Surprisingly, only one winner will study medicine, but 31 plan to major in math, 13 in physics, seven in chemistry. In whatever field, the 121 honored teenagers prove that the country's "greatest resource" is a rich and varied lode. Some standout scholars:

▶ Jill Ramsey of Briarcliff Manor, N.Y., scored two perfect 800s and a 795 on her college boards, may major in anthropology or Spanish at Stanford. Last year as a summer project, she helped to build a clavichord.

▶ Elaine Leachman of Los Alamos, N. Mex., speaks French, Spanish, Swedish, Russian—and Danish acquired while her physicist father was posted at the Nils Bohr Institute in Denmark. In Copenhagen she won second place in a French contest, represented Denmark on a trip to Paris. She helps with a class for retarded children, will train as a language teacher at Stanford.

▶ Jeffrey Liebman of Evanston, Ill. got a four-minute standing ovation when the President's telegram was read to a student assembly. He heard not a clap of it, having been deaf since birth. He attends Evanston's college-sized Township High, reads lips so fluently that some classmates are unaware of his deafness. Hugely versatile, Jeffrey was a state winner in the Science Talent Search for his experiment on fast evaporation, won a Carnegie Tech creative-writing prize for an essay on Salinger and Kafka, a national prize for a one-act play, and a letter for wrestling. He will major in chemistry at Oberlin.

▶ Paul Kenneth Hansma of Scottsdale, Ariz., "just seemed to drift into science," has built everything from a cloud chamber to a solar furnace to an electron accelerator. For a hobby he builds fountains, is now on his ninth. He studies with stereo earphones whispering light classical music to him. He will attend New College in Sarasota, Fla., move on to postgraduate research in physics.

▶ Jacquelyn Faye Evans of Little Rock, Ark., made her achievements (straight A's) amid notably tense circumstances as one of the few Negro students to enter and stay at Little Rock's Hall High School after it was integrated by federal troops. "The identity crisis was there at first," she says, "but I got along fine." She reads 1,800 words a minute, will go to Radcliffe on a scholarship.

▶ Dale Gieringer of Cincinnati is towering physically (6 ft. 3 in., 190 lbs.) and intellectually (he tops his class of 289). "A youngster with a brain like this is awesome," says one teacher at Walnut Hills High. In free time, Dale programs computers at the University of Cincinnati's Kettering Laboratory ("It's just a job, really"). Dale took up astronomy at six, and his prime interest is "where physics, math and astronomy meet—cosmology, deep space distribution of matter." He hopes after Harvard to join NASA or become a research astronomer at an observatory in Australia or South Africa.

TEACHING

Reading by Rainbow

Teaching English by pure "look-say"—the theory that children need only recognize shapes of whole words rather than individual letters or syllables—is discredited in the U.S.; 30 years of trying it produced two generations of bad spellers and etymological ninnies. But going back to pure phonics does not answer the original objection that learning English's brain-busting disparities of spelling is dull and slow. In Washington, before a class of 29 illiterate adults and teen-agers, a teacher named Caleb Gattegno demonstrated a speedy means of teaching reading by an ingenious system of color-coding sounds.

Londoner Gattegno, 54, who made a lot of money by introducing the Cuisenaire rods that help moppets to master math (TIME, Jan. 31), uses a rainbow-hued set of word charts. They give each of English's 20 vowel sounds a color of its own. Thus the u in *up* is printed in yellow, and so are the identical-sounding *o* in *done*, *oe* in *does*, *oo* in *blood*. The *o* in *no* is tan, and so are seven other spellings that sound the same, like the *eau* in *beau* and the *ough* in *though*. There are 27 colors for consonant sounds. The sound of *n* in *no* is lavender, as is the *kn* in *know* and the *gn* in *gnat*.

Visual Dictation. Learners first master short pronunciations of the five vowels (the *a* as in *at*, *e* as in *pet*), then some consonant sounds (*p*, *t*, *s*) to provide the components for a lot of words. Using what he calls "visual dictation," tapping the charts with a pointer, Dr. Gattegno lets students discover with delight that strings of sounds make words, then whole sentences, including such swinging examples as "Pat met on a mat a man as fat as Tim." The decipherability of language thus established, the drill moves on to tougher orthography: *weigh*, *height*, *eye*, *diaphragm*, for example.

"Color serves as an extra dimension to help the learner associate the image of the letters with the sound until he has mastered it," explains Gattegno. "It makes nonphonetic English a phonetic language without changing the traditional spellings." Once sounds are

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

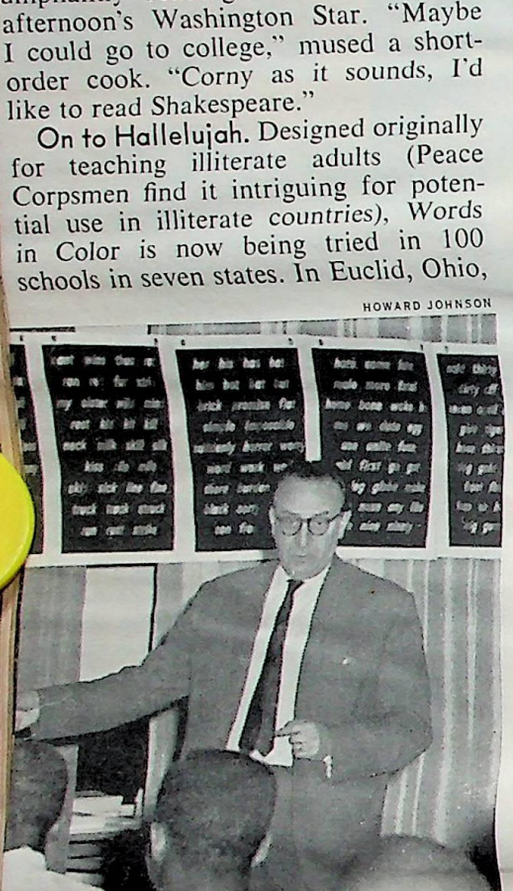
Digitized by Arya Samaj Foundation Chennai and eGangotri

learned, the rainbow fades. Class books are in black on white, and students write in ordinary black. "Within six weeks they seem to rely mostly on form, referring back to the color charts when they have problems in working out words," reports a teacher.

On the second day of the Washington demonstration, Dr. Gattegno's pupils, certified as "functional illiterates" by the welfare department, were triumphantly reading stories from that afternoon's Washington Star. "Maybe I could go to college," mused a short-order cook. "Corny as it sounds, I'd like to read Shakespeare."

On to Hallelujah. Designed originally for teaching illiterate adults (Peace Corpsmen find it intriguing for potential use in illiterate countries), Words in Color is now being tried in 100 schools in seven states. In Euclid, Ohio,

HOWARD JOHNSON



INVENTOR GATTEGNO & WORD CHARTS
How by hues.

where a pilot project was launched last year, five-year-olds read simple stories, first-graders whip through fourth-grade readers. "What do brown, light orange, magenta make?" the teacher will ask. "Pot!" cry the kids. Dr. William Jordan, assistant head of the elementary schools, says: "We have never seen such progress. Our color readers are far ahead of any comparable groups." Students conquer the course, through such words as *schist* and *hallelujah,* in six weeks to six months.

Learning so relentlessly nonphonetic a language as English will never become effortless, and Words in Color may be overrated by some of its spectacular early successes. Yet for its happy discovery that symbolic color sticks in an illiterate's brain quicker than a shape, and its basic expansion of the alphabet (from 26 letters to 47 colors) to match the language's sounds, it gives promise of turning into an educational hit (light blue, pink, magenta).

HORSE RACING

Q & A

"Horses for courses," the old saying goes. It was never truer than last week, when a big bay who fancies Aqueduct Race Track the way most horses fancy sugar cubes, won the Belmont Stakes—thus dashing Northern Dancer's hopes of becoming the first Triple Crown winner since Citation in 1948.

Trainer Elliott Burch worried for a week before he decided to enter Quadrangle in the race. Paul Mellon's handsome colt has the look of a classic horse: at 16.1 hands and 1,100 lbs., he is one of the biggest three-year-olds in the U.S. And he has breeding to match: his sire, Cohoes, won stakes at two, three and four, and his dam, Tap Day, was a daughter of Calumet Farm's great Bull Lea. But in the Kentucky Derby, Quadrangle finished fifth behind Northern Dancer; in the Preakness, the best he could do was fourth. Still, Burch decided to gamble, and the deciding factor might well have been Quadrangle's record at the Big A; four firsts, one second in five starts.

Worst of the Three. But try and tell that to the fans. On race day, 61,215 of them—biggest crowd in the Belmont's 96 years—were in the stands, and Northern Dancer, at 4 to 5, was clearly the people's choice. Why not? The Canadian-bred colt had won the Derby and Preakness with ease. The only thing against him was history. At 1½ mi., the Belmont is the longest of the Triple Crown races, and in the 15 years since Citation, odds-on favorites have lost seven times. Two, like the Dancer, were trying for a triple: Tim Tam in 1958 (a broken-legged second), and Carry Back in 1961 (a dismal seventh).

At post time, the odds against Quadrangle were 13 to 2. Jockey Manuel Ycaza thought that was pretty funny. "This is a free-running colt," he said. "He can beat any horse in the country." As if to prove it, he urged Quadrangle into the lead at the start, then eased up. Other horses pounded past: California's Hill Rise (2 to 1) and long-shot Orientalist (42 to 1) dueled for the lead; Quadrangle slipped back to fourth, and Northern Dancer was running fifth. Suddenly, Orientalist began to bear out from the rail. "I saw that big hole," said Ycaza, "and I said to myself, 'You can steal this race.' " In a wink, Quadrangle zipped past the leaders and opened up a one-length lead.

Carnations for Two. On the outside, aboard Northern Dancer, Jockey Bill Hartack made his move, closed to within a neck. "I leaned over and talked in the horse's ear," said Ycaza. "I kept saying, 'Let's get the Belmont. Let's get the Belmont.' Then I hit him twice." Quadrangle pulled away like an Atlas leaving the pad. At the wire, he was two lengths ahead of Roman Brother, six ahead of Northern Dancer. Jockey Ycaza plucked two white carnations from the wreath around Quadrangle's neck. "One for my wife," he explained, "and one for little Manuelito." For himself, Ycaza plucked something even sweeter: a 10% slice of the $110,850 winner's purse.

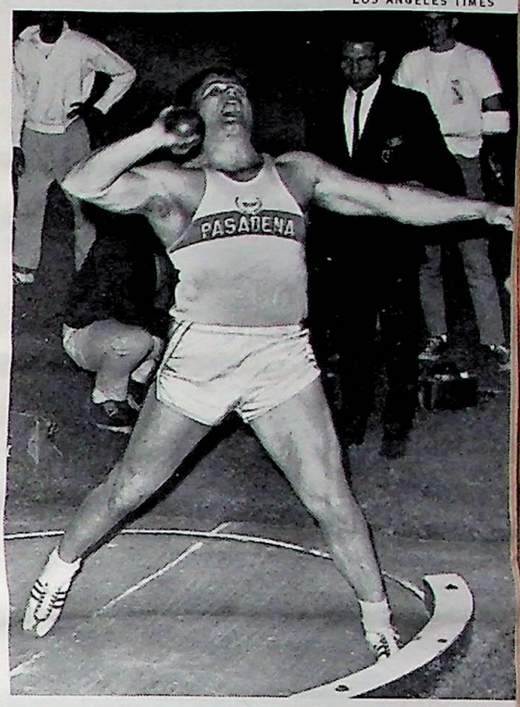
TRACK & FIELD

The Prince of Put

Into the shotput circle at California's Occidental College strode Dallas Crutcher Long III, known to his friends as the Prince of Whales. Hefting a 16-lb. iron ball in one hammy hand, he crouched low, tucked the ball behind his right ear, and began to inch back his left foot like a second-story man feeling his way down a ladder in the dark. Suddenly, he dipped and flung himself bodily across the ring. A grunt, a gasp—the shot soared through the air and thudded into the turf 66 ft. 3½ in. away. For the second time in twenty days—and the third time this spring—Dallas Long had smashed the world record in the shotput.

Strongest Ever. At 23, Long is no longer the fuzzy-cheeked, 255-lb. prodigy who stunned track experts by tying Parry O'Brien's world mark in 1959 when he was only a freshman in college. Married and a father now, he has put on 10 lbs., and his graduate studies in dentistry keep him busy 60 hours a week. He competed only twice all last season, and his haphazard practice sessions this year are limited to two nights a week. "It's always in the dark," says Long. "I used to climb the playground fence at the grammar school down the block, but the night watchman didn't like that much. So now I use a piece of sidewalk in the park."

LOS ANGELES TIMES



SHOTPUTTER LONG
Practice in the dark.

Out of shape or not, Long is still the strongest shotputter who ever lived. In four years at the University of Southern California, he topped 60 ft. an astonishing 69 times, won three straight N.C.A.A. championships, and capped his senior season with a record toss of 65 ft. 10½ in. Nobody has approached that mark since—except Long himself. Last April he got off a put of 65 ft. 11½ in. And one day last month, he showed up at the West Coast Relays in Fresno, limping on a bandaged left foot. "I was working out with pulley weights," he explained. "They weren't heavy enough for me, so I had a guy standing on them. The darned steel cable snapped when the weights were all the way up. They came crashing down on my foot—and drove it into the floor like it was a nail." Whereupon Long warmed up by hurling the shot 65 ft. 3 in. on his first try, then uncorked a toss of 66 ft. 7¼ in.—a full 8¾ in. over his own listed world record. But it went for naught: Fresno officials had unaccountably neglected to put a steel ring around the shotput circle as international rules require.

Prospect of Gold. The bait that lured Long back into competition this season, of course, is the prospect of a gold medal at the 1964 Olympics. He will not lack for competition in Tokyo. Randy Matson, a 19-year-old Texas A. & M. freshman, already has a 64 ft. 10½ in. throw to his credit this spring. But by the time the Olympics roll around, Long may be hurling that 16-lb. ball all the way into orbit. "I've always felt that somebody would hit 70 ft. some day," he says. "And the way I'm going, I ought to do it this year."

BASEBALL

The Man Nobody Wanted

The rightfielder of the Minnesota Twins is a hoax. He calls himself Tony, but his name is Pedro. He has claimed to be 27, but he is really 22. He swings a bat as though he were waving goodbye to his grandmother. And he is probably the only ballplayer in the major leagues who got turned down twice by the minors. But none of that is likely to keep Tony—or Pedro—Oliva from becoming Rookie of the Year and, just possibly, the only player in history to win the American League batting championship in his first big-league season.

The son of a back-country Cuban plantation worker, Oliva was barely 19 when the Twins' man in Havana spotted him in 1960 and offered him a minor-league tryout. He jumped at the chance. Trouble was, he needed a passport, and Cuba being Cuba, that involved all sorts of red tape. So Pedro simply borrowed his brother Tony's—and has been using his brother's name ever since.

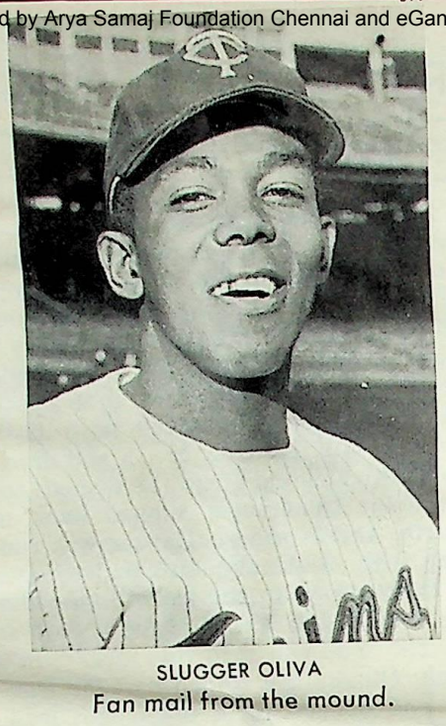
Down to the Ds. The tryout was a washout. After three days, the Twins offered him—free—to the National League's Houston Colts. The Colts turned him down too. At that, Oliva went to visit a buddy who was playing for the Charlotte, N.C., Hornets—a Twins farm club. The Hornets didn't want him either. Out of charity, the general manager got Tony a berth on the Wytheville, Va., Twins, a Class D team in the Appalachian Rookie League. And all of a sudden Tony started hitting baseballs with his unconnected swing.

That first year at Wytheville, he clouted ten homers, drove in 81 runs, and hit .410 for the season—highest batting average in all of organized baseball. Tony had to learn how to field from the first grade up, but he batted .350 at Charlotte in 1962, .304 at Dallas-Fort Worth in 1963, .365 in the Puerto Rican League last winter, won a starting berth with the Twins this spring. In his first 100 trips to the plate, he collected 43 hits, and his average has not dropped below .380 since. Last week Oliva was leading the American League in batting (.389), runs (41), hits (77), doubles (12) and triples (5), and ranked sixth in home runs (with 11).

There is always a chance that opposing pitchers will find some way of getting Tony out. Nothing yet has worked—not even the ultimate weapon. Pitchers call it the "brushback"; batters call it a beanball. It is the highest compliment a pitcher can pay a hitter, and Oliva has been getting a lot of fan mail from the mound. He has eaten dirt at least a dozen times this spring. Things have reached such a stage, in fact, that Twins Manager Sam Mele has ordered retaliatory measures. "Anybody knocks Tony down, he gets knocked down himself," he tells Twins pitchers.

Out Like a Marble. "If nothing happens to upset that natural ability," says Mele, "Tony can be one of the game's great hitters." Only one bad thing seems remotely likely to happen to Oliva: choking on a chuckle. A gold tooth gleams in his constant smile, and his laugh explodes like a marble popping out of a bottle of ginger ale. Tony's English is still practically nonexistent, and he is just beginning to learn his teammates' names. "Big Powder," he calls fellow Cuban Vic Power.

As for opposing players—well, that is just too much to ask. One day, recalls Power, the Twins were debating the merits of Cleveland Pitcher Mudcat Grant. "Tony say, 'Who is this Mudcat? Who is Mudcat?' I tell him, 'Why, you just got two hits off him.' Tony just smile. He don't know Mudcat. He don't know Bob Feller. He don't know Ty Cobb. He don't know nothing. He just smile and show that gold tooth."



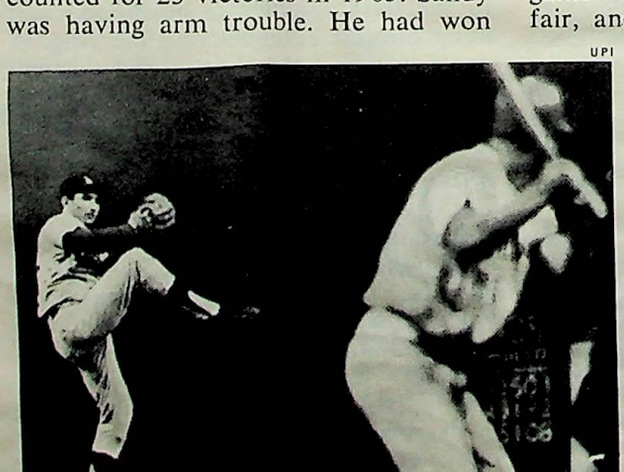
SLUGGER OLIVA
Fan mail from the mound.

A Third for Sandy

The Dodgers were in the doldrums. All spring long, Los Angeles' world champions had been mired deep in the second division. Their fielding was sloppy, their hitting spotty. The biggest disappointment of all was Pitcher Sandy Koufax, 28, whose golden left arm accounted for 25 victories in 1963. Sandy was having arm trouble. He had won only five games, while losing four, and Manager Walter Alston even demoted him briefly to the bullpen.

Last week, against the league-leading Philadelphia Phillies, Sandy roared back to demonstrate that the scorer's K still stands for Koufax. In nine innings, he faced only 27 men—the absolute minimum. Twelve Phillies struck out, and the only one who reached base at all was Richie Allen, who walked in the fourth inning, was thrown out trying to steal second. With the Dodgers leading 3-0 and two out in the bottom of the ninth, Sandy faced Phillies Stopper Bobby Wine. The first pitch was a ball, and Wine fouled the second into the leg of Plate Umpire Ed Vargo. Wincing with pain, Vargo called him out—and the tension mounted. "Ball!" he finally called. Wine whiffed on a second strike. Then, Sandy wound up, kicked his right leg high into the air, and burned a fastball straight across the heart of the plate. Koufax walked off the mound, the fourth player in history to pitch three no-hit games.

UPI



DODGER KOUFAX (THROWING LAST PITCH)
A fastball across the heart.

SCOREBOARD

Who Won

▶ Rice University Star Fred Hansen a new world record in the pole vault with a leap of 17 ft. 1 in. (the old record: 17 ft. ¾ in., by Miami's Jim Pennel), at a track meet in Houston.

▶ Oregon's Dyrol Burleson: a one-step victory over Loyola of Chicago's Tom O'Hara in the mile run at the Compton, Calif., Relays. Burleson was clocked in 3 min. 57.4 sec., and the next seven finishers all cracked 4 min. Wichita's Jim Ryun, 17, came in eighth at 3 min. 59 sec.—fastest time ever recorded by a high school miler.

Who Lost

▶ The New York Mets: the longest single game (7 hrs. 23 min.) and longest doubleheader (9 hrs. 52 min.) in history, both to the San Francisco Giants, before 57,037 supersatiated fans—biggest crowd of the 1964 season—in New York's Shea Stadium. The first game was a regulation nine-inning affair, and the Giants won 5-3. But the nightcap went 23 innings before Catcher Del Crandall, the only able-bodied man on the Giant roster (except pitcher Jack Fisher, who had not yet played, drove in the winning run with a pinch double to give San Francisco an 8-6 victory.

▶ Frank ("Pop") Ivy: the $23,000-a-year job as coach of the American Football League's Houston Oilers of onetime Passing Whiz Sammy Baugh—whom Ivy had coached as an assistant with the losers," exweeks before Owner Bud Adams doesn't like losers won 17 games, plain in Ivy's two seasons. wh

TELEVISION

D-Day, Ike Hour

Television serves best when it serves history, and last Friday night it made history as well. On the eve of the 20th anniversary of the invasion of Normandy, *CBS Reports* presented a program about D-day. It started by showing Omaha Beach as it looks today —bathers, volleyballs, open sky, and little boys playing in the rotted shells of LSTs. Then Dwight D. Eisenhower walked up from the water's edge and began to talk about it.

He talked for 90 minutes, with Walter Cronkite getting a word in occasionally. He talked from a Jeep while he drove it; he talked from the deck of a British frigate; he talked from the window of a German observation bunker; he described the greatest show in military history from plan to execution. Often almost professionally vague as President, Eisenhower as Commanding General was a man of self-assurance and enthusiasm, reeled off statistics with computer ease, and often, as he gestured toward empty stretches of beach or water, film clips would appear, showing the precise scene 20 years earlier, jammed with the action of war.

IKE IN NORMANDY, 1964

Best Bargain. The most fascinating effect of these scenes was a matter of technology, as the program reached back across the nearer distance of Ike's actual presidency to show a man slightly but substantially different, reliving his somewhat presidential generalcy in command of the corporate war. Against the background of the vast invasion, the organization reaching to the horizon, his special colloquial touch stood out retrospectively as the small force that brought the great ones to human size and made the whole huge enterprise go so well.

Sitting in his still-preserved invasion room at Southwick House near Portsmouth, he said that the D-day he had picked was June 5, but "it wasn't in the cards. You couldn't go. The weather was terrible. This house was shaking." Eisenhower recalled the "little grin" on the meteorologist's face when he came in announcing a break for June 6. "It was the best of a bad bargain," Ike told Cronkite. "He predicted this good weather would last between 24 and 36 hours, but I said, 'O.K., we'll go,' and this room was emptied in two seconds."

Waiting Time. With Operation Overlord in motion, there was nothing much for Ike to do but wait nervously for H-hour. Had he indeed written a message to be broadcast in case of failure? Cronkite wondered. "Well, Walter, I must tell you something. I did," said Ike. The message had read: "The landing has been a failure and it's no one's fault but mine." Grinning at Cronkite, Ike shrugged. "If it did fail," he said, "I was going into oblivion anyway, so I might as well take full responsibility."

He went around to see several units of the 101st Airborne Division, and the paratroopers told him not to worry: they would button things up on arrival in France. As they took off, "I watched them out of sight," Ike told Cronkite, who asked if it were true that tears had been observed in his eyes. "It could have been possible," said Ike. "Goodness knows those fellows meant a lot to me."

On Sea & Land. But the greatness of the program was not so much in its superb vignettes as in the experience of watching Eisenhower move through them, whether he was standing on the cliffs of Pointe du Hoc remembering the Rangers ("regular monkeys") who scaled them, contemplating Omaha Beach in a light rain with water glistening on his hat and droplets forming on his nose, or looking out over the water and recalling that the landing craft had trouble "over here, where the currents were so bad."

In the village of Ste.-Mère-Eglise, he sat on a bench with the wife of the wartime mayor. She pointed to the steeple of the church and told him about a paratrooper from Wilmington, N.C., whose chute had caught on it, and how he had hung there for hours, pretending to be dead. Eventually the Germans cut him down and took him prisoner.

In the end, President Eisenhower sat in an American military cemetery at St.-Laurent-sur-Mer and, with thousands of white crosses forming a background for his words, talked about his own son, who had graduated from West Point on June 6, 1944, who had not died in the war, and who had given him grandchildren to brighten his life. There was no sentimentality in what he said, merely strong feeling for the dead who had gone to France, as he put it, to gain nothing for themselves.

IKE WITH 101ST AIRBORNE, 1944
"Those fellows meant a lot to me."

Never before in history has such an immediate and permanent record been made of a general returning to the field of a great battle and describing it in his own words, while film archives supplied scenes of the actual warfare. It was something to see.

It is too bad that CBS is so young. If it had existed 149 years ago, it might have invited Wellington to do a show on Waterloo.

STARS

Miracle on 46th Street

Men about town, or new to it, know the Empire State Building is only a second feature. So are Shea Stadium, Madison Square Garden, the Statue of Liberty, the Guggenheim Museum, Radio City Music Hall and Central Park. For in New York City these days, the fastest, flashiest show around is at the corner of Broadway and 46th Street.

It plays to an S.R.O. audience. Admission is free, the performance scheduled for 11:30 p.m. But sports fans

SIEMENS

If you ask us:

"What's your special field?"

Our special field is the whole spectrum of electrical engineering. For whoever builds a modern power station must also be familiar with instrumentation. Whoever builds electronic computers must have an intimate knowledge of solid-state technology. There are no section barriers in engineering, least of all in electrical engineering. For the Siemens Group it has always been a matter of course to make use of the latest results of research and practical experience acquired on one sector in development work on other sectors as well. The practical implication for customers is that, whether the project on hand is the planning of an electronic computer center, the designing of a special-purpose drive, the construction of a power station, the automation of a steel mill, or the establishment of a communications network: it can always be said to be our special field.

***The Siemens* Group — your experienced partner in all electrical engineering projects**

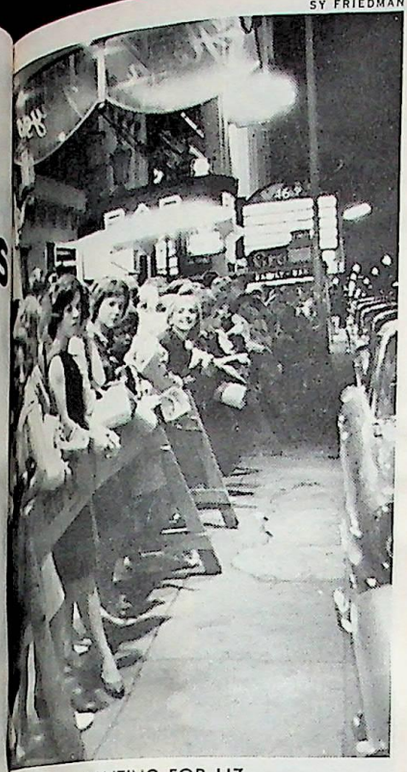
SY FRIEDMAN



WAITING FOR LIZ

Countdown. Blast-off. Squeal.

must jockey for position, and the crowds gather early every night of the week but Sunday. By 11, they are a good thousand strong, amiable at first, ruly and obedient. Some nibble candy bars left over from the movies, others nip from flasks. Excitement mounts. So do six policemen, onto snorting steeds. Six-teen *more* police get the barriers set up along 46th Street and part way across the Broadway exit. The throng fidgets: gloves drop, eyeglasses break, drunks mutter, old men complain and ask to be taken home, sophisticates yawn but stay rooted, teen-agers warm up for the squeal. Someone starts the rumors ("She's gone to Beirut, or Beverly Hills, or some place; she's not here; she's never coming; she never has been here, neither has he"). Always there are peo-ple, deposited by misfortune on the wrong block, who stumble bewildered-ly down theater row, wondering aloud whether Mme. Nhu is back in town or what? But they are adventuresome souls and queue up anyway. The crowd is pushing 3,000, and each other.

Countdown. The door under the dark marquee at the Lunt-Fontanne Theater creaks open. Someone looks out, checks the field, withdraws. And then, blast off. Out of the stage door steps Elizabeth Taylor. She is wearing yellow, or laven-der or green, or rose, or some other color, never anything she has ever worn before or will again. The audience surges forward. She crosses the sidewalk in seven steps or three seconds. Hamlet follows her, not all that melancholy.* Someone flashes a sudden dazzling, billion-

dollar smile and slips into the limousine purring in wait at the curb. It pulls out slowly, flanked by mounted police-men on either side, and creeps leisurely down the center of the street. From the back seat she smiles again, lifts a hand and delivers a wave the way Elizabeth II never properly learned.

By 11:40, the cortege reaches Broad-way and vanishes into the dark. Shrieks long since shrieked hover in the air like radioactivity, echo along the empty trail. The moment is gone, the brief encoun-ter between man and myth is nothing but memory. Manhattan's greatest spec-tacle is over. But only for the night. With *Hamlet* held over until August and nine weeks still to go, his lady is sure to keep the show off the road and onto the street.

BROADWAY

Farce de Frappe

When the girls of the Folies-Bergère filled out questionnaires for the benefit of the American press, many listed their measurements as 90-60-90. Mere report-ers have seldom been entrusted with information of such magnitude. But with a second long look, they realized that the girls were only thinking in centimeters.

That about says it for the Folies-Bergère: in one sense, it promised to be the biggest bust in memory, and in an-other it is. The French revue of flesh and spectacle opened last week in Manhat-tan. Even beforehand, Peeping Toms began to swarm and cluster around the Broadway Theater because they had heard that some of the girls were re-hearsing without so much as a sequin to outflash their natural splendors. But, alas, even a relatively small sequin could do just that.

Near the outset, the girls begin to yip like Chippewas and throw their skirts in the air while the orchestra saws out some Offenbach, and they kick up their legs in what can be precisely described as the can't-can't. Georges Ulmer, the man who wrote the ballad *Pigalle* and who acts as M.C., tells a joke: "The Fo-lies-Bergère is an old institution, near-ly 100 years old. Of course, lately we have changed some of the girls." He does not say which ones, and without radioactive carbon it is absolutely im-possible to tell.

The overall evening is actually part fraudville and part vaudeville, and the vaudeville is quite good. A skillful little dog stands on one paw on its master's outstretched thumb. A girl spins and whirls in the middle of a rope whose ends are held in the teeth of two men. The sexiest item of the evening is a strip-teasing marionette, who bumps, grinds, twists, and removes her bra to reveal the best shape on the hot side of the foot-lights. Patachou, the evening's headliner, is a once-great stylist who still has a touch of Piaf—but not enough.

France has stung America with a *farce de frappe.*

It need not be. When he was out with an inflamed tonsil for two performances last week, roughly 40% of the ticket holders dem-onstrated that they had come to hear Richard Burton or nobody, demanded their money

A Man's Caboose Is Not His Castle

A man's home may be his castle, but if he riles the neighbors, they may have a lot more say about the place than he does. William M. Phillips, feature editor of the Miami Herald, learned that expensive lesson when he decided to install a railroad caboose in his backyard. Phillips wanted some cheap, additional living space for his three children. What he got was a blizzard of bills that have now hit $10,000 and an endless zoning suit that has become the longest in the history of Florida's Dade County. Even worse, he has now been ordered to get rid of the caboose.

Board v. Board. According to Phillips, his most serious error was that he got only verbal permission for his housing scheme from a zoning official, who now denies everything. When the neighbors yowled that the caboose violated the zoning code ban on any "eyesore or nuisance" in Miami, the local zoning board bucked the complaint to the county zoning department, which offered the suggestion that the caboose be painted green, hidden by shrubs and used only as a playhouse. That pleased neither side, so the case ascended to the zoning board of appeals, which ordered Phillips to remove the caboose. Taking to the courts, Phillips lost one appeal after another up to the Florida Supreme Court, which refused to hear him on the ground that his lawyer used the wrong legal approach.

By now, the zoning board of appeals had been stripped of its decision-making authority. Phillips started all over again, and twice he got a recommendation for a variance covering the caboose. But the Metro Commission, which governs the county and has the final word, said no each time. Phillips' neighbors finally asked the state attorney to charge him with criminal violation of the zoning code—punishable by a $500 fine and 60 days in jail for each day's violation.

Injunction v. Injunction. Phillips was so mad that he put a $5,200 mortgage on his house to pay for the fight, and went to court again to enjoin the county from haling him into criminal court. Circuit Judge Joe Eaton ruled that the caboose must go and that the county should pay Phillips $975 for his trouble. Neither side liked that decision either, and both appealed. But the district court of appeals upheld the lower court.

Last week, the Metro Commission voted to pay Phillips the $975 set by Judge Eaton and accept the injunction that ordered him to remove the caboose. Phillips reluctantly agreed to go along. Looking back on the long fight, he says he would have preferred to be prosecuted in criminal court as a zoning law violator. He feels that then he might have pleaded his case before a jury that would have been more sympathetic than his neighbors.

COURTS

Something Mother Would Like

It is one of the proudest tenets of American law that any accused person is innocent until proved guilty. Yet each year thousands of Americans who have been charged with a crime but not yet brought to trial spend weeks and sometimes months in prison. They stay behind bars simply because they cannot afford the price of bail. In an effort to correct the inequities of a practice that, in effect, discriminates against the poor, 450 judges, district attorneys, lawyers, and police from all 50 states gathered in Washington for the first National Conference on Bail and Criminal Justice.

The conferees were all too familiar with the problems. Most judges set bail according to the crime. They give little consideration to a defendant's background, character or financial status. And the man who holds the key to freedom is not even a member of the c
he is a professional bondsman, in

cide, sex and narcotics offenses as too
risky to handle. But the success of the
project strongly suggests that many in-
digent defendants can be turned loose
by sidestepping the old concept of mon-
ey bail and substituting character checks
and supervision (Vera sends special let-
ters and makes telephone calls to re-
mind the *defendants* to show up for
trial). The Vera system would not only
greatly reduce the cost of jailing pre-
trial prisoners—$10 million annually in
New York City—but would also give
defendants a better chance to prepare
their defense, allow them to continue to
work and support their families while
awaiting trial, and avoid placing on the
unconvicted the onus of serving time.

New York City in January decided to
adopt Vera procedures for all its crimi-
nal courts. Experiments with the system
have also been started in eight other
major cities, including Chicago, Los An-
geles and San Francisco, and Attorney
General Robert Kennedy is encouraging
federal courts to release more prison-
ers without bail. Reflects Schweitzer:
"There is an old saying, 'nothing is so
terrible as watching a beautiful theory
being butchered by brutal facts.' But
this is one time when the facts came out
as beautifully as the theory."

THE SUPREME COURT

An Oath

"Is it subversive to attend interna-
tional conventions and exchange views
with scholars from Communist coun-
tries?" It could be. "Could one support
participation by this country in world
organizations would not be farfetched,
argued Justice Byron White, if the Su-
preme Court let stand two state of
Washington loyalty oaths which re-
quired a state employee to swear that
he was not a "subversive person" and
would "promote undivided allegiance to
the Government." A majority of the
justices agreed with White, and the Su-
preme Court last week declared the
state Washington oaths unconstitution-
al, voiding that the court had upheld a
similar Maryland statute, dissenting
Justice Tom Clark found his colleagues'
change of heart "unfortunate." Justice
Clark's worries, he complained, "ex-
pect more sunbeams from cucumbers
than did Gulliver's mad scientists."

RECREATION

Way Out to Play

Children poured into the playground and found two jet planes, a tank and three trolleys, an 1870 locomotive, a Coast Guard tug, an amphibious craft, a fire engine, a Marine obstacle course and a soapbox racing track. There were some old-fashioned things too—basketball courts, swings and seesaws.

This child's vision of Eden is the new John F. Kennedy Playground, which opened in Washington last week. The idea came from Attorney General Robert Kennedy after a drive through one of the city's most depressed areas, which had almost no recreational facilities. He studied the problem, developed plans, and chose O. Roy Chalk, the energetic president of the D.C. Transit System, to raise the $200,000 needed for construction. But the most inspired idea cost nothing: to ask the armed forces to donate some obsolete tanks, planes, and ships. They happily complied. Chalk has now set up the National Committee on Playgrounds for Young America, hopes to raise $2,500,000 to duplicate the playground in other cities.

The Monster & Friends. The Kennedy Playground is only the latest variant in a slow latter-day transformation of the old slide and swing. The slides are now apt to be shaped like oversized caterpillars, and space stations, polyblocks and geodesic domes are standard equipment in better playgrounds across the U.S. "Creative play" is one of the country's newest fancies.

Oakland, Calif., has a $65,000 Fairyland with supersize Mother Goose characters and a clocktower slide; a 30-ft. sculpture called "The Monster" whose innards are littered with caves and slides; a series of structures made of wooden piles and culvert pipe, imaginatively painted and arranged; a Western frontier town (with a tombstone inscribed "As You Stand Now So Once Was I").

Philadelphia's twelve-year-old playground program has cost $30 million, is generally acknowledged to be the most successful in the country. No two of the city's 347 recreational facilities are identical: one has a series of concrete castles, one a squirrel house, another a spray pool. Newest equipment includes a 25-ft.-high rocket to the moon (with a helpful slide back to earth) and a gigantic turtle made of pipe and concrete. A big draw at the Penn Valley playground in Kansas City, Mo., is a magnificent woodpile composed of a series of tree trunks embedded in concrete under sand to form an intricate jungle gym. Even small towns are adopting the new gadgets. The town of Warner Robins, Georgia, for instance, has constructed a new 13-unit obstacle course of slides and balance beams, installed a couple of whirl merry-go-rounds.

Splinters in the Dust. Chief holdout is old New York. In a memorable exchange in 1948, Architectural Critic Lewis Mumford accused Park Commissioner Robert Moses of creating playground spaces "that are merely leftovers, bleak asphalt wastes, marks of an absence of human interest and an almost positive distaste for beauty." To parents' demands that sawdust be substituted for cement, Park Commissioner Newbold Morris replied with a pungent comment on the problems of the great big city. "Sawdust gets full of splinters, broken glass, empty cigarette packages and debris. We're experimenting with a rubber compound, but it's been ripped with knives. We have $450,000 a year in willful damage to park property."

In an effort to smuggle some imaginative ideas into the city, Architect Louis Kahn and Sculptor Isamu Noguchi have produced a design for a $1,000,000 playground to be carved out of Riverside Park. Proposed as a memorial to the late Philanthropist Mrs. R. Levy, the layout includes a sunken covered amphitheater, a pyramid and some handsome free-form sculpture designed to tempt the climbing young. But by the time the park engineers, the evaluators, the experts and the mayor are through with the project, many a moppet may well have turned gone grey at the temples.

DESIGN

When Big Meets Small

Cars spun along the strip, crashed, smashed, shattered, splintered, stopped in a downpour of metal and glass. It looked like Indianapolis all over again, but the site was East Haven, Conn., the event no sport but an experiment in automobile survival staged by the state police department to prove the contention that small cars are more vulnerable than standard models.

The test consisted of driving a small car head on into a stationary small car and vice versa. Photographs taken at the moment of collision were enough to alarm any small-car owner—and did when they were reproduced in newspapers across the country. Dauntless Volkswagens and Saabs were devastated, while the bigger Buicks, Fords and Pontiacs came out of the wrecks relatively unscathed. Connecticut State Police Commissioner Leo J. Mulcahy, who planned the project, pronounced the tests conclusive and declared: "We want to create buyer resistance to small

A survey made last ...ar by Illinois' Bureau of Traffic re...rted that the death rate of compact ...d small-car drivers was double the ...ath rate of other passenger-car driv... A similar report by Maine, pub...hed in April, showed a fatality rate for ...ons in compacts (defined as cars ...der 3,000 lbs.) that is 5½ times as ...eat as that of full-size cars. Studies of ...e California Highway Patrol found that ...ll-car occupants suffer a far higher ...e of injury or death in accidents. ...-pact and foreign cars," says Mich... Highway Commissioner John C. ...ke, "may be socially desirable in ...e parts of the country, but they are ...nance. Less weight and less accel...n make a car less safe."

...ble & Lethal. In rebuttal, the ...-car men have an impressive case: ...cars do not get into as many ac... The Maine and California sur... corroborate the contention; both ...that the big cars have a sub...ly higher accident rate. Because ...small-compacts have relatively mod... engines, their drivers do not feel ...eady sense of power that tempts ...gers and frustrated males to reck...speed, which is admittedly the prin...ngle cause of accidents.

...small car can swerve faster, stop shorter. And perhaps because of this nimbleness and humility, small-car drivers mow down far fewer pedestrians and bicycle riders than their big brothers. Insurance companies bear out the argument. Most offer a 10% discount to drivers of small-compact cars, based on "lower bodily injury and property damage because of the smaller size and weight and related safety factors."

In the end, the argument seemed a standoff. The Detroit Free Press observed: "We're not sure the [Connecticut] findings get anywhere. For if we assume the necessity of collisions, then every driver should logically try to get a car heavier than his neighbor's—leading in the end to a battle tank with Airfoam upholstery and dual headlights." Alternatively, small-car makers might demand a restriction on big cars, on the ground that they may be safer for their occupants but far more lethal to others.

Conclusion: the driver of a small car is less apt to have an accident. In an accident, the driver of a big car is better off, but he may do in more victims.

THE FAMILY

Not So Explosive

While the rest of the world frets over the population explosion, the most recent statistics issued by the U.S. Public Health Service show that the U.S. birth rate is in a decline. The general fertility rate—the number of births per 1,000 women between the ages of 15 and 44—was down to 104.0 *v.* 107.2 for the previous March. Furthermore, this drop continues a two-year trend. Only 337,000 live births were recorded in the month of March—6,000 fewer than last year and the smallest total number for the month since 1955.

The Health Service was frankly baffled, pointing out that "the age composition of the female population, with increasing numbers of women entering the childbearing ages, is favorable to a higher level of fertility." Unofficial guessers attributed the decline to World War II (girls born in the 1946 baby boom are only now approaching the commonest marrying age) and the introduction of oral contraceptives.

PUBLISHING

Apartness in Cincinnati

Although Cincinnati's two papers, the morning Enquirer and the evening Post & Times-Star, both belong to the Scripps-Howard chain, they stand about as far apart as they can get. Each has its own plant, its own staff and even its own editorial course. In 1958, for example, the Enquirer endorsed Republican C. William O'Neill for Ohio Governor, while the Post plumped for Democrat Mike Di Salle. Separation was part of a calculated Scripps-Howard effort to allay suspicions of monopoly, and to demonstrate that competition can flourish even in a one-ownership newspaper town. Last week Scripps-Howard's Ohio stronghold was under Government siege. In a suit filed in Federal District Court in Cincinnati, the U.S. Department of Justice's antitrust division demanded that the Enquirer be severed from Scripps-Howard's 18-paper chain.

Monopoly by Circumstance. To Scripps-Howard's executives, Cincinnati had seemed almost the last place where the Justice Department might have been expected to strike. The chain had established its Cincinnati monopoly quite by chance. In 1956, it owned only one of the city's three competing dailies, the Post. Then the Enquirer, which had been bought from the estate of the paper's publisher by Enquirer employees, went back on the auction block. Scripps-Howard's bid topped that of Cincinnati's other evening paper, the independently owned Times-Star. In 1958, the Times-Star, which was losing money at the rate of $1,000,000 a year, sold out to the Post and vanished into its masthead.

Scripps-Howard was thoroughly aware of the implications of its newest monopoly and set out to discourage the possibility of any Government suit. The Enquirer's five-man voting trust, set up by employees in 1952 to manage the paper, was perpetuated; the chain contented itself with a minority representation of two. The chain editorials that went out from New York to all Scripps-Howard papers were not even sent to the Enquirer; the chain insigne, a lighthouse, did not shine from its pages. Only last week the Enquirer extended by ten years the lease on its plant at 617 Vine Street—which was not due to expire until 1967.

The Enemy. In challenging Scripps-Howard's monopoly in Cincinnati, the Justice Department passed over many likelier locales for an antitrust suit. Newspaper monopolies have become the rule rather than the exception in the U.S. Competition exists in only 52 of the 1,434 towns that publish daily newspapers. And where competition has vanished by merger, it has rarely been permitted to survive in spirit, as it does in Cincinnati. In Memphis, for example, another Scripps-Howard monopoly town, the two papers share the same plant and the same ad salesmen.

Then why Cincinnati? Why did the Government wait eight years to file its trustbusting suit? Officially, the Justice Department was not saying, but its strategy seemed clear. "Cincinnati is a practical suit because the papers are easily separable," said a Justice spokesman. "You can get better practical relief." What this meant was that in most newspaper mergers, the two joined papers produce so hopeless a tangle—in both production and finance—that even a victorious antitrust suit cannot sort it out.

The Justice Department also hinted that its interest in Scripps-Howard's Cincinnati monopoly had been revived by a recent "citizen's complaint"—presumably from someone who had convinced Washington that the chain's dominance in Cincinnati operated in restraint of trade. As far as the city's two papers are concerned, it will be a difficult charge to prove. "The situation here is as competitive as I can make it," said Post Editor Dick Thornburg. "If I could keep the Enquirer from getting the weather, I'd do it." Nor was his sentiment peculiar to the brass. Said a Post reporter: "We work hard to clobber the Enquirer, and we do. As far as I'm concerned, it's the enemy." The "practical relief" logic of the Justice Department, however, suggested that Scripps-Howard might have been less vulnerable in Cincinnati if its two papers had not been so separate.

EMMANUEL (LEFT) & PHEBUS KNOLL READING TORAH WITH RABBI

JUDAISM

ynagogue with Bedrooms

Every Friday at sundown, the tele-hone operators at Tel Aviv's sleekly odern Hotel Deborah close down the itchboard. Guests at writing desks in e lobby put away pens and snuff out garettes. Desk clerks lock up the cash gister. For the Orthodox Jew, all ser-le work is forbidden on the Sabbath and the rule is strictly observed at e Deborah, the world's largest strict-kosher hotel.

In Israel, even the big luxury hotels a kosher kitchens, but otherwise the alacha (Jewish law) is loosely ob-rved. The Deborah, on the other hand, run so religiously that one rival inn-eeper calls it "a synagogue with bed-oms." Besides separate kitchens and ining rooms for meat and dairy dishes, ere is a purifying bath, or *mikveh*, in hich men immerse themselves before idays and Sabbaths, and women after enstruation and childbirth. A staff rab-conducts services at the hotel's own nagogue three times a day, and the ief work of hairdressers at the Debo-'s beauty salon is setting the wigs of thodox women who usually crop their r and keep it covered after they mar-is a sign of modesty.

Even for Gentiles. Owned by four rtian-born brothers named Knoll, e Deborah is named after their de-t Orthodox mother, who was so ocked by the Sabbath violations at Aviv's other hotels that she insisted uilding a first-rate place where Jews stay in good conscience. Most re for Orthodox Jews are little bet-than boarding houses, but the Debo-could look impressive even in Mi-Beach. Its 16 stories make it the est hotel in Israel, and the high qual-of its food and service has even at-ed Gentile guests, who are offered mlikes (skullcaps) to wear in the dining rooms. Finding money to build the Deborah was no problem; the millionaire Knoll brothers own a number of corporations in Venezuela, including a construction firm, a dental supply business, an export-import company and an office-furniture factory.

What took ingenuity was figuring out how to operate a modern hotel at a profit and still provide for the 613 commandments Orthodox Jews must observe at all times. An Orthodox Jew cannot so much as press a button on the Sabbath, so the elevators are preset to go up and down automatically all day long, stopping at every floor. Since Jews can operate stoves if they are turned on before the Sabbath, all food in the kitchens is cooked before Friday sundown and then left to simmer through the night. Tearing toilet tissue is also forbidden by halacha, so Friday afternoons maids put white baskets containing separate sheets of paper in all the bathrooms. Guests may not check in or out or pay their bills on the Sabbath. Lights in the lobby are turned on and off automatically by electric clocks, but any other light left on accidentally must burn through the night, since flicking switches is forbidden. Not until Saturday sundown is the hotel's rigid observance of the law relaxed.

People Needed It. Emmanuel Knoll, 46, who is co-manager of the Deborah with his brother Phebus, estimates that his operating costs are 20% higher than those of Tel Aviv's other hotels, but he does have some compensations. The Deborah is so well regarded by Israel's Orthodox community that the rooms have been solidly booked since it opened last March; in fact, Knoll plans to build another kosher hotel in Jerusalem, toys with the thought of one in New York. But he says that he is "not out to make a business of this hotel. I put it up because I felt that religious people needed it."

ROMAN CATHOLICS

Cremation: Permissible

The early Christians abhorred cremation as a pagan practice, and ever since, the Roman Catholic Church has held that the body is not for burning. When cremation was legalized in northern Europe during the 19th century, the Catholic Church suspected an atheistic plot to discredit belief in resurrection. In 1886 the Roman Inquisition declared that Catholics who cooperated in cremation were guilty of sin, and the prohibitions were repeated in the 1917 revision of canon law.

As part of Pope Paul's creeping modernization of the church, the Holy Office has now sent an instruction to all Catholic bishops easing up on the old restrictions. The letter reaffirms the church's traditional preference for burial, but notes that there is no unchangeable dogma forbidding cremation, which thus can be authorized where national custom, economics or hygiene make it necessary.

According to one Vatican official, the Holy Office letter was issued "because there has been a change in attitudes toward burial and cremation around the world." Most non-Roman Christians long ago accepted cremation as no less reverent than interment, and Catholic theologians agree that God could just as easily resurrect a body from scattered ashes as from dry bones in a grave. The new ruling will probably be of most help to bishops in the predominantly Buddhist countries of Asia, where burial is regarded as a revolting and disrespectful custom. Japanese Catholics have already drawn up a cremation rite, and it is expected that church leaders in India, Ceylon and Burma will eventually follow suit.

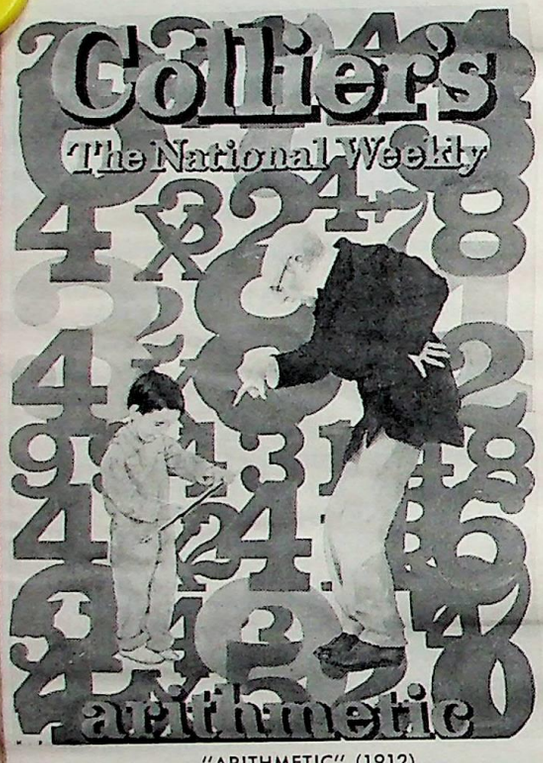
ILLUSTRATORS

Grand-Pop

The pop art of 50 years ago had an attribute not shared by the pop art of today: it was popular. The most popular of the artists of that time, Maxfield Parrish, now 93, painted book illustrations and calendars that were reproduced by the millions. College boys hung his works in their rooms amidst a clutter of crew oars, fencing foils and mooseheads. From a first cover for *Harper's Weekly* in 1895, he painted on to become the country's best-paid artist.

Parrish's gnomes and damsels, straight out of *King Arthur* and tem-



"ARITHMETIC" (1912)

pered by romantic Pre-Raphaelite gentility, adorned the covers of *Collier's, Century* and *Scribner's*. His best-known commission (around $50,000) was a 28-ft.-long mural of Old King Cole for the merry old souls in the bar of John Jacob Astor's Hotel Knickerbocker, which can still be seen in Manhattan's Hotel St. Regis. Medieval nobility was a deathless theme for Parrish; even the caption for his 1921 Jell-O ad ran: "The King and Queen might eat hereof and Noblemen besides." Parrish was indeed, the pop artist of his era.

What ever could bring Parrish back? None other than the pop promoter of this era: Lawrence Alloway, nimble curator of Manhattan's Guggenheim Museum. Alloway has escorted a show of Parrish's work from far-out Bennington College to Manhattan's conservative Gallery of Modern Art, where last week 52 Parrishes went on view.

Alloway gave his highest praise to Parrish: "Behind a screen of high technique, Parrish is master of the cliché, of the image of the moment." But perhaps even more could be said in his favor. The artist's famous "Parrish blue," a highly glazed ultramarine over sleek gesso, still glows with an outer-space beauty. His overly graceful figures, like fashion models, strut and stretch, as clearly defined against grainy color backdrops as if they were modern hard-edge images given fingers and toes. Only the brooding golden backlighting that makes theaters out of Parrish's scenarios bespeaks a pre-neon sensibility.

At his Cornish, N.H., home, where he has lived for more than 50 years, Parrish is plainly baffled; he thinks of himself as derrière-garde. "How can these avant-garde people get any fun out of my work?" he asks. "I'm hopelessly commonplace." He couldn't have picked a more fashionable word.

ANTIQUITIES

The Sun-Colored Metal

To the sun-worshiping Indians of the Americas before Columbus, gold was not so much precious as sacred. The Incas of Peru used it freely in wall coverings, in breastplates, in artificial

flowers, in provision for tombs—never thinking of it as rare, always stressing the religious emotion they felt from gold's sunlike luster.

To the avaricious Spaniards, gold was simply rare and therefore of monetary value; when a nation had enough, it became rich. The Indians were astonished at this attitude, and surmised that the white men had some physical disease that could only be cured by gold. The Inca Emperor Atahualpa had to ransom himself from the swinish Spanish Adventurer Pizarro with a roomful of the stuff—13,000 lbs., all told. (For his pains, Atahualpa was strangled.) Indifferently, the Spaniards melted art into bullion; their pillage increased Europe's gold supply by 20%, part of which went to finance the ill-fated Ar

SCIENCE

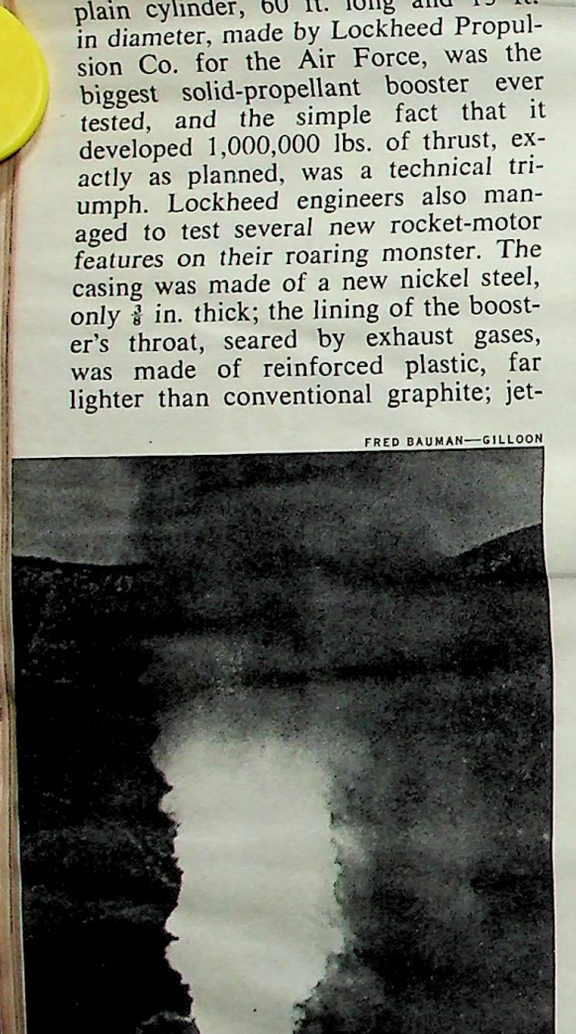
SPACE

Casual Triumph

There was a strangely routine air about the rocket test. No exasperating, last-minute delays, no long, apprehensive countdowns—someone simply pressed a button and a dagger of pale yellow flame spewed skyward. White smoke climbed above the dry hills, and an enormous roar echoed along the California-Mexico border. After exactly 109 seconds, as scheduled, silence came back to the test stand.

It was the very casualness of the static test, the ease with which the engineers stuck to their strict schedule, that made the test so impressive. The plain cylinder, 60 ft. long and 13 ft. in diameter, made by Lockheed Propulsion Co. for the Air Force, was the biggest solid-propellant booster ever tested, and the simple fact that it developed 1,000,000 lbs. of thrust, exactly as planned, was a technical triumph. Lockheed engineers also managed to test several new rocket-motor features on their roaring monster. The casing was made of a new nickel steel, only ⅜ in. thick; the lining of the booster's throat, seared by exhaust gases, was made of reinforced plastic, far lighter than conventional graphite; jet-tabs pushed into the racing exhaust to simulate steering. Each of the novelties worked perfectly on the first try.

FRED BAUMAN—GILLOON



LOCKHEED'S STATIC TEST
Big boost for solids.

It was all in sharp contrast to the long, costly, gingerly testing of big liquid-fuel engines, which are festooned with intricate plumbing and normally require years of development before they work properly. "Solids won't be second in the booster field much longer," said Lockheed Propulsion's President Robert F. Hurt. "One of these days the big boosters will all be solids." General Joseph S. Bleymaier, deputy commander of the Air Force's Space Systems Division, for which the engine was built, seconded the motion: "I believe this will usher in a new era of solid-propellant rocket motors."

So firm is their faith in the advantages of solids, four large rocket companies are putting millions of their own dollars into development—a rare gamble in the Government-nurtured aerospace industry. In addition to Lockheed, Thiokol Chemical Corp., maker of the Minuteman booster, has put $12 million into a Georgia plant to build solid-propellant engines up to 21 ft. 8 in. in diameter with 3,000,000 lbs. of thrust. Aerojet-General Corp., maker of the Navy's Polaris booster, is doing the same near Miami. The United Technology Center of United Aircraft is building smaller solids at Sunnyvale, Calif. The rocketmakers are all betting high that the National Aeronautics and Space Administration will eventually be forced to call on them for help.

RESEARCH

How Much Is Enough?

Is the U.S. Government spending enough money on scientific research? And is the money it does spend being spent wisely? Each year, the scientific community argues over the answers with increasing fervor, because each year the massive tools of modern research move farther out of the financial reach of universities or industry. Only the Government can foot the bill.

Few scientists complain that the men in Washington are not spending enough. But those who have turned up to testify at the hearings held by the House Select Committee on Government Research largely agree that too little Government money is being spent on basic research, too much on projects aimed at space or military hardware. "Of course, the applied-research programs in nuclear physics, space and defense are important to the national purpose," says President Lee DuBridge of Caltech. "But precisely because these programs are large, the Government's support of basic research should be larger than now. It is now inadequate to keep the topnotch people in the universities provided with funds for research and equipment."

The Federal Government, Dr. DuBridge argues, is spending about billion a year on research and dev ment, but only $400 to $500 milli the allotment goes to basic researc the universities. The rest of the r says Dr. DuBridge, goes mostly such impressive engineering proje moon rockets. But all that wor pends on discoveries made in the some of them generations ago. The of progress, warns Dr. DuBridge slow perceptibly unless theoretica entists, with no hardware in mind, fresh knowledge from nature.

Lively Excitement. At Cam Mass., where Harvard and M.I.T chor the spreading scientific co along Route 128, researchers that they have been showered wi eral riches beyond their most h dreams of 20 years ago. But the quick to point out that some fields as oceanography, are neglected. astronomy, which is in a stage of excitement, must beg for funds.

President Kennedy's science a Jerome Wiesner, who is now de science at M.I.T., is convinced th prosperity rests on research a research must have unfaltering fe support. "In the new era," says W ner, "we must support all the goo search available. If we don't, our nomic growth is going to falter." vard Professor George Kistiakow who was Eisenhower's science a repeats the theme: "All our wealth affluence is based on the scientific search of the last century." Public port for science, he says, is nec uncover new knowledge on wh base the affluence of the future.

Last to Go. "There are peo Congress," says a leading scientist, feel that basic research is useless. thing that scientists do to amuse selves. So there is a tendency in gress to cut basic research funds. a person is budgeting, the first th is likely to cut out is his savings a Basic research is like that savin count; it should really be the last Congress, says Stanford P Wolfgang Kurt Hermann Panofsky have to learn the difference be applied research (in which a man what he is looking for) and ba search (in which he does not). spending money on an applied de he says, "you have to question the for it. But when spending mon fundamental research that may our whole way of looking at nature question of the need is premature.

Dr. Panofsky, who learned to large figures as head of Stanford million linear accelerator, believes lavish funds expended on high-e physics, which pries into the inn ture of matter, and on cosmology, tries to understand the universe pay higher eventual returns th applied research. "We cannot a be ignorant," he says, "of the fundamental type of structure on everything else depends."

ECONOMICS

The Patient's Purse

The U.S. will spend an estimated $33 billion for medical care in 1964. Government agencies, from federal to local, will put up somewhat more than $8 billion; the balance of almost $25 billion will come more directly out of the pockets of ailing individuals and their families. Who gets the money? And is the patient's purse being well treated?

The answers are usually lost in a statistical jungle. Now Seymour E. Harris, a Harvard professor emeritus of political economy, has tracked them down in a fact-packed book of 508 pages, *The Economics of American Medicine* (Macmillan; $8.50). In general, he concludes that the price of health is reasonable, except for a few items on the bill.

Best-Paid Profession. The price is rising fast: that $33 billion annual charge is up from a mere $14 billion in 1950. Doctors, whose fees used to amount to about 31¢ of every medical-care dollar, now take in only 26¢. The dentists' share is down from about 12¢ to 10¢; drugs are holding steady around 20¢, and 16¢ still pays for a miscellaneous category that includes eyeglasses and other appliances, nursing-home care, and insurance premiums. Where do the rest of the pennies go? Almost entirely to the hospitals. Around 1950, hospitals were taking only 22¢ of the sick man's dollar. Now they take the biggest slice of all: more than 27¢.

Though doctors collectively get proportionately less of the patient's dollar, Harris reports that they have become the highest paid professionals in the U.S. Before the 1929 crash, those in private practice averaged $5,300 a year; they took a cut to $4,000 during the Depression. They had won back most of this loss by the time of Pearl Harbor, and have climbed steadily ever since then to a current national average of $25,000 or more (far more than such other professionals as dentists and lawyers).

Doctors' fees have doubled since 1950, but this is less than the average price increase for consumer goods and services in general. The boost in doctors' incomes is mainly a result of the fact that they are seeing many more patients. They still work long hours (60 a week is common), and they crowd more patients' visits into each hour. Nor are they practicing more efficiently. Doctors, says Harris, are generally better educated than they used to be, have the batteries of new laboratory tests and technicians' services to help them arrive on the right diagnosis and treatment, while spending less time palpating the patient. Doctors now commonly charge for items that used to be free, such as a bit of supplementary advice given by telephone. And they have cut down time-consuming house calls from about 40% of their practice, before World War II, to a mere 7% in 1964. Says Harris: They have "put the burden of travel on the patient."

The Big Increase. Hospital charges for each day of a patient's stay are suffering from what Harris calls galloping inflation. Experts differ on how severe the increase is statistically. But Harris argues that since 1948, however they are computed, hospital daily costs have gone up 2½ times as much as income after direct taxes, which is the best measure of the patient's ability to pay. By far the biggest factor in hospitals' rising costs has been salaries and wages —and, most surprisingly, it is the professional and nursing staffs that have

taken most of the increase, and not the notoriously underpaid housekeeping and kitchen employees.

A hospital's daily charge is not a good index to what a hospital stay actually costs the patient. On the debit side are many additional services for which the patient is billed separately —some hospitals are running six times as many lab tests on patients as they did in 1950. On the credit side is the fact that the average stay in a hospital has been cut from 15 days to ten. This is partly because improved surgery and medical care are sending patients home sooner, even after serious illnesses, and partly because patients now go into a hospital for less serious conditions— either because they can afford to or because their doctors think they can. Insurance helps to pay the bills. By now, 73% of all Americans have some insurance against part of the costs of illness in a hospital, and insurance pays 56% of private hospital bills. But Harris says this is not enough. However horrendous hospital costs are now, Harris expects a further 50% increase in daily rates by 1970, raising them to $45 or $50. By then, auxiliary services may well add another $50, which will bring hospital bills to $100 a day for a short stay, with the surgeon's fee still to pay.
